Section 78 prohibits any insurer from participating in any underwriting of the purchase or sale of securities in advance of their issuance or from entering into any transaction for such purchase or sale on account of such insurer jointly with any other person, firm or corporation, or from entering into any agreement to withhold from sale any of its property.

Investments by classes for the 1946 and 1947 year-ends of all United States legal reserve life insurance companies, as estimated by the Life Insurance Association of America, are shown on page 363.

During World War II, virtually all funds becoming available for investment by life insurance companies were invested in U. S. Government securities, but in the post-World War II period, the trend has been towards expansion in corporate securities (which expanded 45% in the two years 1946-7), and mortgage loans (which increased 29% for the two years).

LIGHT COIN

Coin reduced by natural abrasion below the standard weight fixed by law. Loss in weight of gold coins, if in excess of the limit of tolerance provided by law, reduces its legal tender value in proportion to such loss in weight. (See Light Gold, Tolerance.)

Loss in weight of fractional silver, nickel, and copper coins does not affect their value as legal tender since these coins are worth less as metal than as coin. (See Token Money.)

LIGHT GOLD

Gold coins which have been reduced in weight, caused by variation or percentage of error on the part of the Mint, or more usually, through abrasion resulting from circulation. For tolerance allowed the Mint in error of fineness and gross weight, see Tolerance. The Revised Statutes, Section 3585, provided that any gold coin in the Treasury when reduced in weight by natural abrasion more than 1/2 of 1% below the standard weight prescribed by law should be recoined, and any gold coins reduced in weight by not more than 1/2 of 1% below the standard weight, after a circulation of 20 years from date of coinage, and ratably for any period less than 20 years, could be received at their nominal value by the Treasury.

The Joint Repeal Resolution of Congress of June 5, 1933 provided specifically that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, shall be legal tender only at valuation in proportion to their actual weight.

However, under the Gold Reserve Act of January 30, 1934, no gold shall hereafter be coined, and no gold coin shall hereafter be paid out or delivered by the United States, except that coinage may continue to be executed by the Mints of the United States for foreign countries. All gold coin of the United States, in accordance with the Act, was withdrawn from circulation, and together with all other gold owned by the United States shall be formed into bars of such weights and degrees of fineness as the Secretary of the Treasury may direct.

(See Tolerance.)

LIMIT

A definite price fixed by a customer in giving an order to purchase or sell securities (or commodities) to a broker for execution, and which the broker must not go over if a purchase, or under if a sale. (See Orders.)

INVESTMENTS, BY CLASSES, 1946-1947

ALL UNITED STATES LEGAL RESERVE LIFE INSURANCE COMPANIES

1947 data, estimated from actual records of 349 companies which at the end of 1946 held 99.92% of the total assets of all U. S. legal reserve companies.

LIMIT OF TOLERANCE

See Light Gold, Tolerance.

LIMITATIONS

See Limitations on Acceptance Credits, Limitations on Bank Loans, Limitations on Investments, Limitations on the Total Indebtedness of National Banks, Statute of Limitations.

LIMITATIONS ON ACCEPTANCE CREDITS

The Federal Reserve Act (Section 13) provides that any member bank may accept drafts or bills of exchange drawn upon it having not more than 6 months' sight to run, exclusive of days of grace, which grow out of transactions involving the importation and exportation of goods, or which grow out of transactions involving the domestic shipment of goods, provided shipping documents conveying or securing title are attached at the time of acceptance, or which are secured at the time of acceptance by a warehouse receipt or other such document conveying or securing title covering readily marketable staples.

No member bank, however, shall accept, whether in a foreign or domestic transaction, for any one person, company, firm of corporation to an amount equal at any time in the aggregate to more than 10% of its paid-up and unimpaired capital stock and surplus, unless the bank is secured either by attached documents or by some other actual security growing out of the same transaction as the acceptance. No bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half of its paid-up and unimpaired capital stock and surplus.

The Board of Governors of the Federal Reserve System, however, under general regulations it may prescribe, which shall apply to all banks alike regardless of the amount of capital stock and surplus, may authorize any member bank to accept such bills to an amount not exceeding at any time in the aggregate 100% of its paid-up and unimparied capital stock and surplus provided that the aggregate of acceptances growing out of domestic transactions shall in no event exceed 50% of capital stock and surplus paid-up and unimpaired.

Any member bank may accept drafts or bills of exchange drawn upon it having not more than 3 months' sight to run, exclusive of days of grace, drawn under

regulations prescribed by the Board of Governors of the Federal Reserve System, by banks or bankers in foreign countries or dependencies or insular possessions of the United States for the purpose of furnishing dollar exchange as required by the usages of trade in the respective countries, dependencies, or insular possessions. No member bank, however, shall accept such drafts or bills of exchange for any one bank to an amount exceeding in the aggregate 10% of the paid-up and unimpaired capital and surplus of the accepting bank, unless the draft or bill of exchange is accompanied by documents conveying or securing title or by some other adequate security; and provided that no member bank shall accept such drafts or bills in an amount exceeding at any time the aggregate of one-half of its paid-up and unimpaired capital and surplus.

(See Acceptance Credit, Bank Acceptance.)

LIMITATIONS ON BANK LOANS

Limitations imposed by Section 5200 of the Revised Statutes upon National banks restrict the amounts which a National Bank may legally lend to one borrower. The Comptroller of the Currency has issued an outline of these limitations, as follows:

Types of Obligations to Which Limits Apply	Limits Imposed by Section 5200 (i.e., Maximum Percentage of Bank's Unimpaired Capital and Surplus which may be loaned to any one borrower)
A. Obligations generally (whether secured or unsecured)	A. 10%
The term "obligations" embraces:	
(a) The direct liability of maker or acceptor (including accommodation makers or acceptors) of paper discounted with, or evidencing loans by, the bank.	
(b) The liability of the indorser, drawer or guarantor who obtains a loan from or discounts paper with, or sells paper under his guaranty to, such National bank, but does not include accommodation indorsers).	
(c) In the case of obligations of co-partnership or unincorporated association, the obligations of its several members.	
(d) In the case of obligations of a corporation, the obligations of all subsidiaries in which the corporation owns a majority interest.	
B. Exceptions to the general 10% limitation:	
1. Drafts or bills of exchange drawn in good faith against actually existing values (Exceptions 1 embraces only 2-name paper; it need not be secured).	1. No limit.
2. Commercial or business paper (Exception embraces only 2-name paper which must (1) be given by a purchaser to a seller in payment for a commodity; (2) bear the full recourse indorsement of an actual owner; and (3) be negotiable).	2. No limit.
3. Obligations (including 1-name paper) secured by goods or commodities in process of shipment. The term "in process of shipment" is construed to mean in the hands of a carrier.	3. No limit.
4. Obligations as indorser or guarantor of notes, other than commercial or business paper taken under Exception 2, having maturity of not more than 6 months and owned by the party negotiating same.	4. 15%, in addition to general 10% limit (25% total).
5. Bankers' acceptances of other banks of the kind described in Section 13 of the Federal Reserve Act.	5. No limit.
6. Notes or drafts secured by shipping documents, warehouse receipts, or other such documents (similar in nature to shipping documents and warehouse receipts, not including trust receipts) transferring or securing title covering readily marketable nonperishable staples, which must be insured if it is customary to insure such commodities. Obligations arising from the same transaction or secured upon the identical staples for more than 10 months do not fall within the exception.	6. In addition to the general limit of 10%: Additional 15% if security is 115%; additional 5% if security is 120%; additional 5% if security is 125%; additional 5% if security is 130%; additional 5% if security is 135%; additional 5% if security is 140%. (50% total.) (Note: The value of the security must be computed at "market value" and the required margin must be maintained at all times during the life of the loan.)

Types of Obligations to Which Limits Apply	Limits Imposed by Section 5200 (i.e., Maximum Percentage of Bank's Unimpaired Capital and Surplus which may be loaned to any one borrower)
7. Notes and drafts secured by shipping documents or instruments transferring or securing title covering or giving a lien on livestock	7. 15% if seccured 115% (25% total). (Note: The value of the security must be computed at "market value" and the required margin must be maintained at all times during the life of the loan.)
8. Notes secured by not less than a like amount of: (a) Bonds or notes of the United States issued since April 24, 1917. (b) Certificates of indebtedness of the United States. (c) Treasury bills of the United States. (d) Obligations fully guaranteed as to principal and interest by the United States.	8. 15% in addition to general 10% limit (25% total).
9. Loans to a National or a State bank or to a representative in charge of the business thereof, when approved by the Comptroller of the Currency.	9. No limit.
10. Obligations secured or covered by "unconditional" guaranties, commitments, or agreements to take over or to purchase or to purchase for cash or its equivalent (within 60 days after demand) made by: (a) Any Federal Reserve Bank; (b) The United States, including any: (1) Department; (2) Bureau; (3) Commission; (4) Establishment; (5) Corporation wholly owned directly or indirectly by the United States.	10. No limit.

Limitations under Section 23A of the Federal Reserve Act are as follows:

Types of Obligations to Which Limits Apply	Limits Imposed by Section 5200 (i.e., Maximum Percentage of Bank's Unimpaired Capital and Surplus which may be loaned to any one borrower)
C. Section 23A	
Affiliates:	Limits Imposed
Loans and credit to; Repurchase agreements with; Investments in and obligations of; Loans secured by obligations of. Collateral to credit of any kind must be in form of stocks, bonds, debentures or other such obligations having a market value 20% more than advances, except if issued by State or political subdivision value may be 10%. See exception to security in paragraphs 2 and 3 of the Act.	Aggregate of all to one affiliate limited to 10% of capital and surplus. Aggregate of all to all affiliates limited to 20% of capital and surplus (see Section 23A of Federal Reserve Act, paragraphs 2 and 3, for exceptions).

Limitations under Section 24A of the Federal Reserve Act are as follows:

D. Section 24A	
Loans to or secured by stock of corporation owning banking house, together with investment in and/or stock and obligations of corporation owning the bank premises.	Limited to amount of capital stock (unless the Comptroller of the Currency approves a greater amount).

State banks becoming members of the Federal Reserve System, subject to the provisions of the Federal Reserve Act and the regulations of the Board of Governors of the Federal Reserve System, shall retain their full charter and statutory rights as State banks or trust companies, and may continue to exercise all corporate powers granted by the State in which chartered, and shall be entitled to all privileges of member banks, except that no Federal Reserve Bank shall be permitted to discount for any State bank or trust company in an amount greater than that which could be borrowed lawfully from such State bank or trust company were it a National bank. The Federal Reserve Bank, as a condition of the discount of notes, drafts and bills of exchange for such State bank or trust company, shall require a certificate or guaranty to the effect that the borrower is not liable to such bank in excess of the amount lawful for National banks, and will not be permitted to become liable in excess of this amount while such paper is under discount with the Federal Reserve Bank (paragraph 12 of Section 9 of the Federal Reserve Act).

Also, under paragraph (m) of Section 11 of the Federal Reserve Act, the Board of Governors of the Fed-

eral Reserve System shall have power, upon the affirmative vote of not less than 6 of its members, to fix from time to time for each Federal Reserve district the percentage of individual bank capital and surplus which may be represented by loans secured by stock or bond collateral made by member banks within such district, but no such loan shall be made by any such bank to any person in an amount in excess of 10% of the unimpaired capital and surplus of such bank. Security loans secured by U. S. Government bonds or notes issued since April 24, 1917, certificates of indebtedness of the United States, Treasury bills, or obligations fully guaranteed both as to principal and interest by the United States, shall be exempt from this limitation, but State member banks shall be subject to the same limitations and conditions as are applicable in the case of National banks under paragraph (8) of Section 5200 of the Revised Statutes.

Any percentage so fixed by the Board of Governors shall be subject to change from time to time upon 10 days' notice, and it shall be the duty of the Board to establish such percentages with a view to preventing the undue use of bank loans for the speculative carrying of securities. The statute empowers the Board of Governors to direct any member bank to refrain from further increase of its loans secured by stock or bond collateral for any period up to one year under penalty of suspension of all rediscount privileges at Federal Reserve banks.

(See Loans.)

LIMITATIONS ON INVESTMENTS

The business of dealing in securities and stock by National banks is limited by Section 5136 of the Revised Statutes, as amended, paragraph Seventh, to purchasing and selling such securities and stock without recourse, solely upon the order, and for the account of customers, and in no case for its own account, and the National bank shall not underwrite any issue of securities or stock, with the following exceptions:

1. The National bank may purchase for its own account investment securities under such limitations and restrictions as the Comptroller of the Currency may by regulation prescribe. (See Comptroller's Regulation.)

2. In no event shall the total amount of the investment securities of any one obligor or maker, held by the National bank for its own account, exceed at any time 10% of its capital stock actually paid in and unimpaired and 10% of its unimpaired surplus fund, except that this limitation shall not require any National bank to dispose of any securities lawfully held by it on the date of enactment of the Banking Act of 1935 (August 23, 1935).

3. The term "investment securities" shall mean marketable obligations evidencing indebtedness of any person, co-partnership, association, or corporation in the form of bonds, notes and/or debentures commonly known as investment securities under such further definition of the term "investment securities" as may by regulation be prescribed by the Comptroller of the Currency (see Comptroller's Regulation).

4. Except as provided or permitted by law, purchase by a National bank for its own account of any shares of stock of any corporation is not authorized.

Stocks permitted to be owned by National banks include: Capital stock of a corporation organized under the law of any State to conduct a safe-deposit business in an amount not in excess of 15% of the capital stock of the National bank actually paid in and unimpaired and 15% of its unimpaired surplus; stock, bonds, debentures, or other such obligations of any corporation holding the premises of the bank, investment in bank premises, or loans to or upon the security of the stock of any such corporation are not authorized, except with the approval of the Comptroller of the Currency, if the aggregate of all such investments and loans will exceed the amount of the capital stock of the National bank; in an amount not exceeding in the aggregate 10% of paid-up capital stock and surplus, stock of one or more banks or corporations chartered or incorporated under the laws of the United States or of any State, and principally engaged in international or foreign banking, or banking in a dependency or insular possession of the United States, either directly or through the agency, ownership, or control of local institutions in foreign countries, or in such dependencies or insular possessions; Federal Reserve Bank stock; loans or discounts on the security of its own capital stock, or purchase, or holding of its own capital stock, only if necessary to prevent loss upon a debt previously contracted in good faith, and such own capital stock purchased or acquired shall be sold or disposed of at public or private sale within 6 months from time of purchase; investments in the capital stock, bonds, debentures or other such obligations of any affiliate, or loans, extensions of credit, repurchase agreements, and advances secured by stock or obligations of such affiliate, if the aggregate amount of such investments or loans will not exceed 10% of capital stock and surplus of the bank, or if in the case of all such affiliates, the aggregate amount of such loans or investments does not exceed 20% of the capital stock and surplus of the bank; ownership of other stocks, only if necessary to prevent loss upon a debt previously contracted in good faith, and to be disposed of promptly.

5. Limitations and restrictions as to dealing in, underwriting and purchasing for own account of investment securities do not apply to: Obligations of the United States or general obligations of any State or of any political subdivision thereof, or obligations issued under authority of the Federal Farm Loan Act, as amended, or issued by the Federal Home Loan Banks, or obligations insured by the Federal Housing Administrator pursuant to Section 207 of the National Housing Act, if the debentures to be issued in payment of such insured obligations are guaranteed as to principal and interest by the United States.

State member banks are required to observe the same limitations on investments imposed upon National banks.

(See Limitations on Bank Loans.)

LIMITATIONS ON THE TOTAL INDEBTEDNESS OF NATIONAL BANKS

No National bank, according to Section 5202 of the Revised Statutes, as amended, shall at any time be indebted, or in any way liable, to an amount exceeding the amount of its capital stock at such time actually paid in and remaining undiminished by losses or otherwise, except on account of the following liabilities:

(1) Notes in circulation (National bank notes are now in process of retirement); (2) Moneys deposited with or collected by the bank; (3) bills of exchange or drafts drawn against money actually on deposit to the credit of the bank or due thereto; (4) Liabilities to the stockholders of the bank for dividends and reserve profits;

(5) Liabilities incurred under the provisions of the Reconstruction Finance Corporation Act; (6) Liabilities incurred under the provisions of the Federal Reserve Act; (7) Liabilities created by the indorsement of accepted bills of exchange payable abroad actually owned by the indorsing bank and discounted at home or abroad; (8) Liabilities incurred under the provisions of Section 202 of Title II of the Federal Farm Loan Act, approved July 17, 1916, as amended by the Agricultural Credits Act of 1923; (9) Liabilities incurred on account of loans made with the express approval of the Comptroller of the Currency under paragraph (9) of Section 5200 of the Revised Statutes, as amended; and (10) Liabilities incurred under the provisions of Section 13b of the Federal Reserve Act (participation with the Federal Reserve Banks in working capital loans to business).

(See Limitations on Bank Loans, Limitations on Investments.)

LIMITATIONS, STATUTE OF

See Statute of Limitations.

LIMITED COMPANY (CORPORATION)

A corporation in which the stockholders are limited in their liability to creditors to the amount represented by the fully paid par value of the stock they own. If the debts of a corporation upon liquidation exceed the sum realized through the sale of the assets, the creditors must bear the loss in proportion to their claims. The stockholders cannot be called upon to make good the deficit. (See Limited Liability.)

Limited companies are to be distinguished in this respect from partnerships, in which the partners are jointly liable for all debts contracted by the partnership jointly and severally liable for torts and breaches of trust, and whose personal property may be taken to satisfy such debts. A partnership and joint-stock company provide unlimited liability for the claims of creditors. (See Joint Stock Company, Partnership.)

LIMITED LEGAL TENDER

See Legal Tender, Token Money, United States Money.

LIMITED LIABILITY

The liability of stockholders of the ordinary business corporation extends no further than to payment of the full par value of the issued and outstanding capital stock, such limited liability being one of the principal advantages of the corporate form of business organization. However, even for limited liability corporations, State statutes provide that every holder of shares of stock not fully paid shall be personally liable to the creditors of the corporation to an amount equal to the amount unpaid on the shares held by him for debts of the corporation contracted while such shares were held by the stockholder. Also, State statutes, e. g., New York, provide that the stockholders of every stock corporation shall jointly and severally be liable personally for all debts due and owing to any of the corporation's laborers, servants or employees other than contractors, for services performed by them for such corporation, under specified conditions.

National banks and State banks and trust companies carried double liability on their stock, stockholders being subject to assessment up to the par value of their shares in addition to losing their original investment. In accordance with the Banking Acts of 1933 and 1935, double liability for National bank stock has been ended, and most States have provided similar legislation for State banks and trust companies. (See Double Liability, Limited Company.)

LIMITED ORDER

A buying or selling order lodged with a broker for execution at a specified price, and which will not be executed if the price is not reached, but which may be executed at a price more favorable to the customer, e. g., "Buy 100 shares of United States Steel at 95." If 95 is named as the buying price and the stock is available in the market at 94 1/2, the buyer is entitled to the actual price at which the purchase is made. That is to say, the broker is entitled to no profit on any transaction executed for a customer, but only to the stipulated commission. In case of odd lots, a limited order to buy at 95 will not be executed until the specified stock sells in a lot of 100 shares or more at 94 7/8. Better price than that can be obtained only if the next round lot sale after receipt of the order is below 94 7/8. Thus, if the next sale is 94 1/2, the stock will be bought at 94 5/8; but if the stock sells at 95, and the next quotation drops to 94 1/2, the execution will still be at the limit of 95. (See Orders.)

LIMPING STANDARD

A term used to describe the monetary system of a country which, although the gold standard has been formally or informally adopted and the free coinage of silver has been suspended, nevertheless retains silver coins in circulation with legal tender power, in order to supply a sufficient volume of circulating media. The limping standard is in reality a survival of the era of Bimetallism (q.v.) in which gold and silver were maintained as a joint standard at a fixed coinage rate. The countries which comprised the Latin Union (q.v.), once having a bimetallic standard and still retaining silver coins in circulation, may be said to have possessed a limping standard.

LINE

See Deposit Line, Line of Credit.

LINE OF CREDIT

The maximum or amount which a person or concern is entitled to borrow from a bank at any given time, or normal limit of accommodation, also called the limit of credit, or credit line. It is the total credit force, or potential credit balance at the disposal of a borrowing customer in return for which the customer is required to maintain proportional balances, prove to be an acceptable credit risk, and otherwise satisfactory as an account. The amount of a credit line is not definitely fixed, but varies from time to time, according to the financial standing of the customer, as shown by submitted financial statements, the bank's loanable resources, and general money and trade conditions.

While a bank usually fixes a line of credit for its borrowing customers, it is usually reluctant absolutely to agree to provide for this amount because changing conditions, either in the affairs of the customer or the bank, may make it inadvisable, if not impossible, to grant the line agreed upon. In other words, while a bank is normally obligated to insure a line of credit agreed upon, it is not legally bound to do so. Any line of credit es-

tablished is predicated upon the continuance of the same management and maintenance of a financial standing as good or better than that which was in existence at the time it was established.

Ordinarily, a bank is able to provide its customers with as much credit as they are entitled to have in proportion to the value of their accounts and financial condition. For this reason, the well established and conservatively conducted concern, having good banking connections, should never experience difficulty in obtaining all the credit it requires.

(See Credit, Credit Risk, Statement Analysis, Twenty Per Cent. Rule.)

LINE OF DEPOSIT

See Deposit Line.

LINE OF STOCKS

A term which refers to commitments made on the long or short side of the market systematically bought or sold respectively on a scale. (See Scaling.)

LIQUID ASSETS

Among commercial and industrial concerns, liquid assets are equivalent to Current Assets (q.v.). Among banks, liquid assets are those which are immediately available as cash, or which can be quickly converted into cash, e. g., call loans, amounts due from banks, exchanges for clearing house, loans eligible for rediscount, and securities enjoying a ready and reliable market. They do not include time loans ineligible for rediscount, securities not enjoying a ready market, banking premises, etc.

LIQUIDATING MARKET

A market in which selling in volume occurs, whether as the result of a concerted movement to reduce prices thought to be inflated, or merely to take profits. As applied to stocks, the term refers in particular to the selling of long stock. (See Bear Market, Liquidation.)

LIQUIDATING VALUE

The net value realizable in liquidation of business or particular asset. In security analysis, the term is most often associated with fire and casualty insurance stocks, to indicate stockholders' equity, however, rather than true estimated value in liquidation. It is generally computed by taking capital, surplus (at market values for security holdings), voluntary reserves, and the equity in unearned premiums reserve. For fire insurance stocks, such equity in unearned premiums is generally taken as a flat 40%, although the actual realizable equity generally is larger. For casualty insurance stocks, the equity in unearned premiums is usually figured closer, depending on average loss ratios for the particular lines of insurance outstanding. The liquidating value is generally expressed on a per share basis on the common capital stock. (See Insurance Company Statements)

LIQUIDATION

This term has two meanings:

(1) Cash realization; the selling of holdings in stocks, bonds or commodities, either to take profits, or in anticipation of, or to prevent losses due to, lower prices. Liquidation may be forced or voluntary. Frequently, liquidation is referred to as extending over a period of time. In this sense, liquidation forms that part of the business cycle which is characterized chiefly by falling prices, business failures, and business inactivity. (See Business Cycle, Forced Liquidation.)

(2) The termination or winding up of a business by the conversion of its assets into cash, and distribution of the proceeds, first to the creditors in their order of preference (See Liabilities), and the remainder, if any, to the owners in proportion to their holdings.

LIQUIDATOR

A person appointed by a court or designated by statute to wind up the affairs of a business. The State Superintendent of Insurance or cognate official is designated by statute to liquidate the affairs of insurance companies, title and mortgage companies, etc. placed in liquidation. Banking statutes designate Receivers to wind up the affairs of closed banks. The Federal Deposit Insurance Corporation shall be appointed by the Comptroller of the Currency receiver for closed insured National banks or insured District of Columbia banks, and in addition, the corporation shall accept appointment as receiver for closed insured State banks if such appointment is tendered by the State banking authority and is authorized or permitted by State law. (See Liquidation.)

LIQUIDITY

A term referring to that condition of an individual or business wherein a high percentage of the assets can be quickly converted into cash without involving any considerable loss by accepting sacrifice prices. Liquidity implies a high degree of currentness and solvency in the equity sense, the current assets are well able to meet current liabilities as they mature. (See Financial Solvency, Working Capital.)

LIRA

See Foreign Moneys-Italy.

LIST

An expression used to refer to the total of securities traded in on a stock exchange; in other words, a short term for Listed Securities (q.v.).

LISTED SECURITIES

Securities which have been approved and admitted or listed on a stock exchange. Each stock exchange has certain rules which must be complied with before a security is admitted to trading, and usually a stock exchange is as exclusive in admitting stocks as it is members.

On the New York Stock Exchange a committee known as the "Committee on Stock List" acts upon all applications for listing, but its decisions are subject to review by the Board of Governors. A prerequisite to listing is registration with the Securities and Exchange Commission pursuant to the Securities and Exchange Act of 1934, such registration not becoming effective until the Stock Exchange has approved listing. There are three important tests for admission of new securities. In the first place, the corporation seeking to list its securities must be seasoned, i. e., must have been in operation over a sufficiently long period to have demonstrated its essential character, its earning capacity, and the moral integrity and business capacity of its management. The New York Stock Exchange is not a tryingout place for

new and untested securities. Secondly, the corporation's records and reports bearing upon its financial condition and earning power must be made public for the benefit of investors and speculators.

Corporations whose stocks or bonds are listed are required to publish their balance sheets, earning statements, announcements of directors' and dividend meetings and opening and closing of transfer books, and it is recommended that they make available to the public any additional information which might serve as a basis for the formulation of an intelligent opinion on the value of a security, e. g., current production rate, current sales, pending orders, new contracts, financing plans, etc.

Finally, the issue must be sufficiently large, widely held and traded in to facilitate a good market. No small or inconspicuous corporation, or one whose stock is closely held by relatively few individuals would be successful in having its stock admitted.

All securities listed on the New York Stock Exchange are fully listed, there having been no unlisted trading privileges for any securities thereon since 1910. The Committee on Stock List may list or admit to dealings on an "issued" or "when issued" basis, the following:

1. Direct obligations or obligations guaranteed as to principal or interest by the United States or any State or political subdivision thereof:

2. Direct obligations of any agency or instrumentality of the United States, or of any State or political subdivision thereof;

3. Securities of an issuer having securities already listed on the Exchange.

4. Certificates of deposit, rights to subscribe and other securities issued in exchange for or growing out of securities already listed on the Exchange.

The Committee on Stock List shall submit to the Board of Governors any application acceptable to the Committee for the listing or admission to dealings of a security which the Committee is not expressly authorized by the rules to list or admit to dealings, enumerated above.

The Committee on Stock List meets weekly to consider applications for listing. Four preliminary drafts of an application must be filed at least 12 days prior to the date set for consideration by the Committee. From these drafts, an application conforming to the requirements, signed by an executive officer of the applying corporation, voting trustees, or depository committees, and 14 printed or typewritten copies, must be filed with the Committee at least 6 days prior to the date set for consideration. Duplicate originals of the application are concurrently filed with the Securities and Exchange Commission. Usually, the registration becomes effective with the Securities and Exchange Commission 30 days after receipt of approval of listing application by the Stock Exchange.

Applications must be accompanied by the required papers and agreements, and by check or fee to be drawn to the order of the Treasurer of the New York Stock Exchange. In addition, companies making application for listing are required to pay the cost of printing. An application for listing Government, State, county, or municipal securities must be signed by a properly accredited official or by financial representatives, and be accompanied by the required papers.

Every application for an original listing of capital stock shall recite:

A. Name of company, where incorporated.

B. (1) Amount applied for (whether temporary or permanent certificates); (2) authorized issue.

C. (1) Date of charter; (2) duration.

D. (1) Whether holding or operating company; (2) name of controlling or guarantor company.

E. (1) Business; (2) special rights or privileges under charter or by-laws.

F. (1) Issues (by classes), dividend rate and par value; (2) total amount of each, authorized and issued, and reacquired; (3) increases and authority therefor, including (a) action by stockholders, (b) by directors, and (c) by public authorities, etc.; (4) amount unissued, (a) options or contracts on same, (b) specific reservation for conversion.

G. (1) Whether capital stock is fully paid; (2) non-assessable; (3) whether liability attaches to shareholders; (4) voting power.

H. If Preferred Stock: (1) whether cumulative or non-cumulative; (2) preferences, including (a) voting power; (b) dividends; (c) distribution of assets on dissolution or merger; (d) redemption; (e) convertability; (f) special provisions.

I. (1) Purpose of issue; (2) net proceeds to company if issued for cash; (3) application of proceeds; (4) amount issued for securities, contracts, property, etc., with description and disposition; (5) additional property to be acquired, with particulars as required by paragraph N below.

J. (1) History of corporation; (2) of predecessor companies or firms, with location and stock issues (by classes); (3) conditions leading to new organization.

K. Tabulated list of constituent, subsidiary, owned or controlled companies, showing (a) date of organization; (b) where incorporated; (c) duration of charter; (d) business; and (e) capital stock issues (by classes), par value, amount authorized, issued, owned by parent company.

L. (1) Mortgages and (2) other indebtedness, showing (a) date; (b) maturities; (c) interest rate; (d) convertability; (e) redemption by sinking fund or otherwise; (f) amount authorized; and (g) amount issued; (3) similar information regarding mortgage and other indebtedness of constituent, subsidiary, owned, or controlled companies; (4) voting power, if any, of trustee of mortgage or of holders of debt.

M. Other liabilities, joint and several, (1) guaranties; (2) leases; (3) traffic agreements; (4) trackage agreements; (5) rentals; (6) car trusts, etc; (7) terms of each, and provision for payment; (8) similar description of other agreements or easements; (9) similar information as to constituent, subsidiary, owned or controlled companies.

N. (1) Description, location, nature and acreage of property, (a) owned in fee; (b) controlled; (c) leased; (2) railroads, mileage completed, operated and contemplated; (3) equipment; (4) character of buildings and construction; (5) tabulated list of franchises showing (a) where granted; (b) date; (c) duration; (d) purpose; (6) timber, fuel or mining lands, water rights; (7) similar information as to constituent, subsidiary, owned or controlled companies.

O. Policy as to depreciation.

P. (1) Character and amount of annual output for preceding 5 years; (2) estimated output (character and amount) for current year; (3) number of employees.

Q. (1) Dividends paid or declared; (2) by predeces-

sor, and constituent, subsidiary, owned or controlled companies

R. (1) Opinion of counsel (not an officer or director of corporation) as to the legality of (a) organization; (b) authorization; (c) issue and validity of stock; (2) name of counsel rendering opinion.

S. Statement whether or not stock is registered under National Securities Act of 1933. (If not registered, legal opinion that registration is not required, must be stated.)

T. Description of all options granted by the company to purchase stock, including number of shares covered, terms, and time within which they may be exercised

U. Financial statements; (1) earnings for preceding 5 years, if available, with interest charges, depreciation and Federal taxes; (2) income and surplus account of recent date for at least 2 years if available; (3) balance sheets of same dates; (4) balance sheet giving effect to recent financing, if any; (5) similar accounts for predecessor, constituent, subsidiary, owned or controlled companies; (6) corporation consolidated within the year previous to date of application, income and surplus account,and balance sheet of all companies merged and balance sheet of applying corpcration; (7) if in hands of receiver within one year previous to date of application, (a) income account and balance sheet of receiver at time of discharge, if available; (b) balance sheet at close of receivership if available, and (c) balance sheet at date of reorganization.

V. Certificate of independent public accountants, qualified under the laws of some State or country, certifying as to the correctness of the balance sheet, income account and surplus statement, of financial statements for most recent fiscal year, and showing scope of audit and qualifications, if any, made by the accountants in respect thereto.

W. Agreements on the part of the corporation with the Stock Exchange, contained in parts F-12 to F-16 of the Directory and Guide. (These agreements are numerous, such as agreement to maintain separate transfer and registrar agents in the Borough of Manhattan of the City of New York, notification of the Exchange of dividend payments, redemptions, changes in capitalization or business, sending of financial statements to stockholders at least once a year and interim statements of earnings, etc.)

X. Fiscal year.

Y. Place and date of annual meeting.

Z. Location of principal and other offices.

ZZ. Names of (1) directors, classified, with addresses; (2) officers; (3) transfer agents, with addresses; (4) registrars, with addresses.

In addition to the above, applications from corporations owning or operating mines, and corporations which own or operate oil and gas wells must submit additional detailed information peculiar to their operations. There are special requirements for listing securities of investment trusts, and "American Shares" representing foreign stocks, and foreign bonds.

In addition to the copies of the application for listing, the following papers must be filed, in the case of stocks:

(1) 3 copies of the charter, with amendments to date, one copy attested by proper public authority.

(2) 3 copies of by-laws, with amendments to date, one copy attested by an executive officer of the corporation.

(3) 3 copies of leases, franchises, easements and special agreements, one copy of which attested by an executive officer of the corporation.

(4) 1 copy of resolutions of stockholders and directors, and copy of proper public authority authorizing issue, if attested by an executive officer of the corporation.

(5) 1 copy of resolutions of stockholders or directors, and copy of proper public authority, authorizing issue of stock or conversion of other securities, attested by an executive officer of the corporation.

(6) 1 copy of the resolutions of stockholders or directors, directing special reservation of authorized stock for conversion, attested by an executive officer of the corporation.

(7) 1 copy of resolutions of stockholders, board of directors, or executive committee, attested by an executive officer of the corporation, authorizing, by name, the officer to appear for listing securities.

(8) 1 copy of resolution appointing transfer agent and registrar, attested by an executive officer of the corporation.

(9) Opinion of counsel (not an officer or director of the corporation) as to legality of (a) organization; (b) authorization; (c) issue; and (d) validity of securities.

The Committee on Stock List will not accept the opinion of an officer or director of an applying corporation, nor of a firm in which the officer or director is a member or counsel on any legal question affecting the corporation; nor will it accept the opinion of an officer or director of a guarantor corporation nor of a firm in which the officer or director is a member, on any legal question affecting the issuance of guaranteed securities.

(10) Opinion of counsel to the effect that registration under the National Securities Act of 1933 is not required (where the securities are not registered).

(11) 15 copies of detailed distribution of securities, one certified.

(12) Certificate of transfer agent of amount of securities issued at date of application.

(13) Certificate of registrar of amount of securities registered at date of application.

(14) Notice of availability of security for trading (issues, certificates, transfers and exchanges).

(15) Report of qualified engineer, covering actual physical condition of property at recent date.

(16) Map of property and contemplated extensions.

(17) Specimens of all securities to be listed.

(18) Questionnaire. (This contains a series of questions, establishing among other things, the relationship to the corporation of the person or persons applying for listing.)

(19) Certified copy of income accounts, surplus accounts, and balance sheets contained in the application.

(20) Agreements. (As specified in F-12 to F-16 of the Directory and Guide.)

(21) Notice from company as to amount of security taken by underwriters.

(22) Loan or security agreement (when required).

(23) Certified copy of printed circular issued by bankers describing the security, if available.

(24) Copy of prospectus issued under National Securities Act of 1933, if available.

(25) At time of filing of original application, a

letter containing the following information:

(a) Volume of trading (total number of shares traded for at least a 2-week period).
(b) State where stock is traded (give name or names of Exchanges, or, if not listed, state so).
(c) State price (bid and offer--also high and low for year), and
(d) Name bankers (if none, state so).

A feature in the list of requirements is the rules governing transfer and registry of listed issues. The Stock Exchange requires each company desiring to list its securities on the Exchange to maintain in the Borough of Manhattan, New York City, two offices or agencies, one for the transfer and the other for the registry of the securities in question. A corporation may prefer to maintain its own transfer office, or it may appoint a trust company to perform the work for it. But no corporation can act as its own registrar, nor can the same trust company act as both transfer agent and registrar for the same security issue. Thus the registrar acts as a check on the transfer office or transfer agent, and eliminates the danger of overissuance of stocks or bonds. The registrar is in fact the representative o. the Stock Exchange, and is by virtue of the listing requirements under the Exchange's control. These regulations of the Exchange, aimed at the old evil of overissuing corporate securities, have proved so effective that the possibility of danger from this source has been very largely forgotten by the general public.

The main body of the list of requirements is devoted to eliciting essential information regarding the applicant corporation which the investor must have to form for himself an adequate opinion of the proper investment value of its securities. The information sought places particular stress on the capital structure of the corporation, and the exact relationship in this structure of the security issue to be listed, the company's assets and liabilities, its earnings and dividend payments, past and present, and many other such vital elements in its business. The specific questions on these and other such matters which the Exchange asks, have been formulated after the long experience of the New York Stock Exchange and its Board of Governors with securities and security marketing.

Certain erroneous impressions may be current with regard to the listing of securities. Listing is no guarantee of the worth of a security, e. g., that it is safe or will not fluctuate in value. It does not mean that such stocks will bear dividends, maintain their dividend rate, or not decline in value. Neither does it mean that bonds will certainly be paid, or that interest will not be defaulted. The Stock Exchange assumes no responsibility and affords no guaranty.

The advantages of listing, however, are important. The requirement of the publication of reports of financial condition and of earnings increases publicity and therefore permits accurate knowledge of equities in earnings and of business conditions leading to proper estimates of security values. It prevents a declaration of secret dividends, since due notice must be given for all dividend payments, new stock issues, etc. It also prevents forgeries and over-issue of stock. The Stock Exchange does guarantee the physical genuineness of the securities traded in and forces machinery upon corporations to prevent frauds in false certificates and over-issues. Thus, certificates must be engraved on a tested kind of safety paper approved by the Exchange and each corporation must maintain a separate agent who is responsible for transfers, and a registrar who is responsible for over-issue

Finally, listing increases the marketability and collateral value of securities, making it easier to borrow on them and giving them a greater hypothecary value. Only listed securities usually are required as collateral.

Through the requirements for registration under the Securities and Exchange Act of 1934, which require a high degree of detail and disclosure, listing requirements for national securities exchanges have become well standardized.

(See National Securities Exchanges, New York Stock Exchange, Securities Act of 1933, Securities and Exchange Act of 1934.)

LISTING

The admission of a security full listing on a stock exchange, as compared with unlisted trading privileges allowed for non-fully listed securities by some stock exchanges. (See Listed Securities.)

LITTLE BOARD

See Board.

LIVE STOCK LOANS

See Cattle Loans.

LIVING TRUST

A form of trust by which the person who creates it (known as the trustor, donor, creator, or grantor), transfers title to certain property (securities, real estate, etc.) to a trustee with instructions to apply the income according to the terms of the trust agreement. The agreement may call for reinvestment of the income, or for a distribution of the income in whole or in part to designated beneficiaries, and often to the trustor himself. The trustee renders a statement of account to the trustor at stated intervals.

This form of trust, also known as an "inter vivos" trust or as a voluntary trust, differs from the testamentary trust in that it becomes operative during the lifetime of the creator. It may be so drawn as to render unnecessary the making of a will, or in case only a part of the creator's property is placed in trust, his will need dispose only of the remainder. Special kinds of living trusts are: retirement trusts, life insurance trusts, pension and profit-sharing trusts, etc.

Living trusts may be made revocable and subject to change, or irrevocable and not subject to change, even by the creator himself. If irrevocable, the property transferred becomes subject to the Federal gift tax. If revocable, and other incidents of ownership are retained by the settlor, the property will be subject to the Federal estate tax at death of the settlor as part of his estate. These trusts make it possible for persons of means to retire from the active management of their businesses by being relieved of all details in connection with the administration of the affairs of their property. Thus, the trustee becomes bound to maintain the property intact, to collect all rents, interest, dividends, and profits, and to remit the proceeds to the beneficiary, wherever he may reside. The most usual sales arguments advanced in favor of the voluntary trust are the following:

1. That it may save taxes. This is a highly technical and empirical subject, depending on the tax position,

from the standpoint of gift taxes and estate and inheritance taxes, of the particular estate.

2. That it gives the grantor an opportunity to see the trust in operation during his lifetime. This argument implies that if the voluntary trust proves satisfactory it can be left unchanged in details and allowed to operate similarly after the grantor's death, and if unsatisfactory it can presumably be changed or revoked. The best type of voluntary trust for older settlors is one irrevocable and non-amendable, to which this implication does not apply. The amendable type of trust could be changed and the revocable type could be terminated and be succeeded by an altered trust during the grantor's lifetime, and is usually preferred for younger settlors during whose lives conditions might change.

3. That the voluntary trust offers, through the ability of the corporate fiduciary as trustee, expert management of the investments.

The risks to which an estate is subject do not begin at the owner's death. The money which the owner has today, and of which he has settled the future disposition by will, may be gone before death of the testator and probate of the will. Thus, assurance of provision for beneficiaries, without the danger that the loss of the settlor's fortune during his remaining lifetime would wipe out such provision, is provided effectively and surely by the living trust.

(See Insurance Trust, Trusts.)

LLOYD'S

An association of English insurance underwriters, known as "Underwriters at Lloyd's", the oldest insurance organization in existence.

Starting in the seventeenth century as a small market in Edward Lloyd's coffee house, it has now become a powerful insurance association (the most famous in the world) whose members underwrite as individuals under the supervision of the Governing Committee. While this institution, now known all over the world, is particularly known for the underwriting of marine risks and such business as is incidental thereto, e. g., publication of Lloyd's Register, there is probably no class of calculable risk, however fantastic, which these underwriters will not insure. Besides writing policies, the house has agents all over the world collecting information, aiding ships in distress, salvaging damaged goods, and adjusting insurance claims.

Each member of Lloyd's is required to deposit with the Governing Committee a minimum of £ 5,000 and substantially more in most cases according to the extent of business underwritten. In addition, individual deposits or guarantees, currently aggregating over £ 16,000,000, are required for non-marine business by the Board of Trade pursuant to act of Parliament. Each Lloyd's underwriter is subject to unlimited personal liability for his underwriting obligations.

For the protection of American underwriting liabilities, a trust fund of approximately $40,000,000 was deposited August 28, 1939 with an American trust company to cover any claims on American policies which were not met within 30 days. In addition, Underwriters at Lloyd's are directly entered to do business in Illinois, where trust deposits of $2,350,000 and non-trust funds of over $2,200,000 are available for protection of policies, and in Kentucky, where deposits of $350,000 are available.

The chairman of Lloyd's attributes its high prestige to four causes: (1) its policies are first-class security; (2) reputation which has been gained for prompt, just and liberal settlement of all straight-forward claims; (3) the market is readily adaptable to new risks and the changing needs and conditions of business, and (4) is the center of the finest shipping news service that the world has ever possessed, and is connected by tradition and by name with great institution known as Lloyd's Registry.

Lloyd's Register has become the recognized information bureau for all the shipping of the world. This register contains a list of the ships of all nations, giving their names, and such descriptive details as length, breadth, depth, displacement, cargo space, horsepower, country of registry, etc.

Lloyd's now have a representative or agent in every principal seaport of the world who forwards information continually in regard to vessel movements, disasters, and storms, to London. These agents do not themselves place insurance, but are representatives of Lloyd's organization only, and are appointed to look after Lloyd's interests, collect information, assist in the adjusting or appraising of losses, etc.

LOAD

This term has two meanings:

(1) In connection with open-end investment company issues, the load is the difference between the selling price of the investment company shares, and the net asset value of the underlying securities. It represents the cost of a number of factors, e. g., organization and distribution costs (including profit), trustee's fees, brokerage, cost of mailing dividends, etc. The load normally ranges from 6 per cent. to 8 3/4 per cent. of net asset value.

(2) In connection with utility properties, the load represents the use of the facilities of the property. An electric utility for example may have an available capacity of 1,000,000 KW. The load placed upon the capacity will vary according to the use of electricity by the utility's customers. The maximum use at a given time is called the peak load. In the above case, if 600,000 KW are used, the load is 60 per cent. of capacity. A utility must have capacity to supply peak load requirements both on a diurnal and seasonal basis.

LOAD UP

An expression to indicate the purchase of a security or commodity to the limit of one's financial capacity for speculative purposes. To be loaded up means to be "long" of an undesirable security or commodity which cannot be easily disposed of except at a loss.

LOAN

See Loans.

LOAN AND TRUST COMPANY

See Trust Company.

LOAN CAPITAL

That portion of the capital of a corporation furnished by long and short term creditors, e. g., bondholders, noteholders, banks, etc., evidenced by instruments having definite maturities, as distinguished from share capital which is contributed by the stockholders.

LOAN CERTIFICATES

See Clearing House Loan Certificates.

LOAN CONTRACT

See General Loan and Collateral Agreement.

LOAN CROWD

An expression used to refer to those brokers, members of a stock exchange, who desire either to borrow or lend stocks, and who usually meet at a designated spot of the exchange. (See Borrowed Stocks, Short Sale.)

LOAN DEPARTMENT

The department of a bank, which under the direction of the loan officers, executes the clerical details in connection with loan transactions. This involves the preparation of notes for signature, examination of collateral or guaranty contracts, and the proper keeping of the loan records. Loans usually are recorded on a card, and in the loan register, loan ledger, maturity tickler, and rate sheet. The loan department is also charged with seeing that the collateral loans are adequately margined, that notes are presented for collection on the date of maturity, that collateral comparisons are made periodically, that interest statements are promptly forwarded, and with making substitutions in collateral at the request of stock exchange borrowers.

LOAN LEDGER

See Liability Ledger.

LOAN MARKET

See Call Money Market, Money Market, Rediscount Rate.

LOAN RATES

See Call Money Market, Money Market, Rediscount Rates.

LOAN REGISTER

A journal or register in which time loans are entered in the order in which they are granted. Since time loans usually are consecutively numbered, entries are in numerical as well as chronological order. This register is an original entry record and contains the complete details of the terms of each loan. (See Bills Discounted Register.)

LOANING RATES

See Lending Rate.

LOANS

The letting out or renting of sums of money by a lender to a borrower to be repaid with or without interest. Long term and intermediate loans covering a period of over one year, are usually evidenced by bonds, debentures, mortgages, deeds of trust, or certificates of indebtedness. Short term bank loans are evidenced by notes, bills of exchange, acceptances, and loan and collateral contracts.

There are numerous possible classifications of bank loans, some of the most important of which are as follows:

1. According to maturity.

(a) Demand loans, terminable at the option of either the lender or borrower.

(b) Time loans, which have a fixed or determinable maturity.

2. According to character of borrower.

(a) Commercial loans—made to business concerns (producers, manufacturers, wholesalers, jobbers and retailers), to furnish working capital for financing the purchase of commodities in the various stages of production and distribution. These loans are usually seasonable or automatic in character, and are required only temporarily. Commercial loans are regarded as self-liquidating for the reason that they are discharged through the proceeds of sale of the commodities financed. Such loans, therefore, usually represent investments in current or quick assets, which in the ordinary course of business, are quickly converted into cash. Short-term loans, usually ranging from 30 days to six months, the majority having maturities of three and four months, constitute the majority of the assets of a commercial bank. In addition, in recent decades commercial banks have developed substantial volume in term loans, representing advances for terms up to 10 years usually, repayable serially, for working capital, refunding or other long term purposes, in competition with investment bankers and life insurance companies active in this field.

(b) Stock exchange or brokers' loans—made to stock exchange brokers upon stock exchange collateral, amply secured in accordance with regulations of the Board of Governors of the Federal Reserve System, who in turn lend the proceeds to speculators operating with margin accounts.

(c) Speculative loans—made to individuals for trading or speculating in stocks, bonds, or commodities. Such loans are collateraled with ample margin and in accordance with margin regulations.

(d) Farm or farm mortgage loans made to farmers to finance the purchase of improved farm land and equipment, or to pay off existing indebtedness.

(e) Agricultural loans—made to farmers for the purpose of financing the planting or harvesting of crops, or the raising and marketing of live stock. Due to the time involved in these pursuits, these loans are of longer maturities than commercial loans. The Federal Reserve Act now permits loans made upon agricultural paper, with a maturity not exceeding nine months (six months before the Agricultural Credit Act of 1923 was passed), to be eligible for rediscount at the Federal Reserve banks. There are several sub-divisions of agricultural loans, such as cattle loans, cotton loans, grain loans, etc.

(f) Real estate or mortgage loans—made to buyers of real estate on a long term basis. Formerly, under the National Bank Act, National banks were not allowed to make loans upon real estate. Lending upon real estate mortgage security was regarded as a function of savings banks, since their deposits are accepted on a time basis and the right of 30 to 60 days' notice for withdrawal of deposits may be exercised when necessary. By amendments of the Federal Reserve Act (Section 24), any National bank may make real estate loans secured by first liens upon improved real estate, including improved farm land and improved business and residential properties. Such loans shall not exceed 50% of the appraised value of the real estate offered as security and shall not be made for a term longer than 5 years, except that: (1) any such loan may be made in an amount not exceeding 60% of the appraised value and for a term not longer than 10 years if the loans is secured by an amortized mortgage or other instrument under whose terms the instalments are sufficient to amortize 40% or

more of the principal within a period of not more than 10 years; and (2) these limitations shall not apply to real estate loans insured under Title II of the National Housing Act. No National bank shall make such loans in an aggregate sum in excess of its capital stock paid in and unimpaired plus unimpaired surplus fund, or in excess of 60% of its time and savings deposits, whichever is the greater

(g) Consumption loans—The loans above referred to are made for productive purposes, i. e., for the furtherance of productive enterprise. When loans are made for the purpose of purchasing goods destined for immediate consumption, e. g., pleasure automobiles, furniture, vacation trips, etc., they are consumption loans rather than production loans. Such loans are not self-liquidating but in recent years, commercial banks have entered the field of personal and consumers loans in substantial volume.

3. According to security

(a) With collateral security, i. e., supported by valuable property which is transferable and has a ready and reliable market, e. g., bonds, stocks, bills of lading, warehouse receipts, mortgages, real estate, etc.

(b) With personal security, as evidenced by the indorsement or guaranty of a name or names other than the maker of the note. Such loans are known as two-name, three-name paper, etc. (See Guaranty.)

(c) Without either collateral or personal security.

4. According to obligation or number of names responsible for payment.

(a) One-name paper, for which only one party is responsible for payment.

(b) Two-name paper, for which two names, either as joint makers or one party as indorser, guarantor or accommodation party, are responsible for payment. Trade and bankers' acceptances are of necessity at least two-name paper, the acceptor becoming the maker, and the payer (drawer), the indorser. For the reason that acceptances are at least two-name paper, they are preferred as investments over single name paper.

(c) Three-name paper, etc., in which three names are responsible for payment. Either notes or drafts may be signed by three or even more parties who are responsible for payment.

5. According to whether interest is paid at the time the note is made or at maturity.

(a) Loans on which interest is paid at maturity. Interest on demand loans usually is paid monthly, quarterly, or upon retirement. Interest on time loans is paid quarterly, semi-annually, or at maturity.

(b) Discounts—on which the interest is paid in advance at the time the loan is made. The distinction between loans and discounts is merely one of difference in the time of payment, a discount being collected in advance at the time the advance is made.

Loans may also be classified accordingto: (1) rate of interest; (2) location of borrower; (3) business of the borrower, and (4) whether eligible for re-discount with a Federal Reserve Bank. (See Agricultural Paper, Amortization Loans, Bills Discounted, Call Money Market, Cattle Loans, Collateral, Commercial Paper, Credit, Discount, Eligibility, Farm Credits Act, Farm Mortgages, Intermediate Credit Banks, Limitations on Bank Loans, Line of Credit, Mortgage Notes, Open Market Purchases, Personal Loans, Small Loans, Term Loans.)

LOANS FOR ACCOUNT OF OTHERS

Loans to brokers and dealers by others than banks, handled by banks for the account of these "others", usually non-banking corporations seeking to lend money profitabiy Because such lenders were beyond direct control of the Federal Reserve System, they were importantly responsible for the inflation in security loans in the late '20s. Loans to brokers and dealers by other than banking lenders are estimated to have reached a peak of $6.4 billion in October, 1929, compared with $3.7 billion in October, 1928. Such loans have been virtually abolished by the Banking Act of 1933 and the Securities Exchange Act of 1934. (See Brokers' Loans.)

LOANS, PARTICIPATION IN

See Participation Loans

LOGARITHMS

A mathematical system of great usefulness in shortening long multiplication and division. A logarithm is defined as the exponent of the power necessary to raise a fixed number (the base) to produce a given number. Thus, the logarithm of 100 is 2, because 10 raised to the second power (10^2) equals 100. Logarithms of numbers between 1 and 10 consist of decimals; of numbers between 10 and 100, the integer 1 and a decimal; of numbers between 100 and 1,000, the integer 2 and a decimal, etc. By recourse to a table of logarithms and formula, the most accurate bonds yields to maturity may be computed. (See Yield.)

LOMBARD LOANS

A financial term used in England and certain European countries to designate loans secured by bonds and shares. The term derives its name from Lombard Street, the Wall Street of London, but is also used in other countries. The term usually refers to collateral loans made by the central bank to commercial banks. The term Lombard Loans designates loans on securities, similar to what are called "collateral" or "street" loans in the United States, except that Lombard Loans are time loans while in the United States these loans are usually demand loans. Lombard Loans are at somewhat higher interest rates than commercial loans and are limited in time-duration by the policy of the central bank in regard to time-duration of its discounts. The term is less strictly used to designate collateral loans generally, without reference to its technical central reserve bank origin. (See Bank of England.)

LOMBARD STREET

An expression used to denote financial London, corresponding to the use of Wall Street, which refers to financial New York. As described by one English writer, Lombard Street represents, "the clearing banks of London, the discount houses, the bill brokers, and all the moneyed interests."

LONDON EQUIVALENT

Under normal conditions, the price at which a security in London must be quoted to equal the New York price, being greater or less, depending upon the rate of exchange, cost of shipment, loss of interest, etc.

Free adjustment of London and New York security prices, however, has been impeded in recent decades by transfer regulations and exchange restrictions. Thus, in recent years sterling securities have been selling in the New York market at sharp price concessions because any proceeds from sale of such securities are

blocked and can only be used for reinvestment in certain designated securities. On the other hand, dividends and interest have been convertible lawfully into dollars at full official sterling rate of exchange.

Latest transfer regulations of the Bank of England curb drastically the freedom of foreign investors to: (1) switch from one sterling security to another; and (2) to sell their holdings in a free market such as New York. The new restrictions (1) prohibit the issuance of certificates for export of sterling-bearer securities; (2) ban the transfer of ownership of a bearer security from the national of one foreign country to the national of another; (3) divide all sterling securities into 13 different groups and require that proceeds from the sale of securities in any one group can be used only for reinvestment in securities of the same group; (4) further require that if the equity behind the sterling security is located in a foreign country, the switching must be limited to a like type of equity of the same nation.

(See Arbitrage, Arbitration of Exchange, Back Spread, Commercial Parities.)

LONDON EXCHANGE

See Sterling Exchange.

LONDON MONEY MARKET

In London there is no such thing as brokers' loans as understood in the United States. There is no call money market against brokers' loans. When one talks of the London money market, reference is had to the bill market, and the market for Government securities. The bill market corresponds to the bankers' acceptance market in this country, and through buying and selling of Government securities, the Bank of England directly influences money market conditions, just as the Federal Reserve System does in the United States through open market operations. The London Stock Exchange houses get their accommodation for carrying stocks from their own bankers. The charge is generally 1% above the Bank of England's rediscount rate. The rate for carrying the stock is fixed every two weeks and is not subject to change unless in the interim there has been a change in the Bank of England rediscount rate. Collateral loans of the London Stock Exchange operators are generally of no direct effect on money market conditions, except in times of much speculation in securities and tight money market conditions.

LONDON RATES

Rates of exchange for the different classes of sterling bills (cables, checks, 30, 60, and 90 day bills), etc., as quoted in London.

LONDON STOCK EXCHANGE

The most important European stock exchange, and one of the best-known markets in the world. In July, 1773, it was formally organized as The Stock Exchange after informal development since the reign of William III, in the coffee houses in Change Alley, Jonathan's and Garraway's, in the Royal Exchange and offices of the East India Company and Hudson's Bay Company, and New Jonathan's. The New Jonathan's building was subsequently outgrown, and a new building was opened in March, 1802 near the Bank of England.

In 1853, the Stock Exchange was rebuilt and the membership increased to 2,000. Growth necessitated extension in 1881 when the building was enlarged to accommodate 1,500 more members. At the present time, the total membership is about 4,000 but it is theoretically unlimited. Admission is carefully restricted, and membership is not for life but subject to renewal each year. Membership may be gained by ownership of at least one share of the capital stock and payment of fees totaling £ 1,150, and obtaining the personal surety of three members for four years for the sum of £ 500 each. Those who have served four years' apprenticeship as clerks may become candidates for admission on reduced fees. Each member may have one authorized clerk, two unauthorized clerks, and two settling room clerks. An authorized clerk may transact business in the Exchange in behalf of the member by whom he is employed, but unauthorized clerks have only a right to enter the house but not to transact business within it.

The London Stock Exchange is in reality a building owned by certain proprietors and used for the purpose of carrying on a market in bonds and shares. It is not regulated in any manner by charter or statute, the city's authority over brokers having ended with the passage of an "Act for the Relief of Brokers for the City of London." The capital of this association of proprietors is £ 720,000 divided into 20,000 shares, most of which are owned by members, and which is listed on the Exchange itself. In addition, there is an issue of £ 250,000 in Debentures, also listed on the Exchange. No one may own more than 200 shares of the stock. The shares carry unlimited liability, and are assessable should additional capital be needed, although not more than £ 2 per share may be assessed in any one year. The administration of the Stock Exchange is vested in two bodies. They are the Managers and the Committee for General Purposes. The Committee has absolute control over the methods of business and admission of new members.

Under reorganization plan proposed in 1947, a single Council will have charge, first steps toward joint control having been taken in 1945, when a Council composed of Trustees and members of the Committee for General Purposes had been formed. The new Council will have sole control of the Stock Exchange. Present capital stock will be converted into Annuities, carrying 4% interest rate, redeemable after 5 years in whole or in part at £ 100 per annum, with repayment of the Annuities expected to be repaid over a period of about 35 years. The Annuities will be without voting power, and holders will not have the privilege of attending meetings, except in the case of meetings called to vary their rights. Reorganization plan also calls for the rebuilding of the building and increasing facilities.

Listing requirements differ from those of the New York Stock Exchange. The Committee examines the affairs of the applicant company and inquires into the personnel behind it. Past earnings are not required. Stocks and bonds of foreign companies may be listed to official quotation provided they are listed on a stock exchange in their own country. There is no "curb" exchange in London. London Stock Exchange members are forbidden to advertise, even to the name and address of the broker. Branch offices are prohibited. Offices

are required to be in the immediate vicinity of the Exchange.

Business on the Exchange is divided into "markets," each composed of a number of jobbers and brokers who specialize in securities of a certain class. Each market has its own separate position on the floor and a broker wishing to buy or sell securities goes to the place where that market is held. The principal markets are. Consols, British Railways, Foreign Stocks and Shares, American Shares and Bonds, Indian Railways, Trunk and Colonial, South American Railways, Banks, Nitrates, Rubbers, and Mining Shares. Underwriters of new issues utilize the Exchange to establish a market for new issues, thus facilitating sale and marketability.

Publicity is lacking as compared with American exchanges, although there is the "Daily Official List," published under authority of the committee at about 5 p. m. each evening. Neither the volume of transactions nor total market value of securities is obtainable. The committee does not accept any responsibility for the status of shares and stocks quoted. There is no ticker service.

Members of the exchange are of two classes, Brokers and Jobbers. The regulations provide that (1) no member shall carry on business both as broker and jobber, (2) no partnerships between brokers and jobbers shall be created, and (3) no member shall change his status from broker to jobber or vice versa without first giving a month's notice to the committee. No person is eligible for membership who is engaged as principal or employee in any other business, or whose wife is so engaged.

Brokers deal with the outside public, and execute their clients' orders to buy and sell with the jobbers who are middlemen between those brokers who have securities to buy and those who have them to sell. The broker's compensation is the commission charged for executing the order, while the jobber's profit consists of the difference between the buying and selling prices. Jobbers are prohibited from dealing with the public.

On receiving an order from a client, the broker buys or sells from a jobber, as the case may be. Unless the client's Limit (q.v.) can be met, however, the order cannot be executed. If the order is executed, the broker forwards a contract note to the client in which the amount due and the settlement day are indicated.

The London Stock Exchange operates on a periodic instead of a daily settlement plan. There are two settlements per month, one near the middle, and the other near the end, of the month. All transactions within the period are to be settled at the next settlement day. There is some business done on a cash and immediate delivery basis, as on the New York Stock Exchange. If a client does not wish to complete a purchase on the settlement day, his broker may arrange to carry payment over to the following settlement day. But for this service the client pays Contango (q.v.)

For the method of settlement, see Settlement Days.

LONG

A buyer or holder of stocks or bonds, usually on margin. One is "long" of a security when he owns more than he has contracts to deliver. The term is the opposite of Short (q.v.). When bulls have been buying they are long of the market or long of stock, and are those who have bought in expectation of an advance in prices. Long stock is held by bulls in distinction to short stock needed by bears. Those who are long of stock constitute the long interest in the market.

LONG ACCOUNT

First read Long.

A term meaning the same as Long Interest (q.v.), which may refer to one security, or to the general market, and means the aggregate of securities purchased or held, usually on margin, in expectation of a rise.

LONG BILL (DRAFT)

A long-term bill; a bill of exchange drawn at say, 30 days' sight, or more. Long bills are usually drawn from sixty to ninety days after sight, and in Far Eastern shipments from four to six months after sight. (See Foreign Bills of Exchange.)

LONG-DATED BILL

See Long Bill.

LONG INTEREST

A term referring to the collective speculative ownership of a particular stock, or stocks in general; the aggregate holdings of the bull speculators. (See Long.)

LONG MARKET

An over-bought market. (See Over-bought.)

LONG OF EXCHANGE

To hold more exchange on a given country than one has sold.

LONG OF THE MARKET

See Long.

LONG PULL

An expression to denote the purchase or sale of a security with full expectation of holding it for a considerable period of time before a profit can be realized. A speculative commitment made with the realization that the position must be maintained for a relatively long period, and is to be distinguished from commitments made "for a turn." Thus a security is said to be a purchase or a sale for the long pull. Speculators for the long pull naturally anticipate a larger profit on a single transaction than those who buy or sell "for a turn."

LONG RATE

This term has two meanings:

(1) In foreign exchange, the rate at which long bills (drawn at 30 days' sight or more) and payable in another country, will be bought by the quoting bank or foreign exchange broker. Long rates are usually quoted for 30, 60 and 90 day bills, and are to be distinguished from the rate for cables, checks (demand drafts) and short bills. The long rate is determined as follows: The check rate is the basic rate. To this should be subtracted interest at the discount rate abroad for the period of the tenor, and then add the necessary revenue stamps, correspondent's collection charge, etc. This result is subject to further slight modification under exceptionally heavy or slack demand for the particular class of bill.

(2) In fire insurance, a rate made for a premium covering a policy to remain in force for more than one year. Thus a long rate is given a three year policy,

which is twice that of the annual rate. The rate for a five year policy is three times the annual rate.

LONG SIDE

See Long Interest.

LONG STERLING

Time bills of exchange drawn on London at 30 days' sight or more. (See Long Bills.)

LONG STOCK

See Long.

LOS ANGELES STOCK EXCHANGE

Founded in 1899, the Los Angeles Stock Exchange is one of the 17 regional securities exchanges registered under the Securities Exchange Act of 1934. There are 49 member firms, and standing committees include Admissions, Business Conduct and Arbitration, Floor Trading, Auditing, Clearings, Stock List, and Member Firms. Trading hours afford 2 1/2 hours extra trading time after the New York close.

For the fiscal year ended June 30, 1947, the Securities and Exchange Commission reports that total market value of sales effected on the Los Angeles Stock Exchange was $104,406,000, consisting of $103,810,000 in stocks (9,989,000 shares) and $596,000 volume in rights and warrants (414,000). Total listings aggregate 212 issues, of which 129 issues are registered, 82 issues admitted to unlisted trading privileges, and 1 issue temporarily exempt from registration. Over 86% of these issues were traded on one or more other securities exchanges. Bond issues listed totaled 6, all traded on one or more other securities exchanges.

(See National Securities Exchanges.)

LOSSES

The chief losses to which a bank is subject are: (1) bad loans and investments, (2) cashing forged, altered, or stop payment checks, (3) accepting counterfeits, (4) defalcations or thefts by dishonest employees, and (5) trading losses in foreign exchange or in securities. Some of these losses can be insured against. (See Bad Debts.)

LOST BANK BOOK

See Lost Pass Book.

LOST BONDS

See Care of Securities.

LOST PASS BOOK

The loss of a pass book for a commercial account is of no serious consequence since the pass book is only a memorandum of deposits. It is neither a book of original entry nor a statement of account, and if lost, cannot be used by another person for making withdrawals. In checking or commercial accounts the deposit slip is the important document and becomes the original entry record.

Among savings banks, however, the pass book is an important instrument, being at once a contract, and the only means by which the depositor makes both deposits and withdrawals. In New York savings bank practice, "if a pass brook is lost, the depositor should immediately notify the bank and if, after a reasonable time, the book is not found and the balance therein is not over $10.00, a receipt shall be taken for the balance, stating that the pass book is lost. If the balance due on the book is more than $10.00, and not exceeding $50.00, the depositor shall make an affidavit as to the loss of the book, and give a receipt for the balance. If the balance due is more than $50.00, the depositor shall execute to the bank a bond of indemnity for twice the amount of said value with sureties to be approved by officers of the bank. In all cases of lost books the account shall be closed and the balance, if not withdrawn, shall be transferred to a new account under another number.

"If a savings bank book be accidentally destroyed or lost and the owner makes an affidavit to that effect, and of its circumstances, and gives a receipt for money drawn on such account, such money will be paid, unless the case be such as to afford reasonable ground of suspicion or fraud. In all cases of loss or destruction of savings bank books, any officer of the bank may require a bond with sufficient sureties conditioned to indemnify the savings bank from loss by reason of making such payments, before the same shall be made" (Kniffin, W. H., Jr.: The Savings Bank and Its Practical Work).

Most New York City savings banks, however, merely require that upon identification, with proof of loss satisfactory to the bank, payments may be made, upon proper receipts therefor, of balances due on such accounts in accordance with the books of the bank, and such accounts closed. The officials of the bank may require that such loss be advertised in a newspaper circulating in New York City and may further require that 30 days shall elapse thereafter before such payments be made.

(See Pass Book.)

LOST STOCK CERTIFICATES

See Care of Securities.

LOTTERY BONDS

Bonds which may be called by lottery for redemption prior to maturity, for which the holder is paid in addition to the principal and interest a substantial cash bounty much larger than the ordinary small premium involved in callable bonds. Lottery bonds bear definite numbers and certain numbers are selected for repayment at specified lottery premiums each year, thus introducing the gambling feature which makes them attractive to a certain class of investors. Advertisements of the sale of lottery bonds are prohibited from the United States mails and shipments prohibited from interstate commerce. Lottery bonds cannot, therefore, be marketed in this country, although they have been common among French and Belgian internal municipal issues and were important in Russian Government financing during Czarist regime.

LOUIS D'OR

A gold coin of France, the 20-franc piece. International currency unit of France is the franc (see Foreign Moneys--France).

MACE

A Chinese weight and money of account equal to 1/10th of a tael, which in turn is a Chinese money of account, equal to the value of a tael of silver. International currency unit of China is the national dollar, consisting of 100 cents. Because of rampant inflation, the national dollar is currently (1948) quoted at nominal figures in relation to the American dollar.

(See Foreign Moneys--China.)

MacMILLAN COMMITTEE

A committee, with the full title of Committee on Finance and Industry, appointed by the British Government on November 5, 1929, composed of leading and distinguished experts in banking and finance, and headed by Lord MacMillan, "to inquire into banking, and finance and credit, paying regard to the factors both internal and international which govern their operation, and to make recommendations calculated to enable these agencies to promote the development of trade and commerce and the employment of labor."

One of the findings of this committee, which submitted its report in mid-Summer, 1931, was that the gold reserve of the Bank of England should be not less than £ 150,000,000, compared with gold reserves reported at the close of August, 1931 of some £ 134,000,000. On Sept. 21, 1931, England went off gold when the Bank of England was relieved of the obligation to sell gold at fixed statutory price.

(See Bank of England, Gold Standard.)

MAIL PAYMENT

A means sometimes employed in remitting small sums of money abroad, differing in no essential respect from remitting by means of check. For example, suppose "A" of New York wishes to remit $100 worth of francs to "B" in Paris. "A" would apply to his bank in New York to make payment to "B" in Paris, requesting the bank to charge his account for the amount and costs. The bank then would ascertain the current rate for francs and compute the number of francs that $100 would buy. Supposing the rate to be 0.475 cents,21,052.6 francs could be purchased for $100. To this, would be added cost of postage.

Because mail payment remittances are for small amounts, rates are somewhat higher than for checks. When mail payments are made in dollars, a small commission, usually 1/4 per cent, is charged in addition to postage. The issuing bank then writes to its Paris correspondent asking it to pay "B" of Paris 21,052.6 francs and to charge its account therefor. The Paris correspondent then makes payment by means of the most convenient method (a) sending "B" a check drawn on itself (b) sending actual currency by registered mail, or (c) requesting "B" to call personally for the funds.

MAIL TELLER

The teller of a bank (sometimes known as fourth teller) in charge of receiving, assorting, proving and accounting for deposits which arrive by mail. Among larger city banks deposits from individual customers and correspondent banks located out of town are as heavy in volume as deposits received over the receiving teller's window. A large clerical force is needed to attend to the detail necessary to properly dispose of these deposits and it is the duty of the mail teller to supervise this work. A large part of this detail consists of assorting the checks according to the various collection agencies and proving the deposits with the deposit slips. Some will be collected through the local clearing house, others by messenger, others through the transit department and the home debits will be charged to customers' accounts. Usually the mail teller also administers the work of assorting clearing house items among the various clearing house banks, and has charge of the out-going exchanges.

MAINTENANCE

In railroad accounting, maintenance refers to maintenance of way and structures and maintenance of equipment, two expense items in railroad income accounts which are of more than passing interest to the investor in railroad securities because to an important extent their provision is controllable by railroad management.

The maintenance account in railroad retirement accounting determines the proportion of gross revenues provided for depreciation and repairs. Originally, in the system of accounts prescribed for railroads by the Interstate Commerce Commission in 1914, depreciation of fixed improvements was left to the discretion of railroad management. However, depreciation of equipment has been required since 1928, and effective January 1, 1943, the Interstate Commerce Commission has also required railroads to depreciate their fixed property (except for track accounts).

Maintenance provision is affected by the volume of traffic, the availability of materials and labor, and the management's accounting policy in expanding or deferring maintenance. Normally, maintenance provision runs between 32% and 37% of gross revenues (13% for way, 19% for equipment, to 15% for way, 22% for equipment,)but these are empirical ratios, and depend upon the period chosen. Thus, during World War II, railroads were permitted to accelerate amortization of defense facilities and equipment over a 5-year period, which led to high maintenance ratios. Also, following World War II, many managements instituted large capital improvements programs, and began to provide for maintenance deferred during the war years. Individual variations among railroads may be noted by reference to Account 284 in Interstate Commerce Commission Reports (Depreciation Rates--Equipment Used, Owned or Leased From Others), which requires railroads to state the percentage depreciation rates for steam locomotives, other locomotives, freight-train cars, passenger-train cars, floating equipment, work equipment and miscellaneous equipment. Also, Account 286A requires railroads to state the percentages used for computing the amounts charged to operating expense and other accounts and credited to Road and Miscellaneous Physical Property account for depreciation during the year on various classes of road and miscellaneous physical property, together with the estimated life of the property upon which such percentages are based. (See Railroad Earnings.)

MAJORITY STOCKHOLDERS

The stockholders representing the controlling interest in a corporation. Ownership of over 50 per cent. of the stock is necessary for this purpose, but in large public-

ly owned corporations, effective control is usually achieved by minority holdings combined with effective use of proxies from remaining scattered small holders. (See Proxy)

MAKER

The person or persons who execute a promissory note and thus are primarily liable on the instrument. The maker of a negotiable instrument by making it engages that he will pay it according to its tenor, and admits the existence of the payee and his then capacity to indorse (Sec. 60, Uniform Negotiable Instruments Law; Sec. 110, New York Negotiable Instruments Law). The maker of a check or draft is known as the drawer (q.v.).

MAKING A BOOK

When specialists receive limited buying and selling orders the prices therein are entered in a book, or on a sheet, under the name of the security affected, and arranged in order of price points at 1/8th (or other fractional) point apart, from high to low. One side is provided for purchases, the other for sales. By reference to this book a broker can tell at a glance the amount of each stock he must buy at each 1/8th (or other fraction) point down, as the price declines and how much he must sell at each 1/8th point up, as the market advances.

(See Book, Specialist.)

MAKING A MARKET

A term used in several connections. It is essential in the flotation and distribution of securities that a good market be provided. A large percentage of many securities is held by speculators who borrow a part of their capital, and who would be unwilling to purchase securities unless a market existed for them, so that they can be sold when favorable opportunities arise. There are two essentials in making a market for a security: (1) favorable publicity and (2) listing on a recognized stock exchange. Before a new issue is actually offered, the syndicate manager will have supplied members of the selling group, brokers and dealers generally and the financial press with considerable preliminary information concerning the condition of the issuing corporation and the issue itself, including distribution of the "red herring" prospectus. Listing on the stock exchange obviously increases the marketability of a security. (For the tests of eligibility for listing see Listed Securities.)

The term is also employed in connection with unlisted securities. Whenever a dealer, investment banker, or syndicate manager names a price at which he will buy, and another price at which he will sell, a certain security, a market is thereby made. In syndicate operation, the syndicate manager establishes a trading account for the duration of the syndicate through which any offerings of the just issued security which are thrown back on the market below public offering price are bought in, in order to protect the remaining unsold portion of the issue. (See Syndicate, Underwriting.)

MAKING A PRICE

When a seller quotes a price which he is willing to accept at the request of the buyer, or vice versa. This term is also used of a practice on the London Stock Exchange (q. v.).

MAKING-UP PRICE

The delivery price of a security. On the London Stock Exchange, it is the price at which a security is carried over from one settlement day to another.

MANAGED CURRENCY

Currency not anchored to gold, which the advocates of managed currency denounce as rigid orthodoxy, but which is managed, controlled or manipulated to secure a predetermined level of prices, i. e., generally stable prices. The managed currency proponents base their position on the quantity of money theory. They propose to manipulate the quantity of money and bank credit by various devices, chief among them being variations in the discount rates in the central banks of issue, open market operations on the part of these banks, and coordinated policy on the part of the public treasury in borrowing and repaying. With these methods it is proposed not merely to regulate prices, but also to regulate the whole business and industrial situation, eliminating the ups and downs of business which are regarded as due to variations in the average of prices.

The two most widely discussed schemes of this sort are the so-called "commodity-dollar" plan of Professor Irving Fisher and proposals for central bank control advocated in somewhat varying forms by Professor Gustav Cassel of Sweden and the British economist, John Maynard Keynes.

Professor Fisher's thesis is that the gold dollar should cease to be a constant weight of gold with fluctuating purchasing power, and should become a fluctuating weight of gold with a more or less constant purchasing power. There would be no actual coinage of gold under the Fisher scheme. The government's gold supply would be kept in gold bars and the actual circulation, then as now, would consist of representative money, i. e., banknotes and token coins. All of the currency would be exchangeable for gold on demand, but the amount of gold for which it would exchange would vary with the price level. If prices, as measured by some generally accepted index, fell 1 per cent. during the month the weight of gold purchasable with the dollar would be decreased 1 per cent., and vice versa. Under the Fisher plan, since the number of grains of gold in the dollar would fluctuate with the price level, there could, of course, be no fixed gold parity. Therefore instead of having one fluctuating element in the exchange—that of demand and supply—there would be two. And the new one would be much the more serious since it would not be limited, as is that of demand and supply, by the upper and lower "gold points."

The Cassel-Keynes plan is that the central bank should keep prices on an even keel by manipulating the supply of credit and currency, with Keynes favoring arbitrary control as well over the price of gold.

See also under article on Inflation.

Keynes, J. M.: The General Theory of Employment, Interest and Money, 1936.

MANIFEST

A formal schedule or statement of a cargo taken on board a ship prepared by the manifest clerks under the direction of its master. It is in reality a summary of

all the bills of lading covering the ship's cargo, and it at once an operating, clearance, entry and accounting document. Its preparation is required, and its form prescribed by the United States and by Governments of the various foreign countries. A manifest is sworn to before the customs' officials of the port of debarkation. One copy is forwarded to the customs' officials at the port of entry, another to the ship owners, and a third retained as a part of the records of the ship.

MANIPULATION

A general term indicating in the broadest sense the artificial advancing and depressing of prices by those who have ability to do so. The course of prices on an organized market could be artificially influenced in greater or less degree by numerous devices, including pools (inside and outside), rings, cliques, wash sales, matched orders, bucketing, corners, unlisting legitimate securities, and by disseminating "tips", false reports, or "alleged information". Manipulative practices on national securities exchanges are prohibited by Secs. 9 and 10 of the Securities Exchange Act of 1934, and such practices on commodity exchanges are prohibited by Secs. 4b and 4c of the Commodity Exchange Act. In addition to such regulation by the Securities and Exchange Commission and the Commodity Exchange Authority, securities exchanges and commodity markets by rules of their own prohibit such practices and engage in self-policing. Despite such regulation and self-policing, spreading of tips and rumors is still quite impossible to prevent, so that the best protection against such still remains to inquire into the sources of information so as to distinguish between fact and rumor. The ultimate purpose of manipulation is to profit at the expense of the lambs (inexperienced speculators). Excessive or improvident speculation, whether based on unfounded rumor or established facts, is not manipulation.

(See Bucket Shop, Clique, Corner, Matched Orders, Pool, Ring, Tip, Wash Sale.)

MANUALS

Periodic publications containing financial statistics and other descriptive information, and used as reference works among brokerage houses, financial institutions, and investors. The term particularly refers to the statistical manuals published by the three leading statistical services--Standard & Poor's, Moody's, and Fitch. Summary of these services follows:

Standard & Poor's: 1. Standard Corporation Records, which contain factual descriptions and summarized financial statements in six loose-leaf alphabetical volumes on American and Canadian corporations, complete on some 6,000 major corporations, and in lesser detail on some 5,000 other corporations. Other components of the service include: a. Daily News Section, containing daily news items; b. Dividend Section, issued daily, containing current dividend and related information.

2. Trade and Securities, an interpretative economic and investment service. Components: a. Weekly Outlook for the Security Markets; b. Surveys covering all key industries and the leading securities in each industry; c. Earnings and Ratings Stock Guide; d. Statistical Section.

3. Railroad Securities Service, consisting of: a. Weekly Survey; b. Traffic Section; C. Earnings Section; d. Position of Securities; e. Revenues and Expenses; f. Railroad Earnings Forecasters; g. Rail Equipment Bulletin; h. Freight Commodity Statistics; i. Guaranteed Stock Bulletin; j. Railway Economic Review; and k. Reorganization Plans.

4. Facts and Forecasts.
5. Investors Guide Stock Reports.
6. Unlisted Stock Reports.
7. Investors Guide Bond Reports.
8. Unlisted Bond Reports.
9. Bond Investments.
10. Investment Fact Reports.
11. Corporation and Municipal Bond Guide.
12. Portfolio Audits.
13. Planned Investments.
14. Planned Investments for Banks.
15. Trust Review System.
16. Special Investigations Department.
17. Investment Advisory Service.
18. Standard Investor.
19. Poor's Institutional Holdings of Securities.
20. Poor's Purchases and Sales of Securities.
21. Poor's Register of Directors and Executives.
22. Status of Bonds.
23. Standard & Poor's Bond Guide.

Moody's: Moody's Manuel, supplemented by semi-weekly news supplements: (1) Governments and Municipals; (2) Banks and Finance; (3) Industrials; (4) Public Utilities; and (5) Railroads. Other Moody's services:

1. Stock Survey.
2. Bond Survey.
3. Moody's Advisory Reports.
4. Moody's Dividend Record.
5. Bond Record.
6. Moody's Personal Management Service.
7. Moody's Supervisory Service for Banks and Trust Companies.
8. Moody's Estate and Trust Service.

Fitch: 1. Fitch Bond Book, an annual, containing statistical descriptions and ratings on railroad, public utility, industrial and real estate bonds of United States and Canada; also dollar bonds of foreign governments, and U. S. Government issues.

2. Fitch Statistical Service, a daily stock, bond and trade service, consisting of: a. Fitch Corporation Manuals, containing loose-leaf corporation descriptions; b. Daily Companies, Earnings and Descriptions Section; c. Daily Dividend Section; d. Daily Redemption Section; e. Fitch Trade, Industry and Security Service.

3. Fitch Loose-Leaf Stock and Bond Corporation Manuals.

4. Fitch Individual Bulletin Services: a. Individual Stock Bulletins; b. Individual Bond Bulletins; c. Unlisted Securities Service.

5. Fitch Weekly Bond Record Service: a. Weekly Bond Record, Quotation Section; b. Weekly Bond Review.

6. Fitch Stock Record.

7. Fitch Supervisory Service.

Among other statistical services popular with brokerage houses, institutions and investors are:

Alfred M. Best Co.: Best's Digest of Insurance Stocks; Best's Insurance Reports (Life, Fire and Marine, and Casualty and Surety).

The Bond Buyer: Directory of Municipal Bond Dealers of the United States; Municipal Bond Sales Book.

Brooks Earnings Indicator: Loose-leaf service on Railroads and on Air Transport Companies.

Commerce Clearing House, Inc.: Loose-leaf tax and

business law reporting service on Banking, Business, Carriers-Utilities, Insurance, Labor, Social Security, Legislation, Securities, and Taxation.

Commodity Research Bureau, Inc.: Commodity Yearbook.

MARGIN

Legally, "a payment on account of a purchase," conferring ownership with its attendant risks and privileges upon the buyer. It is loosely but incorrectly referred to by financial writers as secuity, equity, deposit, "the sum which may be lost" (Hammond), and "provision against loss" (Century Dictionary). It is the difference between the amount advanced by a banker or broker on securities held for speculative purposes and the amount at which such securities would sell in the market. Thus, if a loan for $100,000 is collateraled by securities the market price of which is $120,000, the margin is $20,000 or 20 per cent. The margin required by bankers and brokers varies according to the nature of the security pledged, and according to its marketability, activity, and range of fluctuation. The margin on a loan must always be protected, i. e., if the market value of securities deposited as collateral declines, additional margin is required. Obviously the excess value of collateral over the loan is for the protection of the lender and represents a "margin of safety" or "buffer" to safeguard the loan. In case of a sudden decline in the market, unless the shrinkage in value of the collateral should be exceptionally severe and rapid, it would still be sufficient to cover the amount of the loan. Regulations T and U of the Board of Governors of the Federal Reserve System limit the amount of credit that may be extended on: listed securities (including short sales) by brokers and dealers to their customers (Regulation T); and loans on stocks, by banks (Regulation U). These regulations prescribe the maximum loan value, which is a specified percentage of market value at time of extension of the credit or loan. "Margin requirements" as used by the Board of Governors, therefore, refer to the difference between the market value (100%) and the maximum loan value.

MARGIN ACCOUNT

An account of a speculator with a broker for the trading of securities on a margin, as distinguished from purchasing securities outright. (See Margin Buying.)

MARGIN BUYING

In margin buying, the speculator furnishes only a fractional part of the money necessary to purchase the stock, the broker furnishing the balance and charging interest on that amount until the speculator either resells the stock or pays off the loan and "takes up" the stock. The broker in turn obtains the funds for carrying margin accounts from banks by re-hypothecating the securities (with the customers' permission) purchased for his customers.

With passage of the Securities Exchange Act of 1934 (q.v.) on June 6, 1934, margin requirements on national securities exchanges became subject to regulation by the Board of Governors of the Federal Reserve System. Regulation T of the Board of Governors, pursuant to Sections 7 and 8 (a) of the Act, became effective October 1, 1934, and applies to extension and maintenance of credit by brokers, dealers and members of national securities exchanges. On November 1, 1937, margin requirements were extended to short sales of securities.

On May 1, 1936, Regulation U of the Board of Governors, pursuant to Section 7 of the Securities Exchange Act of 1934, became effective, applying to loans by banks for the purpose of purchasing or carrying stocks registered on a national securities exchange.

Both Regulation T and Regulation U limit the amount of credit that may be extended on a security by prescribing the maximum loan value, which is a specified percentage of the market value at the time of the extension of credit. Thus, "margin requirements", as shown in the following table from the Federal Reserve Bulletin, are the difference between the market value (100%) and the maximum loan value:

Margin Requirements

(Per Cent of Market Value)

Prescribed in accordance with Securities Exchange Act of 1934	July 5, 1945-Jan.20, 1946	Jan.21, 1946-Jan.31, 1947	Effective Feb. 1, 1947
Regulation T:			
For extension of credit by brokers and dealers on listed securities	75%	100%	75%
For short sales	75	100	75
Regulation U:			
For loans by banks on stocks	75	100	75

With such high margin requirements, the leverage permitted on margin trading is low. The purpose of buying on margin is to increase the possibility of gain with available capital. The advantage of buying on margin can be illustrated by the following example. Suppose a speculator with a capital of $10,000 desires to purchase as much as possible of a certain stock, selling at $100 per share. If he bought the stock for cash and delivery, he would be able to purchase only 100 shares. On a 10% margin, however, such as was formerly customary, he would be able to buy 1,000 shares, the broker putting up $9,000 and the speculator $1,000 per 100 shares. In this way, the speculator could purchase ten times as much stock as he could by purchasing it outright. If the stock enhances in value, say one point, a profit of $1,000 is made, whereas, in an outright purchase, the profit would be only $100. This advantage of leveraged possibility of gain, however, is offset by the disadvantage of equal possibility of loss, and therein lies the danger of low margin trading. If the stock declines one point, the speculator loses $1,000. The broker will "carry" the stock provided there is ample margin to protect the account, and will rarely carry stock until the margin is exhausted, particularly in an active and rapidly declining market. Ordinarily, when an account falls below the margin requirement, a margin call is sent out, and if there is not an immediate response, sufficient stock is sold out from the account, at the broker's discretion, to place the account in a properly margined position. Many brokers do not permit trading against Stop Orders (q.v.), and require that there shall be sufficient margin in the account regardless of such stop loss orders entered by the customer. In a declining market, therefore, a customer who would reduce to a minimum his chances of being sold out should strengthen his credit balance whether or not a margin call has been received.

Under Regulation T, a "restricted" account is an account in which, at the beginning of business on any given day, the adjusted debit balance exceeds the maximum loan value at such time of the securities in the account. An "unrestricted account" is an account in which at any given time the adjusted debit balance equals or is less than the maximum loan value at such time of the securities in the account. A lending broker or dealer shall not permit any customer to make in an unrestricted account any transaction or combination of transactions which would cause such account to become a restricted account, unless he demands additional margin in an amount sufficient to make such account an unrestricted account. Similarly, a lending broker or dealer shall not permit a customer to make in a restricted account any transaction which, in combination with any other transactions made on the same day and together with demands for additional margin in connection therewith, results in any increase of the excess of the adjusted debit balance of the account over the maximum loan value of the securities in the account, or results in any net withdrawal of cash or securities. A lending broker or dealer, however, may permit a customer to make any transaction or combination of transactions which causes the account to become an unrestricted account.

In speculative commodity futures trading, the situation is essentially different because of the character of futures trading. All such trading is done on margin unless and until delivery of the cash commodity should occur. Original margins, usually averaging about 15% of the original purchase or sale, are required by futures commission houses, and additional margin is called for whenever price declines reduce margin, usually to 75% of the original requirement. Should in his judgment, the speculator accept delivery of the actual commodity, much more substantial margin is required. The commodity exchanges generally prescribe minimum margins, and futures commission houses are free to require higher margins than the minimum. In commodity exchange regulation, the Commodity Exchange Act (q.v.) aimed at restrictions on daily trading limits, as well as regulation of the maximum long or short positions that may be held by any speculative account at any time in any one commodity, and the amount of speculative trading that may be done by any person on any one day. The Act requires segregation of funds belonging to customers, including margins deposited and profits on past transactions, on the books of the futures commission houses.

In times of declining markets, causing heavy losses to speculators unable to protect their margins, the demand had often been raised formerly to prohibit margin trading by requiring outright buying. Low margins have also been attacked in the past as encouraging speculation and market inflation. On the other hand, margin trading has been recognized as fundamentally as sound as any kind of borrowing where collateral is pledged as protection for a loan. The danger of margin buying lies in weak or thin margins especially when furnished by inexperienced speculators. (See Exhaust Price, Margin, Margin Call, Stop-Loss Order, Short Sale, Wiped Out.)

MARGIN CALL

A notice sent by a broker to a customer, or by a bank to a borrowing broker, requiring additional security or a partial payment of a loan in order to offset or make good a loss in the value of the collateral, due to a decline in the market price of securities pledged. The following is an example of a typical margin notice:

> "As the present market value of the securities pledged to us as collateral against your indebtedness is not sufficient to give the customary margin, please send us at once additional satisfactory securities to make good the margin, and oblige."

If additional margin is not immediately delivered, the broker or the bank has the right, in accordance with the loan and margin agreement, to sell the securities to satisfy the loan and any interest due, and to return any remaining balance to the borrower.

MARGIN NOTICE

See Margin Call.

MARGIN OF SAFETY

An investment term used to express the extent or degree by which the principal of a loan or issue of securities is protected by property equities and earning power. The first requisite of a sound investment is safety of principal, and the second regularity (or prospect of maintenance) of the income. Strictly speaking, not even the best investment is absolutely safe either as to principal or as to income, and any sum invested must be regarded as carrying some risk. There is a wide range of risks in the multifarious investment mediums available, and the degree of safety, or inversely the degree of risk, is measured by the margin of safety, also sometimes called the factor of safety.

Specifically, margin of safety refers to separate factors. First, the phrase may apply to the excess value (in dollar amount or in percentage) of the specific lien security, specific pledge of assets or collateral, or general (but unpledged) assets supporting a loan or security issue. For example, in conservative mortgage finance the amount of the mortgage loan is rarely more than 66 2/3 per cent. of the appraised value of the mortgaged property. Thus a mortgage loan of $20,000 on a property appraised at $30,000 would have a margin of safety of $10,000 or 50 per cent. The protection afforded this mortgage loan may be viewed by the amount by which the value of the property could shrink and still leave a sum sufficient to pay off the mortgage. The degree of protection from this viewpoint, which might more logically be called the margin of risk, would also be $10,000, but 33 1/3 per cent. instead of 50 per cent.

In the case of brokers' call loans on stock exchange collateral, banks require a specific pledge of stocks (or stocks and bonds mixed) which at market value are equal to from 120 to 130 per cent. of the amount of the loan. The 20 to 30 per cent. excess value of the collateral over the amount of the loan is called "margin," and must be continually kept good. If the loan is for $100,000, and the market value of the securities is $125,000, the margin of safety is $25,000, or 25 per cent. The margin of risk, which is the amount by which the collateral security could decline in value and still leave a balance sufficient to pay off the loan would be $25,000, but 20 per cent. instead of 25 per cent.

The margin of safety for the principal of a mortgage bond issue is the excess of value of mortgaged property, or value of the remaining equity if subject to prior lien issues, over the par value of the amount outstanding. In practice, it is difficult, of course, to determine the market value of properties that are mortgaged for bond issues—especially railroad and public utility properties. However, engineering reports are of value in this connection, while in railroad mortgage bond issues there are certain well established ratios of reasonable bonded indebtedness per mile of road. A bond issue may have excellent protection for the principal amount even though no lien or collateral security is offered. If the general unincumbered net assets of a company, conservatively valued, are twice the amount of debenture bonds outstanding, and there are no prior bond issues, then the margin of safety for the principal of such a debt would be 100 per cent.

The term "margin of safety" as a measure of the degree of protection afforded the principal sum invested in stocks seems never to have been used, since the value of stocks is usually thought to be dependent wholly on earnings available for such stocks. In theory, however, the principle could as well be extended to stocks as to bonds or any other form of debt. For example, if a corporation which has no funded debt or debt other than current liabilities, has $250,000, in net tangible assets against $100,000 of preferred stock and $100,000 of common stock, the theoretical margin of safety for the par amount of preferred stock would be the excess of net tangible assets over the amount of preferred stock outstanding, e. g., $150,000, or 150 per cent. Similarly, the margin of safety for the par amount of common stock outstanding would be the excess of the net tangible assets over the combined preferred and common stocks outstanding, e. g., $50,000, or 50 per cent. If a corporation's books represent the true state of affairs, the margin of safety for par amount of the common stock would be the amount of the total corporate surplus. If the common stock were purchased for 50 per cent. of par the margin of safety in equity value would be $100 per share, or 200 per cent.

Secondly, and probably of considerably more importance, is the use of the term to denote the excess of earnings available for the payment of interest charges on a debt (whether short-term or long-term), of earnings available for the payment of dividends over dividend requirements (or current dividend rates). In bond investments, much importance is attached to the margin of safety as a key to investment values and in particular to the margin of safety as determined over a period of years. The determination of the margin of safety (earnings available for a bond issue over interest requirements) is normally the chief factor used by the various bond rating services in fixing bond ratings.

Wherever a corporation has only one bond issue, e. g., $1,000,000 bearing 5 per cent., and has had an income available for interest charges on this issue for the past five years of $150,000 a year, the average margin of safety is $100,000 a year, or 200 per cent. In usual parlance, however, it is said to be earning its bond interest charges three times over. The earnings protection afford by this corporation for its bond interest requirements, like that of the property protection afforded the principal amount of a debt as mentioned above, may be viewed as the extent by which the sum available for bond interest charges (usually called gross income or total income) could decline and still cover bond interest requirements. In this instance, the sum would be $100,000 annually, or 66 2/3 per cent. As stated previously, a more suitable designation for this percentage would be margin of risk.

It is customary in investment circles to regard the margin of safety for a corporation's fixed charges, or for its preferred dividend and common dividend requirements as the number of times such charges or dividend requirements are earned. Thus, a corporation having annual fixed charges of $100,000, and earning $400,000 for such charges, is said to earn its fixed charges four times over. The margin of safety, or better, margin of risk, would be better stated as 75 per cent, i. e., that the sum available for such charges could decline by as much as 75 per cent. and still leave enough to cover such charges. Likewise, a corporation having earnings of $300,000 available for its preferred stock on which dividend requirements are $100,000 is said to be earning such requirements three times. The margin of risk would be computed on the amount by which the sum available for interest charges could decline and still pay all prior charges plus the preferred dividends, i. e., 50 per cent. If the present common dividend is $100,000 annually (referring to the above example), the margin of safety (or marginof risk) would be computed on the amount by which the sum available for interest charges could decline and cover not only interest charges and the preferred dividend but the common dividend as well, i. e., 25 per cent.

Wherever a corporation's earnings for interest charges are less than the interest charges a minus margin of safety arises. For example, if earnings available for interest are $150,000, and interest charges are $200,000, 75 per cent. of the charges are being earned, making a margin of safety of minus 33 1/3 per cent., meaning that the sum available for interest charges

must increase 33 1/3 per cent. in order to cover such charges. (See Investment Securities.)

MARGIN REQUIREMENTS

See Margin Buying.

MARGINAL ROAD

A railroad whose earnings available for charges just about cover fixed charges, thus rendering it vulnerable to any decline in earning power. Bonds of marginal roads are in the speculative class, and normally sell at large discounts. (See Railroad Bonds.)

MARIA THERESA DOLLAR

Also called the Levant dollar, because of its circulation in the Near East for trade purposes. Originally, this silver dollar was coined in Austria. It was formerly the monetary unit of Abyssinia. International currency unit of Ethiopia is the dollar, consisting of 100 cents. (See Foreign Moneys--Ethiopia.)

MARINE INSURANCE

Marine insurance policies specify the specific coverage and maximum liability to the insured (who may be the owner of the vessel or of the cargo) by the underwriter in consideration of payment of premiums, for a specific voyage or other term, and against specified risks, usually covering perils of the seas, fire, assailing thieves, criminal barratry of the master and mariners, and all other like perils and losses. (See Average, Marine Insurance Certificate.)

MARINE INSURANCE CERTIFICATES

After the ocean bill of lading, the marine insurance certificate is the most important shipping document which accompanies a foreign bill of exchange, without which the shipper and the bank financing the shipment would take all the risks incident to marine transportation. Marine insurance is therefore provided to cover the various marine hazards incident to overseas shipments, as protection to both the shipper and the bank which advances funds against the shipment.

While the law holds railroads (as common carriers and bailees) to strict responsibility in undertaking the transportation of goods, and makes them liable for practically all losses and damages, e. g., theft, breakage, fire, etc. (all except those caused by a public enemy, or the so-called acts of God), the Harter Act (q.v.) has relieved ocean carriers of many specified marine risks. To provide for their liability to shippers, railroads insure themselves against all risks assumed as common carriers, by blanket insurance policies. Ocean carriers being relieved of responsibility for cargoes, provide only for insurance to cover the vessel, passing on the burden of insuring the shipments constituting the cargo, to the shippers.

Each ocean shipment should be covered against general marine risks and for others to which it may be especially exposed, e. g., pilferage or breakage. The customary insurance policy covers only certain risks and it is advisable that a proper understanding of the limitations and conditions of the insurance be reached between shipper and insurance agent in order to avoid future controversy. Insurance is usually obtained from the point of origin to the ultimate destination and the insurance certificate is issued in the name of the shipper. An indorsement in blank is desirable just as in the case of a bill of lading when the documents are delivered to the accepting bank.

The amount of insurance should fully cover the cost of the goods. It is even advisable to insure for a greater amount than the invoice value, say 10 per cent., to cover the shipper's profit and such transportation charges as are already incurred. It is important that the insurance policy cover all the important risks, and in time of war, war risk. (See Average.)

MARINE INSURANCE POLICY

See Marine Insurance Certificate.

MARK

The Reichsmark, pre-World War II international currency unit of Germany, was quoted at about 2 1/2 to the American dollar. At the beginning of the occupation of Germany by the four powers (United States, Russia, England and France), the American Zone established a military exchange rate of 10 marks per dollar, which flat rate subsequently was replaced by a system of conversion factors for various commodities and goods.

MARK-DOWN

An expression used in banking practice to denote the re-appraisal of the value of securities pledged as collateral to stock exchange loans whenever there is a severe decline in the stock market. This procedure is necessary whenever securities decline, say on an average of four points or more, as a protection to the bank's loans, and out of recognition of the principle that margin requirements must be kept continually good. The procedure requires the examination of the collateral cards of each stock exchange loan, and changing the value of the securities to conform with the latest quotations. It is therefore a reinventorying of the collateral in accordance with the prevailing or most recent market quotations. When the change in the value of each security in the collateral to each loan has been noted, the total value of the securities is then ascertained. Whenever the total value of the collateral computed under the re-appraisal is insufficient to furnish the required margin the loan is under margined, and a margin notice is forwarded to the borrowing broker. (See Margin Call.)

MARK SIGNATURE

When a person is unable to write his own name, his signature to any legal instrument, e. g., check, note, mortgage, passbook, etc., is affixed by means of a cross or other distinguishing mark. The name of the signer is then written next to the mark by a witness in the following manner:

	his	
John	X	Doe
	mark	

The witness signs his own name as witness.

Savings banks which serve communities where illiterates are numerous, must provide for mark signatures, or other means of identification. Usually the mark signature is supplemented by additional data which may be used as a basis for test questions for the purpose of future identification. Such data usually consists of recording the age, date of birth, father's name, mother's name, occupation, color of eyes, color of hair, height, distinguishing marks, etc. When the passbook is pre-

sented for the purpose of withdrawing money, test questions are put to the customer based upon the foregoing data. (See Finger Print Identification.)

MARKED CHECK

In some instances depositors have arranged with their banks that each check drawn by them shall bear a certain distinguishing mark known only to the depositor and the bank. The purpose of the marked check is to prevent forgery and the bank is bound not to pay checks for such depositors which do not bear this distinctive mark.

MARKET

A means of trading intercourse. Although a market is usually thought of as a locality, it is rather the circumstances under which buyers and sellers communicate and determine the prices of the commodities traded in. "A coming together of offers and demands for economic goods, irrespective of the physical presence of the contracting parties. The market may be local, national or international; wherever definite quantities of goods are bought and sold, there is a market, and the price at which the exchange is effected is the market price" (Ely, R. T.: Outline of Economics). "The general field within which the forces determining the price of a particular commodity operate." "The place or conjunction of means through which buyers and sellers are brought together for the exchange of economic goods" (Seager, H. R.: Principles of Economics).

There are several classifications of markets. The chief classification is that based upon the kind of commodity traded in, e. g., stock market, produce market, grain market, money market, cotton market, live stock market, real estate market, wool market, lumber market, foreign exchange market, etc. Markets may be formal or organized, and informal or unorganized. When organized, they are usually called exchanges, e. g., the New York Stock Exchange. The markets for foreign exchange, real estate, lumber, etc., are unorganized. Organized markets are closed, while unorganized markets are open; that is, trading in the former is limited to members of the exchange, while in the latter, trading is open to everybody.

Markets may be classified in accordance with the breadth of the demand for various products, e. g., world, national, and local market. With the perfection of the means of communication, many commodities now enjoy a world market, e. g., international securities, sterling and dollar exchange, wheat, cotton, wool, etc. A national market is one in which a commodity is traded in only within the borders of one country. A local market is one in which commodities are exchanged only within a restricted area.

Markets are primary and secondary. A primary market is one located in the centers of consumption where large quantities are available for distribution and stored in warehouses, elevators, or railroad or shipping terminals. Chicago is a primary market for wheat and other grains. A secondary market is one near the points of production. It is the place where commodities are collected and not distributed. A small prairie town would be a secondary market.

Markets are also continuous and discontinuous. The New York Stock Exchange provides a continuous market for listed stocks and bonds. The market for unlisted stocks and bonds is discontinuous An auction is a discontinuous market. (See Auction, Chicago Board of Trade, Chicago Mercantile Exchange, Commodity Exchange, Inc., Marketability, Market Price, Market Value, New Orleans Cotton Exchange, New York Cocoa Exchange, New York Curb Exchange, New York Cotton Exchange, New York Coffee and Sugar Exchange, New York Real Estate Board, Over-the-Counter Market, and Winnipeg Grain Exchange.

MARKET AVERAGES

One of the chief barometers upon which investors and speculators rely in making market commitments. Although the prices of securities fluctuate according to the particular conditions affecting them, it is well known that in the case of stocks especially, prices rise and fall sympathetically. So true, is this phenomenon that the Street speaks of the entire market as being bearish or bullish, or of prices in general being too high or too low, basing or supporting such conclusions by reference to market averages which usually are composed of a relatively small sampling of total issues traded. This sympathy in price movements is but a corollary of the principle of interdependence of all industries, and of solidarity in the commercial and economic structure. Economic conditions that tend to cause an increased volume of business and increased earnings in one industry, tend also to better the earnings of others.

By studying the average prices of groups of stocks or bonds over a period of time, market "technicians" work out various systems and theories for short term, intermediate or major swings, or Speculative Cycle (q. v.). One of the most popular of these is the Dow Theory (q.v.). Statistical services and newspapers publish daily averages of both stocks and bonds. It is customary to furnish averages for a certain number of (1) railroad stocks; (2) industrial stocks, and (3) public utility stocks, as well as an average of all three groups combined. Market averages afford a tabloidal indication of stock market levels. If, for instance, the average of industrial stocks should be twice that of a year ago, it is probable that the careful speculator would think twice about making purchases. Indeed, if other barometers indicate that business is due for a slump, that sales are declining, and that earnings are likely to be curtailed, it could be time to sell because the market is "making a top"

Average bond prices fluctuate, not so much in accordance with business conditions, as with interest rates. This is particularly true of Government and municipal bonds, and of high grade corporation bonds where the interest charges are well below average earnings. Among the more speculative bond issues, prices are considerably influenced by business conditions, as well as by interest rates. Since high grade bond prices are chiefly influenced by changes in interest rates, they are even more apt to move sympathetically than in the case of stocks, which tend to move by groups. In preparing averages of bond prices, it is usual to furnish separate averages for at least four groups, viz., railroads, industrials, public utilities and municipals. Separate averages may also be furnished for United States Government and foreign Government bonds, as well as for all bonds Such averages are usually compiled on a yield basis rather than average price, and thus inversely charted, indicate the price trend

(See Dow-Jones Averages.)

MARKET INFLUENCES

Almost everything that happens in business has a direct or indirect influence on values. The stock and commodity markets are the places where these various impulses are registered. Significant economic forces are constantly operating in the United States and other portions of the commercial world that affect instantly, or in advance, the course of prices on the various stock and commodity exchanges.

Crop reports and prospects, both domestic and foreign, banking and money conditions, steel production, automobile sales, labor conditions, taxation, the fear of war or its termination, movement of freight, new building construction, business failures, chain store sales, imports and exports, the expectation of favorable or unfavorable legislation, national or otherwise, and Supreme Court decisions are only some of the numerous factors which depending on their timing and portent will influence movements in stock and commodity prices.

It is, therefore, important to know where and when authentic information is obtainable concerning the recognized factors which exercise an influence on the various markets. The appended tabulation of some of the generally recognized current market factors includes many indicators of current business activity of a general nature. In addition, earnings reports of specific corporations often more directly exercise important market influence, as well as dividend actions, capitalization changes, and comment by management on operations. (See Business Barometers.)

Supreme Court Decisions	Mondays, when Court is in session

MARKET LEADERS

Those stocks which act as bellwethers in their respective industry groups in market action. Examples of market leaders are U. S. Steel among the Steels; General Motors among the Automobile producers; General Electric among the Electrical Equipment companies; Baltimore & Ohio, New York Central and Pennsylvania among the Rails; DuPont and Union Carbide & Carbon among Chemicals; Kennecott and Phelps Dodge among Coppers; American Telephone & Telegraph among Utilities; the Standard Oils among Oils, etc. This market position as leaders reflects the position of leadership in the respective industry by these companies, as well as the popularity of the stocks with speculators and investors alike who wish to "buy" or "sell" the market

MARKET LETTERS

Practically every brokerage house issues a daily market letter which it posts in its customers' room for the information of its clients, and transmits by telegram to its branch offices. Such a letter is a short resume of the more prominent political, business, financial, and technical market factors bearing upon the immediate price trend. Advise is sometimes given as to commitments, recommendations for purchase and sale in certain groups or specific securities, being volunteered. Although some market letters have tended to deteriorate into meaningless technical jargon and pointless hedging and straddling, and the popularity of market letter writers is ephemeral, such literature has achieved a definite place in the scheme of market influences.

In addition to the daily market letters described, many brokerage houses publish a more or less elaborate review every week or month. Such reviews contain a summary of business and financial conditions, analyses of particular stocks or bonds which the house favors, opinions of leading financial writers, statistical charts, and special features.

A resume of the leading financial and commodity markets appears in the newspapers of the larger cities as a regular department. Monthly business reviews are published by all of the twelve Federal Reserve banks, and by many of the metropolitan commercial banks.

The following is a specimen market letter:

"In summing up it is more and more apparent every day that conditions affecting stock exchange securities are strongly characteristic of the early stages of a major advance in prices. One might say that we are now in the creeping stage. Improvement has been going steadily on for three months. Stocks have been passing from weak to strong hands. The market is undoubtedly in the early accumulative stages. The distributive period will probably come next year. I would not hesitate to buy good stock in all groups of the list. There are some industrials, however, that do not appear to be out of the woods. Just when it will come it is difficult to say. Copper stocks are steadily growing in public favor. They are very cheap and have great possibilities in my opinion. There promises to be spectacular bul-

lish operations in the oil group. Steel and railroad equipment shares appear to be in a promising position.

"Some time early in the year, probably after disappointing reports of corporate earnings during this year's liquidation of commodities have been read and digested, we believe a distinct business revival will be under way. Important manufacturers tell us their plans are based on this expectation and we think they are warranted." (See Business Forecasting Services.)

MARKET OFF

An expression used to denote that the prices on a security or commodity have declined for the day.

MARKET ORDER

An order given to a broker to be executed at the best price obtainable for the particular security or commodity immediately after its receipt. If no price is stated in an order, it is always understood to be "at the market." (See Orders.)

MARKET PRICE

The price which is currently being realized for a particular security or commodity. (See Market Value.)

MARKET PRICE OF BULLION

See Mint Price of Gold.

MARKET PRICE OF GOLD

See Market Ratio, Mint Price of Gold.

MARKET RATE OF INTEREST

A term used to denote the rate of interest charged by banks for different classes of loans, different rates being quoted for call loans, time loans (with mixed, industrial and Government bond collateral), commercial paper, bankers' acceptances (eligible and ineligible), etc. (See Bank Rate, Interest Rates, Money Market, Rediscount Rate.)

MARKET RATIO

A term, also known as the commercial ratio, to denote the ratio at which equal weights of gold or silver exchange in the market, as distinguished from their coinage or mint ratio. Since the success of bimetallism depends upon the maintenance of equivalence between the market and mint ratios of gold and silver, the governments which formerly adopted the bimetallic standard attempted to establish a mint ratio equal to the current market ratio. Experience shows, however, that the market ratio of gold and silver varies according to the demand and supply of these commodities. The extent of the variation in the average market ratio from year to year shown in the following table, explains the impossibility, from a practical point of view, of keeping the two ratios uniform:

Year	Ratio
1700	14.81
1725	15.11
1750	14.55
1775	14.72
1800	15.68
1825	15.70
1850	15.70
1860	15.29
1865	15.44
1870	15.57
1875	16.64
1876	17.75
1877	17.20
1878	17.92
1879	18.39
1880	18.05
1881	18.25
1882	18.20
1883	18.64
1884	18.61
1885	19.41
1886	20.78
1887	21.10
1888	22.00
1889	22.10
1890	19.75
1891	20.92
1892	23.72
1893	26.49
1894	32.56
1895	31.60
1896	30.59
1897	34.20
1898	35.03
1899	34.36
1900	33.33
1901	34.68
1902	39.15
1903	38.10
1904	35.70
1905	33.87
1906	30.54
1907	31.24
1908	38.64
1909	39.74
1910	38.22
1911	38.33
1912	33.62
1913	34.19
1914	37.37
1915	40.48
1916	30.78
1917	24.61
1918	21.00
1919	18.44
1920	20.28
1921	32.76
1922	30.43
1923	31.69
1924	30.80
1925	29.78
1926	33.11
1927	36.47
1928	35.34
1929	38.78
1930	53.74
1931	71.25
1932	73.29
1933	59.06
1934	72.49
1935	54.19
1936	77.09
1937	77.44
1938	80.39
1939	88.84

Year	Ratio
1940	99.76
1941	99.73
1942	90.57
1943	77.67
1944	77.67
1945	67.00
1946	40.83

The above ratios, obtained from the Annual Report of the Director of the Mint, have been based since 1914 on daily New York quotations; for the period 1897-1914, on daily London quotations; and for previous years, on data from secondary sources.

(See Mint Ratio.)

MARKET SENTIMENT

The prices of securities on a stock market are affected by many factors commonly referred to as "sentimental," which exert considerable influence in the determination of prices. An unfavorable earnings report of a large corporation, for instance, tends to depress prices, even though the general outlook is favorable. A sudden reduction in the call money rate sentimentally would have a favorable influence upon prices, even though the lower rate may later prove to be only temporary. Likewise strength or weakness in the grain and cotton markets and in the foreign exchanges are likely to impart strength or weakness to the stock market, even though the connection between them is remote.

The term is used also to denote the general tone or feeling of operators toward the immediate future course of prices. Thus, market sentiment may be bullish (cheerful), bearish (gloomy), or mixed (divided) for the current day, immediate future, or for the "long pull."

(See Market Influences.)

MARKET SPOTS

See Spotty.

MARKET STABILIZATION

Although pegging, fixing and stabilization of security prices is a form of manipulation generally prohibited by the Securities and Exchange Act of 1934, Sec. 9a (6) of the Act leaves in the Securities and Exchange Commission the discretionary power to allow such pegging, fixing and stabilizing of the price of a security in accordance with such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.

This provision was based on the practical necessity for such market stabilization during the period of distribution and public offering of a security, in order to assure the success of the offering. Accordingly, the Securities and Exchange Commission has by regulation permitted stabilizing operations to be conducted in securities being publicly offered and on which registration statements have been filled with the Commission. Under the regulation, detailed reports covering all such stabilizing operations are required to be filed with the Commission. Also, in accordance with Rule 426 of Regulation C of the Commission, in any case in which the registrant or any of the underwriters knows or has reasonable grounds to believe that the price of any securities may be stabilized to facilitate the offering of the registered securities, there shall be set forth, either on the outside front cover page or on the inside front cover page of the prospectus, a statement in substantially the following form, subject to appropriate modifications where circumstances require, such statement to be in capital letters, printed in type at least as legible as ten-point boldface leaded type, as follows:

"IN CONNECTION WITH THIS OFFERING, THE UNDERWRITERS MAY EFFECT TRANSACTIONS WHICH STABILIZE OR MAINTAIN THE MARKET PRICE OF (Identify each class of securities in which such transactions may be effected) AT A LEVEL ABOVE THAT WHICH MIGHT OTHERWISE PREVAIL IN THE OPEN MARKET. SUCH TRANSACTIONS MAY BE EFFECTED ON (Identify each exchange on which stabilizing transactions may be effected. If none, omit this sentence.) SUCH STABILIZING, IF COMMENCED, MAY BE DISCONTINUED AT ANY TIME."

In addition to permitting stabilization of prices of securities being publicly offered, the Securities and Exchange Commission has also by regulation permitted stabilization of prices in connection with "secondary offerings" of securities already issued and listed on national securities exchanges. This type of stabilization, however, is regulated more closely, as it is more closely related to the type of manipulation prevalent at times in "free" markets before passage of the Securities and Exchange Act. (See Securities and Exchange Act of 1934, Securities and Exchange Commission.)

MARKET SWINGS

See Business Cycle, Speculative Cycle, Swings.

MARKET VALUE

The current or prevailing price of a security or commodity as indicated by current market quotations, and therefore the price at which additional amounts presumably can be purchased or sold. At any given time, the market value of a given security is taken to be that indicated by the last sale; inactive securities, where no current quotations are available, the latest bid price. In the case of unlisted securities, the market value may be determined by the last private sale, or by competent appraisal. The market value constantly fluctuates in active issues and may change frequently during the course of a single day's trading.

MARKETABILITY

The relative ease and quickness with which a security or commodity can be sold; availability of an opportunity to sell when desired; disposability, i. e., ability to be liquidated on short notice. In purchasing securities, one of the most important features to be considered is marketability. An investor, whether private or institutional, may be suddenly confronted with a need for cash, and in an emergency the advantage of possessing marketable securities is apparent. Of all forms of investments, listed active stocks and bonds usually enjoy the greatest marketability, the degree of marketability depending upon the degree of their activity. Unlisted securities are generally less marketable, but may be sold through one broker to another broker or investor. This is called an 'over the counter' market. Marketability is also essential in imparting to a security acceptability as collateral, i. e., Hypothecary Value (q. v.).

The marketability of commodities depends upon competition, demand, supply, location, seasons, quality, policy of middleman, etc. However, the principal grain and food products have a ready market through the vari-

ous organized exchanges, particularly for the purchase and sale of future contracts. Trade channels for various commodities are standardized and markets must be studied. Some manufacturers sell directly to consumers by mail, others through jobbers, and still others through retailers, oftentimes maintaining their own retail organization. Salesmanship and advertising are modern devices for increasing the marketability of commodities.

Fixed assets, especially real estate, have low marketability and ordinarily considerable time is required in order to dispose of them. In the case of real estate, moreover, the title must be searched and other details prepared for the closing, whereas transfers in securities and commodities can be made without these preliminaries. (See Market.)

MARKETING

The principles and practices of marketing and distribution have been intensively analyzed and synthesized into an independent branch of study. Among the factors studied in a typical course are: physical distribution, such factors as market methods employed in assembling, transporting, storage, sales, distribution, financing, risk taking, etc., as well as channels of distribution, the functions and methods of jobbers, types and methods of retailers, co-operative marketing, general problems confronting manufacturers, and present-day merchandising methods; in "mental" distribution, such factors as forces in marketing, analysis of a commodity, trademarks and brands, sales methods and sales management, advertising plans and mediums, advertising copy and display, together with the process involved in correlating all these factors in the complete marketing campaign.

MARKING DOWN RATES

An expression used in banking practice to indicate the reduction in the rate charged on outstanding call loans. It is usually the practice for brokers who have borrowed call money to ask the lending bank for a decrease in the rate when the renewal rate is reduced to a rate below that at which the loan previously stood. Some banks automatically mark down the rate on standing call loans when the renewal rate changes in favor of the borrower. (See Call Loan.)

MARKING TIME

An expression used to denote that prices on a stock or commodity exchange are without definite trend; a hesitating, stationary, unchanged, trendless condition preparatory to a move. Such a market exists when there is no change in fundamental conditions to warrant changes in prices, and operators are waiting for events capable of either favorable or unfavorable interpretation, in the meantime preferring to proceed experimentally.

MARKING UP RATES

Banks lending call money notify the borrowing brokers whenever the renewal rate on outstanding call loans is changed to a higher figure than that at which the loan was originally arranged or previously standing. (See Call Loan.)

MARKKA

The international currency unit of Finland. (See Foreign Moneys--Finland.)

MARTIN ACT

The Martin Act is the New York State "Blue Sky" Law, constituting Article 23-A (Sections 352-359-h, inclusive) of the General Business Law. It is of the "punitive" type of Blue Sky law, requiring only a summary type of registration for dealers and securities, and being most effective in the use of the subpoena and examination, and ex parte injunction.

Under the Act, the Attorney General of the State is vested with the power of subpoena and examination, if in his opinion, a securities fraud has been, is being, or is about to be perpetrated, in the sale or advertising for sale of a security. The Attorney General is also empowered to apply for ex parte injunctions restraining activities of the persons concerned, one of the few instances in which such exparte injunctions can still be obtained in New York State. At an early date, the Attorney General was successful in obtaining court interpretation that the Martin Act is not a penal act, thus avoiding the rigidity of construction that such interpretation would give to the Act. Nevertheless, under the Act, the Attorney General may prosecute every person charged with the commission of a criminal offense in violation of the laws of the State applicable to the fraudulent practices found, or the Attorney General may in his discretion transmit evidence as to any such offense to the District Attorney. Any person disobeying any order or judgment shall be deemed in contempt of court and shall be guilty of a misdemeanor, and in addition, every violation shall be subject to a civil penalty of $1,000 recoverable in an action brought by the State. Any person violating any of the operative provisions of the Act shall be guilty of misdemeanor punishable by

fine of not more than $500 or imprisonment for not more than one year, or both.

The registration provisions of the Martin Act are contained in Section 359-e, with exemptions in Section 359-f, as follows:

Section 359-e. Definitions; duties of dealer.--The word ''dealer'' or ''dealers'' as used in Sections 350-c (general requirement for publication of State notices), 359-e and 359-f hereof, shall include every person, partnership, corporation, company, trust, or association except a domestic municipal corporation who engages directly or through an agent in the business of trading in securities in such manner that as part of such business any of such securities are sold or offered for sale to the public in this state; or who deals in futures or market quotations of prices or values of any securities or accepts margins on prices or values of said securities. The business of trading in securities within the meaning of this section shall not include an isolated transaction in which a specific security is sold or offered for sale, by the owner thereof, or by his representative, for the owner's account, such sale or offer of sale not being made in the course of repeated and successive transactions of a like character by such owner, or for his account by such representative, and such owner or representative not being the issuer or underwriter of such security. A sale or offer of sale to the public shall not include an isolated transaction of the nature above mentioned; any sale or offer of sale to any person engaged in the business of acquiring securities for the purpose of resale to the public; any sale or offer of sale to a banker, to a dealer or to a corporation or to any syndicate or group formed for the specific purpose of acquiring such securities for resale to the public directly or through other syndicates or groups, or any sale or offer of sale upon the floor of any exchange to a broker in securities.

1. After this subdivision as hereby amended takes effect, no dealer shall sell or offer for sale to the public within this state, as principal, broker or agent, any securities issued or to be issued unless and until a notice, to be known as the ''state notice'', containing the name, business or post office address of such dealer and if such dealer is a corporation the state or country of incorporation thereof, and if a partnership the names of the partners, shall have been filed in the department of state. Such notice shall be in the following form:

Name(s) of dealer(s).....
Business address(es) or post office address(es) (state which) .....
If a corporation, the state or country in which incorporated .....
If a partnership, the names of the partners .....
.....

2. After this subdivision takes effect, no dealer shall sell or offer for sale to the public within this state, as principal, broker, or agent, or otherwise, any securities issued or to be issued, unless and until such dealer shall have caused to be filed in the department of law a statement, duly verified as hereinafter provided, to be known as a ''dealer's statement'' containing:

(a) The name of such dealer.

(b) The address of the principal office of such dealer, if any, wherever situated, and the address or addresses of the principal office and all branch offices of such dealer within this state, if any.

(c) If such dealer be an individual, a statement of his connections during the preceding five years with any person, partnership, corporation, company, trust or association engaged in the business of selling securities or offering securities for sale, and the names of the last three issues of securities, the whole or any part of which have been sold or offered for sale by such dealer, including sales or offers for sale made by any person, partnership, corporation, company, trust or association with which such dealer, at the time of such sale or offer, was in any way connected or associated.

(d) If such dealer be a partnership, the names, residence and business addresses of the partners, including special or limited partners, and of all other individuals participating as principals in the profits of such business, specifying as to each the nature of his relation to such business and giving with respect to each all of the information required by (c) of this subdivision two to be given by a dealer who is an individual.

(e) If such dealer be other than an individual or partnership, the name of the state or country where incorporated or organized, and the names, residence and business addresses of its principal officers, wherever located, and of its officers and branch managers in this state, specifying as to each the nature of his relation to such business, and giving with respect to each all of the information required by (c) of this subdivision two to be given by a dealer who is an individual.

(f) A statement as to whether such dealer, or, if such dealer be other than individual, whether any partner, principal, officer, director or branch manager thereof, has been convicted by a court of competent jurisdiction in any state or country of any criminal offense in connection with any transaction involving the sale or offer for sale of securities, or has been enjoined or restrained by order of any court of competent jurisdiction from selling or offering for sale securities in any state or country, or continuing any practices in connection therewith, or, having been registered or licensed as a dealer, broker or salesman of securities in any state or country, has had such registration or license cancelled by order of any such court of competent jurisdiction. If such dealer, or any such partner, principal, officer or branch manager has been so convicted, restrained or enjoined, or has had such registration or license so cancelled by order of a court of competent jurisdiction, such dealer's statement shall have incorporated therein full and complete details thereof.

3. In the event that any dealer, or any partner, principal, officer, director or branch manager shall, after such dealer shall have filed a dealer's statement as provided in subdivision two of this section, be convicted by a court of competent jurisdiction of any state or country of any criminal offense in connection with any transaction involving the sale or offer for sale of securities, or be enjoined or restrained by order of any such court of competent jurisdiction from selling or offering securities in any state or country, or continuing any practices in connection therewith, or, having been registered or licensed as a dealer, broker or salesman of securities in any state or country, having such registration or license cancelled by order of any such court of competent jurisdiction, or in the event that after any dealer shall have filed a dealer's statement under the provisions of subdivision two of this section any change shall take place in the personnel of the partners, principals, officers or branch managers, information with respect to whom is required to be set forth in a dealer's

statement under the provisions of (c) or (d) of subdivision two of this section, or shall make a change in the location of his principal office or discontinue or change the location of any branch office, such dealer shall not sell or offer for sale to the public within this state as principal, broker or agent, any securities issued or to be issued, unless and until a statement, to be known as a "supplemental dealer's statement," duly verified as hereinafter provided, shall have been filed with the department of law, setting forth in full the details thereof, and in the case of any new partner, principal, officer, director or branch manager with respect to whom information required by (c) or (d) of subdivision two of this section has not theretofore been included in a dealer's statement or supplemental dealer's statement filed by such dealer, setting forth such information with respect to such new partner, principal, officer, director or branch manager thereof.

4. Each such dealer's statement and each such dealer's supplemental statement shall be verified by the dealer, or if such dealer be a partnership, by a general partner thereof, or, if such dealer be other than an individual or partnership, by a principal officer thereof, and shall state that the facts therein stated are true to his own knowledge; provided that in the case of a dealer's statement or supplemental dealer's statement of a dealer other than an individual, the person verifying the same may state on information and belief the facts therein included with respect to any other individual, if such dealer's statement or supplemental dealer's statement shall have attached thereto an affidavit of such other individual stating that all facts contained in said dealer's statement or supplemental dealer's statement with respect to him are true.

5. Any false statement contained in any such dealer's statement or supplemental dealer's statement or in any affidavit attached thereto shall constitute a violation of this section within the meaning of section 359-g of this article.

6. The attorney-general may in his discretion adopt forms for the use of dealers for filing any statements in the department of law pursuant to the provisions of this section and furnish such forms to dealers without charge or fee therefor, and such forms shall provide only for the information required to be filed in the department of law as herein set forth. The department of law shall collect the following fees: for filing each "dealer's statement" five dollars; for filing each "supplemental dealer's statement", two dollars and fifty cents; for filing each "sworn statement," two dollars. The fees herein enumerated shall be payable at the time of filing and no filing shall be deemed effective within the meaning of this article until such fees have been paid.

7. Any person, partnership, corporation, company, trust or association representing in any manner that the state, the department of law or any officer thereof has recommended the purchase of any stocks, bonds or other securities, in advertising or offering such stocks, bonds or other securities for sale shall be guilty of a misdemeanor punishable as provided in subdivision two of section 359-g of this article.

8. After this subdivision as hereby amended takes effect no dealer shall sell or offer for sale to the public within this state as principal, broker or agent, any securities issued or to be issued which are not exempted from the provisions of this subdivision by section 359-f hereof unless and until such dealer shall cause to be filed a further state notice containing the information, other than the names of partners, required to be published by subdivision one of this section, but opposite heading "Name of dealer," if the person or persons causing such notices to be filed are acting pursuant to the provisions of subdivision nine of this section, there shall be added either the words "syndicate manager" or "syndicate managers" as the case may be; and in addition thereto and as part of each such further notice the name of the security or securities, name, post office address and state or country of incorporation or organization of the corporation, association, common law trust or similar organization issuing or to issue the security or securities to be sold or offered for sale, in the following form:

Name of security or securities .....
Name of issuer of securities .....
Post office address of issuer of securities .....
.....
The state or country in which organized .....
.....

Two or more dealers may jointly file such further notice required by this subdivision, and a dealer or exchange must file a further state notice for each issue about to be offered which has not heretofore been published by the issuer.

9. Whenever a dealer shall have become a member of a selling group, or syndicate, herein called syndicate, formed pursuant to a written agreement for the purpose of effecting the sale or distribution to the public of a particular issue of securities, and the sale or offer of sale or distribution of such securities to the public by dealers is not exempted from the provisions of subdivision eight of this section by section 359-f hereof, any member of such syndicate shall be deemed to have complied with the provisions of subdivision eight of this section without the filing of any notice required by such subdivision in connection with the sale or offer of sale of such securities if the syndicate manager or managers specified in said syndicate agreement, at least one of whom maintains an office in this state, shall have agreed with the members of said selling syndicate to cause to be filed a state notice respecting such securities in the form required by subdivision eight of this section. Such notices shall be filed at or before the time the securities described therein are sold or offered for sale to the public, and may be filed either in the name or names of the syndicate manager or managers or in the name of one of them who maintains an office in this state, to be designated in said agreement.

Whenever a syndicate manager or managers shall have agreed in writing with the members of any such selling syndicate to cause the notices to be filed pursuant to the provisions of this subdivision, the syndicate manager or managers designated in said agreement to cause such notices to be filed as hereinbefore provided, shall be deemed to be a dealer or dealers in such securities within the meaning of this article notwithstanding anything to the contrary contained in section 359-e hereof.

Whenever a dealer, or an exchange pursuant to the provisions of subdivision k of section 359-f hereof, shall have filed any notice herein required to be filed, or shall have prepared such notice in the form herein prescribed and have forwarded the same together with the fee for the filing and publication thereof enclosed, by registered mail, postage prepaid and properly ad-

dressed to the department of state at Albany, such dealer, or exchange as to the contents of such notice and the filing thereof, shall be deemed to have complied with the requirements of this section.

Whenever a dealer shall have filed any dealer's statement or supplemental dealer's statement required to be filed under the provisions of this section, or shall have prepared any such dealer's statement or supplemental dealer's statement and have forwarded the same by registered mail, postage prepaid and properly addressed, to the department of law in Albany, such dealer, as to the filing of such dealer's statement or supplemental dealer's statement, shall be deemed to have compiled with the requirements of this section. (As amended by L. 1925, Ch. 239; L. 1928, Ch. 210; L. 1929, Ch. 669; L. 1932, Ch. 397; L. 1934, Ch. 524 and Ch. 571; L. 1935, Ch. 218; L. 1941, Ch. 39, Sec. 34; L. 1945, Ch. 441.)

Section 359-f. Exemptions from certain provisions of section 359-e.--1. The provisions of subdivision eight of section 359-e shall not apply to any transactions relating to the sale or offering for sale of any of the following described securities by a dealer therein:

(a) Any security issued, or guaranteed by the United States or any territory or insular possession thereof, or by the District of Columbia, or by any state or political subdivision or agency thereof.

(b) Any security issued or guaranteed by the Dominion of Canada or by any foreign government with which the United States is at the time of the sale or offer for sale thereof maintaining diplomatic relations, or by any province or political subdivision thereof.

(c) Any security issued by a national bank or by any federal land bank or joint-stock land bank or national farm loan association under the provisions of the federal farm loan act of July 17, 1916, or by any corporation created or acting as an instrumentality of the government of the United States pursuant to authority granted by the congress of the United States.

(d) Any securities issued or guaranteed by a public service or utility corporation, including a railroad corporation, provided such corporation is subject to regulation or supervision either as to its rates and charges or as to the issue of its own securities by a public commission, board or officer of the government of the United States, or of any territory, or insular possession thereof, or of any state or municipality or other political subdivision thereof, or of the Dominion of Canada, or any province thereof; also equipment and trust certificates or equipment notes or bonds based on chattel mortgages, leases or agreements for conditional sale of cars, motive power, or other rolling stock mortgaged, leased or sold to or furnished for the use of or upon such a railroad or other public-service utility corporation, or equipment trust certificates, or equipment notes or bonds where the ownership or title of such equipment is pledged or retained in accordance with the provisions of the laws of the United States, or of any state, territory or insular possession thereof, or of the District of Columbia, or of the Dominion of Canada, or of any province thereof, to secure the payment of such equipment trust certificates, bonds or notes.

(e) Any security issued by a corporation organized exclusively for educational, benevolent, fraternal, or reformatory purposes, and not for pecuniary profit.

(f) Any capital stock issued by a state bank, trust company or saving institution incorporated under the laws of and subject to the examination, supervision and control of any state or of the United States or of any insular possession thereof.

(g) Any security which under the laws of this state is a legal investment for savings banks or trust funds, and any securities which are underwritten or sold by any corporation under the supervision of the superintendent of banks of the state of New York.

(h) Any security, other than common stock, outstanding for a period of not less than five years, upon which no default exists in the payment of principal or interest and upon which no such default has occurred for a continuous immediately preceding period of five years, or in the case of preferred stock upon which dividends specified in the certificates of such stock have been paid for a continuous immediately preceding period of five years.

(i) Negotiable promissory notes, drafts and commercial paper provided that such issue of notes, drafts and commercial paper mature in not more than twelve months from date of issue and shall be issued within three months after the date of sale.

(j) Any bond and mortgage sold or offered for sale in an undivided whole.

(k) Securities which on January 1, 1925, have been fully listed upon any exchange, located in the state of New York, which on said date was organized and in operation, and so long thereafter as the same shall remain so listed and any securities senior thereto. Securities which shall become fully listed upon any such exchange subsequent to said January 1, 1925, shall not be exempted as herein provided unless and until such exchange shall cause to be duly published pursuant hereto in the state paper as defined herein, a notice which shall contain the name of the corporation, association, common law trust or similar organization issuing the security or securities so listed, the business or post office address thereof, the state or country where incorporated or organized, the date of such listing and a brief description and the amount of the security so listed. After such publication of said notice as aforesaid, securities so listed subsequent to January 1, 1925, and any securities senior thereto, shall thereupon be exempted hereunder so long as the same shall remain so listed.

(l) Securities sold or offered for sale at any judicial executor's, administrator's, guardian's, or conservator's sale, or any sale by a receiver or trustee in insolvency or bankruptcy or at a public sale by auction held at an advertised time and place.

(m) Sales by or for the account of a pledgee or mortgagee selling or offering for sale or delivery, in the ordinary course of business, to liquidate a bona fide debt, a security pledged in good faith as security for such debt.

(n) Negotiable documents of title, foreign currency orders and calls or options therefor.

2. The attorney general may upon application, in writing grant exemptions from the provisions of section 359-e, subdivisions two, three, four, five and six to any person, partnership, corporation, company, trust or association which is a dealer as defined in section 359-e, solely by reason of the fact that it is offering or selling to its security-holders, to the public, or to others, any one or more of the securities which are specified in any one or more of the following paragraphs of this subdivision two of section 359-f:

(a) Securities of a corporation which has been in existence for a period of not less than ten years or which

is a consolidation, merger, or successor of one or more corporations which has been in existence for a period of not less than ten years, and which have not defaulted in the payment of principal or interest on any of its obligations for a continuous immediately preceding period of ten years, and in the case of preferred stock, upon which dividends specified in the certificates of such stock have been paid for a continuous immediately preceding period of six years, and in the case of common stock, upon which dividends have been paid annually for a continuous immediately preceding period of six years at the rate of not less than 3 per cent. of the book value of such common stock as shown by its balance sheet at the date of the close of the fiscal year in which such dividends were paid, as certified by an independent certified public accountant.

(b) Securities which on January 1, 1925, have been fully listed upon any exchange, located in the state of New York, which on said date was organized and in operation, and so long thereafter as the same shall remain so listed and any securities senior thereto, as well as securities which have since that date become fully listed on any such exchange and have remained so listed for a period of at least ten years immediately preceding the date of offering thereof and any securities senior thereto, and additional amounts of such securities as have been so listed for a period of at least ten years immediately preceding the date of offering thereof, and which additional securities it is planned, at the time of offering thereof, to list.

(c) All securities which are mentioned in section 359-f, subdivision one, with the exception of such securities as are specified in subdivisions h and k thereof.

(As amended by L. 1925, Ch. 239; L. 1926, Ch. 617; L. 1932, Ch. 397; L. 1941, Ch. 39; L. 1946, Ch. 980.)

(See Blue-Sky Laws, False Statement Acts.)

MASSACHUSETTS TRUST

A term sometimes applied to the business trust, so-called because of the fact that it was developed in Massachusetts as a form of business organization, corporate in character, having the power to hold and deal in real estate at a time when the Massachusetts statutes did not permit corporations to do so.

Organization of the business trust partakes of the details of a trust, being set up under a deed of trust in which organizational details are provided, and being limited like other trusts by the Rule Against Perpetuities (q. v.), which in most States limits the duration of trusts to two lives in being, plus nine months (period of gestation), plus a minority (21 years). Legal title to the property of the business trust is vested in the trustees, who issue transferable participation certificates or shares to the beneficiaries or shareholders. In order to avoid unlimited liability for the debts of the trust, the deed of trust must specify no such unlimited liability will attach to the trustees, and in addition, in order to avoid unlimited liability for shareholders or beneficiaries, the trustees must specify in all contracts that shareholders will not be so liable. Since business trusts are subject to Federal income taxes, and have few tax advantages under State laws, and since their original purpose in Massachusetts has been eliminated by statutes allowing corporations to hold and deal in real estate, they remain as a cumbersome variation of the corporate type of business organization. (See Trusts.)

MATCHED ORDERS

A form of Manipulation (q.v.) by which an operator buys a particular stock from one broker and sells it through another, thus artificially giving the appearance of activity. The purpose of matched orders is to induce buying of the stock by the public as a result of the display of activity and change in price and unloading when the price has risen sufficiently to permit a satisfactory profit. The brokers receiving the orders to buy and sell usually have no knowledge of the purpose of the transaction, and carry out their orders in good faith. This is an expensive method of manipulation and is likely to prove costly for the unsuccessful manipulator. Matched orders are prohibited by Sec. 9 of the Securities Exchange Act of 1934.

MATURITY

The terminating or due date of a note, time draft, acceptance, bill of exchange, bond, etc. The date a time instrument of indebtedness becomes due and payable, e. g., a 60-day note becomes due and payable at the expiration of that period. A check, or sight or demand instrument matures upon presentation for payment.

Time drafts or bills of exchange drawn, e. g., 30 days after sight, mature 30 days after presentation for acceptance, the maturity being fixed by computing the date 30 days thereafter. Time drafts should therefore be presented for acceptance as soon as possible, whenever it is desirable to bring the maturity at the earliest possible date. (See Days of Grace.)

As to maturity, bonds may be classified in four groups, viz.: (1) obligatory maturity without provision for prior redemption; (2) obligatory maturity with prior redeemability with or without a premium; (3) indeterminate maturity, i. e., no definite maturity indicated but redeemable after a certain date at the option of the issuer; (4) perpetual bonds issued without provision for optional or obligatory maturity, except in case of default in interest payments. Some common stocks of the classified type, such as Class "A", and preferred stocks, generally, are issued subject to redemption, in whole or in part, and usually at a premium. (See Prior Redemption.)

MATURITY INDEX

See Tickler.

MATURITY TICKLER

A record kept for the purpose of indicating the date upon which each loan, bill discounted, bond investment, or other time instrument matures. (See Tickler.)

McFADDEN ACT

See Pepper-McFadden Act.

McLEAN-PLATT ACT

An Act passed September 17, 1919, under which National banks, without restriction to the amount of their capital and surplus, were permitted to subscribe in amounts not exceeding 5 per cent. of their capital and surplus to the stock of foreign banking corporations, as a further means of providing for the capitalization of institutions engaged in financing foreign trade. This Act was superseded by the Edge Act (q. v.).

MEAT-PACKING

See Packers.

MECHANIC'S LIEN

A claim created by statute law in most states, existing in favor of persons who have performed work or furnished materials in and for the erection or repair of a building. A mechanic's lien attaches to the land as well as to the building. It is a preferred claim and secures to the holder priority of payment, i. e., payment before other secured and general claims, except taxes.

MEET

To fulfill one's financial obligations, e. g., paying off a maturing loan or taking up on the delivery date securities previously contracted for.

MEETINGS

Under the New York State statutes, corporate meetings are of six principal types, all statutory.

Directors' meetings are either regular meetings or special meetings. Under Section 27 of the General Corporation Law, the by-laws may provide for a quorum for directors' meetings, which shall be not less than one-third of the board, as well as provide for fixed dates for regular meetings of directors. If the by-laws so provide for fixed dates, the directors are not entitled to any additional notice for regular meetings. For special meetings of directors, notice is required, but such notice may be waived, either before, during or after such meeting.

Stockholders' meetings are of four types. Section 45 of the Stock Corporation Law required written notice of meeting of at least 10 days and not more than 40 days, and notice shall also state who calls the meeting.

1. The annual meeting of stockholders for the purpose of electing directors. Section 55 of the Stock Corporation Law requires that such meeting shall be held at least once a year to elect at least one-fourth of the board.

2. Special meetings of stockholders. The by-laws may provide for any length of notice.

3. Special meeting of stockholders to oust hold-over directors, under Section 22 of the General Corporation Law.

4. Extraordinary meetings of stockholders, as provided by Section 52 of the Stock Corporation Law. Where the necessary two-thirds vote of stockholders, for example to ratify a change in capitalization, is not obtainable from stockholders' response to calls for special meeting, either in person or by proxies, the corporation may make application to the Supreme Court and obtain permission to call an extraordinary meeting of stockholders. Notice of such meeting shall be sent to all stockholders, and any stockholders appearing in person or sending in their proxies shall constitute a quorum, with two-thirds vote of the total vote represented at the meeting shall be sufficient to ratify the proposal.

Securities listed and registered on a national securities exchange are subject to the proxy rules of the Securities and Exchange Commission as well as of the exchange. (See By-Laws, Proxy.)

MELON

A stock market expression to denote a stock dividend or large extra cash dividend. When any extraordinary distribution of corporate profits is declared, the directors are said to have "cut a melon." (See Stock Dividend.)

MEMBER BANK CALL REPORT

Statements of condition reported by member banks in response to calls from the Comptroller of the Currency, in the case of National banks, and from the Board of Governors of the Federal Reserve System, in the case of State member banks, are combined in the periodic Member Bank Call Report, a publication of the Board of Governors of the Federal Reserve System.

Calls by the Comptroller of the Currency and by the Board of Governors of the Federal Reserve System for statements of condition have been for identical dates since 1922. All member banks are required by law (Sec. 5211, Revised Statutes, for National banks; Sec. 9 of the Federal Reserve Act) to be subject to not less than three calls a year, although customarily four calls per year have been issued. Each National bank, in addition to submitting its official copy of its call statement to the Comptroller of the Currency, forwards a copy of the statement to its local Federal Reserve Bank. State member banks submit two copies of their call statements to their local Federal Reserve Bank, one of which is forwarded on to the Board of Governors. Tabulation of the National bank call figures is done by the Comptroller, and of the State member bank figures by the Board. The Board of Governors then combines its figures with those of the Comptroller of the Currency for publication in the Member Bank Call Report. (See Call Report.)

MEMBER BANKS

The Federal Reserve Act states that "the term, 'member bank' shall be held to mean any National bank, State bank, or bank or trust company which has become a member of one of the Federal Reserve Banks." Since all National banks are required to join the Federal Reserve System, they are, ipso facto, member banks. (See Federal Reserve System.)

MERCANTILE AGENCIES

Companies engaged in the business of supplying credit information. Mercantile agencies are of two classes, general and special. Of the general agencies, Dun & Bradstreet, Inc. are the oldest, best established, and most generally used. This company has been in existence for over 100 years (one of its antecedents having been the first general agency, established in New York City in 1841), and the entire country is served by their many branch offices. Their services are national in scope and they are prepared to issue reports on practically any business house (producers, manufacturers, jobbers, wholesalers, retailers, brokers, and traders) in the United States. Special agencies are those that limit their services to a single or related lines of trade, and operate nationally or in a local field. Practically every trade association in the country has organized its own credit information exchange bureau, and in addition, credit interchange bureaus, such as the National Association of Credit Men, exchange credit information among members, and the credit bureaus, such as those organized as the Associated Credit Bureaus of America, supply credit information and reports.

The general mercantile agencies furnish reports of two kinds, general and special. The general reports are contained in the reference or credit rating books, which are published quarterly. These books are leased (not sold) to the subscribers, and contain many names, the Dun & Bradstreet Reference Book containing over

2,000,000 names. Each name is given a capital and credit rating. The capital rating is based on the information contained in the financial statement which the agency endeavors to procure from each listed name every six months. The Credit Rating (q.v.) denotes the grade of credit to which the name is entitled in the opinion of the agency as a result of its investigation.

The special reports are usually limited to certain lines of business or to the more important names, but the general agencies do not attempt to furnish such reports on all names. Special reports are obtained under contract, the price varying with the number requisitioned per year. The information furnished in special reports is of a general nature, but oftentimes quite extensive. As a rule these reports embody the following points: history, antecedents, and past record of the concern; present personnel; nature of the business; latest statement; total assets and liabilities from previous statements; location of properties; character and capacity of management; fire record; court record; general credit standing; opinion of the trade; and business outlook. From the standpoint of a bank undertaking a credit investigation, the special reports of the agencies are valuable in (1) furnishing the history of the concern; (2) in furnishing "leads" which may serve in detecting other important information, and (3) in corroborating information obtained from other sources.

Information obtained by the mercantile agencies is collected from various sources: (1) direct investigation of the name; (2) trade creditors and banking connections; (3) public records, and (4) insurance records. These agencies maintain a corps of reporters who call on the trade, and written questionnaires are forwarded semi-annually to all business houses throughout the country to be answered and returned. Most business men recognize the value of establishing and maintaining their credit position, and consequently are willing to accede to the request of mercantile agencies for information. If this information cannot be secured directly, the facts are obtained from neighboring business houses or banks in the community.

Public records are also investigated. Usually the county clerk of each community is engaged to forward a report upon all items of interest to the central office of the agency. In large cities, agencies engage their own representatives to search these records. For instance, the records of the County Recorder's Office are searched for mortgages and other encumbrances, and various court records are searched for suits in civil or criminal cases, petitions and discharges in bankruptcy, and judgments and appeals.

The investigation of losses by fire, burglary, etc., constitutes an important part of the work of the general agencies. By special arrangement with the fire patrol of each city, local and national boards of fire underwriters, city and state fire marshals, and insurance companies, agencies are able to secure a vast amount of information concerning business insurance. Whenever a fire occurs, reports are made by the city fire patrol, local board of fire underwriters, etc., so that the agency can determine the amount of the loss, whether insured, and the extent of the fire adjustment, so that the net loss can be established.

In addition to agencies of national scope, local agencies and services will be found in practically every city of importance. In New York City alone, some 88 credit rating and reporting agencies, bureaus or services are listed.

MERCANTILE EXCHANGE

Some commodity exchanges offer interested merchants the facilities and advantages of futures trading as well as centralized spot markets in the commodities concerned. Among contract markets and regulated commodities in which futures trading is either conducted or authorized, are the following mercantile exchanges and commodities regulated thereon:

Market	Regulated Commodities
Chicago Mercantile Exchange	Butter, eggs and potatoes.
Memphis Merchants Exchange Clearing Association	Cottonseed meal and soybean meal.
New York Mercantile Exchange	Butter, eggs and potatoes.
New York Produce Exchange	Cottonseed oil, soybean oil and tallow.
St. Louis Merchants' Exchange	Wheat, corn and millfeeds.

(See Commodity Exchanges.)

MERCANTILE PAPER

Notes, acceptances, and bills of exchange made or indorsed by concerns engaged in the jobbing, wholesaling, or retailing of commodities, as distinguished from obligations arising out of the production or manufacture of commodities. The short-term obligations of a wholesale grocery would be mercantile paper, whereas those of a farmer or steel manufacturer would not. Mercantile paper is a sub-classification of Commercial Paper (q. v.).

MERCHANDISE TURNOVER

The rate at which the stock of merchandise of a concern is moved. It is also known as the "momentum of sales," or sales to merchandise ratio. The merchandise turnover is properly determined by dividing the annual cost of goods sold by the average inventory, but in practice, it is usually computed by dividing the annual net sales by the average inventory.

The merchandise turnover varies in different lines of business, each having a standard peculiar to itself. The merchandise turnover among wholesale groceries is naturally greater than in ship-building, jewelry, or furniture business. It may be from seven to twelve in the former and two in the second and third. This ratio is an important barometer of the internal condition of a single business, and taken in the aggregate, it is a barometer of general business conditions. It is an indicator of overstocking or slow merchandising, or of rapid moving of goods according to whether the ratio is high or low. No greater amount of capital should be tied up in inventories than necessary and the faster goods can be "turned," the greater the profit on the capital invested. Assuming the same margin of gross profit or "mark up," it is more profitable to move $50,000 of goods twenty times a year than $100,000 of goods ten times, because in the first instance the business can be carried on with half the capital of the second. When the merchandise turnover is relatively high, it indicates the capacity of the management to move its goods quickly and discloses a favorable condition.

In analyzing credit risks, wherever the merchandise turnover is high, insistence on a high current ratio is less important.

MERCHANTS ASSOCIATION OF NEW YORK

Now known as the Commerce and Industry Association of New York, Inc.

This service-type chamber of commerce, founded in 1897 as The Merchants Association, functions as the "Voice of New York Business." It has 10 departments, or bureaus, geared to render prompt day-to-day service and assistance to its membership, which represents a complete cross-section of New York industrial and economic life. Its announced principles.

"Whatever affects the daily life of New York--industrial, economic, civic--becomes the focal point for action by the Association.

"The Association's many services are designed to meet the needs and requirements of its members, whose subscriptions provide the revenue for its operations.

"As its membership roll grows, the Association is enabled to widen the field of its activities and enlarge the scope of its services.

"To each member is accorded an opportunity to participate in the diversified services and activities of the Association and to help achieve, for the benefit of the entire community, its basic purpose--'to foster the trade and welfare of New York.' "

The ten departmentalized units of the Association and their functions, services and activities, are:

World Trade Department.--Represents the largest and most active group of exporters and importers of the country; acts as clearing house for information on all phases of export and import procedure, consular and shipping requirements; assists members in locating suitable agents abroad, certifies origin certificates, commercial invoices and other shipping documents for all countries requiring chamber of commerce signatures; issues weekly bulletin with up-to-date regulation changes, trade inquiries, current news; provides comprehensive service regarding customs and tariff regulations.

Personnel Management Bureau.--Gives advice and guidance in personnel administration and labor problems through consultation, plant inspection and publication of current information; maintains a union contract file for reference; issues "Annual Survey of Clerical Salary Rates and Personnel Practices" and bimonthly "Current Index of Clerical Salary Rates"; undertakes special survey work on wages, etc., as need arises.

Industrial Development Bureau.--Furnishes advice, information and guidance on all industrial problems, development of new products, location of raw material sources and available manufacturing facilities, new merchandising methods and sales techniques, government regulations, licensing requirements, business trends; helps members locate work for idle machines, develop new sales outlets for nationwide distribution of New York products; assists local manufacturers' agents to secure new items to represent.

Research Bureau.--Observes, reviews and analyzes the general services of City, State and Federal Government; included are municipal, state and national budgets, tax problems, city special taxes, City Charter and State Constitutional amendments, transit, banking and currency, Building Code, city planning problems such as urban rehabilitation and control of street traffic, sanitation, public health and water supply, public utilities and education.

Property Owners Bureau.--Aggressively protects and promotes the interests of realty owners in New York City; studies and reports on legislation and regulations at all government levels and appears before governmental and other public bodies as need arises; works closely with members in drafting recommendations, insuring well-balanced program representing collective judgment of leaders in New York realty field.

Albany Bureau.--Supports and opposes bills affecting business in the State; acts as clearing house, not only for the Association, but also for other business organizations, chambers of commerce and similar civic groups throughout the State; issues weekly Legislative News-Letter explaining pertinent measures pending in both houses and containing information on governmental activity in the State Capital.

Legislative Service Bureau.--Keeps abreast of all legislation, reviewing thousands of bills introduced annually in the Congress, State Legislature and City Council; furnishes digests or complete copies of bills and laws; drafts bills to support Association policy; supplies information on public rules, regulations, orders of administrative bodies; legal and business library available to members.

Transportation Bureau.--Invites consultation on every phase of the freight transportation problem; assists in amicable adjustment of controversies between members and carriers; opposes rate adjustments harmful to members and acts in their interest on proposed transportation legislation; appears frequently before the Interstate Commerce Commission and other Government agencies, and railroad rate committees.

Social Security Bureau.--Gives advice, consultation and information to members on New York State Unemployment Insurance Act, Federal Social Security laws and regulations, unemployment insurance laws and regu lations of all 48 States; makes continuing study of laws and recommends appropriate amendments.

Public Relations Bureau.--Publicizes activities of the Association; promotes public interest in problems and needs of business and the community; publishes Weekly Bulletin; supervises the Association's radio programs; consultant for other bureaus on public relations problems, production of printed matter and plans for varied projects.

The Association publishes a Weekly Bulletin for its entire membership and a World Trade Bulletin, also issued weekly, for its import-export members. During the New York State Legislative session, a Weekly News-Letter is distributed by the Albany Bureau to members and 750 business and trade organizations throughout the State. Special bulletins on Federal legislation and regulations and current personnel management, social security and property owners' problems are issued from time to time.

The Association has its offices in the Woolworth Building, 233 Broadway, New York 7, N. Y.

MERGER

A combination of two or more corporations into a dominant corporation. In order for a merger of two ordinary business corporations to occur in New York State, two statutory tests must be met:

1. Similarity of line of business. This does not mean identical line of business, but of related lines of

business, such as "feeders" or suppliers.

2. The dominant corporation must own 100% of the stock of the subsidiary merged.

If the above requirements exist, then all that is needed for merger is preparation and filing of Certificate of Merger by the board of directors, stockholders' consent not being necessary. Effect of filing the certificate is that the dominant corporation completely absorbs the subsidiary, which then loses its corporate existence. The dominant corporation is immediately vested with title to every asset possessed by the subsidiary, and becomes completely liable for every obligation of the subsidiary as though it had itself incurred the obligation.

These technical requirements for merger are different from those for consolidation. Under New York State laws, two requirements must be met for consolidation of ordinary business corporations:

1. Similarity of line of business.

2. Stockholders of each of the consolidating corporations must vote-two-thirds of the outstanding stock for the consolidation, and any dissenters are entitled to payment of appraised value of their stock.

If the above requirements are met, the Certificate of Consolidation must be filed. Then all of the consolidating companies go out of existence, and a new corporation, combining the old, comes into being, using the name of any one of the consolidating corporations, and that corporation is automatically vested with title to all assets of the consolidating corporations and charged with liability for all obligations of the consolidating corporations.

Under the Banking Law, Public Utility Law and Insurance Law, mergers in New York State may be effected with less than 100% stock ownership, but stockholders are entitled to vote on the merger, and dissenting stockholders are entitled to appraised value of their stock.

Under Act of November 7, 1918, National banks may "consolidate", the corporate existence of each of the constituent banks being merged into and continuing in the consolidated National bank. Stockholders vote on the consolidation, and two-thirds affirmative vote is required of stockholders of each consolidating National bank. Under Act of February 25, 1927, any State or District of Columbia bank may be consolidated with a National bank. Stockholders of each bank vote on the consolidation, two-thirds affirmative vote of stockholders of each bank is required, and dissenting stockholders of either the National bank or State or District of Columbia bank consolidating may upon proper notice receive the appraised value of the stock. No such consolidation shall be in contravention of the law of the State under which the State bank is incorporated. If State branch banking laws so allow, offices of the consolidated bank may be continued as branches

Through the device of the Holding Company (q. v.), necessity for mergers or consolidations is obviated, but tax reasons and special legislation, such as the Public Utility Holding Company Act of 1935 in the public utility field, may render use of the holding company either not feasible or inhibited by prohibitions and regulations. Holding companies in the banking field are subject to regulation by the Board of Governors of the Federal Reserve System for member banks in the form of special agreements and voting permits.

(See also Branch Banking, Consolidation of Banks.)

MESSENGER

A name given to certain employees of banks and brokerage houses. The chief function of bank messengers is to collect items (checks, notes, acceptances, etc.), not drawn on clearing house banks and not collectible through the clearing house, by direct presentation. They also collect special items drawn on individuals, brokers, corporations, etc., e. g., arrival drafts and drafts with stocks and bonds attached. Collections made by messengers are frequently known as collections by hand. The larger banks maintain a large corps of messengers, usually under the supervision of the city collection or note teller's department. They are given specific instructions, are not allowed to use their own discretion, may accept only cash or certified checks in payment of items and must demand the return of all unpaid items.

Brokers' messengers are employed to effect the transfer and delivery of securities, and are frequently entrusted with large amounts of valuable papers. Protection from possible loss by the dishonesty of messengers should be provided through fidelity and theft insurance.

METAL EXCHANGE

See Commodity Exchange, Inc.

METALS

In customary grouping of securities, this term refers to the shares of non-ferrous metal producers, such as copper, gold, lead, nickel, silver, tin and zinc producers.

(See Copper, Gold, Lead Futures, Nickel, Scrap Iron, Silver, Steel Alloys, Tin, Zinc Futures.)

METHODS OF TRADING

The various methods of trading on the New York Stock Exchange are defined by the rules, as follows:

Rule 108.--Bids and offers in securities admitted to dealings on a "when issued" basis shall be made only "when issued", i.e., for delivery when issued as determined by the Exchange.

Bids and offers in securities admitted to dealings on a "when distributed" basis shall be made only "when distributed", i.e., for delivery when distributed as determined by the Exchange.

Rule 109.--Bids and offers in stocks admitted to dealings on an "issued" basis shall be made only as follows, and may be made simultaneously as essentially different propositions, but when made without stated conditions, shall be considered to be "regular way":

(a) "Cash," i.e., for delivery on the day of the contract.

(b) "Regular way", i.e., for delivery on the third full business day following the day of the contract.

(c) "Seller's option", i.e., for delivery within the time specified in the option, which time shall be not less than four full business days nor more than 60 days following the day of the contract;

except that, beginning with the third full business day preceding the final day for subscription, bids and

offers in rights to subscribe shall be made only ''next day'', i.e., for delivery on the next full business day following the day of the contract, and shall be made only for ''cash'' on the final day for subscription.

''Regular way'' and ''seller's option'' methods of trading were modified when the New York Stock Exchange adopted the 3-day delivery plan. ''Regular way'' contracts formerly called for delivery on the second full business day following the day of the contract, and ''seller's option'' formerly had a range of not less than three days nor more than 60 days following the day of the contract.

Rule 110.--Bids and offers in securities of the U. S. Government admitted to dealings on an ''issued'' basis shall be made only as follows, and may be made simultaneously as essentially different propositions, but when made without stated conditions, shall be considered to be ''regular way'':

(a) ''Cash'', i.e., for delivery on the day of the contract.

(b) ''Regular way'', i.e., for delivery on the full business day following the day of the contract.

(c) ''Seller's option'', i.e., for delivery within the time specified in the option, which time shall be not less than two full business days nor more than 60 days following the day of the contract.

Rule 111.--Bids and offers in convertible bonds admitted to dealings on an ''issued'' basis (unless designated by the Exchange to be determined pursuant to Rule 112) shall be made only as follows, and may be made simultaneously as essentially different propositions, but when made without stated conditions, shall be considered ''regular way'':

(a) ''Cash'', i.e., for delivery on the day of the contract.

(b) ''Regular way'', i.e., for delivery on the third full business day following the day of the contract.

(c) ''Seller's option'', i.e., for delivery within the time specified in the option, which shall be not less than four full business days nor more than 60 days following the day of the contract.

Rule 112.--Bids and offers in bonds admitted to dealings on an ''issued'' basis which are not subject to the provisions of Rule 110 or Rule 111 (including such convertible bonds as are designated by the Exchange to be determined pursuant to this Rule) shall be made only as follows, and may be made simultaneously as essentially different propositions, but when made without stated conditions shall be considered to be ''regular way'':

(a) ''Cash'', i.e., for delivery on the day of the contract.

(b) ''Regular way'', i.e., for delivery on the third full business day following the day of the contract; provided, that the seller shall be permitted (unless the buyer specified ''third day'' when making his bid) to state at the time of closing the transaction on the floor that the bonds are sold for ''delayed delivery'', in which event delivery shall be due on the 7th day following the day of the contract.

(c) ''Seller's option'', i.e., for delivery within the time specified in the option, which time shall be not less than 8 days nor more than 60 days following the day of the contract.

(See Deliveries, Ex Dividend, Good Delivery, New York Stock Exchange.)

METRIC SYSTEM

A decimal system of weights and measures, which originated in France. Basic unit of the system is the meter, which is approximately one ten-millionth of the distance on a meridian from the equator to the pole, or about 39.37 inches.

The tables on page 400 list metric denominations for measures of length, capacity, area, and mass., and their equivalents in other metric measures, and in common equivalents.

Bibliography

U. S. Department of Commerce, National Bureau of Standards: General Tables of Weights and Measures (LC 682); Units of Weight and Measure (U. S. Customary and Metric); Definitions and Tables of Equivalents (M 121).

METRIC TON

A unit of weight used in Continental countries, particularly in measuring grains. A metric ton is equal to 2,204.62 avoirdupois pounds. (See Metric System)

MEXICAN DEBT

Thanks to the 1942 Debt Plan and the 1948 Mexican Railways Debt Plan, order has been achieved out of the chaos that formerly characterized most Mexican dollar debt, many issues of which had been issued back in the days of Dictator Diaz, with inadequate records and default for many years.

External dollar debt includes $47 million in bonds under the 1942 Debt Plan, pursuant to which modified interest is regularly paid on certain Federal bonds and sinking fund service totals about $2.5 million per year; $48 million in Railway debt under the 1948 Railway Debt Plan, pursuant to which principal amounts are scaled down and options offered either to pay modified interest plus cumulative sinking fund, the Mexican Government assuming full responsibility for service, or else to use all funds entirely to retire bonds, $151 million in commitments from the Import-Export Bank, of which $67 million has been utilized and $13 million repaid to June 30, 1947; and $19.5 million in general and agrarian claims. Mexico has also received additional commitment for $175 million in credits from the Import-Export Bank, and has also applied to the International Bank for Reconstruction and Development for $209 million in loans. Also, the Government is obligated under the settlement agreement for the British-Dutch oil claims to pay off the settled $130 million over 15 years at $8.7 million per year.

Internal public debt is only about $200 million (P1 billion), a principal sum which amounts to a relatively small debt. In fact, total debt service, internal and external, in the 1948 budget is only P360 million ($72 million), or less than 16% of total budgeted revenues. However, Mexican trade balances have been unfavorable since 1944, inflation has been a problem, and as a result, gold and foreign exchange holdings have been steadily reduced since their high in 1945. Consequently, in mid-1948, the Mexican peso went off its par of 4.855 to the dollar set under agreement with the International Monetary Fund, and a new par remains to be officially announced, although open market quotations indicate the possibility of new rate of 6.33 to the dollar.

METRIC SYSTEM

MEASURES OF LENGTH

Metric Denomination	Equivalent In Meters	Equivalent in Common Use
myriameter	10,000 m	6.214 miles
kilometer	1,000 m	0.62137 mile
hectometer	100 m	328 ft., 1 inch
dekameter	10 m	393.7 inches
meter	1 m	39.3707 inches
decimeter	1/10 m	3.937 inches
centimeter	1/000 m	0.3937 inch
millimeter	1/1000 m	0.03937 inch

Measures of Capacity

Metric Denomination	Metric Equivalent In Liters	Metric Equivalent Cubic Measure	Equivalent in Common Use Dry Measure	Equivalent in Common Use Liquid Measure
kiloliter (stere)	1,000	1 m^3	1.308 cu. yds.	264.17 gals.
hectoliter	100	1/10 m^3	2.8378 bushels	26.42 gals.
dekaliter	10	10 dm^3	9.08 quarts	2.64 gals.
liter	1	1 dm^3	0.908 quart	1.0567 qts.
deciliter	1/10	1/10 dm^3	6.1022 cu. in.	0.845 gill
centiliter	1/100	10 cm^3	0.6102 cu. in.	0.33815 fl. oz.
milliliter	1/1000	1 cm^3	0.0610 cu. in.	0.27052 fl. dram

Measures of Area

Metric Denomination	Equivalent In Square Meters	Equivalent in Common Use
square kilometer	1,000,000 m^2	0.386 sq. mile
hectare	10,000 m^2	2.471 acres
are	100 m^2	119.6 sq. yards
centare	1 m^2	10.764 sq. ft.
square decimeter	1/100 m^2	15.5 sq. in.
square centimeter	1/10,000 m^2	0.155 sq. in.
square millimeter	1/1,000,000 m^2	0.00155 sq. in.

Measures of Mass (Weight)

Metric Denomination	In Grams	Equivalent In Metric Capacity of Water at Maximum Density	Equivalent In Avoirdupois Weight
millier (tonneau)	1,000,000	1 m^3	2,204.62 lbs.
quintal	100,000	1 hl	220.46 lbs.
myriagram	10,000	10 l	22.046 lbs.
kilogram	1,000	1 l	2.2046 lbs.
hectogram	100	1 dl	3.527 oz.
dekagram	10	10 cm^3	0.3527 oz.
gram	1	1 cm^3	15.432 grains
decigram	1/10	1/10 cm^3	1.5432 grains
centigram	1/100	10 mm^3	0.15432 grain
milligram	1/1000	1 mm^3	0.01543 grain

Metric Abbreviations

m--meter.
m^2--square meter.
m^3--cubic meter.
cm^3--Cubic Centimeter.
dm^3--cubic decimeter.
mm^3--cubic millimeter.
l--liter.
dl--deciliter.
hl--hectoliter

MEXICAN MONEY

The international currency unit of Mexico is the peso, consisting of 100 centavos.

See Foreign Moneys—Mexico.

MILKING

An expression used to denote the process employed by the management of some companies of exploiting their business by squeezing the last cent of profit from operations, e. g., by failing to reserve a part of earnings for expansion and improvements, not charging sufficient depreciation, flagrantly over-liberal salaries, or by other improper, although perhaps legal, accounting methods. The term was also applied to the directors of public utility holding companies, whose financial practices tend to enrich the stockholders at the expense of the operating companies and their public through malmanagement rather than mismanagement.

MILL

A monetary unit of account of United States currency, having a value of 1/10th of one cent. It is not coined, but is used in money calculations where precision is required in fractions of a cent.

MILLIEME

A bronze coin of Egypt, equal to 1/1,000th of the Egyptian pound. (See Foreign Moneys—table 2.)

MILLING

The ridged or furrowed edge forming the circumference (rim) of coins. The nickel and bronze coins of the United States are not milled. The purpose of milling is to prevent the clipping or filing of the edges and the sale of such clippings by dishonest persons, by making the filing or mutilation so obvious that the coin could not be easily passed. Coins are designed to be thickest at the edges in order to better protect the engraved figures on the obverse and reverse surfaces. (See Abrasion, Coinage.)

MILREIS

In Brazil, the former monetary unit, consisting of 1,000 reis. International currency unit of Brazil is the cruzeiro, consisting of 100 centavos.

In Portugal, the former monetary unit. International currency unit of Portugal is the escudo, consisting of 100 centavos.

(See Foreign Moneys.)

MINIMUM FREE BALANCE

In checking or non-borrowing accounts, the minimum free balance corresponds to the average balance, also known as compensating balance, maintained by a borrowing account. Cost accounting systems for checking accounts customarily allow an interest credit, based on the average rate of return earned on earning assets, on the minimum free balance in determining the service charge for activity of the account. Some banks offer checking services in a variety of forms featuring no requirement of minimum balances, operating instead on a flat charge per check, or per account up to a maximum number of items handled.

(See Average Balance, Bank Cost Accounting, Compensating Balances.)

MINING SECURITIES

The stocks and bonds of coal, copper, silver, lead, zinc and gold mining companies. In general, this class of securities is the most speculative of all, especially if the properties are undeveloped. In considering the purchase of mining securities, one should carefully distinguish between producing and undeveloped companies. Babson distinguishes between (1) producers and dividend payers; (2) producers and non-dividend payers; (3) corporations in the development stage which may or may not produce, and (4) prospects, consisting of leases or options upon property thought to contain mineral deposits.

In computing the worth of producing mining properties, the most important factors to consider are: (1) the extent of ore reserves; (2) the cost of mining the given metal in comparison with its selling price, and (3) the accounting policy with regard to Depletion (q. v.).

Nowadays it is usually implied that mining technology has advanced to a point where ore reserves can be exactly estimated. This is far from the truth, especially in the case of precious metals, where there is no way of accurately determining the length of a vein except by exploitation and exploration. In the case of coal and copper, however, more or less accurate estimates can be made.

There is a wide difference in the cost of production of a given mineral from mine to mine, and within a given mine, from ore to ore according to grade. Thus, within every producing district there will be relatively high cost and low cost producers.

When the raw material, coal or ore, has been entirely extracted from a mine in commercially practicable quantities, the property, including the machinery and equipment, is almost worthless. It is specialized machinery, and its cost to move would be nearly as much as it is worth. For this reason, a mining company must provide, in addition to earnings, an amount sufficient to liquidate the original investment. In order to retire its capital investment, a mining company must formulate a policy of depletion which will permit setting aside out of earnings periodically a sum which, when the mineral assets have become exhausted, will equal the original investment. The perfection of the depletion policy depends upon the accuracy in estimating ore reserves, and in revising estimates as development and exploration proceed. Many mining companies do not make charges for depletion and therefore do not build up depletion reserves. When this is the case, dividends upon stocks of such mining companies consist not only of a distribution from current earnings, but also a return of investment.

Bonds are rare among mining companies as a class, but various well established coal companies have issued them. Mining bonds should always be of the sinking fund variety, which provide for the periodic setting aside out of earnings sums with which to retire the bonds, particularly in proportion to extraction of the mineral asset if reserves are relatively low and rate of production high.

MINOR COINAGE PROFIT

The seigniorage profit which the Government makes in coining Minor Coins (q.v.) from the constituent metals. It is equal to the difference between the value of the coins and the commercial value of the metals used in their coinage.

For the fiscal year ended June 30, 1947, a total of 196,970,200 5¢ pieces (copper, 75%; nickel, 25%), and 1,448,185,000 1¢ pieces (1,066,780,000 consisting of copper, 95%, and zinc, 5%; and 381,405,000 consisting of copper, 95%, and zinc and tin, 5%) were coined. Issue for the 1947 year totaled 179,215,800 5¢ pieces and 867,860,000 1¢ pieces. Seigniorage on total minor coinage produced for the 1947 fiscal year was $22,113,-700, which is included among miscellaneous receipts of The Mint. In addition, the mints (Philadelphia, San Francisco and Denver) have built up a total in round amounts of $1,000,000 in the Minor Coinage Metal Fund, and had as of June 30, 1947 also, a balance of $93,020 in the Recoinage Fund, Minor.

MINOR COINS

Minor coins in the U. S. currency system are the "nickel" (5¢ piece) and the cent (1¢ piece).

For the fiscal year 1947, a total of 196,970,200 nickels (copper, 75%; nickel, 25%), and 1,448,185,000 cents (1,006,780,000 composed of 95% copper and 5% zinc, and 381,405,000 composed of 95% copper, 5% zinc and tin) were coined. Issue for the 1947 fiscal year totaled 179,215,800 nickels and 867,860,000 cents. Total stock of minor coin in the United States as of June 30, 1947 was estimated at $348,889,000.

Total minor coinage in the history of the United States, showing statutory authority for coinage, denominations, standard weight, and total coined, has been as shown in the table on page 403 (source--1947 Annual Report of Director of the Mint).

MINORITY STOCKHOLDERS

A term used to denote the interest of those owning less than 50 per cent. of the stock of a corporation. Oftentimes the majority of the stock of a corporation is held by another corporation, or by a few individuals who thereby control its policy through the voting power of the stock they own. By means of cumulative voting, minority stockholders frequently can elect one or more directors at the annual meeting, provided they hold a fair proportion of the stock. Whenever the by-laws of a corporation permit cumulative voting, an important advantage is given to the minority stockholders.

MINT

A place where metallic money is manufactured or coined. The Bureau of the Mint, also known simply as The Mint, is one of the bureaus in the organization of the Treasury Department, and is headed by the Director of the Mint. The Mint maintained seven field installations in operation during the fiscal year 1947: coinage mints at Philadelphia, San Francisco and Denver; assay offices at New York and Seattle; gold bullion depository at Fort Knox; and silver bullion depository at West Point, which operates as an adjunct of the New York Assay Office. The Office of the Director of the Mint in Washington, D. C. administers all Mint Service activities.

Production of U. S. coins during the fiscal year 1947 increased 22% over the 1946 production of 1,658,127,100 pieces, and consisted of the following coins:

U. S. Coinage
Fiscal Year Ending June 30, 1947

Denomination, Silver Coins:	Total Value	Total Pieces
Half dollars, regular	$8,746,850.00	17,493,700
Half dollars, commemorative:		
Iowa Centennial	50,028.50	100,057
Booker T.Washington	850,469.00	1,700,938
Quarter dollars	13,142,100.00	52,568,400
Dimes	29,946,700.00	299,467,000
Total Silver	$52,736,147.50	371,330,095
Minor Coins:		
5¢ pieces	$9,848,510.00	196,970,200
1¢ pieces	14,481,850.00	1,448,185,000
Total Minor	$24,330,360.00	1,645,155,200
Combined Total	$77,066,507.50	2,016,485,295

The mints during the 1947 fiscal year also manufactured 1,600 tons of metals into 334,085,727 coins for the following foreign governments: Colombia, Cuba, Dominican Republic, Ecuador, Ethiopia, Netherlands East Indies, Panama, Saudi Arabia, and Venezuela.

In recent years, output of U. S. coinage by the mints has compared as follows:

Fiscal Years Ended June 30th:	Total Value	Total Pieces
1938	$26,610,909	540,375,283
1939	15,538,378	255,566,260
1940	39,994,684	768,090,830
1941	74,987,420	1,599,349,007
1942	111,006,180	2,114,890,662
1943	153,474,480	1,472,098,762
1944	109,464,837	2,568,640,270
1945	124,754,925	2,646,134,101
1946	78,003,170	1,658,127,100
1947	77,066,508	2,016,485,295

MINT CHECK

A check drawn on the U. S. Treasurer in payment for bullion deposited at a mint. Checking credit with the U. S. Treasurer to the credit of the United States mints as of June 30, 1947 totaled $263,388, and is included among the assets of the mints.

MINT FINE BARS

Bars of gold or silver of 0.992 fineness and upward. U. S. mints and assay offices manufacture gold issue bars and silver issue bars, such production in the 1947 fiscal year totaling 113,005 gold issue bars, containing 30,833,735 fine ounces of gold; and 2,964 silver issue bars, containing 1,154,005 fine ounces of silver.

Under orders of the Secretary of the Treasury of December 28, 1933 and January 11 and 15, 1934, all gold coin domestically owned, with minor exceptions, was required to be delivered to the Treasury of the United States, and under the Gold Reserve Act of January 30, 1934, all gold coin was withdrawn from circulation and formed into bars. Gold bars or bullion are obtainable from the Treasury at $35 per ounce, plus handling charge, under Treasury permit for export in settlement of international exchange transactions. Gold bars, government-stamped, are also issuable at mints and assay offices under Treasury permit for use in industry and the arts.

New York daily market quotations for bar silver, 0.999 fine, ranged from a high of 90 1/8¢ to a low of

MINOR COINAGE

Denomination	Authorizing Act	Standard Wt.(Grams)(1)	Total Coined to December 31, 1946 Pieces	Face Amount
5¢ (nickel)	May 16, 1866)	77.16	2,946,424,532	$147,321,226.60
Ditto	Feb. 12, 1873)

Ditto (6)	Jan. 18, 1837	84)		
Total Minor Coinage			20,989,560,882	$363,593,205.31

(1) Standard composition:
5¢ and 3¢ (nickel)--copper, 75%; nickel, 25%.
5¢ (silver)--copper, 56%; silver, 35%; manganese, 9%.
2¢ and 1¢ (bronze)--copper, 95%; tin and zinc, 5%.
1¢ and 1/2¢ (copper)--pure copper.
1¢ (nickel)--copper, 88%; nickel, 12%.
1¢ (zinc-steel)--steel, with obverse and reverse sides covered with a coating of not to exceed 0.001 inch zinc.
1¢ (copper-zinc)--copper, 95%; zinc, 5%.

(2) 5¢ (silver) coined under provisions of Act of March 27, 1942, as amended by Act of Dec. 28, 1945, from Oct. 1, 1942 until expiration of authority on December 31, 1945.

(3) 3¢ (nickel) discontinued by Act of Sept. 26, 1890.

(4) 2¢ (bronze) discontinued by Act of Feb. 12, 1873.

(5) Proclamation of the President in conformity with Act of March 3, 1795.

(6) Copper cent and half-cent discontinued by Act of Feb. 21, 1857.

(7) Nickel cent discontinued by Act of April 22, 1864.

(8) Zinc-steel cent coined by orders of the Secretary of the Treasury dated Dec. 23, 1942 and May 15, 1943, pursuant to Act of Dec. 18, 1942, during calendar year 1943.

(9) Copper-zinc cent coined, by order of the Secretary of the Treasury of Dec. 16, 1943, pursuant to Act of Dec. 18, 1942, from January, 1944 until expiration of authority Dec. 31, 1946.

(See Bronze Coins, Nickel, Token Money.)

59 3/4¢ per ounce during the fiscal year ended June 30, 1947.

MINT MARK

The unobtrusive mark on a coin which indicates the mint at which it was made.

MINT PAR OF BULLION

See Mint Price of Gold

MINT PAR OF EXCHANGE

The ratio of one country's standard unit to that of another country on the same metallic basis; the bullion value of the monetary unit of one country expressed in terms of that of another. For any given nation it is determined by dividing the weight of pure gold contained in its standard coin or monetary unit into the weight of pure gold contained in the standard coin or monetary unit of another, the value of the alloy being disregarded. For instance, the mint par of exchange of the pound sterling with the United States dollar is $4.03, meaning that there is 4.03 times as much pure gold by weight in the pound sterling as in the United States gold dollar. The mint par of exchange never varies unless one

country alters its coinage regulations. The mint par is distinguished from the commercial rate, which is not fixed but normally fluctuates in accordance with the supply and demand of bills of exchange and other factors. (See Commercial Parities, Long Rate.)

(For the Mint Pars of Exchange of the international currency units of the principal foreign countries, see Foreign Moneys.)

MINT PRICE OF GOLD

The coin equivalent of a given weight of gold of standard fineness (0.900 fine). In the absence of a seigniorage charge it is really not a price at all, but a fixed amount which the assay offices and mints are indirectly required by statute to pay for any given weight of gold of standard or other fineness.

From the coinage act of 1837 until August 29, 1933, the United States having officially suspended the gold standard on April 19, 1933, the law declared that the value of 23.22 grains of pure gold, or 25.8 grains of standard gold, should constitute the dollar, the monetary unit of value of the United States. Since 23.22 grains of pure gold is equal to $1.00, the assay offices or mints received and paid for pure gold at the rate of $20.67 per fine ounce. This is determined in the following manner Since there are 480 grains in one ounce and 23.22 grains equal $1.00, it will take $20.67 to buy 480 grains, i. e., 480 divided by 23.22. $18.60 is paid per standard ounce (0.900 fine), this amount being exactly 9/10th of $20.67. Slight coinage charges were made when gold offered was less fine than standard gold.

Since the Presidential decree of January 31, 1934, the standard gold content of the dollar has been reduced to 59.06 per cent. of its former gold value on a permanent basis. The present mint price of gold is $35 an ounce, so that the pure gold content of the dollar is now 13.7137 grains.

Payment for gold bullion turned in at the assay offices or mints may be received by check upon a Federal Reserve bank, or the United States Treasurer through a Government depository.

Until England relinquished the gold standard on September 21, 1931, the mint price of British standard gold bullion (11-12 fine) was £ 3 7s 10 1/2d. The Bank of England was required by law to pay £ 3 7s 9d an ounce for standard gold bullion (11/12ths fine), being 1 1/2d less than the actual mint price. However, on September 21, 1931, England went off gold when the Bank of England was relieved of the obligation imposed by statute to sell gold bullion at fixed price. After a period of suspension and amendment, the British fixed price for gold bullion was set at 172 s 3d on June 9, 1945.

MINT RATIO

The ratio at which the weight of the gold dollar and silver dollar are fixed for coinage purposes, as distinguished from the Market Ratio (q.v.). The mint ratio now existing between the gold dollar and silver dollars is 27.07 plus, which is computed by dividing the weight of the pure silver in the silver dollar (371.25 grains) by the weight of the pure gold in the gold dollar (13.7137 grains). The mint ratio differs from the market or commercial ratio which fluctuates in accordance with the varying market prices of the two metals. The impracticability of Bimetallism (q. v.) is due to the fact that it is impossible to maintain more than temporarily a coincidence between the market and mint ratios.

Where gold is the standard money and is coined without charge by statute it is worth as much as bullion as coin, and vice versa. Consequently the market price and mint price of gold would be the same unless the coins have become abraded or mutilated. Since abraded coins are reduced in weight, more of them would be required when exchanged for new full weight coins. The market price of light weight coins, therefore, is above the mint price.

Since the Gold Reserve Act of January 31, 1934, gold coinage in the United States has been at an end, and all gold was turned in to be formed into gold bars.

MINT REMEDY

See Remedy, Tolerance.

MINUTE BOOK

One of the corporate records of a corporation, which include the stock certificate book, the stock transfer book, the stock ledger, and the minute book. The minute book records in formal permanent record all the action and proceedings at meetings of directors and stockholders, and thus is a vital corporate record. In a bank, the minute book is usually kept by the cashier, in a business corporation, by the secretary. (See By-Laws, Corporate Records.)

MINUTES

The proceedings of directors' and stockholders' meetings of a corporation, formally kept in permanent record in the Minute Book (q.v.).

MISSISSIPPI BUBBLE

A name given to the final unfortunate outcome of a series of speculative financial ventures under the leadership of John Law, a Scottish financier and paper money advocate, with the aid of the French government. In May, 1716, John Law obtained a franchise to organize in Paris France's first financial institution, known as the Banque Generale. This bank was empowered to issue notes (in reality paper currency) payable at sight in the weight and value of the money mentioned at the time of issue. In 1717, the notes were decreed as acceptable in payment of taxes, the immediate effect being to reduce interest rates and to command a premium. Having obtained the confidence of the Regent, the French government gave Law control of Louisiana for purposes of trade and colonization.

Accordingly, in 1717, Law founded the Compagnie de la Louisane en d'Occident which later absorbed the Compagnie du Canada, and companies with similar powers in East India, China, and Africa. The company was commonly known as the "Mississippi Company," but after its failure as the "Mississippi Bubble." The early success of the scheme made it possible for the company to take control of the Mint and the powers of "Receivers-General," thus assuming vast importance both in home and colonial financial affairs. The Banque Generale was restyled Banque Royale in 1718, and in 1720 Law became Comptroller-General of Finance, the bank and company becoming one. After a great speculative craze, based on the overissue of paper money, the bank and its schemes collapsed in May, 1720, forcing Law to leave the country.

MONETARY STANDARD

See Monetary Unit, Standard of Value, Standard Money.

MONETARY STOCK (CIRCULATION)

The aggregate of all kinds of money issued by a Government, including that held in the Treasury, in the central banks and other banks of issue, and in circulation. The monetary stock of the United States consists of that held in the U. S. Treasury and the mints, the Federal Reserve Banks and Agents, and in circulation (outside the Treasury and the Federal Reserve Banks).

As of May 31, 1948, total United States monetary stock, outstanding and in circulation, was as shown in the table on page 406.

In accordance with the Gold Reserve Act of January 30, 1934, title to all the nation's monetary gold stocks, including some $3.5 billion held by the Federal Reserve Banks, was vested in the Treasury of the United States. Gold certificates or gold coin no longer circulate domestically, in further compliance with the Gold Reserve Act. The gold certificates held by Federal Reserve Banks and Agents represent monetization of the gold credits placed to the credit of the Federal Reserve Banks by the Treasury when these institutions turned in their monetary gold. Only the Federal Reserve Banks and Agents may hold gold certificates presently authorized. Gold certificates shown in the table as publicly outstanding are old type currency, no longer in domestic circulation, which are in circulation outside the continental limits of the United States, or still not turned in domestically.

(See Gold Certificates; Gold Reserve; Gold Reserve Act of 1934; Money Circulation.)

MONETARY UNION

See Latin Union, Scandinavian Union.

MONETARY UNIT

The coin selected by a Government to serve as the unit of account, and which by law contains a prescribed weight (and fineness) of the metal selected to serve as the standard of value. The gold dollar, although no longer coined, is the monetary unit of the United States. Since the United States possesses a decimal coinage system, the dollar is a multiple of fractional coins; and an aliquot part of coins of higher denomination. The weight of the standard unit was fixed at 23.22 grains of pure gold, or 25.8 grains of gold 0.900 fine, prior to the suspension of the gold standard on April 19, 1933. On January 31, 1934, Presidential proclamation permanently fixed, pursuant to the Gold Reserve Act of 1934, the standard weight of the dollar at 15 5/21 grams, 0.900 fine, or 13.7137 grains pure gold, being 59.06% of the former gold content. (See Gold Coins, Mint Price of Gold.)

Although many countries have similarly retained gold as the standard of value, most of them have instituted prohibition on gold coinage and internal circulation of gold coin similar to such prohibitions in the United States. For the various monetary units of other countries, see Foreign Moneys. (See Money of Account, Standard Money, Standard of Value.)

MONEY

A medium of exchange; an instrument, token, or expedient, whether metal or paper, by which payment is made for the transfer of values from one person to another. "Money is that which passes freely from hand to hand throughout a community, and is received in full payment for commodities and services without reference to the character of the person rendering it." "Those instruments of general acceptability which pass freely from hand to hand as media of exchange" (Ely, R. T.: Outlines of Economics). "Money is that valuable thing or economic good which possesses in any country or community universal acceptability as a medium of exchange or means of payment" (Johnson, J. F.: Money and Currency). "That commodity of intrinsic value acceptable in exchanges which has become by law or custom the universal tender for debt" (Conant, C. A.: The Principles of Money and Banking).

Herewith are additional definitions:

"The value of money in general is the quantity of all the money in the world in proportion to all the trade. Money, while the same quantity of it is passing up and down the kingdom in trade, is really a standing measure of the falling and rising value of other things in reference to one another, and the alteration in price is truly in them only. But if you increase or lessen the quantity of money current in traffic in any place, then the alteration of value is in the money" (John Locke).

"The value of money in any country is determined by the amount existing. That commodities would rise or fall in price in proportion to the increase or diminution of money, I assume as a fact that is uncontrovertible. The demand for money is regulated entirely by its value, and its value by its quantity" (David Ricardo).

"And again, in whatever degree, therefore, the quantity of money is increased or diminished, other things remaining the same, in that same proportion the value of the whole, and of every part, is reciprocally diminished or increased" (James Mills).

"The value of money is in the Inverse Ratio of its quantity, the supply of commodities remaining the same". (Sir J. Graham).

"The value of money—other things being the same—varies inversely as its quantity, every increase of quantity lowering the value, and every diminution raising it in a ratio exactly equivalent. That an increase of the quantity of money raises prices, and a diminution lowers them, is the most elementary proposition in the theory of currency, and without it we should have no key to any of the others" (John Stuart Mill).

Scientifically, real money is a commodity or a representative of a commodity which mankind universally readily accepts in exchange for other commodities and services. It is therefore to be distinguished from promises to pay and other forms of credit instruments, e. g., notes, checks, drafts, money orders, etc. In its popular sense, it is used to indicate any form of currency, gold or silver coin, gold or silver certificates, Government notes, or bank notes. Popularly, also, it is used as the equivalent of wealth or riches. In the bank-

United States Money

(1) Outside Treasury and Federal Reserve Banks; includes any paper currency held outside the continental limits of the United States.
(2) Includes $156 million held as reserve against U. S. Notes and Treasury Notes of 1890.
(3) To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury Notes of 1890 outstanding is not included in total Treasury currency outstanding.
(4) Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown.
(5) Less than $500,000.

General note: There are maintained in the Treasury--(a) as a reserve for U. S. Notes and Treasury Notes of 1890--$156,039,431 in gold bullion; (b) as security for Treasury Notes of 1890--an equal dollar amount in standard silver dollars (these Notes are being canceled and retired on receipt); (c) as security for outstanding silver certificates--silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (d) as security for gold certificates--gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Gold certificates include credits with the Treasurer of the U. S. payable in gold certificates. Federal Reserve Bank Notes and National Bank Notes are in process of retirement.

Source--Federal Reserve Bulletin of the Board of Governors of the Federal Reserve System.

---

ing sense, it means credit, lending power, or free capital awaiting investment. Banks are said to lend money when in reality they lend credit. In the legal sense, money is that which has been declared to be Legal Tender (q.v.). Money which is eligible to serve as bank reserves is usually defined by law. (See Lawful Money.)

The history of money is one of energetic controversy even among economists and monetary scientists. More has been written on this subject than on any other branch of economics, as shown by the lengthy bibliography concluding this title. Its history is one of evolution from barter, commodities acceptable in exchange, precious metals coined by Governments, various forms of paper money, credit, bank deposit currency, Government short-term discount bills, etc. In fact, in recent years, money has come to be regarded as synonomous with any readily marketable value that can be easily translated into purchasing power. The notion of managed currency, without a tie-up with gold, is one of comparatively recent origin, and brought to fullest development by suspensions of gold, exchange depreciation,

and currency devaluations in the period 1931-1935. (See Managed Currency.)

The various forms of money used by the principal commercial nations of the world may be classified as follows:

Paper Money

Government notes or promises to pay.
1. Secured by gold reserve, full or partial (specie reserve).
2. Secured by Government bonds (documentary reserve).
3. Unsecured (Fiat money).

Bank notes or promises to pay.
1. Secured by gold reserve.
2. Secured by Government Bonds.
3. Secured by commercial paper.
4. Secured by general assets.
5. Secured by any combination of the above.

Certificates of deposit or redemption in gold or silver (redemption of paper currency in gold has been restricted or eliminated in many countries in recent years).

Metallic Money

Gold coin (prohibited or restricted in domestic circulation of most countries in recent years).
Full legal tender silver coin.
Subsidiary silver coins with limited legal tender.
Minor coins.

Money performs five chief functions: (1) medium of exchange; (2) common denominator or standard of value; (3) standard of deferred payments; (4) storehouse of value or unit of purchasing power; and (5) as bank reserves. The qualities which money should possess to serve as a good medium of exchange are portability (high value in small bulk), durability (indestructibility), uniformity (homogeneity), divisibility, and cognizability. Gold combines these qualities better than any other metal and has come to possess unlimited legal tender power and acceptability throughout the civilized world. As a standard of value money must possess value in itself and a high degree of stability of value. Gold also answers these requirements. As a standard of deferred payments and unit of purchasing power, a money must be selected which possesses not only stability of value but durability, qualities also possessed by gold.

The real value of money depends upon its purchasing power, i. e., the quantity of other commodities or services that it will buy. Expressed in other terms, the value of money depends upon the general level of prices, and varies in inverse ratio. When prices rise the value of money falls and vice versa. (See Coinage, Currency, Gold Production, Gold Reserve, Gold Standard, Fiat Money, Foreign Moneys, Legal Tender, Mint, Monetary Stock, Monetary Union, Monetary Unit, Money Circulation, Paper Money, Quantity Theory of Money, Redemption of Money, Representative Money, Token Money, United States Money.)

MONEY BROKER

A person who acts as intermediary between borrowers and lenders of money. The term was applied chiefly to brokers on the New York Stock Exchange who served the function of bringing the lending banks and borrowing brokers together. Since there is now a centralized "Money Desk" at the New York Stock Exchange, the function of such money brokers is obviated.

MONEY CIRCULATION

Currency (coin and paper money) in circulation, outstanding outside of the Treasury and the Federal Reserve Banks. Since most business in the United States, over 90% judging from the ratio of bank debits to money in circulation, is transacted by means of the bank check, money circulation is of secondary importance as a medium of exchange compared with debits to deposit accounts. For the year 1947, reported debits to total deposit accounts, except interbank accounts, totaled $1,125,074 million, compared with total currency in circulation of $28,868 million as of December 31, 1947.

The bulk of money circulation consists (about 85%) of Federal Reserve Notes (q.v.). Silver certificates, subsidiary silver, and minor coin constitute most of the remaining types. United States Notes, which are required to be reissued by law whenever they return to the Treasury, are the other type of currency issued regularly. These latter items are called "Treasury Currency" because the Treasury is responsible for their issuance or redemption. As of May 31, 1948, money in circulation by kinds was reported by the Board of Governors of the Federal Reserve System as follows:

Money in Circulation (1)
(in millions)

	May 31, 1948	April 30, 1948	May 31, 1947
Gold Certificates	$45	$46	$48
Federal Reserve Notes	23,525	23,489	23,953
Treasury Currency--total	4,242	4,182	4,259
Total	$27,812	$27,716	$28,261
Treasury Currency:			
Standard Silver Dollars	$155	$154	$148
Silver Certificates and Treasury Notes of 1890	2,061	2,011	2,071
Subsidiary Silver Coin	910	903	874
Minor Coin	344	342	330
U. S. Notes	315	310	321
Federal Reserve Bank Notes (2)	357	361	410
National Bank Notes(2)	100	100	107

(1) Outside Treasury and Federal Reserve Banks; includes any paper currency held outside the continental limits of the United States.
(2) In process of retirement.

Although of minor importance compared with bank debits, money in circulation has expanded sharply in recent years in a steady uptrend which appears to indicate a permanently higher level of circulation compared with that of the '20s. Compared with the pre-World War II year 1939, circulation is now 4 times larger, and compared with the boom year 1929, circulation is currently 6 times larger. Among the reasons for this phenomenon are the much larger volume of employment and payrolls, expansion in retail trade, elimination of interest on demand deposits, increased service charges on checking accounts, reduction in number of banking offices, etc. Expansion in circulation during World War II years was also induced by the large volume of payments to servicemen, Treasury cash expenditures, and

preference for cash instead of check payments in "black market" and "gray market" transactions. Expansion in circulation by denominations in recent years has compared as follows:

U. S. Money in Circulation, by Denominations

Source--Statistical Abstract of the U. S.

Note: In accordance with the Gold Reserve Act of 1934, $287 million in gold coin shown in Treasury records as outstanding was dropped from the statement of money in circulation (reflected in above 1934 figure).

MONEY MARKET

This term is a misnomer, since in the strict sense, there is no market place (except for call loans, see Call Money Market), nor is actual money lent. In reality, this term is synonymous with interest rates for various classes of paper and in any event would be more appropriately referred to as a credit market.

The money market consists of:

(1) Lenders.
   a. Banks and trust companies.
   b. Discount houses.
   c. Brokers.
(2) Borrowers.
   a. Commercial.
   b. Speculative.
   c. Agricultural.
   d. Industrial, etc.
(3) Intermediaries.
   a. Note brokers.
   b. Money brokers.
   c. Stock exchange brokers, etc.

None of these classes can be sharply defined, since banks or brokers may at different times exercise all these functions. The money market always relates to short-term loans, as distinguished from long-term loans, e. g., bonds in which corporations or governmentalities are the borrowers, the public are the lenders, and underwriting syndicates, the intermediaries.

In recent years of "managed" money rates, the level of rates and conditions in the money market have come to depend upon four principal factors: (1) Policies of the Treasury and the Federal Reserve System; (2) level of excess reserves of New York City member banks, and ultimately the magnitude of such reserves for the entire banking system; (3) demand for credit from the various classes of money market borrowers; and (4) credit expansion policies of the member banks. Thus, while factors (1) and (2) may encourage "easy money" and ample supply of excess reserves, actual expansion depends upon the demand for money market credit and the willingness of member banks themselves to expand such earning assets further.

In the New York money market, interest rates are quoted for five classes of loans, as follows:

(1) Call loans on stock exchange collateral.
(2) Time loans for 2, 3, 4, 5, and 6 month maturities.
    a. On mixed collateral.
    b. On industrial collateral.
(3) Commercial paper with 4 to 6 month maturities.
    a. Best names.
    b. Other names.
(4) Discount rates of the Federal Reserve banks.
    a. On commercial paper collateral.
    b. On government collateral.
(5) Bankers' acceptances for 1 to 6 month maturities.

Because of the relatively large investments by banks in U. S. Government securities, as compared with relatively low volume in other money market investments, short term and intermediate term U. S. Government securities yields have become a highly important section of the money market. Such yields are customarily quoted for (1) 3 months bills (rate on new issues offered); (2) 9 to 12 month certificates of indebtedness; and (3) 3 to 5-year taxable issues.

The range of open market money rates in New york City in recent years has compared as shown in table at bottom of page (source--Federal Reserve Bulletin).

MONEY OF ACCOUNT

The kind of money in which the bookkeeping of a nation is carried on. In the United States business houses keep accounts in dollars and cents; in England, in pounds, shillings, and pence; in France, in francs and centimes, etc.

MONEY ORDERS

A form of credit instrument calling for the payment of money which provides a safe and convenient means of remitting funds by persons having no checking account. There are three parties to a money order; the remitter (payer), the payee, and the drawee. Money orders are issued by three types of organizations; the Post Office Department, express companies, and a number of the large banks, the former being most commonly used.

Postal money orders are of two kinds, domestic and international. Domestic form money orders are payable in the United States and its possessions, Canada, Newfoundland, Cuba, the Bahamas, Bermuda, British Guiana, British Honduras, Philippine Islands, and a number of the West Indian islands. International money orders are those payable in foreign countries.

Money orders may be secured at practically any post office in the United States. The first step is to fill out an application upon which the name and address of the payee and the remitter are stated together with the amount of money which it is desired to send. Upon receipt of the application with the amount to be sent plus the fee, the postmaster or postal clerk issues the money order which is addressed to the postmaster of the town or city in which the payee is located. The remitter then sends the money order to the payee, who by presenting it at the post office where he lives, will receive payment in cash upon proper identification.

The maximum amount for which a single money order may be issued is $100, although additional orders can be bought on the same day, if it is desired to send a larger sum. Applications must be preserved at the issuing post office for three years from date of issue.

Although money orders are issued against a designated post office, any money order purchased in territorial United States may be cashed at any money order post office in territorial United States if presented for payment on or before the expiration of the thirtieth day following the date of issue. If presented at a later date

Year	Prime Commercial Paper 4 to 6 months(1)	Prime Bankers' Acceptances, 90 days (1)	Stock Exchange Call Loan Renewals (2)	U. S. Government Security Yields(4)

(1) Annual averages.
(2) The average rate on 90-day Stock Exchange time loans was 1.50% beginning August 2, 1946; 1.25% from May, 1936 to August 1, 1946; annual averages: 1936, 1.16%; 1933, 1.11%; 1932, 1.87%; 1929, 7.75%.
(3) Rate on new issues offered within period.
(4) Bills and notes were tax exempt prior to March 1, 1941.

and within one year from the last day of the month in which they are issued, they are payable only at the office designated in the money order as the paying office, or repaid at the issuing office. The holder is required to receipt a money order before it is paid.

Postal money orders may be transferred by indorsement but only one indorsement is permitted. Most banks will accept money orders for credit of depositors' accounts. Bank stamps are not regarded as indorsements.

Application for, and method of issuing international money orders by the Post Office Department, are similar to that of handling domestic money orders, except that the fees are higher. International money orders are issued in United States currency and not in that of a foreign country.

The fees charged for issuing domestic and international money orders together with instructions to applicants, as issued by the Post Office Department, are reproduced below and on page 412.

(See Bank Money Order, Express Company Money Order.)

Fees for Money Orders Drawn on Domestic Forms

Effective January 1, 1949

Fees to be charged for the issue of domestic money orders payable in the United States, including Hawaii, Puerto Rico and the United States Virgin Islands, or in Guam and Tutuila (Samoa); also for orders payable in:

Antigua	Dominica
Bahamas	Grenada
Barbados	Jamaica
Bermuda	Montserrat
British Guiana	Nevis
British Honduras	Newfoundland
British Virgin Islands	Philippine Islands
Canada	St. Kitts
Canal Zone	St. Lucia
Cuba	St. Vincent
Trinidad and Tobago	

From	$0.01 to $5	10¢
	$5.01 to $10	15¢
	$10.01 to $50	25¢
	$50.01 to $100	35¢

Postal Notes

Effective January 1, 1949

Postal Notes, any amount up to $10 Fee, 8¢ each

No application is required.

(For use in the Continental United States only)

MONEY POOL

A pool formed by banks to raise funds to supply the need of Stock Exchange brokers in time of need, and when insufficient funds are offered in the open market. (See Call Money Market.)

MONEY RATES

A general term, referring to the levels of interest rates generally and the cost of credit to borrowers of all types. Customarily, however, the term is used in connection with open market rates in New York City, the money center of the nation. (See Money Market.)

The levels of money rates, like those of any other free markets in a capitalistic economy, should be allowed to adjust themselves in accordance with the supply of and demand for funds. In recent decades, however, commencing with the inauguration of "managed" money rates in 1933, the Federal Government, through coordination of Federal Reserve and Treasury policies, has kept money rates at low levels, both as a stimulant to borrowing and as a means of keeping interest cost of deficit financing at low levels. This has been done largely through manipulation of the volume and distribution of bank "Excess Reserves" (q.v.), one of the major determinants on the supply side, assisted importantly until outbreak of World War II by large-scale gold imports.

In more recent years, however, during World War II and post-war years, the volume of excess reserves at New York City has ceased to exercise its former sensitive effect on money rates. Despite low level of excess reserves and even recourse to Federal funds at times, money rates at New York have continued evenly at low levels, taking their major cue instead from current policies of the Treasury in regard to interest rates on new offerings of Government securities. This reflects both the heavy position of banks and other investors in Government securities, and the continued "institutional" character of fixing of levels of money rates. Because of continued heavy Treasury financing requirements, magnitude of present outstanding Federal debt, and the huge stake of institutions in stability of levels of Government securities, it is probable that these "managed" and "institutional" characteristics of money rates will be continued indefinitely. (See Discount, Interest, Legal Rate of Interest, Rediscount Rate.)

MONEY RESERVE

See Bank Reserve, Gold Reserve, Reserve.

MONEY STOCK

See Monetary Stock, Money Circulation.

MONEY TRANSFER

The transmission of funds from one place to another by means of the public or private telegraph. The larger offices of the telegraph companies provide for the transfer of funds by wire to other important centers. The paying office requires the person presenting the telegram that requests payment to prove identification, unless identification is waived.

Money transfers are also made by means of private telegraph lines controlled by the larger banks, including the Federal Reserve banks. Suppose, for instance, that Bank B of Joliet, Illinois, which normally maintains balances with Chicago bank A, and a New York bank C, wishes to place itself in immediate possession of New York funds, which have suddenly become exhausted. Supposing banks A and B are correspondents with large reciprocal balances, bank B may instruct bank A to telegraph funds for its account with bank C. Upon receipt of the instructions over the private wire, therefore, bank C will credit account of bank B and charge the account of bank A. At the same time bank A will charge the account of bank C. Thus a transfer of funds has occurred without involving actual currency shipments. Confirmatory advices will be sent by mail from

Fees for International Money Orders

As of mid-1948, payable in Algeria, Argentina, Belgium, Brazil, Burma Cape of Good Hope, Cape Verde Islands, Chile, China, Colombia, Costa Rica, Czechoslovakia, Denmark, Eire (Ireland), Finland, France, Germany (Saar Basin only), Great Britain and Northern Ireland, Greece, Guatemala, Honduras, Hungary, Iceland, Italy, Lebanon, Luxemburg, Malaya, Mexico, Natal and Zululand, Netherlands, New South Wales, New Zealand, Norway, Orange Free State, Peru, Poland, Queensland, Salvador, South Australia, Surinam, Switzerland, Tasmania, the Transvaal, Tunis (Regency of), Uruguay, Victoria, Western Australia, and Yugoslavia.

For Orders from

	$00.01 to	$10	10 cents
From	$10.01 to	$20	20 cents
"	$20.01 to	$30	30 cents
"	$30.01 to	$40	40 cents
"	$40.01 to	$50	50 cents
"	$50.01 to	$60	60 cents
"	$60.01 to	$70	70 cents
"	$70.01 to	$80	80 cents
"	$80.01 to	$90	90 cents
"	$90.01 to	$100	1 dollar

Take notice that the maximum amount for which a single Money Order may be drawn in the United States is $100.

Instructions

In the application the given name of the remitter and payee, or initials thereof, should precede their surnames respectively. If the payee has only one given name, it should be written in full, if known to the remitter. For example, the name John Jones should be so written, and not as J. Jones. The given name or names of a married woman should be stated, and not those of her husband. For example, Mrs. Mary J. Brown should not be described as Mrs. William H. Brown, unless her own given names or initials thereof are unknown to the remitter. Observance of these rules will tend to prevent mistakes and delay in payment.

Names of persons, places and streets, as well as numbers and amounts, should be written in full and in the plainest manner possible.

The postmaster must refuse to issue an international order payable to any person, if the surname and the initial letters of that person's given names are not furnished by the applicant, unless the payee be a peer or a bishop, in which case his ordinary title is sufficient. If the payee be a firm, the usual commercial designation of such firm will suffice, as "Baring Bros.," "Smith & Son," "Jones & Co."

---

bank A to bank C, and return advices from bank C to bank A.

MONEY VALUE

The value of an asset expressed in terms of the national currency, as contrasted with its barter value in terms of other goods and commodities. Money Value is the standard expression of value for labor, services, wealth of all kinds, etc. in advanced commercial societies. Stated money values may be nominal or current, depending upon whether they are arbitrarily fixed, or whether they reflect current realizable values.

MONEYED CORPORATION

Under New York State Statutes (General Corporation Law), stock corporations are classified as (1) moneyed corporations, (2) railroad corporations, (3) transportation corporations, (4) business corporations, and (5) cooperative corporations. The statute defines a "moneyed corporation" as a corporation formed under or subject to the Banking Law or the Insurance Law.

MONEYS OF THE WORLD

See Foreign Moneys.

MONOMETALLISM

A system in which only gold or some other metal (silver if not gold) is made the basis of the standard money of a nation, other metals being used for subsidiary monetary purposes only. This means that the coins of only one metal are endowed with full legal tender qualities and are coined without limitation as to quantity. Leading commercial nations now have a monometallic gold system, also known as the Single Standard, (q. v.), and distinguished from Bimetallism (q. v.), but most countries are on a bullion standard and prohibit or restrict internal circulation of gold coin.

MONTREAL CURB MARKET

See Montreal Stock Exchange.

MONTREAL STOCK EXCHANGE

The oldest Stock Exchange in Canada, having been founded in 1874. The following descriptive data is contained in a booklet published by the Public Relations Department of the Montreal Stock Exchange:

Early Beginnings.--The first security trading in Montreal began shortly after the Napoleonic Wars. In 1817, the Bank of Montreal was founded and publicly financed. In 1832, the Champlain and St. Lawrence Railway was incorporated, and stock to raise capital for this company was sold from the old Exchange Coffee House on St. Paul Street in Montreal. By the middle of the century, stocks were quoted daily in the Montreal press. In 1863, a "Board of Stock Brokers" was formed in Montreal, consisting of 11 members who met daily. They made rules regarding membership, commissions, and listing fees for stocks. In 1874, the Board of Stock Brokers became the Montreal Stock Exchange, incorporated under that name with a charter from the Government of the Province of Quebec. Volume of business in 1874 was modest, trading being con-

ducted in 63 issues, mostly banks, insurance, railroad and navigation stocks. Daily turnover totaled about 800 shares. With completion of the Canadian Pacific Railway in 1887, however, and increased economic development, the Montreal Stock Exchange expanded rapidly, and in 1904, the Exchange moved from St. Sacrament Street, where it had been operating since 1883, to its present quarters on St. Francois Xavier Street, in the heart of Montreal's financial district.

Recent Development.--Early in 1926, the Montreal Curb Market was organized by members of the Montreal Stock Exchange with a view to providing organized trading facilities for unlisted securities which could not meet the listing requirements of the Montreal Stock Exchange. One hundred memberships in the Montreal Curb Market were issued, 77 of which were taken up by members of the Montreal Stock Exchange, and 23 of which were sold to recognized stock brokers throughout Canada. The Montreal Curb Market was first housed in the Canadian Pacific Building on Hospital Street, but after three years of expansion, it moved into its present quarters in the Montreal Stock Exchange Building.

Organization and Administration.--Membership in the Montreal Stock Exchange at present is limited to 80 seats, and in the Montreal Curb Market, to 100 seats. These are not, however, arbitrary totals, and can be changed. Rights of entrance are transferable, and membership can be obtained subject to election and the acquisition of a seat. Requirements for membership are that the applicant be a male British subject, at least 21 years of age; that he furnish references as to character, responsibility and financial standing; in due course, the applicant is voted on by members. If elected, the member must then secure the transfer of a seat into his name. Provisions for election to the Montreal Curb Market are closely similar in nature.

The Montreal Stock Exchange is administered by a Governing Committee of 11 members, elected annually. The extent of the organization is indicated by the five standing sub-committees: (1) Committee of Arrangements. This is in effect a small executive committee able to act quickly and effectively with regard to both internal and external Exchange affairs. Among other responsibilities, it makes sure the financial status of member firms continues to be satisfactory.

(2) Building and Floor Committee, which controls the maintenance and operation of the exchange building. It provides proper facilities for trading and controls the conduct of all trading and traders on the floor.

(3) Listing Committee, which handles applications for the listing of securities and passes upon them, and sees that listing fees are paid. Records are kept of all additions, deletions and changes.

(4) Telephone, Telegraph and Non-Member Brokers Committee, which is in charge of all wire connections, exchange tickers, etc. as they apply to members and non-members.

(5) Public Relations Committee, which provides liaison between the exchange and the public. Quotation service is provided in both English and French. All statistics, market letters, etc. are controlled by this Committee.

In the interests of efficiency, the executive offices of the two exchanges, the Montreal Stock Exchange and the Montreal Curb Market, are merged in many respects. Thus, the General Manager of the Stock Exchange is also General Manager of the Curb Market. The chief officials of the two exchanges, the Chairman and the Governing Committee, act in a purely honorary capacity. Both exchanges are non-profit making organizations. The costs of administration are borne chiefly by the members through the payment of dues. Some revenue is secured through payment of listing fees.

Listing Requirements.--Broadly speaking, the main requisites for a corporation wishing to have its shares listed on the Montreal Stock Exchange are: (1) a sound financial position; (2) a distribution of the various securities of the applying corporation which would assure a public interest in the said securities; (3) competent management. Listing requirements of the Montreal Stock Exchange require that: (1) a copy of the charter of the applying corporation and amendments thereto be filed with the Exchange; (2) a copy of the by-laws of the corporation and all amendments thereto also be filed with the Exchange; (3) that all certificates representing securities listed on the Exchange be steel engraved in order to make imitation or forgery thereof exceedingly difficult; (4) that all certificates be transferable in the city of Montreal, and that no charge be levied for transfers; (5) that the following financial statements be filed with the application for listing: (a) statement of earnings for the previous 5 years (if available); (b) balance sheet as at the end of the previous fiscal year of the corporation; (c) revenue and expenditure account for the previous fiscal year; (d) surplus account as at the end of the previous fiscal year. In addition to the above, the Montreal Stock Exchange requires that all corporations whose securities are listed thereon, supply it with the following information: (1) immediate notification by telephone or telegraph of all dividend declarations; (2) immediate notification of rights issued to subscribe for additional stock of the corporation; (3) immediate notification of changes in the set-up of the corporation that would materially affect the prices of its securities.

Listing requirements of the Montreal Curb Market are similar to those of the Montreal Stock Exchange, but are not as exacting. By and large, the Curb Market is a seasoning ground for securities prior to their being listed on the Montreal Stock Exchange. The Curb Market's requirements in regard to the distribution of securities and the financial status of applying corporations are not as rigid as those of the Montreal Stock Exchange. Over 97% of the mining securities dealt in on the Montreal markets are either listed or traded in on the Montreal Curb Market. In listing mining securities on the Montreal Curb Market, the following are some of the principal requirements: (1) Full information as to properties, claims, etc. owned by the applying company; (2) the number of shares issued in payment of the property and number of shares issued for cash and the amount received therefor; (3) certified copies of all options, pooling or escrow agreements; (4) up to date report on work done on the property by a qualified engineer; (5) financial statements showing assets and liabilities.

Types of members.--The majority of members of the Montreal Stock Exchange are partners of Stock Exchange firms doing business with the public, called "commission brokers." There are also independent brokers or "floor brokers", not usually members of any firms, who have little or no dealings with the public. A floor broker carries out buy and sell orders for other members of the Exchange when these members are absent or have more business than they can handle.

For this service, the floor brokers receive 1/10th of the regular commission. Finally, there are the "arbitrage brokers", members of arbitrage firms which have several seats, on exchanges in Toronto, Montreal, London or New York, whose operations tend to maintain equivalent prices for securities listed or traded in more than one of these markets. At the present time, there are no brokers on the Montreal Stock Exchange or Montreal Curb Market who do purely an arbitrage business.

The Montreal Stock Exchange requires the member in whose name the membership is held to do the actual trading on the floor. The Montreal Curb Market, however, permits its members to appoint representatives to appear on the floor for them.

Trading Units and Deliveries.--"Board lots" are usually 25 shares on the Montreal Stock Exchange and 100 shares for mining stocks on the Curb Market. Any purchases and sales in quantities less than board lots are odd lots, involving usually 1/8th of a point odd lot charge. Deliveries are cleared through the Exchange Clearing House. The second day after the transaction takes place is settlement day. The stock broker must have posted delivery of securities due with the Clearing House, and the stock broker having a debit balance must give his check to the Clearing House by 12 noon on settlement day. At 1 o'clock, stock brokers receiving stock call for the securities at the Clearing House. All the certificates going through the Clearing House must be in Street names (in the name of a member house and endorsed in blank).

One characteristic of trading on the floor occurs whenever there are several sellers of a stock. The sellers toss coins for the privilege of making the sale. The same thing may happen if there are several buyers at the same price.

Trading volume.--Monthly transactions during a recent 12 months' period, together with brokers' loans and value of listings, are shown in the appended tabulation.

MOODY'S INVESTORS SERVICE

One of the oldest investors advisory services and publishers of financial information, founded by John Moody in 1908. The business was incorporated in New Jersey on June 30, 1914.

The service publishes "Moody's Manuals", issued annually in five volumes, Governments, Banks and Finance, Industrials, Public Utilities, and Railroads, together with the semi-weekly news supplements for each of these manuals. In addition, Moody's Dividend Record and Moody's Bond Record are published. These manuals and records cover the entire investment field with their factual reporting service.

Statistical Summary

Montreal Stock Exchange - Montreal Curb Market

Source--Monthly Review of the Montreal Stock Exchange and Montreal Curb Market.

Interpretative and advisory services published regularly are Moody's Stock Survey, and Moody's Bond Survey, as well as Moody's Advisory Reports. In addition, the company operates several forms of investment services, and does special research and economic and investment supervisory work for banks, brokers, financial institutions, corporations, estates, and individual investors.

Moody's originated investment ratings familiarly known as Moody's Bond Ratings, which are widely used by bankers and investors.

Branch offices are located in Chicago, Philadelphia, Boston and Los Angeles, with sales offices in other principal cities. The company controls Moody's Investors Service, Ltd., a subsidiary operating in England which controls Moody's Service, Ltd.

The company is capitalized at 60,000 shares of non-callable $3 cumulative participating preference stock, no par value (publicly offered at $52 per share in November, 1928), and 60,000 shares of no par value common stock, all owned by the management and employees. The preference stock is fully listed on the New York Curb Exchange.

MORAL RISK

That part of the risk involved in loaning money which depends upon the integrity or honesty of the borrower or prospective borrower. In one-name, straight, or uncollateraled loans, if not all loans, the moral risk is the most important of all the elements of the credit. The personal equation dominates all others, since without character and integrity no person can be trusted, irrespective of the ability and property he may possess. In judging the moral risk involved in the application for a loan several elments must be investigated, e. g., reputation for honesty, sobriety, veracity and standard of business ethics. Does the risk make a practice of "welching" on contracts when the market goes against him? Does he engage in unfair competition? Is he conservative in his commitments? Are his past performances and antecedent connections above reproach? What reputation does he have in the trade and among his banking connections? These are some of the questions to be asked in measuring the moral risk. (See Business Risk, Credit, Credit Risk, Property Risk.)

MORATORIUM

An order by a Government making it lawful to defer payment of all or certain kinds of debts for a certain period of time beyond the original maturity in order to prevent general bankruptcy or collapse of credit by legally protecting debtors as against their creditors in times of public danger. Holdsworth defines a moratorium as "an official declaration or decree by the Government postponing all or certain types of maturing debts for a given period" (Money and Banking).

In recent United States financial history, moratoria have been invoked in connection with banks and mortgage debts. Banking moratoria began on February 14, 1933, when Michigan ordered all banks in that State closed for eight days. Other States quickly invoked similar action, and the crisis culminated in the national "bank holiday" invoked by the President on March 6, 1933. The Emergency Banking Relief Act of March 9, 1933 authorized the Comptroller of the Currency to appoint conservators for any National bank when considered necessary in order to conserve its assets, provided for issuance of preferred stock by national banks, and preferred stock and capital notes or debentures by State banks, to the Reconstruction Finance Corporation, to strengthen capital funds of banks, and authorized reorganization of National banks upon approval of the Comptroller and 75% of depositors or 66 2/3% of the stockholders, or both. Sound banks were allowed to reopen promptly after termination of the "holiday".

Moratoria in connection with mortgage debts were also invoked by States during the depth of the real estate depression to avoid wholesale foreclosures of mortgagors unable to meet principal instalments and interest. Later, these moratoria were continued on a modified basis until general recovery permitted full resumption of amortization and interest payments.

MORRIS PLAN

Morris Plan banks specialize in "retail" bank credit, making small personalized loans, including those for housing repairs, modernization, and new household equipment. As specialists in consumer credit, they offer competition to commercial banks which have entered this field in recent years, as well as in "personal loans" where such departments have been established. These banks derive their name from Mr. Arthur J. Morris who, after investigating the co-operative banks of Europe, founded the first Morris Plan Company in Norfolk, Virginia, in 1910.

Morris Plan banks have been successful in becoming eligible for membership in the Federal Reserve System, for deposit insurance membership in the Federal Deposit Insurance Corporation, and in being recognized by State banking and legislative authority as banking institutions constituting part of the banking system of the State.

One feature of the Morris Plan is that of insuring the lives of borrowers through the Morris Plan Insurance Society. Borrowers may procure life insurance policies for the full amount of their loans, which will be applied in payment of such loans and the remainder, in the case of death, paid to the family or estate, thus relieving the co-makers and dependents from responsibility.

Present corporate set-up of the Morris Plan System is headed by the Morris Plan Corporation of America, which was incorporated in Virginia in 1925 and issued all its common stock to the Industrial Finance Corporation in consideration for transfer of "The Morris Plan" goodwill, trademark and similar rights including privilege of enfranchising and organizing Morris Plan Banks and companies and furnishing them with auditing, advertising, advisory, rediscounting and other services, to which functions of the company were limited until September, 1931. In September, 1931, the Industrial Finance Corporation transferred back all of its interests in the Morris Plan Banks and companies and in the Morris Plan Insurance Society to the Morris Plan Corporation of America. As a result, the Morris Plan Corporation of America became and has since continued to be the parent company of the Morris Plan Insurance Society and of the group of Morris Plan banks and companies. The corporation in October, 1945 also merged the Industrial Finance Corporation.

The Morris Plan Corporation of America, therefore, is the top Morris Plan holding company whose subsidiaries and affiliates are engaged directly or indirectly in supplying consumer, commercial and personal credit; general and commercial banking; the offering of new

plans of wholesale and retail automobile and other consumer goods financing and related insurance services in conjunction with dealers, manufacturers and banks, in part through the "A B C Plan" (q.v.), the American Bank Credit Plan; other related insurance activities; and to a limited extent, in the small loan business.

As of May 2, 1946, the Morris Plan Corporation of America owned directly or through a subsidiary, a majority of voting stock of 13, and a minority interest in 31, Morris Plan banks and trust companies. The majority owned institutions operated in 20 cities, in 8 states and the District of Columbia.

In turn, the Morris Plan Corporation of America is controlled by the American General Corporation, a subsidiary of the Equity Corporation, which owns over 61% of the outstanding common stock.

MORTGAGE

Mortgages in legal contemplation are of two types--(1) the common law mortgage, which conveys title to the land which is security for debt to the mortgagee, subject to condition subsequent that upon payment of the debt with interest as convenanted, the conveyance shall be void; and (2) the legal lien mortgage, which entitles the mortgagee to merely a legal lien upon the land. The legal lien concept has been recognized by statutes of many States, including New York. The New York statutory legal lien mortgage, which is reproduced below, is defined by the New York Real Property Law as having the effect of a conveyance of land by the mortgagor to the mortgagee on the condition subsequent that if the mortgage debt be paid with interest at maturity the conveyance shall be void.

The mortgagee, i. e., lender, should make certain that the title to mortgaged property is in the name of the mortgagor. A lawyer may be engaged to search the title, or else the services of a title insurance company may be secured. These companies make a business of searching titles and guaranteeing their validity. An abstract of title is given by the lawyer or title insurance company to show the succession of ownership of the property and the encumbrances thereon, if any. Whenever a mortgage covers buildings or other property destructible by fire, the property should be adequately insured.

When the mortgage has been delivered to the mortgagee it should be recorded in the office of the registrar of deeds at the county seat. This is necessary in order to circumvent the possibility of a dishonest mortgagor giving a subsequent mortgage upon the property which may be recorded prior to the first.

The following is the statutory form of mortgage provided by Section 258, New York Real Property Law, which section does not prevent or invalidate the use of other forms:

Schedule M
Mortgage

Statutory Form M.

This mortgage, made the ..... day of .....nineteen hundred and ....., between ..... (insert residence), the mortgagor, and ....(insert residence),the mortgagee.

Witnesseth, that to secure the payment of an indebtedness in the sum of .....dollars, lawful money of the United States, to be paid on the ..... day of ....., nineteen hundred and ....., with interest thereon to be computed from ..... at the rate of ..... per centum, per annum, and to be paid....., according to a certain bond or obligation bearing even date herewith, the mortgagor hereby mortgages to the mortgagee .....(description).

And the mortgagor covenants with the mortgagee as follows:

1. That the mortgagor will pay the indebtedness as hereinbefore provided.

2. That the mortgagor will keep the buildings on the premises insured against loss by fire for the benefit of the mortgagee.

3. That no building on the premises shall be removed or demolished without the consent of the mortgagee.

4. That the whole of said principal sum shall become due after default in the payment of any instalment of principal or of interest for .....days, or after default in the payment of any tax, water rate or assessment for ..... days after notice and demand.

5. That the holder of this mortgage, in any action to foreclose it, shall be entitled to the appointment of a receiver.

6. That the mortgagor will pay all taxes, assessments or water rates and in default thereof, the mortgagee may pay the same.

7. The mortgagor within ..... days upon request in person or within ..... days upon request by mail will furnish a statement of the amount due on this mortgage.

8. That notice and demand or request may be in writing and may be served in person or by mail.

9. That the mortgagor warrants the title to the premises.

In witness whereof this mortgage has been duly executed by the mortgagor.

(See Chattel Mortgage, Farm Mortgages, Mortgage Bonds, Mortgage Certificates, Mortgage Loans, Purchase Money Mortgage.)

MORTGAGE BONDS

Bonds secured by a mortgage on property, whether real or personal, or both. Mortgage or secured bonds are to be distinguished from debenture or unsecured bonds. In the United States mortgage bonds are more popular than debentures, whereas the reverse is the case in England. (See Consolidated Mortgage Bonds, First Mortgage Bonds, General Mortgage Bonds, Refunding Mortgage Bonds, Second Mortgage Bonds, etc.)

MORTGAGE CERTIFICATES

A modified form of mortgage or real estate bond, also known as mortgage participation certificates, now in considerable disfavor as the result of unfavorable experience, operating and legal, with them during the 1929-1932 real estate depression. Many mortgage companies formerly issued mortgage certificates, and usually guaranteed the payment of both interest and principal, based upon and representing an interest in first mortgages which they owned. Such guarantee, however, proved worthless when invoked in volume, because the ratio of outstanding guarantees to capital funds was 20:1 and even as high as 40:1, and the companies went into reorganization or liquidation. There were several types of mortgage certificates. In some cases, certificates represented shares or participations in a specific bond and mortgage of large denomination held by the mortgage company and in which a precise description of the property securing the mortgage was recited. In other cases, the certificates were secured by a general

pledge of mortgages, equal in value to the certificates which were not specifically enumerated or described but deposited with a trustee. Mortgages so deposited were accompanied by: (1) a certificate of appraisal showing that the value of the property covered by the mortgage was at least twice the principal of said mortgage (to meet this requirement, actual practice tended to be over-liberal in appraisals); (2) policy of fire insurance fully protecting the holders of the certificates against loss in case of fire; and (3) policy of title insurance, guaranteeing the validity of the mortgage.

First mortgage certificates on property in New York state were formerly legal investments for trust bonds, but under 1936 amendment to the Decedent Estate Law and Personal Property Law, the specifically declared intention of the amendment was stated to be to prohibit any future investments in parts of bonds and mortgages for trust funds.

MORTGAGE COLLATERAL TRUST BONDS

Same as Collateral Mortgage Bonds (q.v.).

MORTGAGE COMPANY

A company whose business consists of the lending of funds upon mortgage security, usually also transacting related activities such as title insurance, mortgage servicing, and investing operations including purchase and sale as middlemen of outstanding mortgages. Title and mortgage companies are subject in New York State to the Insurance Law, and hence are "moneyed corporations". In New York, many mortgage companies engaged in the sale of guaranteed mortgages and mortgage certificates were placed in reorganization or liquidation following the breakdown caused by the 1929-1932 depression in real estate. The New York State Mortgage Commission was formed to take over some $800 million in mortgages securing mortgage certificates which had been sold by these companies with their guarantee. (See Farm Mortgage Companies.)

MORTGAGE DEBENTURES

Mortgage bonds; a title used in countries where debenture is synonymous with bond.

MORTGAGE INSURANCE

See National Housing Act.

MORTGAGE INVESTMENT COMPANY

A mortgage lending and investing institution similar to the Mortgage Company (q.v.), acting both for own account and as middlemen in the creation, purchase or sale of mortgages on urban or farm property. (See Farm Mortgage Companies.)

MORTGAGE LOAN AND INVESTMENT COMPANY

A variant in designation for Mortgage Company, and Mortgage and Investment Company (q.v.). See also Farm Mortgage Companies.

MORTGAGE LOANS

Loans made on real estate collateral, urban, or rural, residential or business, in which a mortgage is given to secure payment of principal and interest. This class of loans is specialized in by savings banks, life insurance companies, mortgage companies, building and loan associations, farm mortgage companies, etc.

Under Sec. 24 of the Federal Reserve Act, National banks may make real estate loans secured by first liens upon improved real estate, including improved farm land and improved business and residential properties. Such loans secured by real estate shall be in the form of obligations secured by mortgage, trust deed or other such instruments upon real estate. Any National bank may purchase any obligation so secured when the entire amount of such obligation is sold to it. The amount of any real estate loans by National banks shall not exceed 50% of the appraised value of the real estate offered as security, and no such loan shall be made for a longer term than 5 years; except that:

(1) Any such loan may be made in an amount not to exceed 60% of the appraised value of the real estate offered as security, and for a term not longer than 10 years, if the loan is secured by an amortized mortgage, deed or trust or other such instrument, under the terms of which the instalment payments are sufficient to amortize 40% or more of the principal of the loan within a period of not more than 10 years; and

(2) these limitations and restrictions do not apply to real estate loans which are insured under the provisions of Title II of the National Housing Act.

No National bank shall make such loans in an aggregate sum in excess of the amount of its capital stock paid in and unimpaired plus the amount of its unimpaired surplus, or in excess of 60% of the amount of its time and savings deposits, whichever is the greater.

Loans made to finance the construction of residential or farm buildings and having maturities of not to exceed 6 months, whether or not secured by a mortgage or similar lien on the real estate, shall not be considered as loans secured by real estate, but classed as ordinary commercial loans. However, no National bank shall invest in, or be liable on, any such loans in an aggregate amount in excess of 50% of its actually paid-in and unimpaired capital. Loans made to established industrial or commercial businesses, so-called "industrial loans" in which Federal Reserve Banks or the Reconstruction Finance Corporation participate, are also exempt from the restrictions or limitations upon loans secured by real estate.

Most State banks and trust companies are not restricted to such an extent in making mortgage loans, either as to individual loans or as to the aggregate maximum which may be outstanding. Consequently, over a period of years the trend of legislation has been to liberalize the stringent restrictions upon National banks.

The papers incidental to a mortgage loan are: (1) note or bond (as evidence of debt); (2) mortgage duly executed (as security for loan); (3) certificate of appraisal (indicating the value of the mortgaged property and its excess of value over the mortgage); (4) abstract of title, or policy of title insurance, indicating that there are no prior liens against the property and in the case of the policy of title insurance, guaranteeing the validity of the title; and (5) insurance papers (to protect the lender against loss in case of destruction of the mortgaged property by fire.)

In applying for a mortgage loan upon city property, the applicant fills in a blank, provided by the lending institution, giving the following information: (1) amount of money desired; (2) location of property; (3) dimensions of ground; (4) dimensions of building; (5) building materials; (6) purposes for use; (7) value of ground; (8) value of building; (9) annual rental; (10) amount of insurance. The signature of the bondsman or mort-

gagor (borrower) is then attached to the application.

The essentials of security in mortgage loans are: (1) extent of the margin of safety, i. e., excess of the appraised value over the total encumbrances on the property; (2) possibility of depreciation in neighborhood values; (3) earning power of the property in rentals and the amount of their excess over taxes, insurance, repairs, and all other charges; (4) adaptability of buildings for other uses; (5) location with reference to transit facilities.

(See Farm Mortgages, Legal Investments for Savings Banks, Legal Investments for Trust Funds, Life Insurance Company Investments, Limitations on Bank Loans.)

MORTGAGE PARTICIPATION CERTIFICATES

See Mortgage Certificates

MORTGAGEE

See Mortgage.

MORTGAGOR

See Mortgage

MOVE

A stock market expression to denote an upward or downward course in the price of a particular stock or in the general market, brought about by the appearance of favorable or unfavorable conditions, or by professional or public participation.

MOVEMENT

See Swings.

MOVEMENT OF CROPS

The principal grain crops are moved from the farms to the milling centers and Eastern seaboard for export trade in the interval from August to October, the peak usually being reached in September. On account of the demand for money and credit required by the purchasers to pay the farmers at this period, large withdrawals of deposits occurred from the Eastern banks by Western banks. After settlement with the farmers had been made and the farmers in turn had paid their debts and made their autumn purchases, these funds gradually found their way back to the East as deposits in the larger banks of the money centers. The crop moving period was, for this reason, a period of money strain, and was usually accompanied by temporary higher money rates, especially affecting the New York call money market, the first to feel the influence of a money squeeze. It was significant that most of the business recessions or even full-fledged panics originated during the crop moving period on account of the intensity of the demand for funds at this time.

With the establishment of the Federal Reserve System, Federal agencies for supplying agricultural credit, e.g., Federal Intermediate Credit Banks and Banks for Co-operatives, and the ease with which banks can secure funds through the rediscount process from the Reserve banks, the crop moving period is now passed without the same fear of a money disturbance that formerly attended it. (See Crop Reports.)

MULTIPLE CURRENCY BONDS

Bonds the principal and interest of which are payable in the currencies of several nations. A number of European Government issues are of this class, e. g., Government of the Kingdom of Norway Sterling 3s of July, 1886, due 1961, and of July, 1888, due 1964, are payable (principal and interest) in London in sterling, in Berlin, Hamburg and Frankfort in marks, in Paris in francs, and in Oslo in kroner.

MUNICIPAL BANKRUPTCY ACT

An Act, approved May 24, 1934, which provided that during the emergency period of two years cities and local taxing units might petition Federal courts for approval of plans for readjustment of their debts if endorsed by holders, of 51 per cent. of their outstanding obligations. It is also stipulated that the plan of readjustment should not be confirmed by the judge until it had been approved by creditors holding two-thirds in amount of each class of claims affected by the plan, and also of those holding three-fourths in amount of all securities.

This act now constitutes Chapter IX, of the National Bankruptcy Act, having been made permanent in 1946.

MUNICIPAL BONDS

Bonds which are obligations of a county, city, town, village, tax district, or other civil division of a state, as distinguished from Government bonds, state bonds, and bonds of business corporations. Municipal bonds constitute one of the subdivisions of civil issues. The fundamental difference between municipal bonds and corporation bonds is that whereas the latter are retired out of earnings, municipal bonds are paid off through taxes levied upon the property located in the civil division which issues them.

Municipal obligations are usually issued for the following public purposes: school houses and equipment, water works and mains, public buildings, street improvements, sewers, drainage, irrigation, and reclamation, parks and museums, bridges, fire equipment, grade crossings, harbor improvements, highways, public markets and other public utilities, libraries, and for refunding maturing issues, etc. Types of obligations, classified from the standpoint of payment, are: (1) direct and general obligations, for which the full faith and credit of the issuing municipality are pledged. All taxable property of the municipality is subject to taxation, up to the tax limits if any, for the payment of principal and interest on such direct and general obligations. (2) revenue bonds, which are payable from specified revenues, usually those from the property or facility financed by the revenue bonds; (3) special assessment bonds, which are payable from assessments upon property deriving benefits from the improvements financed by the bonds; and (4) tax anticipation warrants or notes, which are issued in anticipation of taxes levied or assessed and in process of collection, and which are usually a first claim upon such tax receipts.

Direct and general obligations (and other types of municipal obligations) are never secured by a specific pledge of collateral, but payment of principal and interest is assured through the taxing power of the issuing municipality, provided they have been legally issued. Legality (or validity) of issue is the first and fundamental consideration in testing the safety of municipal bonds. If the bonds comply with all the laws of the Government and the state in which the municipality is located, they must be paid. Since municipalities may be sued, bondholders may have recourse to the courts to

endorse collection of taxes through an increase in the tax-rate (depending on legal tax limits) sufficient to pay the interest on any legally issued municipal bonds. Although most States have tax limit legislation, many of these States exclude debt service from such tax limits. Other considerations of equal importance are the good faith of the issuing community (as shown by past records), financial competency of the community's officials, and financial statement.

In analyzing financial statements of municipalities, assessed value of taxable property, the basis of taxation, is fundamental, as well as the assessment basis used by the municipality in taxation. Assessment bases vary widely throughout the United States, so that the mere figure for assessed valuation of property is not completely indicative unless the assessment basis is also given. Sinking funds should be deducted from gross debt to determine net debt. Using net debt as the basis, debt per capita and net debt percentage to assessed value of taxable property are the two basic financial indicators of municipal credit. In making comparisons of these ratios, municipalities are grouped in groups comparable as to population and total assessed valuation of property, so that such ratios appearing high for small cities would not be considered high for larger cities. Comparison of the prevalent tax rate compared with legal limit if any is also of interest, although many States exclude debt service from tax limits, as well as the trend of general revenues and general expenditures, and the volume of tax delinquencies. A high tax rate with rising delinquencies and budget deficits would indicate credit difficulties.

Municipal bond prices usually fluctuate with interest rates, and are not directly affected by business conditions. The rate of interest which they bear depends upon a number of variables including (1) the size and importance of the issuing municipality; (2) section of the country; (3) type and purpose of the obligation; (4) past record of the issuing municipality, and (5) financial statement. Due to their intrinsic strength, municipal obligations can usually be marketed at a lower rate of interest than any other class of obligations, except Government and state securities. While the stock exchanges do not provide a market for municipal bonds, a fair market is always provided by the many bond houses throughout the country which specialize in this class of securities. They are always acceptable as bank collateral.

Municipal bonds are sold by the issuing civil division, usually by inviting competitive public bids advertised for in a newspaper. When bids are offered, they must be sealed and accompanied by a certified check equal to a certain percentage of the issue. The papers required of the issuing jurisdiction in authorizing a municipal bond issue are as follows:

(1) Copy of the minutes in which the resolution authorizing the issue, states (a) amount, (b) maturities, (c) purpose, (d) date of issue, (e) interest rate, (f) where payable, (g) form of bond, (h) vote of officers (trustees) of jurisdiction, (i) citation of law under which issued.

(2) Copy of bond form.

(3) Attorney's opinion as to legality, which states (a) that the resolution has been examined, (b) that the general code has been examined, and (c) that in his opinion the bonds are (or are not) a binding obligation.

(4) Transcript of Record of Proceedings, which include (a) title of issue, (b) name of jurisdiction, (c) names of its regularly constituted officers, (d) fiscal statistics of jurisdiction, e. g., population, debt, tax rate and application of taxes, (e) resolution to issue bonds, (f) legal notice of sale, (g) proof of publication, (h) bond and financial statement, (i) correspondence with successful purchaser, (j) minutes of meeting accepting successful bid, (k) treasurer's certificate that bonds have been paid for, (1) signature identification certificate containing signatures of officers who have signed the bonds, (m) satisfactory evidence that no litigation is threatened or pending against the jurisdiction affecting the validity of the bonds or the right of the officers to hold office.

With general recovery in municipal finances since 1933, low money rates, and plethora of investment funds seeking investment, municipal securities have generally enjoyed a favorable market experience in recent years. One of their most important investment advantages in recent years of high taxes has been their exemption from all Federal income taxes, in addition to which most States exempt from taxation their domestic State and municipal issues. (See Legal Investments for Savings Banks, Legal Investments for Trust Funds, Life Insurance Company Investments, Municipal Debts.)

MUNICIPAL DEBTS

Debts of State and local governments, apart from Federal Government debt. In addition to the Federal Government and the 48 States, there were over 155,000 governmental units in the United States as of 1942.

Since 1938, gross debt of the States has been reduced over 35% and net long term debt, over 33%, as the following tabulation indicates:

Summary of State Gross Debt, Net Long Term Debt
1938-1946
(in millions)

Year	Gross Debt Total	Gross Debt Long Term	Gross Debt Short Term	Net Long Term Debt
1946	$2,366	$2,344	$22	$1,750
1945	2,525	2,522	3	1,890
1944	2,792	2,784	9	2,100
1943	2,944	2,924	21	2,306
1942	3,267	3,104	163	2,547
1941	3,497	3,300	197	2,651
1940	3,642	3,327	315	2,627
1939	3,545	3,372	173	2,646
1938	3,383	3,298	85	2,625

Source--Bureau of Census.

In contrast to the declining trend in State and local debt in recent years, Federal Government debt has sharply expanded as the table on page 420 shows.

Gross Debt of Federal, State and Local Governments
1902-1946
(in millions)

Year*	Total	Federal(1)	State and Local(2) Total(3)	State	Local
1902	$3,372	$1,178	$2,194	$270	$1,924
1912	5,692	1,194	4,498	423	4,075
1922	33,219	22,963	10,256	1,163	9,093
1932	39,049	19,487	19,562	2,896	16,680
1940	63,177	42,968	20,209	3,526	16,720
1941	69,143	48,961	20,182	3,413	16,812
1942	92,064	72,422	19,642	3,211	16,479
1943	155,341	136,696	18,645	2,909	15,783
1944	218,429	201,003	17,426	2,768	14,703
1945	275,234	258,682	16,552	2,425	14,164
1946p	285,309	269,422	15,887	2,358	13,564

(1) Debt of U. S. Government; includes general Treasury obligations borrowed on behalf of Federal agencies and excludes Federal agency debt incurred outside of general Treasury. Insofar as Federal Government utilities and enterprises are financed through general and special accounts, Federal debt comprises both general and enterprise debt.

(2) Comprises debts both for general purposes and for Government enterprises.

(3) Beginning 1932, totals are less than sum of State and local public debt by amount of duplicating State debts for reloan to local governments.

*Beginning 1940, data are as of June 30th; earlier data, as of ends of fiscal years.

pPreliminary.

Source--Statistical Abstract of the U. S.

Gross debt of leading cities (the 397 cities having populations in 1940 of over 25,000) has declined over 12% since 1942, while net long term debt has declined over 14% during the same period, as the following table shows:

City Finances
Cities with 1940 Population of Over 25,000
(in millions)

	1946	1945	1944	1943	1942
Total general Revenues	$2,916	$2,714	$2,663	$2,591	$2,589
Total general Expenditures	2,939	2,685	2,620	2,614	2,677
Provision for Debt Retirement	272	293	320	320	293
Gross Debt	7,164	7,326	7,497	7,820	8,155
Net Long Term Debt	5,831	5,978	6,175	6,488	6,823
New Borrowing	177	106	49	48	N.A.

N.A.--Not available.

Source--Bureau of the Census.

Latest trend, however, is for municipal financing to increase. Total volume of municipal financing in 1947 was $2,353.8 million, in long term financing, as compared with $1,203.6 million for 1946. Short term municipal financing in 1947 aggregated $957.5 million, compared with $740.8 million in 1946.

(See Municipal Bonds.)

MUNICIPAL WARRANT

As defined by the Governors of the Federal Reserve System, warrants "shall be construed to mean bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months, and the term municipality shall be construed to mean state, county, district, political subdivision, or municipality in the continental United States, including irrigation, drainage, and reclamation districts." Under Sec. 14 (b) of the Federal Reserve Act, any Federal Reserve bank can purchase warrants issued by a municipality in anticipation of the collection of taxes or in anticipation of the receipt of assured revenues, provided they are general obligations of the entire municipality and other conditions. (See Federal Reserve Board Regulation--Regulation F.)

A municipal warrant may originate as an order given by a municipal official acting under proper authority upon the treasurer of such municipality to pay a certain person, firm, or corporation a certain sum of money for goods or services advanced, and which when presented to the treasurer, cannot be paid for lack of funds. When stamped as follows: "Presented but not paid on account of lack of funds. This warrant bears interest from this date until paid at the rate of ..... per cent." together with the treasurer's signature, the order becomes a warrant. The details of the warrant are then entered, i. e., registered in the treasurer's records. A warrant may be payable to bearer or to order.

When a municipality having warrants outstanding accumulates funds available for their redemption, a call is inserted in a local newspaper announcing that warrants of designated numbers will be paid upon presentation, naming the date when interest will cease. A person who invests in warrants must provide some method of automatic notification so that when a call is announced, prompt presentation may be made in order to avoid loss of interest. (See Warrant.)

MUNICIPALS

A market designation for Municipal Bonds (q. v.).

MUNIMENT OF TITLE

A muniment is a document by which rights are fortified or maintained. One of the legal characteristics of a bill of lading is that, beside being a receipt for goods and a contract to ship, it is a muniment of title.

(See Bill of Lading.)

MUTILATED CURRENCY

Coins which are cut, punched, trimmed, etc., and paper money which is torn or badly worn.

Paper money received by banks for deposit may be so mutilated and worn as to be unfit for circulation. It devolves upon the banks dealing with the public to redeem such money and to pay out, so far as possible, only clean, crisp bills.

It is the function of Federal Reserve banks to provide new bills and coins in exchange for mutilated and worn ones. Redemption of uncurrent bills is best effected by exchanging them for new ones at the nearest Federal Reserve bank. Where a Federal Reserve bank is in the same city, this can be accomplished by direct delivery. Otherwise it is necessary to forward the currency by express, express and insurance charges being borne by the Federal Reserve bank for member banks.

Mutilated coins are also redeemable at the Federal Reserve banks. Since they are statutorily over-valued, mutilated and light weight silver dollars, subsidiary

silver and minor coins are normally redeemable at face value.

Mutilated and torn paper currency is redeemable at face value by the Currency Redemption Division of the U. S. Treasurer, provided three-fifths or more of the bill remains. For less than three-fifths, but for two-fifths and more, a piece of paper money is redeemable at one-half its face value. For less than two-fifths, a piece of paper money is generally worthless. If the holder of any portion of a mutilated bill will furnish an affidavit certifying that the missing portion has been destroyed, that piece of paper money will be redeemed at face value.

(See Light Coin, Light Gold, Redemption of Money.)

MUTUAL MORTGAGE INSURANCE

See National Housing Act.

MUTUAL SAVINGS BANK

See Savings Banks.

NAKED RESERVE

The reserve of a Federal Reserve bank after making adjustments for borrowing from and loans to other Federal Reserve banks, as distinguished from the actual reserve. Each Federal Reserve Bank is required to maintain reserves in gold certificates equal to at least 40% of Federal Reserve Notes in circulation and reserves in gold certificates or lawful money equal to at least 35% of deposits. Under the Federal Reserve Act, the Federal Reserve Board has power to require any Federal Reserve bank to rediscount paper held by another, e. g., a Federal Reserve bank in a strong position may be required to rediscount the paper of another in a weak position. The actual reserve of each Federal Reserve bank does not exhibit its real strength or weakness and consequently the credit condition of the region served, because the actual reserve gives effect to inter-reserve borrowings and lendings. The naked, or adjusted reserve, is a derived figure, calculated to reveal the true strength of each regional reserve bank. It is ascertained by adding to the reserve bank's actual reserve the amount of its lendings (through rediscounts) to other Federal Reserve banks and subtracting them from the amount of its borrowings, if any. In this way the adjusted or naked reserve is correspondingly increased or diminished and the effect of inter-reserve bank rediscount operations is eliminated.

The Board of Governors of the Federal Reserve System points out that Federal Reserve credit policy is determined on the basis of the broad needs of the credit and business situation, and not on the basis of variations in the reserve ratio. During most of their existence, the Federal Reserve Banks have had reserves amply in excess of requirements, so that the actual amount of excess reserves and the reserve ratio have not been of particular significance. The last period of stringency was in 1933, when the Board of Governors exercised the power conferred by the Federal Reserve Act and suspended reserve requirements of Federal Reserve Banks for 30 days on March 3, 1933, and established a tax on the deficiency in reserves, the average reserve ratio of the Federal Reserve Banks having declined to 45.3%. However, by the end of March, 1933, the average daily reserve ratio of the Federal Reserve Banks had improved to 51.3%, and thereafter rapid improvement occurred. (See Reserve Ratio.)

NAME DAY

See Settlement Days.

NAPOLEON

The French gold twenty franc piece, named after Napoleon I. Rare in circulation because of hoarding and withdrawal from circulation. International currency unit of France is the franc.

(See Foreign Moneys—France.)

NARROW MARKET

A term used of the stock market to denote that the volume of business is light, trading inactive and that in many issues no sales are made at all. Because of the scarcity of, and spread between, bids and offers, relatively large changes in prices occur on a small volume of transactions.

Applied to a particular security, this term means that bids are infrequent and originate from but few sources. Thus, unlisted stocks of small companies not widely known, and even stocks listed on one of the large exchanges, may have a narrow market. For that reason they usually sell at lower prices than active stocks of equal earnings and property values, active stocks commanding higher market quotations because they can be more readily disposed of without concessions in price because of the high marketability.

NATIONAL ADVISORY COUNCIL

The National Advisory Council on International Monetary and Financial Problems was established by the Bretton Woods Agreements Act of 1945 along with the International Monetary Fund and the International Bank for Reconstruction and Development.

As stated in the June 24, 1947 report of the Council, the Act directs the Council to coordinate the policies and operations of the representatives of the United States on the International Monetary Fund and the International Bank for Reconstruction and Development, the Export-Import Bank of Washington, and all other agencies of the Government "to the extent that they make or participate in the making of foreign loans or engage in foreign financial, exchange or monetary transactions." The Council is also directed to advise and consult with the President and the United States representatives on the Fund and on the Bank on major problems arising in the administration of the Fund and the Bank; and to recommend to the President general policy directives for the guidance of the representatives of the United States on the Fund and Bank. The Act requires the Council to report from time to time to the President and Congress, but at least every six months, and in addition, to submit special and more comprehensive reports biennially (every two years).

In accordance with the Act, members of the Council are: the Secretary of the Treasury, the Secretary of State, the Secretary of Commerce, the Chairman of the Board of Governors of the Federal Reserve System, and the Chairman of the Board of Directors of the Export-Import Bank. The United States Executive Directors on the Fund and the Bank regularly attend the meeting of the Council. The Council ordinarily meets each week and holds such special meetings as may be required. The Council makes use of the existing personnel of its five member agencies. Its Staff Committee, consisting of technical representatives of member agencies and a representative of the Securities and Exchange Commission, collects and analyzes information and prepares reports and recommendations for the Council. Secretariat functions are performed by personnel of the Treasury Department.

In accordance with its statutory responsibility, the Council has coordinated a wide variety of foreign financial transactions by agencies of the United States Government, including foreign loans, financial settlement of war accounts, and credits to foreign governments or their nationals for purchase of United State Government surplus property. Its objective has been to achieve a consistent United States foreign financial policy. Problems which before the institution of the Council had been dealt with by individual agencies, in many cases with only incidental coordination, have been made the

subject of joint discussion and joint decision. The Council considers various criteria for foreign loans, among which are: the purpose of the loan, the need for the loan, the borrower's ability to repay, the allocation of available loan funds among applicant countries, the alternative sources of loan funds, and the possible effects of the use of loan proceeds on the United States domestic economy. On the basis of these criteria, the Council approves or disapproves consideration by the lending agency of a proposed loan or credit. Thus, through an over-all analysis, the Council offers its best judgment to a lending agency with regard to particular loan applications.

Similarly, through continuous consultation with United States representatives on the International Fund and Bank, and through exercise of the special powers granted to the United States in the Bank's Articles of Agreement over the Bank's operations involving United States dollars, the Council assures coordination between the operations of these international institutions and the foreign financial operations of the United States Government.

(See International Bank for Reconstruction and Development; International Monetary Fund.)

NATIONAL AGRICULTURAL CREDIT CORPORATIONS

Banking corporations authorized by the Agricultural Credits Act of March 4, 1923. These corporations could be organized and controlled by private capital under the general supervision of the Comptroller of the Currency with a minimum capital stock of $250,000. No National Agricultural Credit Corporation could commence business until it had deposited with the district Federal Reserve Bank U. S. Government securities in an aggregate face amount of at least 25% of its paid-in capital stock. Any member bank of the Federal Reserve System could upon permission of the Comptroller of the Currency invest a limit of 10% of paid-in capital stock and surplus in the stock of one or more of these corporations. Sec. 77 of the Farm Credit Act of 1933 provided that after the date of enactment (June 16, 1933), no National Agricultural Credit Corporation shall be formed under the provisions of Title II of the Agricultural Credits Act of 1923.

National agricultural credit corporations were empowered to make loans for agricultural purposes on chattels, live stock, growing crops and personal credit up to a period of nine months; except that in the case of breeding stock and dairy herds the period could be extended to three years. Against the paper thus discounted, debentures could be issued up to an amount to be prescribed by the Comptroller of the Currency. Rediscounting facilities were provided to facilitate the marketing of such debentures. (See Agricultural Credits Act, Farm Credit Administration, Federal Farm Loan Act, Intermediate Credit Banks.)

NATIONAL ASSOCIATION OF CREDIT MEN

A national organization with local bureaus created to assist its members, which consist of the larger business houses, in safeguarding credits, in promoting safe principles of credit extension, in research along credit lines (the Robert Morris Associates), and in reciprocating credit information. The first meeting of the Association was called in 1896, at Toledo, Ohio. The Association has ranked for years as one of the basically most important credit organizations in the United States. National office is located at 1 Park Avenue, New York City. The monthly magazine, "Credit and Financial Management", is published.

NATIONAL ASSOCIATION OF SECURITIES DEALERS, INC.

A country-wide membership association of securities brokers and dealers organized upon passage of the Maloney Act, an amendment to the Securities Exchange Act in June, 1938, which is registered with the Securities and Exchange Commission for the purpose of the Act. The following descriptive data is furnished by the association:

The National Association of Securities Dealers, Inc is the outgrowth of the Code of Fair Competition for Investment Bankers, drawn up by representatives of the securities business under provisions of the National Industrial Recovery Act (NRA). When this legislation was declared unconstitutional by the Supreme Court of the United States in 1935, the securities industry undertook to preserve and make operative, on a voluntary basis, the provisions of the Code looking toward perfection of a code of ethics and its enforcement. This was accomplished with the cooperation of the Securities and Exchange Commission which for three years supported efforts of the business to obtain the necessary legislation giving the Code idea legal substance.

In June, 1938, the legislation was adopted by Congress, popularly known as the "Maloney Act" after its sponsor, the late Senator from Connecticut. The Maloney Act was introduced as an amendment (15A) to the Securities Exchange Act. Specifically, it permits the organization of brokers and dealers into membership associations which would register with the Securities and Exchange Commission for the purposes of the Act. Upon passage of the Maloney Act, the National Association of Securities Dealers, Inc. was formed. It is the only association operating under the Act.

The Association's objectives are as follows:

To promote through cooperative effort the investment banking and securities business, to standardize its principles and practices, to promote therein high standards of commercial honor, and to encourage and promote among members observance of Federal and State securities laws;

To provide a medium through which its membership may be enabled to confer, consult, and cooperate with governmental and other agencies in the solution of problems affecting investors, the public and the investment banking and securities business;

To adopt, administer and enforce rules of fair practice and rules to prevent fraudulent and manipulative acts and practices, and in general to promote just and equitable principles of trade for the protection of investors;

To promote self-discipline among members, and to investigate and adjust grievances between the public and members and between members.

The Maloney Act was concerned with establishing the mechanism for national regulation of the Over-the-Counter securities market. Over-the-Counter dealers, since they were not nationally organized as a unit, had not been susceptible to control such that exercised by stock exchanges over their members. NASD provided the instrument for accomplishing that needed control. It became the first truly national organization of brokers and dealers embracing the whole industry without

regard for location, the kind or volume of business done, or collateral affiliations.

NASD is a non-profit, membership corporation. Any broker or dealer in securities who meets statutory requirements for membership may belong. Anyone desiring to join who is lawfully engaged in the investment banking or securities business applies to the Board of Governors for the necessary forms. The applicant is supplied with literature describing the Association and the obligations of membership. He signs the appropriate membership agreement which, among other things, contains a provision that the applicant, if admitted, will abide by the By-Laws and Rules of Fair Practice, the Association's binding code of ethics. After the appropriate District Committee has decided that the applicant is lawfully engaged in the securities business and is eligible for membership, admission is granted.

The Maloney Act provides that "The rules of a registered securities association may provide that no member thereof shall deal with any non-member broker or dealer except at the same prices, for the same commissions or fees, and on the same terms and conditions as are by such member accorded to the general public." NASD has such a rule regulating members' dealings with non-members. In view of the fact that its membership is made up of practically all brokers and dealers actively engaged in securities dealings, dealers who are not members of the Association trade with NASD members as any investor would. This means at prices which dealers sell securities to the public and not at the prices they sell to each other. There is both a wholesale and a retail market for securities.

Rules for guiding members' business practices are comprehensive and represent the extent of obligations assumed by members. Foremost rule in this connection in that "A member, in the conduct of his business, shall observe high standards of commercial honor and just and equitable principles of trade." This rule has been formally interpreted to mean, among other things, that a member cannot sell securities at prices not reasonably related to their current market price. Another rule is that "..... if a member buys for his own account from his customer, or sells for his own account to his customer, he shall buy or sell at a price which is fair, taking into consideration all relevant circumstances, including market conditions with respect to such security at the time of the transaction, the expense involved, and the fact that he is entitled to a profit; and if he acts as agent for his customer .....he shall not charge his customer more than a fair commission or service charge....." Other rules impose upon members responsibility for recommendations that may be made to customers; impress upon members the obligations of the fiduciary capacity in which they at times serve; the necessity to disclose the capacity in which they are acting for or with customers; the forbidding of transactions of a manipulative, deceptive or fraudulent character, and the improper use by the member of a customer's securities or funds, etc.

The Association is empowered to inspect members' books and records to ascertain if rules have been or are being violated. Such inspections, by direct examination or by questionnaire, are made at frequent intervals, whether or not there is reason to believe violations would be found. Thus the Association does not have to rely upon complaints from the public or other members to obtain information concerning the practices of its members. Enforcement of NASD's code of fair practice extends to registered employees of members--salesmen, traders, etc. Such personnel, under the By-Laws, become "Registered Representatives" of members agreeing, as a requirement of registration, to abide by the Rules and regulations of the Association. They are, therefore, subject to the same obligations and duties as are members and are equally bound under the disciplinary powers of the organization.

Enforcement of By-Laws and Rules of Fair Practice is a continuing function. A code of procedure is followed if disciplinary steps against a member and an employee are taken. Disciplinary action is carried out through a complaint process. Charges of violations of one or more of the rules of the Association form the basis for complaints. The Association carefully examines into such charges to establish whether reasonable grounds for them exist in fact. Only when it is certain such "reasonable grounds" do exist, is a complaint filed. Complaints can be instituted by a member of the public, a member of the Association or by the Association itself. The source becomes the "complainant." When a complaint is filed, the nature of it must be given in writing to the member involved. The charges must be set forth in reasonable detail, as well as the rule or rules allegedly violated. Answers to the complaint must be made by the "respondent" (member) within 10 days from the date of notice of the complaint or within a time limit specified by the District Business Conduct Committee which will receive evidence on the complaint. The complainant or respondent may ask for a hearing on the charges contained in the complaint. Both may appear in person and with counsel at any hearing held. A record of all hearings is kept. When all parties have been heard and the record completed, a decision is rendered. If it is found that violations of the rules occurred, the decision may impose one of several penalties. If it is found that no violations occurred, the proceedings are dismissed.

Disciplinary penalties take the form of censure, fine, suspension or expulsion from the Association. The seriousness of the violations found to have occurred decide the degree of the penalty. Expulsion is the most severe disciplinary action within the power of the Association. Whether the decision is of a disciplinary nature or is a dismissal of the proceedings, there exists right of appeal or review. The respondent or complainant may appeal to the Board of Governors of the Association for a review of the proceedings and decision. The Board has the power on its own motion, to call up any proceeding for review. The Board, in its disposition of the matter, renders a written opinion. Its opinion may affirm, remand, modify, increase or cancel the decision of the District Business Conduct Committee. The complainant or respondent has the right to appeal any finding of the Board of Governors to the Securities and Exchange Commission. The SEC may, on its own motion, call up for review any disciplinary decisions of the Board of Governors. Decision of the SEC, in turn, may be appealed to the courts by the complainant or respondent.

The NASD is organized on a national and district basis. Its organizational set-up is not unlike that of a corporation having a national office and branches throughout the country. In order to carry out NASD's objective of self-regulation on a basis of home rule, the country is divided into 14 Districts. Each District

operates under the direction of a District Committee. Members of the District Committee are elected by members located in the State or States covered by the District. Members of such committees serve for three years. District Committees shall act as the agencies of the corporation for the administration of its affairs in their respective districts. The Committees have the right to appoint subsidiary committees, such as District or Local Business Conduct Committees, Quotations Committees, Uniform Practice Committees, etc. Such committees, under the supervision of the District Committee, administer the duties associated with their particular fields. District Business Committees take evidence and render decisions in all complaints filed against members of their particular District.

The Chairmen of the 14 District Committees constitute an Advisory Council to the Board of Governors. They are entitled to attend meetings of the Board but have no voting power. The Board of Governors is made up of 21 representatives of the members. Each represents and is elected by the members of his own District. Eleven Districts elect one member each to the Board while District No. 13 (New York) elects 5; District No. 8 (Chicago), 3; and District No. 2 (California), 2. Management and administration of the affairs of the corporation are vested in the Board of Governors, which is the governing body under the By-Laws. Members of the Board serve for three years. The Board annually elects a Chairman, Vice-Chairmen, Treasurer, an Executive Director and such other officers as may be desirable. The Board defines the powers and duties of all officers as well as compensation of employees. No member of the Board and no member of any Committee of the Association receives compensation for his services. Committees are appointed by the Board to represent it in several fields of service to the membership. Such national committees include a Business Conduct Committee, Quotations Committee and Uniform Practice Committee. An Executive Committee, made up of members of the Board, is appointed annually and acts for the Board in the interim between meetings of that body. A Finance Committee, also made up of members of the Board, is responsible to the Board for administering financial affairs of the Association.

(See Over-the-Counter Market.)

NATIONAL BANK

A bank incorporated under a charter granted by the Federal government upon the authority of the National Bank Act (q. v.). Under a 1927 amendment of the Act, National bank charters now have an indeterminate duration, as against a former duration fixed at 99 years and earlier at 20 years. (See National Banking System.)

NATIONAL BANK ACT

The Act which created the National Banking System (q.v), passed February 25, 1863, but radically revised June 3, 1864. One of the important original motives for enacting the National Bank Act was to provide uniform national bank note circulation. Neither the original nor amended act provided for the abandonment of circulating notes of state banks. A further amendment, passed in February, 1865, however, imposed a tax of 10 per cent. on state bank notes, effective August 1, 1866, after state bank notes disappeared from circulation. Since 1935, National bank notes have been in process of retirement.

This Act has been amended in many particulars since its original passage, and the Federal Reserve Act (q.v.) should be regarded as a further extension of the law regulating Federally chartered institutions.

"An act to ptovide for a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof, approved June 3, 1864, shall be known as the 'National bank act'."
(Amendment of June 20, 1874, section 1.)

(See National Bank System, Federal Reserve System.)

NATIONAL BANK CALL

The Comptroller of the Currency is required by law to call for a statement of condition of each National bank at least three times a year. In practice, the Comptroller has called in recent years for four statements a year, the mid-year and year-end statements as of June 30th and December 31st, for statistical purposes; and the spring and autumn calls as of irregular dates. These irregular dates serve the purpose of preventing the banks from "window dressing", i. e., temporarily placing themselves in a favorable condition in order to make a good impression. The statement of condition shall be furnished within five days after the receipt of the Comptroller's notice.

Detailed instructions for preparation of call reports, including blank reports and publishers' certificates for use in connection with publication, are furnished by the Comptroller. Call reports shall be made according to the form specified by the oath or affirmation of the president, or of the cashier, or of a vice president, or of an assistant cashier of the National bank designated by its board of directors to verify such reports in the absence of the president and cashier, taken before a notary public properly authorized and commissioned by the State in which such notary resides and the National bank is located, or any other officer having an official seal, authorized in such State to administer oaths, and attested by the signature of at least three of the directors. Each call report shall exhibit, in detail and under appropriate headings, the resources and liabilities of the National bank at the close of business on any past day specified by the Comptroller as the call date. Statement of resources and liabilities, together with acknowledgment and attestation in the same form in which it is made to the Comptroller, shall be published in the place where such National bank is established, or, if there is no newspaper in the place, then in the one published nearest thereto in the same county, at the expense of National bank. Proof of publication shall be furnished as may be required by the Comptroller.

In addition to the regular reports, the Comptroller of the Currency also has the power to call for special reports from any particular National bank whenever in his judgment these are necessary in order to obtain a full and complete knowledge of its condition.

Furthermore, the Banking Act of 1933 requires each National bank to obtain from each of its affiliates other than member banks and furnish to the Comptroller not less than three reports during each year, in such form as the Comptroller may prescribe, verified by the oath or affirmation of the president or such other officer as may be designated by the board of directors of such affiliate to verify such reports, disclosing the information specified below as of dates identical with those for which the Comptroller calls for the call statement of

condition. For the purpose of this requirement, the term "affiliate" shall include holding company affiliates.

Each such report of an affiliate shall be transmitted to the Comptroller at the same time as the corresponding call report of condition, except that the Comptroller may, in his discretion, extend such time for good cause shown.

Each such report shall contain such information as in the judgment of the Comptroller shall be necessary to disclose fully the relations between such affiliate and such bank and to enable the Comptroller to inform himself as to the effect of such relations upon the affairs of the National bank.

The reports of such affiliates shall be published by the National bank under the same conditions as govern its own condition reports. The Comptroller shall also have power to call for additional reports with respect to any such affiliate whenever in his judgment the same are necessary in order to obtain a full and complete knowledge of the conditions of the National bank with which it is affiliated. Such additional reports shall be transmitted to the Comptroller in such form as he may prescribe. Any such affiliated bank which fails to obtain and furnish any report required under this section of the Revised Statutes (Sec. 5211), shall be subject to a penalty of $100 for each day during which such failure continues.

When the reports of National banks in pursuance of the Comptroller's call are received, they are examined, the results tabulated and made available to the public. This body of banking statistics is of great value to bankers and students of banking and when compared with the results of previous periods, shows the trend of banking and credit conditions. (See Comptroller's Call.)

NATIONAL BANK CIRCULATION

See National Bank Notes.

NATIONAL BANK DEPOSITORY

See Depository.

NATIONAL BANK EXAMINER

Under Sec. 5240 of the Revised Statutes, the Comptroller of the Currency, with the approval of the Secretary of the Treasury, shall appoint examiners who shall examine every member bank at least twice in each calendar year and oftener if considered necessary, although the Board of Governors of the Federal Reserve System may authorize examination by State authorities to be accepted in the case of State member banks. However, Sec. 9 of the Federal Reserve Act exempts State member banks from examination by the Comptroller of the Currency, and Federal Reserve Banks have customarily done their own examination of State member banks, usually at the same time as that done by State authorities.

To carry out this heavy examining load for the 5,005 National banks, the Comptroller of the Currency has built up an organization of examiners headed by the Chief National Bank Examiner, and organized in each Federal Reserve District with a National Bank Examiner in charge of all other examiners assigned to the District. The examiners and assistant examiners making the examinations of National banks and affiliates, and the chief examiners, reviewing examiners and other persons whose services may be required in connection with examinations and reports, are employed by the Comptroller of the Currency with the approval of the Secretary of the Treasury. The Comptroller of the Currency also fixes the salaries of all bank examiners (formerly the Board of Governors of the Federal Reserve System had this power), and reports on such to Congress.

Employment compensation of examiners and other employees in the office of the Comptroller, which compensation includes retirement annuities, is paid from assessments on National banks and affiliates and is not subject to other laws applicable to officers or employees of the United States. The funds derived from such assessments are not Government funds or appropriated monies. Expense of examinations is assessed in proportion to assets or resources held, and in addition, all National banks exercising fiduciary powers are assessed in proportion to the amount of individual trust assets and total corporate bonds and notes for which the National bank acts as trustee.

The Comptroller of the Currency has the power and is authorized to publish the report of his examination of any National bank or affiliate which shall not, within 120 days after notification of the recommendations or suggestions of the Comptroller, based on the examination, have complied with such to his satisfaction; 90 days' notice of such publication shall also be given to the bank or affiliate.

The examiner making the examination of any National bank and affiliates, or of any other member bank, has the power to administer oaths and to examine any of the officers or agents of the bank and affiliates under oath, and make a full and detailed report of the condition of the bank to the Comptroller of the Currency. Refusal to permit examination subjects the bank to forfeiture of all the rights, privileges and franchises of the bank. Refusal of affiliates to permit examination subjects the National bank to a penalty of not over $100 for each day that such refusal continues. (See Bank Examinations, Bank Examiners.)

NATIONAL BANK NOTES

A form of currency issued by National banks under the authority of the National Bank Act (q.v.), and Federal Reserve Act, and also known as national currency.

Provision was made in 1935 for the retirement of all National bank notes, as explained in this title under "Provision for Retirement."

Prior to the Federal Reserve Act, National banks were required to purchase United States (pre-World War I) bonds, and deposit them with the United States Treasurer, as security for circulating bank notes issued. Under the Federal Reserve Act, the purchase of these bonds and the issue of circulating notes was no longer compulsory, but merely optional. If the notes were not issued, the bonds did not have to be purchased.

National bank notes were taxed according to the particular issue of eligible United States bonds purchased to secure them. In the case of 2 per cent. bonds the tax was 1/4 per cent. semi-annually; for 3 per cent. and 4 per cent. bonds the tax was 1/2 per cent. semi-annually.

Under the Federal Reserve Act, it was contemplated that the Federal Reserve banks would gradually purchase all the bonds now securing the circulating notes of the National banks, which eventually would disappear

from circulation. A large number of these bonds were acquired by the Federal Reserve banks. National banks were not required to relinquish the circulation privilege.

National bank notes were issued in denominations as follows: $5, $10, $20, $50, and $100. They were engraved with green backs and bore a brown seal on the obverse side. The charter number of the National bank of issue also was required to appear on the obverse side.

As in the case of Federal Reserve bank notes, a 5 per cent. redemption fund in Lawful Money (q.v.), was required to be maintained with the United States Treasurer by the National bank of issue for the redemption of these notes, should they be presented. This fund did not earn interest, and could not be considered as a part of the bank's legal reserve. National bank notes were redeemable in gold or lawful money at the office of the United States Treasurer, or at the bank of issue. They were not legal tender, until the enactment of the AAA Farm Relief and Inflation Act of May 12, 1933, as amended by the Joint Resolution of Congress of June 5, 1933.

Provision for Retirement.—The Secretary of the Treasury announced on March 9, 1935, that the 2 per cent.Consols of 1930 would be called called for redemption on July 1, 1935, and the 2 per cent. Panama Canal Loan bonds of 1916-36 and 1918-38 for redemption on August 1, 1935. About $600,000,000 of the Consols and about $75,000,000 of the Panama Canal bonds were then outstanding. These bonds bore the circulation privilege, i. e., eligible as security for National bank notes.

In retiring these bonds the Treasury made use of the free gold resulting from the reduction in the weight of the gold dollar. The Treasury issued to the Federal Reserve Banks an amount of gold certificates about equal to the bonds being retired. The gold certificates were issued under the authority of the Gold Reserve Act of 1934, and for every gold certificate so issued there was withdrawn from the general fund of the Treasury and held as security an amount of gold equal to the gold certificates so issued.

By a provision of the Federal Home Loan Bank Act enacted July 22, 1932, all bonds of the United States bearing an interest rate of 3 3/8 per cent. per annum, or less, were given the circulation privilege for a period of three years. This provision expired July 22, 1935. At that time banks with circulating notes outstanding under this temporary authorization were required to replace the bonds, then serving as security, with lawful money to retire their outstanding notes thus secured.

The retirement of the 2 per cent. Consols and the 2 per cent. Panama Canal bonds, and the expiration of the temporary authorization for issuance of National bank notes against other bonds accomplished a simplification of the currency system through the elimination of the National bank notes, an action contemplated at the time of the passage of the Federal Reserve Act. More then $500,000,000 of the bonds called were already on deposit with the Treasurer as security for this type of currency.

Concurrently with the retirement of the National bank notes, the Treasury was also in process of redeeming and cancelling Federal Reserve bank notes, and for the same reasons. These retired currencies were replaced mainly by Federal Reserve notes which now constitute the bulk of currency in circulation. As of May 31, 1948, there were still outstanding in circulation some $100 million of National bank notes. (See Federal Reserve Bank Notes, Federal Reserve Notes, Monetary Stock (Circulation)).

NATIONAL BANK REPORT

See National Bank Call.

NATIONAL BANK TAXES

National banks are deemed instrumentalities of the Federal Government, and hence under the doctrine of McCulloch v. Maryland, decided in 1819 by Mr. Chief Justice Marshall, that the "power to tax involves the power to destroy," States may not tax National banks discriminatorily. Congress in Sec. 5219 of the Revised Statutes has specified the extent to which the States may tax National banks, as follows:

Sec. 5219, Revised Statutes. The legislature of each State may determine and direct, subject to the provisions of this section, the manner and place of taxing all the shares of National banking associations located within its limits. The several States may (1) tax said shares, or (2) include dividends derived therefrom in the taxable income of an owner or holder thereof, or (3) tax such associations on their net income, or (4) according to or measured by their net income, provided the following conditions are complied with:

1. (a) The imposition by any State of any one of the above four forms of taxation shall be in lieu of the others except as hereinafter provided in subdivision (e) of this clause.

(b) In the case of a tax on said shares the tax imposed shall not be at a greater rate, than is assessed upon other moneyed capital in the hands of individual citizens of such State coming into competition with the business of National banking associations; provided, that bonds, notes or other evidences of indebtedness in the hands of individual citizens not employed or engaged in the banking or investment business and representing merely personal investments not made in competition with such business, shall not be deemed moneyed capital within the meaning of this section.

(c) In case of a tax on or according to or measured by the net income of an association, the taxing State may, except in the case of a tax on net income, include the entire net income received from all sources, but the rate shall not be higher than the rate assessed upon other financial corporations nor higher than the highest of the rates assessed by the taxing State upon mercantile, manufacturing and business corporations doing business within its limits;

Provided, however: That a State which imposes a tax on or according to or measured by the net income of, or a franchise or excise tax on, financial, mercantile, manufacturing and business corporations organized under its own laws or laws of other States and also imposes a tax upon the income of individuals, may include in such individual income dividends from National banking associations located within the State on condition that it also includes dividends from domestic corporations and may likewise include dividends from National banking associations located without the State on condition that it also includes dividends from foreign corporations, but at no higher rate than is imposed on dividends from such other corporations.

(d) In case the dividends derived from the said shares are taxed, the tax shall not be at a greater rate

than is assessed upon the net income from other moneyed capital.

2. The shares of any National banking association owned by non-residents of any State shall be taxed by the taxing district or by the State where the association is located and not elsewhere; and such association shall make return of such shares and pay the tax thereon as agent of such non-resident shareholders.

3. Nothing contained herein shall be construed to exempt the real property of associations from taxation in any State or in any subdivision thereof, to the same extent, according to its value, as other real property is taxed.

4. The provisions of Sec. 5219 of the Revised Statutes of the United States as in force prior to March 25, 1926 shall not prevent the legalizing, ratifying or confirming by the States of any tax heretofore paid, levied, or assessed upon the shares of National banks, or the collecting thereof, to the extent that such tax would be valid under said section. (Act of June 3, 1864, Sec. 41, 13 Stat. 111, as amended by Act of March 4, 1923, 42 Stat. 1499; Act of March 25, 1926, 44 Stat. 223, 12 U. S. Code 548.)

It will be noted that Congress has granted liberal taxation powers to the States to tax National banks, under the later liberal doctrine of inter-governmental reciprocity in taxation by the Federal Government and the States.

National banks are subject to Federal Income Taxes, and in addition, National banks are subject like other domestic corporations actively in business to the tax upon declared value of the capital stock imposed by the Internal Revenue Code. (See Taxes.)

NATIONAL BANKING ASSOCIATION

Another name for National bank. This designation is employed throughout the National Bank Act.

NATIONAL BANKING SYSTEM

A system of Federally chartered independent banks established under the authority of the National Bank Act (q. v.), originally an outgrowth of Civil War finance for the purpose of assuring the sale of Government bonds. The plan of the system, outlined in 1861 by Salmon P. Chase, then Secretary of the Treasury, became a law February 25, 1863, but has since been amended many times, chiefly through the Federal Reserve Act and amendments thereto.

The original act provided for the compulsory purchase by each bank to be organized of Government bonds up to at least one-third of the capital. Upon being deposited with the Treasurer of the United States, such bonds might be used as security for circulating notes equal in amount to 90 per cent. of their par value. Subsequently the act was amended so that National banks were no longer required to purchase these bonds unless to secure National bank notes. As the result of the retirement of bonds eligible as security, all National bank notes have been in process of redemption since 1935.

No National bank may be organized with capital of less then $100,000, except National banks with a capital of not less than $50,000 may be organized in any place with population of not over 6,000. No National bank may be organized in a city with population of over 50,000 with capital of less than $200,000, except that in the outlying districts of such a city where the State laws permit the organization of State banks with a capital of $100,000 or less, National banks may with the approval of the Comptroller of the Currency have a capital of not less than $100,000. No National bank may commence business until it shall have a paid-in surplus equal to 20% of its capital. Until surplus shall equal the amount of common capital, each National bank shall before the declaration of a dividend on its shares of common stock carry not less than 1/10th of its net profits for the preceding half year to its surplus fund.

All National banks are required to be members of the Federal Reserve bank of their district and to invest in the capital stock of such bank in the amount required by law, which is 6% of capital and surplus, of which 3% has been called.

National banks are chartered and supervised by the Comptroller of the Currency. Application for a charter, valid for 99 years by the 1922 amendment but made indeterminate by the 1927 amendment, must be filed with the Comptroller of the Currency, and contain the following information: (1) name and address of the prospective organizers (shareholders), at least five in number; (2) number of shares subscribed by each; (3) proposed title of bank, and (4) endorsement of project by three prominent officials. The chief organization papers are articles of association, organization certificate, oath of directors, signature of officers, by-laws, certificate as to payment of capital stock. In order that National banks may be readily identified as such, the law requires that the word National appear in the title, or that the initials N. B. A. (national banking association) or N. A. (national association) immediately follow the title.

The following general powers are granted to National banks: (1) general corporate powers, i.e., to sue and be sued, etc.; (2) receive demand and time deposits; (3) discount notes; (4) lend on personal and collateral security with certain limitations on the amount to a single borrower; (5) make real estate loans secured by first liens upon improved real estate including improved farm land and improved business and residential properties; (6) issue circulating notes on deposit of Government bonds having the circulation privilege; (7) hold real estate for own use or in payment of a defaulted loan; (8) make acceptances covering domestic, export, and import shipments of merchandise, or to create dollar exchange; (9) deal in foreign exchange; (10) issue letters of credit; (11) deal in gold and silver bullion but only under Treasury regulations; (12) maintain branches under prescribed limitations; (13) establish branches in foreign countries if capital and surplus is $1,000,000 or over; (14) receive special deposits through custodianship accounts or the rental of safe deposit boxes; (15) exercise fiduciary powers if permission is granted by the Board of Governors of the Federal Reserve System and requirements of the State are met; (16) borrow and rediscount from the Federal Reserve Bank; (17) invest in the stock of foreign banking corporations up to 10 per cent. of capital and surplus if $1,000,000 or over; (18) deal in United States Government securities; and (19) act as insurance agent and real estate loan brokers in towns of less than 5,000.

National banks are preeminently commercial banks, although in the larger cities, they perform a great variety of services. Recent bank legislation has tended to eliminate the chief differences between the three principal bank types, viz., National banks, state banks, and trust companies. In most states, trust companies are

permitted to engage in commercial banking. Conversely, national and state banks are allowed (with certain restrictions) to establish trust departments. The great metropolitan banks, whether organized as National banks, state banks, or as trust companies, are veritable financial department stores. They aim to furnish not only such banking facilities as they are specifically empowered by law to perform, but to supplement these facilities with many refinements not mentioned in the law.

Recent Changes.—Since 1933, and particularly since 1935, many important changes affecting National banks and/or member banks, either by direct amendment of the Federal Reserve Act or in cognate banking laws, have been made. Among the most important of these revisions are the following:

1. Member banks of the Federal Reserve System are prohibited from the payment of interest on demand deposits, effective June 16, 1933. The Board of Governors of the Federal Reserve System was also authorized to regulate interest rates of time deposits.

2. Stock of National banks, whether old or new stock, ceased on July 1, 1937 upon 6 months' published notice to be subject to double liability.

3. Commercial and investment banking business have been divorced. All banks were prohibited, beginning July 16, 1934, from owning or controlling a security affiliate (theretofore engaged in underwriting and distributing securities).

4. Member banks are prohibited from acting as agent in making loans to brokers or dealers for the account of others; and are restricted in investing in affiliate obligations.

5. Member banks are prohibited from lending their funds to any executive officer. A bank officer must also report to his board of directors concerning loans from another member bank.

6. Branch banking. National banks are accorded the same rights respecting branches as State banks. With the approval of the Comptroller of the Currency National banks may establish and operate branches within the State, if such right is permitted by State laws to State banks. National banks are entitled to the privilege of establishing branches and must have a minimum capital of $500,000, except in states with a population of less than one million and which have no cities located therein with a population exceeding 100,000, where the minimum capital shall not be less then $250,000. In states with a population of less than one-half million and having no cities with a population exceeding 50,000, the capital shall not be less than $100,000. The aggregate capital of every national bank and its branches shall at no time be less than the aggregate minimum capital, required by law for the establishment of an equal number of national banks situated in various places where such branches are located.

7. Deposit insurance was provided by which deposits in all member banks and certified non-member banks (those qualifying as solvent by state banking authorities) were insured under the Temporary Federal Deposit Insurance Fund to a maximum of $5,000 as of July 1, 1934 and under the permanent deposit insurance plan from August 31, 1935. To carry out the plan the Federal Deposit Insurance Corporation was formed. The maximum amount of the insured deposit of any depositor is $5000. To provide the means for making the permanent insurance feature effective three sources were drawn upon: the Government contributed $150,000,000; each Federal Reserve bank was required to purchase stock in the corporation to an amount equal to one-half of its surplus on January 1, 1933; and, the insured banks are assessed one-twelfth of 1 per cent. of their deposits per annum, in semi-annual assessments. By Act of August 5, 1947, provision was made for the retirement and cancellation of the capital stock of the Federal Deposit Insurance Corporation. (See Federal Deposit Insurance Corporation.)

8. Member banks are required to have a board of directors composed of not less than five and not more than twenty-five. Every director shall be bona fide owner in his own right of par value of not less than $2,500, unless the capital shall not exceed $50,000, in which case the minimum par value of stock is $1,500; or unless the capital shall not exceed $25,000, in which case the minimum par value of stock is $1,000.

9. Loans secured by stock and bond collateral may be carried by member banks only in such ratio to a bank's capital and surplus as may be prescribed by the Board of Governors of the Federal Reserve System for the Federal Reserve District. (See Federal Reserve Board Regulation "R").

NATIONAL BANKRUPTCY ACT

The power of Congress to establish uniform laws on the subject of bankruptcy throughout the United States is one of the powers expressly delegated by the U. S. Constitution to the Federal Government (Article I, Section 8).

Acting under this authority, Congress passed and repealed several bankruptcy laws prior to 1898, when the National Bankruptcy Act, basis of the present law, was enacted. This Act in turn has been amended many times since, the most important amendments having been enacted in 1933, 1934, 1935, 1938 and 1946. As now constituted, the Act consists of the following chapters:

Chapters I through VII: outline the procedure for traditional bankruptcy, involving liquidation for the benefit of creditors.

Chapter VIII: includes the former Section 77, pertaining to railroad reorganizations.

Chapter IX: pertains to municipalities; made permanent in 1946.

Chapter X: successor to the former Section 77-B, pertaining to corporate reorganizations.

Chapter XI: outlines a new simplified type of procedure, Arrangements.

Chapter XII: pertains to real property Arrangements by persons other than corporations.

Chapter XIII: provides for Wage Earners' Plans.

Chapter XIV: provides for reorganizations arising out of Maritime Commission liens.

Chapter XV: provided on a temporary basis from 1942 for a 3-year period, for simplified railroad debt adjustment plans instead of formal reorganization provided by Chapter VIII, the former Section 77. In 1948, the Mahaffie Railroad Reorganization Bill provided authority for such railroad debt adjustment plans for railroads then in receivership, as well as other rail-

roads, instead of resorting to Chapter VIII. Applications for the Mahaffie Bill's procedure, as well as details of such plans, must clear through the Interstate Commerce Commission.

(See Bankruptcy, Corporate Bankruptcy Act, Insolvency, Municipal Bankruptcy Act.)

NATIONAL BUDGET

The following is an historical record of the annual surplus or deficit and the gross debt of the United States Government by years 1791 to 1947, inclusive. As the result of deficit financing for "pump priming" recovery, the World War I absolute peak in gross debt, $26,596,701,648 on August 19, 1919, was exceeded in the peace-time year 1934, and by June 30, 1939, the gross debt had crossed the $40 billion mark. As of June 30, 1946, reflecting huge volume of World War II financing, the gross debt stood at over $269 billion, or $1,907 per capita.

NATIONAL BUREAU OF STANDARDS

One of the bureaus of the United States Department of Commerce. Its function is to study and conduct researches, in collaboration with other agencies of the Federal Government, states, municipalities, technical societies and trade associations, for the purpose of increasing efficiency in production and consumption by encouraging and facilitating the use of its standards and specifications. The work of the Bureau is extremely comprehensive and is concerned with standardizations in weights and measures, agricultural methods, fisheries, testing products in laboratories, heat and temperature measurements, food values, radio communications, and many other matters. The results, accomplishments, findings, and program for future study are contained in the annual publication of the Bureau, known as "Standards Yearbook," obtainable at a small charge from the Superintendent of Documents. The Standards Yearbook has proved to be of much value to manufacturers, industrial experts, engineers, and purchasing agents.

NATIONAL CURRENCY

Another name given to National Bank Notes (q. v.), and Federal Reserve Bank Notes (q. v.).

NATIONAL DEBT

In its restricted sense, this term refers to the aggregate of bonds, certificates of indebtedness, and other direct obligations of the United States Government. For total internal debts of the United States, see Internal Debts.

Total Government debt is customarily given gross, without deduction for balance in the general fund of the Treasury or other offsets. Government guaranteed debt is usually shown separately. In addition to interest-bearing gross debt, there is a small amount of non-interest bearing debt outstanding, consisting largely of unredeemed matured debt on which interest has ceased, and currency obligations of the Treasury, consisting of U. S. Notes, Federal Reserve Bank Notes and National Bank Notes, the latter two types of currency being in process of retirement. Government direct obligations are further divided into marketable public issues, non-marketable public issues, and special issues to Government trust funds and agencies.

As of June 30, 1948, total gross direct debt was $252,292 million, consisting of the following types: total interest-bearing direct debt, $250,063 million; marketable public issues, $160,346 million; non-marketable public issues, $59,506 million; special issues, $30,211 million; $2,229 million in non-interest-bearing debt; and $69 million in fully guaranteed interest-bearing debt.

Absolute peak of World War I gross debt was reached on August 31, 1919, totaling $26,596,648 and averaging an interest rate on interest-bearing debt of 4.196%. Lowest point of gross debt in the subsequent post-World War I period was reached on December 31, 1930, totaling $16,026,087,087 and averaging interest rate of 3.75%. Absolute peak for World War II gross debt was reached on February 28, 1946, totaling $277,912,315,345, and averaging an interest rate of 1.972%. On a per capita basis, these fluctuations in gross debt have been as follows: August 31, 1919, $250.18; December 31, 1930, $129.66; February 28, 1946, $1,979.61.

The table on page 432 shows the various classes of gross debt, as well as fully guaranteed interest-bearing debt, as of June 30th each year from 1916 to 1948.

(See Internal Debts, National Budget, National Wealth, Public Debt.)

NATIONAL DEFENSE ADVISORY COMMISSION

This was the prototype of defense agencies created by the Roosevelt Administration for coordinating and advising on defense mobilization. In creating the Commission, officially entitled the Advisory Commission to the Council of National Defense, the President acted under Statute of Congress enacted in 1916, which directed the appointment of a Council of National Defense,

to consist of the Secretary of War, Secretary of Navy, Secretary of the Interior, Secretary of Agriculture, Secretary of Commerce, and Secretary of Labor. In addition, the Statute further directed the Commission to nominate and the President to appoint an Advisory Commission to consist of not more than 7 members, each of whom shall have special knowledge of some industry, public utility, or the development of some natural resource, or otherwise qualified in the opinion of the Council.

The Commission was appointed May 28, 1940 to coordinate and advise in the organization of the nation's resources of men and materials for defense purposes through the following divisions:

Industrial Materials Division: Edward R. Stettinius, former chairman of the U. S. Steel Corporation, chief.

Production Division: William S. Knudsen, former president of the General Motors Corporation, chief.

Transportation Division: Ralph Budd, president of the Chicago, Burlington & Quincy, chief.

Labor Division: Sidney Hillman, president of the Amalgamted Clothing Workers Union, chief.

Agriculture Division: Chester Davis, member of the Board of Governors of the Federal Reserve System, chief.

Division of Price Stabilization: Leon Henderson, member of the Securities and Exchange Commission, chief.

Division of Consumer Protection: Miss Harriett Elliott, Dean of Women, University of North Carolina, chief.

Defense Housing Coordinator: Charles F. Palmer,

president of the National Association of Housing Officials, chief.

Office of the Coordinator of National Defense Purchases: created by Executive Order in June, 1940, to maintain close contact with defense procurement agencies and the Commission.

Bureau of Research and Statistics: Stacy May, of the Rockefeller Foundation, chief.

Division of State and Local Cooperation: Frank Bane, Executive Director of the Council of State Governments, chief.

Administrator of Export Control: Lt. Col. Russell L. Maxwell, chief (coordinating with the State Department).

Coordinator of Commercial and Cultural Relations Between the American Republics: Nelson Rockefeller.

The following year, 1941, the administration of National Defense was reorganized and grouped under some 35 separate divisions, agencies and offices, and the Council of National Defense became inoperative as its functions were absorbed by these new executive agencies.

(See Assignment of Claims Act.)

NATIONAL FARM LOAN ASSOCIATION

Local cooperative associations of farmers organized under the terms of the Federal Farm Loan Act, for the purpose of borrowing money on farm mortgages through the Federal Land Banks. An association may be formed by ten or more farmers who must be borrowers from a Federal Lank Bank and who must independently subscribe for shares of stock in the association to an amount equal to 5 per cent. of the face of the desired loan. Members are, therefore, stockholder-borrowers who are required to pay, at the time the loan is granted, $5 in cash for one share of the par value of $5 for each $100 borrowed. Loans may not be made to any one borrower in an amount exceeding $50,000, and loans to any one borrower may not exceed $25,000 unless approved by the Land Bank Commissioner.

A local association is administered by a board of not less than five directors chosen from among the members. The board elects a President, Vice-President, Secretary-Treasurer, and a Loan Committee of three members. An association is required to indorse the mortgage notes of its members which in turn are converted into cash at the district Federal Land bank for the face amount of the loan, which may range in amount from $100 to $50,000 but not in excess of 65% of the appraised normal value of the farm offered as mortgage security. Appraisals are made by a Land Bank appraiser, a public official appointed by the Farm Credit Administration.

An association requires no building and may be conducted with a minimum of expense. The principal routine duties fall upon the Secretary-Treasurer who receives applications for membership and loans, collects interest and principal payments, and keeps the records of the association. Each association is required to subscribe for shares of the Federal Land bank of its district (par value $5), to an amount equal to 5 per cent. of the aggregate sum desired on mortgage loans. Associations also aid in the sale of Federal Farm Loan bonds.

(See Farm Credit Administration, Federal Farm Loan Act, Federal Farm Loan System, Federal Land Bank.)

NATIONAL HOUSING ACT

An act, approved June 27, 1934, which, among other things:

(1) Provided a comprehensive program of home financing and mortgage insurance, and that financial institutions which make loans for the purpose of financing alterations, repairs and improvements upon real property are to be insured up to 20 per cent. of the total of such loans.

(2) Established a program of mutual mortgage insurance under which first mortgages on residential property which are amortized may be insured up to $16,000 in any case, and up to 80 per cent. of appraised value of the property.

(3) Authorized the establishment of national mortgage associations each with a capital of not less than $5,000,000 with authority to purchase and sell first mortgages and borrow money through the issue of securities.

(4) Created a corporation under the supervision of the Federal Home Loan Bank Board to insure accounts of members of the Federal Home Loan Bank system, except mutual savings banks, and which is required to insure accounts of Federal savings and loan associations established under authority of the Home Owners Loan Act of 1933.

(5) Provided for the appointment of a national housing administrator and to handle the housing renovation and modernization, the mutual mortgage insurance and also the national mortgage association features of the act.

(6) Limited to an aggregate of $200,000,000 the total liability to be incurred by the administrator for the insurance of financial institutions; and

(7) Created a Savings and Loan Insurance Corporation with a capital of $100,000,000 to insure the accounts of Federal savings and loan associations.

Operating sections of the Act from the housing standpoint are as follows:

Title I - Modernization loans.--Government insurance is provided for lending institutions on loans made to finance property improvement, alterations and repairs. Most of these loans are limited to a maximum amount of $2,500 and maximum maturity of 3 years, repayable in monthly instalments. Amendment to the Act in 1942 broadened such loans to $5,000 and maturities to over 7 years for the purpose of financing additional living quarters for War workers and veterans through conversion of existing structures in designated areas. The Act placed a limit of not over 5% discount per year on amounts under $2,500 and 4% on amounts over $2,500. Loans under Title I have been fairly popular with institutions, and to June 30, 1947, a total of $2.7 billion in such loans on 6,691,000 properties had been insured.

Title II - Insured mortgage loans.--This Title provides for insurance of mortgage loans up to $16,000 on 1- to 4-family houses made by approved private lending institutions, amortized monthly (1/12th of annual net taxes, interest and other charges) over terms as long as 20 years. Second mortgages or other liens were not permitted. Loans under this Title may cover either new or existing housing, but generally may not exceed 80% of the valuation of the property. However, where loans are for not over $5,400, and cover new single family, owner-occupied homes built under FHA inspection, the mortgage may be for 90% of the appraised value, with an amortization period of up to 25 years. On new owner-occupied homes valued at not over $10,000, the ratio of loan extension to appraised value could be 90% of the first $6,000 and 80% of the remainder of the valuation, up to a maximum mortgage of $8,600, with a maximum term of 20 years. Effective

interest rate is now 4 1/2%, plus the 1/2% insurance premium based on outstanding balances. Loans under Title II have been most popular with lending institutions, and to June 30, 1947, the FHA had insured a total of $5,655,952,000 in mortgage loans on 1,330,000 properties.

The insurance contract provides that upon default for 60 days in monthly payments, the mortgagee shall report this to the FHA, and at the end of a total period of 12 months' default, the mortgagee shall take necessary steps to deliver title to the FHA, although he has the right to institute such steps after one month of nonpayment. Upon receiving satisfactory title and finding the property in satisfactory condition, the FHA would issue Mutual Insurance Fund 2 3/4% Debentures, guaranteed as to principal and interest by the U. S. Government, with a maturity of 3 years from July 1 of the year of maturity of the mortgage, for the outstanding value of the mortgage plus interest from the date of foreclosure proceedings. In addition, a Certificate of Claim would be issued, payable in whole or in part when and if the FHA should sell the property for a sum sufficient to pay the Debentures plus other expenses and receives cash for such payment.

Of the 1,330,000 dwellings on which Title II loans have been insured, the FHA has taken over and resold 4,067 properties, to June 30, 1947.

Title VI - Housing for war workers and veterans.--This Title was added to the Act by the 1941 amendment, specifically to assist in providing housing for war workers. Insurance activity for war worker housing ended in September, 1945. Mortgages insured were limited to a maximum of $5,400 on a single family house; $7,500 on a 2-family house; $9,500 on a 3-family house; and $12,000 on a 4-family house, and could be for up to 90% of the FHA valuation. Total insurance authorization for war worker housing was $1.8 billion.

Title VI was revived for veterans and hardship cases in May, 1946 by the Veterans Emergency Housing Act, with substantially the same provisions and an additional authorization of $2 billion. The former mortgage limitation of $5,400 on a single family house could be raised to $8,100 maximum by the Federal Housing Commissioner in areas where construction costs had risen, as could the following other types: 2-family house, from $7,500 to $12,500; 3-family house, from $9,500 to $15,750; and 4-family house, from $12,000 to $18,000. Mortgages could be for up to 90% of the necessary current cost within these limitations.

Large scale housing projects could also be financed under this revived Title for up to 90% of the necessary current cost, with a maximum of $5,000,000 or $1,500 per room attributable to dwelling use (which could be increased to $1,800 per room by the Commissioner in higher cost areas).

Title VI authorization was further increased in June, 1947 by $200 million, with an additional $200 million also available upon approval of the President. This amendment also provided for insured loans to prefabricated housing manufacturers and for insurance of mortgages arising out of the sale of Government owned permanent homes and housing projects meeting with FHA requirements.

To June 30, 1947, the FHA reports that a total of $1,969,930,000 in insured mortgage loans on 459,000 dwelling units were insured under Title VI.

Repayments, mostly through regular monthly amortization, have totaled to June 30, 1947 by the various classes of loans as follows: Title I, $2,198 million; Title II, $2,675,781,000; and Title VI, $539,318,000.

The grand total of loans extended to June 30, 1947 since the FHA's inception in June, 1934 was reported at $10,346,879,706 for all Titles, provided for a total of 8,480,000 families.

NATIONAL INCOME

A number of studies attempting to measure the income of the nation as a whole have been made on bases involving various statistical factors. Practically all of these estimates are based upon official statistics as source material, and chiefly statistics compiled by the Bureau of the Census of the Commerce Department and the Internal Revenue Bureau of the Treasury Department. Among the best-known studies on national income are those of the Commerce Department, National Bureau of Economic Research, collaborated reports of the aforementioned, National Industrial Conference Board, Federal Trade Commission, and the Brookings Institution.

Any estimate of total national income in a given year is hardly useful in itself, but becomes significant when related to a series of estimates over a period of years. Even a series of figures, however, may be misleading unless adjusted to changes in the price level, since a rising national income corresponding proportionally with a rising price level signifies no actual gain in consuming power; if population gains, it signifies an actual decline in per capita consumption of real goods and services. Hence, there is need for adjusting estimates of national income to some standard price level, and to a per capita basis. Still more important are the sources and distribution of the national income.

Estimates by the National Industrial Conference Board of realized national income, total and per capita in current dollars and constant dollars of 1926 purchasing power, for the years 1799 to 1938, are given in the following Table I.:

Table I.

Year	Total National Income (millions)	National Income *Adjusted by 1926 General Price Level (millions)	Per Capita Income (dollars)	Per Capita Income Adjusted* by 1926 General Price Level (dollars)
1799	$677	$1,092	$131	$211

*Adjusted by Price Index, Snyder Index, Federal Reserve Bank of New York and National Industrial Conference Board.

Taking average conditions for the ten-year period ended 1928 in the principal organized industries, wages and salaries were about 70 per cent. of the total income, while capital received 30 per cent. as rent, interest, and profits. The sources of production of the national income, taking a general average for the ten years were: agricultural 17 per cent.; manufacturing 30 per cent.; transportation 9 per cent.; government 5 per cent; mining 3 per cent.; banking 1 per cent.; miscellaneous (including professions, retailers, jobbers, merchants, domestics, etc.) 33 per cent.

Analysis from Income Taxes.—Personal income tax returns furnish a rough guide of incomes and their distribution in the United States. These are available from the reports of the Bureau of Internal Revenue and the Bureau of Census. Each year the Treasury Department analyzes income tax returns and compiles data from which considerable information is obtainable.

For example, Federal personal income tax returns as analyzed in the aggregate for the year 1929 (an extremely prosperous one), reveals distribution of incomes as shown in Table II.

As the result of instituting the pay-as-you-go Federal income tax system by the Current Tax Payment Act of 1943, income tax collections now reach a much larger number of taxpayers. For the year 1944, for example, a total of 42,354,000 individuals filed taxable returns. Some 18,800,000 individuals or 45% of taxpayers, had adjusted gross income under $2,000; 30,000,000 individuals or 71%, had adjusted gross income under $3,000; and 40,000,000 taxpayers or 94%, had adjusted gross income under $5,000. On the other hand, some 8,200 taxpayers or only .02% of total taxpayers, had adjusted gross income of $100,000 or over; only 283 taxpayers had adjusted gross income of $500,000 or over; and 62 taxpayers had adjusted gross income of $1,000,000 or over.

By contrast, in 1935 only 4,500,000 individuals filed, or only 10% of total population gainfully employed. Yet the distribution of incomes is strikingly similar to that of 1944: some 2,000,000 taxpayers or 45% of those reporting, had incomes under $2,000; 3,000,000 or 70%, incomes of under $3,000; and 4,000,000 taxpayers or 90%, had incomes of under $5,000. Some 2,600 taxpayers had incomes of $100,000 or over; 150 had incomes of $500,000 or over; and 41 had incomes of $1,000,000 or over. In 1944, the 40,000,000 taxpayers reporting adjusted gross income under $5,000 accounted for a total of 77% of total adjusted gross incomes reported, and the 8,200 taxpayers reporting adjusted gross incomes of $100,000 or over accounted for 1.3% of total adjusted gross incomes reported. This compared with the 1935 distribution as follows: The 4,000,000 taxpayers reporting incomes under $5,000 accounted for 60% of total incomes reported; and the 2,600 taxpayers reporting incomes of $100,000 or over accounted for 3.8% of total incomes reported.

Formerly a relatively small percentage of those gainfully employed paid Federal income taxes, and a still smaller percentage of the total population. In 1933, out of 46,683,961 persons of 18 years of age or over able to work (1930 census) only 1,731,116 had taxable incomes. These persons reported total taxable income of $10,845,653,532, and paid $372,967,761 in taxes. Thus, only 3.7 per cent. of employables paid an income tax, and the average net income of those who paid taxes was $6,276.70. Income taxes were paid by only 3.4 per cent. of the entire population.

Table II.

Analysis of Federal Income Tax Returns for 1929

Distribution	Amount	%
Wages and salaries	$10,740,029,412	37.34
Business	3,295,626,192	11.46
Partnership	1,816,841,499	6.32
Profit from sale of real estate, stocks, bonds, etc., other than capital net gain from sale of assets held more than 2 years	2,239,763,714	7.79
Capital net gain from sale of assets held more than two years	2,316,193,430	8.05
Rents and royalties	1,167,611,945	4.06
Interest and other income	2,127,877,272	7.40
Interest on government obligations not wholly exempt from tax	40,040,698	.13
Dividends on stock of domestic corporations	4,525,716,378	15.74
Fiduciary	493,264,890	1.71
Total income	$28,762,965,430	100.00
General deductions	4,243,668,453	14.75
Net income	$24,519,296,977	85.25

The average net income per return for 1922 was $3,143.46, the average amount of tax was $126.86 and the average tax rate was 4.04 per cent. The proportion of the population filing returns according to the population of the United States of July 1, 1922, as estimated by the Bureau of Census was 6.20 per cent. The per capita net income reported was $194.72 and the per capita tax was $7.86. For the preceding year, based on the census of 1920, the proportion of population filing returns was 6.28 per cent., the per capita income reported was $184.65 and the per capita tax was $6.79.

Table III shows the total number of income-tax returns for the calendar year 1914 (fiscal year 1915), classified according to the amount of net income stated in the returns. It must be noted that these figures represent merely the required returns of income. They are subject to error through concealment or misstatement; and in any event they do not include incomes under $3,000 per year.

Table III.

Classification of incomes	Number of Returns
$ 3,000 to 4,000	82,754
4,000 to 5,000	66,525
5,000 to 10,000	127,448
10,000 to 15,000	34,141
15,000 to 20,000	15,790
20,000 to 25,000	8,672
25,000 to 30,000	5,483
30,000 to 40,000	6,008
40,000 to 50,000	3,185
50,000 to 75,000	3,660
75,000 to 100,000	1,501
100,000 to 150,000	1,189

National Income Since 1929.--The U. S. Department of Commerce in a Supplement to the July, 1947 issue of Survey of Current Business published a complete revision of the Department of Commerce statistical series on gross national product, national income, and personal income (formerly known as income payments to individuals). The Federal Reserve Bulletin reports these changes as follows:

Gross national product is designed to be the most comprehensive measure of the output of the economy. It takes into account the value of all final products currently produced, including both capital goods and commodities available for current consumption, together with changes in inventories of all types of goods. These goods and services are valued as nearly as possible at market prices, and no deduction from the total is made to allow for the value of fixed capital used up in the process of production, viz., depreciation charges are ignored. The value of materials incorporated in final products is deducted, however, in order to avoid duplication. Furthermore, the series is confined strictly to goods and services currently produced. It does not attempt to measure all transactions or changes in value. Hence, transfers of real estate or of other existing assets are not taken into account. Likewise, capital gains and losses are excluded, as well as payments such as unemployment compensation or pensions, which are not related to current production.

National income is a summation of the amounts earned by labor and property owners on account of current production, after allowance for depreciation. Like the gross national product, it also leaves out capital gains, including profits or losses arising from changes in inventory values due to price fluctuations. It also excludes indirect business taxes (excises, etc.) since they are not a reward to any of the factors of production, although they are included in market prices and hence in the gross national product. The national income series, therefore, is more suitable than the gross national product for studies of income distribution or for the analysis of long-range problems when account must be taken of the maintenance and replacement of fixed capital.

Personal income figures are especially useful for short-range economic analysis. They include only income actually received by persons (including non-profit institutions and unincorporated enterprises as well as individuals) in cash or in kind. Thus, they exclude the retained earnings of corporations, which are not available for expenditure by persons. They include, on the other hand, social security benefits and other transfer payments, which are not usually considered part of income but which are available for private expenditure. Personal income minus personal taxes and related lia-

Source: "America's Capacity to Consume."

bilities is known as disposable personal income. This series is the basis for many studies of consumer expenditure and saving.

The relation of gross national product, national income, personal income, and saving, for the years 1929-1946, as revised by the Department of Commerce and published in the National Income Supplement to the July, 1947 issue of Survey of Current Business, is given in Table VII. (as reported in the Federal Reserve Bulletin for September, 1947).

Another method of analysis of the national income is by distributive shares. As published in the Federal Reserve Bulletin (September, 1947), national income by distributive shares for the years 1929-1946, on the latest revised basis of the Department of Commerce, is shown in Table VIII.

NATIONAL INDUSTRIAL CONFERENCE BOARD

Founded in May, 1916, to provide a bureau of scientific research, a clearing house of information, a forum for discussion, and a means of co-operative action on matters vitally affecting the industrial development of the United States. It is the fundamental purpose of the Conference Board to bring together the collective experience of those engaged in industry and the pertinent industrial facts secured by scientific inquiry and to translate knowledge and matured opinion into constructive action by the application of trained judgment.

The Conference Board was organized with a directorate of executives in the principal branches of American industry and with a trained staff of economists, statisticians and engineers. Leading industrialists serve as officers and executive members of the board. The Conference Board is not a commercial organization

The major part of its income is derived from voluntary contributions of optional amount from all classes of employers and others interested in the welfare of industry. Under the auspices of the board, many reports, pamphlets and books on business economics have been published.

NATIONAL INDUSTRIAL RECOVERY ACT

An act, approved June 16, 1933, which created the National Recovery Administration (Blue Eagle Codes) and the Public Works Administration. Among other things it:

(1) Declared it to be the policy of Congress, in the then existing national emergency of widespread unemployment and disorganization of industry, to encourage national industrial recovery, to foster fair competition and provide for the construction of useful public works.

(2) Covered all industries engaged in or affecting interstate or foreign commerce and provided for a comprehensive program of public works.

(3) Created the National Recovery Administration, the Industrial Recovery Board, the Federal Emergency Administration of Public Works and Board.

(4) Relieved industries or integral units, during the emergency, from anti-trust restrictions provided that they were to function under codes of fair competition, voluntary or imposed, agreements or licenses.

(5) Provided for the adoption of voluntary codes, subject to the President's approval, if the adopting body was of open, representative membership, if the code did not promote discriminations or monopolistic practices and provided labor was protected by rights to collective bargaining, prohibition of "yellow dog" contracts and establishment of maximum hours, minimum rates of pay and proper working conditions.

(6) Provided that codes might be imposed by the President, upon his own initiative or complaint, after public hearing, to eliminate abuses inimical to the public.

(7) Authorized employer-employe agreements on maximum hours, minimum rates of pay and working conditions, standards so established to have the same effect as codes of fair competition.

(8) To avoid administrative conflict with the Agricultural Adjustment Act, authorized the President to delegate to the Secretary of Agriculture any of his powers and functions with respect to trades, industries or subdivisions engaged in handling agricultural commodities.

(9) Empowers the Federal Trade Commission, on the

President's request, to conduct any necessary investigations.

(10) Provided that violations of codes, agreements or licenses should be deemed unfair competition to be restrained by United States District Courts upon application of the Attorney General or District Attorneys.

(11) Provided for petroleum control empowering the Interstate Commerce Commission upon the President's order to institute proceedings to control pipe lines and fix rates, and that interstate transportation of petroleum drawn from storage in excess of amount permitted by State law or regulations might be prohibited.

(12) Stipulated that the Federal Emergency Administration for Public Works might function for two years, and authorized its administrator to prepare a program covering highways, water systems, conservation and development of natural resources, prevention of soil erosion, water power and electric transmission development, river and harbor improvements, flood control, low-cost housing and slum clearance,and, subject to suspension under treaty, naval and aircraft construction, army housing, motorization and mechanization.

(13) Terminated loans under the Emergency Act of 1932 and decreased the RFC's outstanding obligations $400,000,000.

(14) Appropriated $3,000,000,000; established a 2 1/2 per cent. sinking fund; allotted $400,000,000 for State highways and $50,000,000 for national-forest, Indian-reservation and public-land roads; provided a $25,000,000 revolving fund for subsistence homestead loans to facilitate population redistribution; and

(15) Provided for revenue from these sources: Gasoline tax increased from 1 to 1 1/2 cents; 5 per cent. excise tax on dividends paid to any one other than domestic corporation: $1 per $1,000 excise tax on corporation capital, domestic or foreign, employed in United States; 5 per cent. excess-profits tax; all to terminate on President's proclamation at close of first fiscal year that budget is balanced or upon repal of the Eighteenth Amendment, whichever should come earlier.

Act Invalidated.—Section 3 of the Act, the codes of fair competition section, was declared unconstitutional by a unanimous decision of the United States Supreme Court on May 27, 1935. The case involved in this deci-

SOURCE.—*National Income Supplement* to the *Survey of Current Business*, July 1947, Department of Commerce.

sion was A. L. A. Schechter Poultry Corp. et al. v. U. S. (295 U. S. 495).

Highlights from the Supreme Court's decision in this case follow: Extraordinary conditions may call for extraordinary remedies. But the argument necessarily stops short of an attempt to justify action which lies outside of the sphere of constitutional authority.

Congress cannot delegate legislative power to the President to exercise an unfettered discretion to make whatever laws he thinks may be needed or advisable for the rehabilitation and expansion of trade or industry. (Delegation of legislative power by Congress to the President was the issue of this case; even Mr. Justice Cardozo, siding with the majority, wrote: "This is delegation running riot.")

In view of the nature of the few restrictions that are imposed, the discretion of the President in approving or prescribing codes, and thus enacting laws for the government of trade and industry throughout the country, is virtually unfettered.

If the commerce clause were construed to reach all enterprises and transactions which could be said to have an indirect effect upon interstate commerce the Federal authority would embrace practically all the activities of the people and the authority of the State over its domestic concerns would exist only by sufferance of the Federal Government.

If the Federal Government may determine the wages and hours of employes in internal commerce of a State it would seem that a similar control might be exerted over other elements of cost such as the number of employes, rents, advertising, methods of doing business, etc.

But the authority of the Federal Government may not be pushed to such an extreme as to destroy the distinction, which the commerce clause itself establishes between commerce among the several states and the internal concerns of a State.

Without in any way disparaging this motive, it is enough to say that the recuperative efforts of the Federal Government must be made in a manner consistent with the authority granted by the Constitution.

NATIONAL METAL EXCHANGE

Formerly the principal metal market of the United States, located in New York City. This exchange was merged with the Commodity Exchange, Inc. (q. v.) on July 5, 1933.

NATIONAL MONETARY COMMISSION

The panic of 1907, perhaps the most serious monetary disturbance in the history of the United States, revealed the weakness of our banking, monetary and credit system, and renewed interest in devising methods of reform. As a result of the panic and the revival of public interest in banking reform,on May 30, 1908, Congress passed the so-called Aldrich-Vreeland Law, as a temporary relief measure until such time as new and through going constructive banking legislation could be formulated. With this end in view, the Act created the National Monetary Commission, the function of which was to make an examination of the monetary and banking systems of the leading commercial nations of the world and to submit a report. The sections creating the National Monetary Commission are as follows:

"Sec. 17: That a Commission is hereby created, to be called the 'National Monetary Commission,' to be composed of nine members of the Senate, to be appointed by the presiding officer thereof, and nine members of the House of Representatives, to be appointed by the speaker thereof; and any vacancy on the commission shall be filled in the same manner as the original appointment.

"Sec. 18: That it shall be the duty of this commission to inquire into and report to Congress at the earliest date practicable, what changes are necessary or desirable in the monetary system of the United States, or in the laws relating to banking and currency and for this purpose they are authorized to sit during the sessions or recess of Congress, at such times and places as they may deem desirable, to send for persons and papers, to administer oaths, to summons and compel the attendance of witnesses, and to employ a disbursing officer and such secretaries, experts, stenographers, messengers and other assistants as shall be necessary to carry out the purposes for which said Commission was created. The Commission shall have power, through sub-committee or otherwise, to examine witnesses and to make such investigations or examinations in this or other countries, of the subjects committed to their charge as they shall deem necessary."

After four years of investigation, which included a study of banking, credit and currency systems at home and abroad and with the co-operation of economists, bankers and business leaders, the commission published the result of its findings in 46 volumes, which are listed below. These volumes have compelled widespread interest and constitute one of the most informative, painstaking, scientific and exhaustive research studies on banking, credit, and currency compiled on the American banking system prior to the Federal Reserve System.

Personnel.—The membership of the National Monetary Commission was as follows:

Nelson W; Aldrich, Rhode Island, Chairman.
Edward B. Vreeland, New York, Vice-Chairman.
Julius C. Burrows, Michigan.
Eugene Hale, Maine.
Philander C. Knox, Pennsylvania.
Theodore E. Burton, Ohio.
John W. Daniel, Virginia.
Henry M. Teller, Colorado.
Hernando D. Money, Mississippi.
Joseph W. Bailey, Texas.
Jesse Overstreet, Indiana.
John W. Weeks, Massachusetts.
Robert W. Bonygne, Colorado.
Sylvester C. Smith, California.
Lemuel P. Padgett, Tennessee.
George F. Burgess, Texas.
Arsene P. Pujo, Louisiana.
Arthur B. Shelton, Secretary.
A. Piatt Andrew, Special Assistant to Commission.

In January 1912, the Commission reported in full to Congress and submitted a bill which later came to be known as the "Aldrich Plan," after Senator Aldrich, the Commission's Chairman. Many of the best features of this plan were later embodied in the Federal Reserve Act so that the recommendations with modifications of the Monetary Commission found tangible expression in the Act which controls our banking, credit and currency system today.

NATIONAL MORTGAGE ASSOCIATION

An association which may be organized under the National Housing Act to purchase and sell first mortgages on real estate held under fee simple or ground lease for not less than 99 years, and which is also authorized to borrow funds for the purchase of its loans through the issuance of bonds, to guarantee the bonds of organizations, and forms and powers, see Title III, entitled "National Mortgage Associations" of the National Housing Act.

NATIONAL QUOTATION BUREAU

Established in 1913, the National Quotation Bureau, Inc. provides an invaluable daily quotation service on unlisted stocks and bonds for investment bankers, the

well as a Mercury Summary Service. The quotation service is published six days a week except stock exchange and legal holidays, and is intended for houses of the dealer type that have a real interest in the Over-the-Counter Market. The service is for the exclusive use of subscribers at the offices to which the service is delivered. The Bureau's standards and requirements prohibit the use of the service to listings from persons who do not indicate a genuine interest in each security sold as to quantity and price although all wants and offerings listed are subject to previous sale or change of price. Thus a subscriber relies upon consulting the service to learn what are ready to trade in. Inside or wholesale markets for the stocks and bonds listed. This service is not intended for the public, but by facilitating the communication of buyers and sellers among trading dealers and brokers performs a valuable function in freeing better markets in unlisted securities and thus benefiting the public.

The service is nation-wide, there being an Eastern Section, a Western Section, and Coast Sections. Messenger service is maintained at each of the Bureau's offices in New York, Chicago and San Francisco to collect listings from subscribers locally. Listings from subscribers located elsewhere are received by regular or air mail, and by prepaid telegraph, telephone or Bell System teletype. The monthly National Corporation Bond, Stock and Municipal Bond Summaries are valuable reference sources for quotations on unlisted securities.

(See Over-the-Counter Market.)

NATIONAL RAW SILK EXCHANGE

This exchange was merged with the Commodity Exchange, Inc. (q. v.) as of July 5, 1933.

NATIONAL SECURITIES EXCHANGES

See Stock Exchanges.

NATIONAL WEALTH

Estimated to be as follows by the United States Census Bureau:

	Total	Per Capita
1922	$320,868,382,000	$2,918
1912	186,299,864,000	1,851
1904	107,104,211,917	1,318
1900	88,517,306,775	1,165
1890	65,037,091,000	1,036
1880	43,642,000,000	870
1870	30,068,518,000	824
1860	16,159,616,000	514
1850	7,135,780,000	308

The Bureau of the Census points out that estimates of national wealth for the earlier censuses were not made by precisely the same methods used in later estimates, and the figures are therefore not closely comparable. Changes in the buying power of money, as indicated by levels of prices and wages, also materially affect comparisons. There have been no official estimates of national wealth since 1922.

Unofficial estimates of national wealth since 1922 have been made by the National Industrial Conference Board, which placed national wealth at the following levels:

1925	$355,300,000
1926	340,471,000
1927	336,195,000
1928	351,362,000
1929	362,362,000
1930	326,701,000
1931	301,301,000
1932	247,351,000

No later estimates by the National Industrial Conference Board are available.

Value of physical assets in the United States has been estimated by the Secretary of the Treasury at $428.1 billion for 1939; $388.4 billion for 1938; and $401 billion (including Government-owned plants acquired since 1939) for 1945. The 1945 estimate of value of physical assets totaled $501 billion gross, but $91 billion was deducted as estimated depreciation on buildings and equipment.

NATURAL GAS

Although natural gas is one of the latest fuels known to man, the natural gas industry in the United States did not begin to develop into importance until 1924, when building began of long distance pipelines from natural gas fields to urban markets. Previously, the industry had been important only in areas local to the gas fields. In recent years, growth of the industry has been the fastest among public utilities, with gains of 64% in customers, 95% in gas sales, and 98% in natural gas revenues for the decade ending with 1947. In 1947, total sales of natural gas reached over 5,115 million cubic feet and natural gas revenues totaled over $543 million, a new high in the history of the industry.

There are now over 700 companies supplying natural gas, serving over 10,700,000 customers in 5,011 communities, and another 81 companies or so supplying mixed natural and manufactured gas to another 1,200,000 customers. Although local retail sales of natural gas sales are to industrial customers, such sales are at low wholesale rates, and residential and commercial sales are the real source of revenues for the industry, accounting for about 70% of natural gas revenues.

Responsible for the record growth of the industry has been the increase in the total network of natural gas pipelines to a total mileage of 125,000 miles, including 5,870 miles of line added in 1947. Pipeline construction programs of the industry as of 1948 call for another 21,500 miles, of which the Federal Power Commission has already approved and authorized about 5,400 miles. When and if completed, such expansion will enable pipelines to reach major cities in the East, including New York and Boston, as well as extensively cover the Middle West, the Southeast, the Southwest, and even reach California. Because of the high fuel cost of coal

for generation of electricity and manufacture of artificial gas, it is expected that coal-burning utilities in major cities will be converted to low-cost natural gas, either straight or mixed, as the pipelines are completed.

Basically justifying all this expansion has been the rapid growth in natural gas reserves of the industry, aided by new discoveries and development of existing fields. Proved natural gas reserves in the United States are estimated by industry sources at 165.93 trillion cubic feet, with another 27.7 billion barrels available in liquid hydrocarbon reserves, as compared with total production of 5.6 trillion cubic feet for 1947. During the next decade, it is anticipated that the natural gas industry will expand to an annual production of 8 to 10 trillion cubic feet. By that time, it is expected that reserves would have grown further, the total increase in reserves since 1934 having been 160%. Principal fields are located in Texas.

NEGOTIABLE

When an instrument is negotiable, legal title thereto may be transferred from one person to another in such manner as to constitute the transferee the holder. Negotiation is by merely delivery, if the instrument is a bearer instrument; or by indorsement and delivery, if the instrument is an order instrument. The holder of a negotiable instrument may sue thereon in his own name, and payment to him in due course discharges the instrument. The most important legal incident of negotiable instruments is the Holder in Due Course (q. v.), who holds the instrument free from any defect of title of prior parties, and free from all defenses except the "real defenses" available to prior parties among themselves, and may enforce payment of the instrument for the full amount against all liable parties. For the requirements of negotiability, see Sec. 1, Uniform Negotiable Instruments Law; and Sec. 20, New York Negotiable Instuments Law. (See Negotiable Instruments, Negotiable Securities.

NEGOTIABLE DOCUMENTS

A general term to include all forms of Negotiable Instruments (q. v.), and other papers which are negotiable by delivery, e. g., bearer checks, drafts or notes, bearer bonds, coupons; or by delivery and indorsement, e. g., order checks, drafts or notes, order bills of lading. Technically, a negotiable instrument is one which calls for the payment of money. An instrument which contains an order or promise to do any act other than the payment of money is not a negotiable instrument within the meaning of the Negotiable Instruments Law. Bills of lading and warehouse receipts call for delivery of merchandise, and while they cannot be considered negotiable instruments, still they may be negotiated if made order documents. An endorsed stock certificate, endorsed in blank, has under the Uniform Stock Transfer Law (Secs. 166-168, New York Personal Property Law) the attributes of a bearer instrument in that an innocent purchaser for value without notice obtains good title, even though the certificate was lost or stolen. Negotiable documents is a term employed to designate all papers which may be negotiated whether negotiable instruments or not. (See Negotiable Instruments.)

NEGOTIABLE INSTRUMENTS

Written orders or promises to pay money which may be transferred from one person to another by delivery, or by indorsement and delivery, the full legal title thereby becoming vested in the transferee; and the negotiation of which to a Holder in Due Course (q. v.), gives such holder the same rights as the original payee (promisee) free from defenses (except the "real" defenses) which might defeat them. Thus, a holder in due course who has purchased a negotiable instrument and secured title by negotiation is the absolute owner. He does not merely purchase as good a title as the previous owner.

Negotiation is achieved (1) by delivery, i. e., by merely handing it from one person to another, when the negotiable instrument is payable to bearer; or (2) by Indorsement (q. v.), and delivery, when the negotiable instrument is payable to order.

By the terms of the Negotiable Instruments Law (q.v.), an instrument to be negotiable must conform to the following requirements: (1) it must be in writing and signed by the maker or drawer; (2) must contain an unconditional promise or order to pay a certain sum in money; (3) must be payable on demand, or at a fixed or determinable future time; (4) must be payable to order or to bearer; and (5) where the instrument is addressed to a drawee, he must be named or otherwise indicated therein with reasonable certainty. It is always presumed that the parties to a negotiable instrument have legal capacity to contract, and that the instrument has been issued for a valuable consideration.

The principal negotiable instruments in the United States are checks, bills of exchange, promissory notes, and acceptances. A postal money order is not a negotiable instrument. (See Negotiable Securities.)

NEGOTIABLE INSTRUMENTS LAW

A law relating to negotiable instruments which was first codified and approved by several of the states in 1897, and has since been adopted and incorporated with certain modifications into the statutes of all the states. Prior to the enactment of this law cases growing out of litigation concerning bills, notes, and checks, were governed by the law merchant—a body of rules, customs, and principles which had been practice for centuries in England. The law merchant is resorted to even now when the negotiable instruments law does not cover the controversy. The law is therefore a crystallization of principles theretofore existing. The first restatement of the principles of the law merchant was the British Bills of Exchange Act enacted in 1882. The American act is to a large extent based upon the British law.

The purpose of the negotiable instruments law is to make uniform in all the states the law relating to negotiable commercial paper. Commissioners appointed from most of the states meet annually in order to promote uniformity in state laws. In 1895 they undertook the first draft of the negotiable instruments law. In the following year it was recommended for adoption by the states and was adopted in 1897 by Florida, Connecticut, New York and Virginia. At the present time all the states have adopted this law, although in some cases it has been somewhat amended. The section numbers of the law as recommended by the commissioners have not always been followed by the several states. The law may be divided into three general chapters: the first dealing with negotiable instruments in general, their

form and interpretation, negotiation, rights of holders, liabilities of parties, presentment, dishonor, discharge, etc. The second chapter deals with bills of exchange and the third with promissory notes and checks.

The following is the text of the Negotiable Instruments Law as incorporated in the statutes of New York State for 1948.

Article 1.
Short Title; Definitions.

Section 1. Short title.
2. Definitions.

§ 1. Short title.—This chapter shall be known as the negotiable instruments law.

§ 2. Definitions.—In this chapter, unless the context otherwise requires:

"Acceptance" means an acceptance completed by delivery or notification.

"Action" includes counter-claim and set-off.

"Bank" includes any person or association of persons carrying on the business of banking, whether incorporated or not.

"Bearer" means the person in possession of a bill or note which is payable to bearer.

"Bill" means bill of exchange, and "note" means negotiable promissory note.

"Delivery" means transfer of possession, actual or constructive, from one person to another.

"Holder" means the payee or indorser of a bill or note, who is in possession of it, or the bearer thereof.

"Indorsement" means an indorsement completed by delivery.

"Instrument" means negotiable instrument.

"Issue" means the first delivery of the instrument, complete in form, to a person who takes it as a holder.

"Person" includes a body of persons, whether incorporated or not.

"Value" means valuable consideration.

"Written" includes printed, and "writing" includes print.

Article 2.
General Provisions.

Section 3. Person primarily liable on instrument.
4. Reasonable time, what constitutes.
5. Time, how computed; when last day falls on holiday.
6. Application of chapter.
7. Law merchant; when governs.

§ 3. Person primarily liable on instrument.—The person "primarily" liable on an instrument is the person who by the terms of the instrument is absolutely required to pay the same. All other parties are "secondarily" liable.

§ 4. Reasonable time, what constitutes.—In determining what is a "reasonable time" or an "unreasonable time," regard is to be had to the nature of the instrument, the usage of trade or business (if any) with respect to such instruments, and the facts of the particular case.

§ 5. Time, how computed; when last day falls on holiday.—Where the day, or the last day, for doing any act herein required or permitted to be done falls on Sunday or on a holiday, the act may be done on the next succeeding secular or business day.

§ 6. Application of chapter.—The provisions of this chapter do not apply to negotiable instruments made and delivered prior to October first, eighteen hundred and ninety-seven.

§ 7. Law merchant; when governs.—In any case not provided for in this chapter the rules of the law merchant shall govern.

Article 3.
Form and Interpretation.

Section 20. Form of negotiable instrument.
21. Certainty as to sum; what constitutes.
22. When promise is unconditional.
23. Determinable future time; what constitutes.
24. Additional provisions not affecting negotiability.
25. Omissions; seal; particular money.
26. When payable on demand.
27. When payable to order.
28. When payable to bearer.
29. Terms, when sufficient.
30. Date, presumption as to.
31. Ante-dated and post-dated.
32. When date may be inserted.
33. Blanks; when may be filled.
34. Incomplete instrument not delivered.
35. Delivery; when effectual; when presumed.
36. Construction where instrument is ambiguous.
37. Liability of person signing in trade or assumed name.
38. Signature by agent; authority; how shown.
39. Liability of person signing as agent.
40. Signature of procuration; effect of.
41. Effect of indorsement by infant or corporation.
42. Forged signature; effect of.
43. Forged or unauthorized indorsements.

§ 20. Form of negotiable instrument.—An instrument to be negotiable must conform to the following requirements:

1. It must be in writing and signed by the maker or drawer.
2. Must contain an unconditional promise or order to pay a sum certain in money.
3. Must be payable on demand, or at a fixed or determinable future time.
4. Must be payable to order or to bearer; and
5. Where the instrument is addressed to a drawee, he must be named or otherwise indicated therein with reasonable certainty.

§ 21. Certainty as to sum; what constitutes.—The sum payable is a sum certain within the meaning of this chapter, although it is to be paid:

1. With interest; or
2. By stated instalments; or
3. By stated instalments, with a provision that upon default in payment of any instalment or of interest, the whole shall become due; or
4. With exchange, whether at a fixed rate or at the current rate; or
5. With costs of collection or an attorney's fee, in case payment shall not be made at maturity.

§ 22. When promise is unconditional.— An unqualified order or promise to pay is unconditional within the meaning of this chapter, though coupled with:

1. An indication of a particular fund out of which reimbursement is to be made, or a particular account to be debited with the amount, or
2. A statement of the transaction which gives rise to the instrument.

But an order or promise to pay out of a particular fund is not unconditional.

§ 23. Determinable future time; what constitutes.—An instrument is payable at a determinable future time, within the meaning of this chapter, which is expressed to be payable:

1. At a fixed period after date or sight; or
2. On or before a fixed or determinable future time specified therein; or
3. On or at a fixed period after the occurrence of a specified event, which is certain to happen, though the time of happening be uncertain.

An instrument payable upon a contingency is not negotiable, and the happening of the event does not cure the defect.

§ 24. Additional provisions not affecting negotiability - An instrument which contains an order or promise to do any act in addition to the payment of money is not negotiable. But the negotiable character of an instrument otherwise negotiable is not affected by a provision which:

1. Authorizes the sale of collateral securities in case the instrument be not paid at maturity; or
2. Authorizes a confession of judgment if the instrument be not paid at maturity; or
3. Waives the benefit of any law intended for the advantage or protection of the obligor: or
4. Gives the holder an election to require something to be done in lieu of payment of money.

But nothing in this section shall validate any provision or stipulation otherwise illegal.

§ 25. Omissions; seal; particular money.—The validity and negotiable character of an instrument are not affected by the fact that:

1. It is not dated; or
2. Does not specify the value given, or that any value has been given therefor; or
3. Does not specify the place where it is drawn or the place where it is payable; or
4. Bears a seal; or
5. Designates a particular kind of current money in which payment is to be made.

But nothing in this section shall alter or repeal any statute requiring in certain cases the nature of the consideration to be stated in the instrument.

§ 26. When payable on demand.—An instrument is payable on demand:

1. Where it is expressed to be payable on demand, or at sight, or on presentation; or
2. In which no time for payment is expressed.

Where an instrument is issued, accepted or indorsed when overdue, it is, as regards the person so issuing, accepting or indorsing it, payable on demand.

§ 27. When payable to order.—The instrument is payable to order where it is drawn payable to the order of a specified person or to him or his order. It may be drawn payable to the order of:

1. A payee who is not maker, drawer or drawee; or
2. The drawer or maker; or
3. The drawee; or
4. Two or more payees jointly; or
5. One or some of several payees; or
6. The holder of an office for the time being.

Where the instrument is payable to order the payee, must be named or otherwise indicated therein with reasonably certainty.

§ 28. When payable to bearer.—The instrument is payable to bearer:

1. When it is expressed to be so payable; or
2. When it is payable to a person named therein or bearer; or
3. When it is payable to the order of a fictitious or non-existing person, and such fact was known to the person making it so payable; or
4. When the name of the payee does not purport to be the name of any person; or
5. When the only or last indorsement is an indorsement in blank.

§ 29. Terms when sufficient.—The instrument need not follow the language of this chapter, but any terms are sufficient which clearly indicate an intention to conform to the requirements hereof.

§ 30. Date, presumption as to.—Where the instrument or an acceptance or any indorsement thereon is dated, such date is deemed prima facie to be the true date of the making, drawing, acceptance or indorsement, as the case may be.

§ 31. Ante-dated and post-dated.—The instrument is not invalid for the reason only that it is ante-dated or post-dated, provided this is not done for an illegal or fraudulent purpose. The person to whom an instrument so dated is delivered acquires the title thereto as of the date of delivery.

§ 32. When date may be inserted.—Where an instrument expressed to be payable at a fixed period after date is issued undated, or where the acceptance of an instrument payable at a fixed period after sight is undated, any holder may insert therein the true date of issue or acceptance, and the instrument shall be payable accordingly. The insertion of a wrong date does not void the instrument in the hands of a subsequent holder in due course; but as to him, the date so inserted is to be regarded as the true date.

§ 33. Blanks; when may be filled.—Where the instrument is wanting in any material particular, the person in possession thereof has a prima facie authority to complete it by filling up the blanks therein. And a signature on a blank paper delivered by the person making the signature in order that the paper may be converted into a negotiable instrument operates as a prima facie authority to fill it up as such for any amount. In order, however, that any such instrument, when completed, may be enforced against any person who became a party thereto prior to its completion, it must be filled up strictly in accordance with the authority given and within a reasonable time. But if any such instrument, after completion, is negotiated to a holder in due course, it is valid and effectual for all purposes in his hands, and he may enforce it as if it had been filled up strictly in accordance with the authority given and within a reasonable time.

§ 34. Incomplete instrument not delivered.—Where an incomplete instrument has not been delivered it will not, if completed and negotiated, without authority, be a valid contract in the hands of any holder, as against any person whose signature was placed thereon before delivery.

§ 35. Delivery; when effectual; when presumed.—Every contract on a negotiable instrument is incomplete and revocable until delivery of the instrument for the purpose of giving effect thereto. As between immediate parties, and as regards a remote party other than a holder in due course, the delivery, in order to be effect-

ual, must be made either by or under the authority of the party making, drawing, accepting or indorsing, as the case may be; and in such case the delivery may be shown to have been conditional, or for a special purpose only, and not for the purpose of transferring the property in the instrument. But where the instrument is in the hands of a holder in due course, a valid delivery thereof by all parties prior to him so as to make them liable to him is conclusively presumed. And where the instrument is no longer in the possession of a party whose signature appears thereon, a valid and intentional delivery by him is presumed until the contrary is proved.

§ 36. Construction where instrument is ambiguous.—Where the language of the instrument is ambiguous, or there are omissions therein, the following rules of construction apply:

1. Where the sum payable is expressed in words and also in figures and there is a discrepancy between the two, the sum denoted by the words is the sum payable; but if the words are ambiguous or uncertain, references may be had to the figures to fix the amount;

2. Where the instrument provides for the payment of interest, without specifying the date from which interest is to run, the interest runs from the date of the instrument, and if the instrument is undated, from the issue thereof;

3. Where the instrument is not dated, it will be considered to be dated as of the time it was issued;

4. Where there is a conflict between the written and printed provisions of the instrument, the written provisions prevail;

5. Where the instrument is so ambiguous that there is doubt whether it is a bill or note, the holder may treat it as either at his election;

6. Where a signature is so placed upon the instrument that it is not clear in what capacity the person making the same intended to sign, he is to be deemed an indorser;

7. Where an instrument containing the words "I promise to pay" is signed by two or more persons, they are deemed to be jointly and severally liable thereon.

§ 37. Liability of person signing in trade or assumed name.—No person is liable on the instrument whose signature does not appear thereon, except as herein otherwise expressly provided. But one who signs in a trade or assumed name will be liable to the same extent as if he had signed in his own name.

§ 38. Signature by agent; authority; how shown.—The signature of any party may be made by a duly authorized agent. No particular form of appointment is necessary for this purpose; and the authority of the agent may be established as in other cases of agency.

§ 39. Liability of person signing as agent.—Where the instrument contains or a person adds to his signature words indicating that he signs for or on behalf of a principal, or in a representative capacity, he is not liable on the instrument if he was duly authorized; but the mere addition of words describing him as an agent, or as filling a representative character, without disclosing his principal, does not exempt him from personal liability.

§ 40. Signature by procuration; effect of.—A signature by "procuration" operates as notice that the agent has but a limited authority to sign, and the principal is bound only in case the agent in so signing acted within the actual limits of his authority.

§ 41. Effect of indorsement by infant or corporation.—The indorsement or assignment of the instrument by a corporation or by an infant passes the property therein, notwithstanding that from want of capacity the corporation or infant may incur no liability thereon.

§ 42. Forged signature; effect of.—Where a signature is forged or made without authority of the person whose signature it purports to be, it is wholly inoperative, and no right to retain the instrument, or to give a discharge therefor, or to enforce payment thereof against any party thereto, can be acquired through or under such signature, unless the party, against whom it is sought to enforce such right, is precluded from setting up the forgery or want of authority.

§ 43. Forged or unauthorized indorsements.—No national bank or banking organization as defined in the banking law shall be liable to a depositor for the payment by it of a check bearing a forged or unauthorized indorsement unless, within two years after the return to the depositor of the voucher of such payment, such depositor shall notify the bank that the check so paid bore such forged or unauthorized indorsement. (Added L. 1941, c. 87, eff. March 13, 1941.)

Article 4.
Consideration

Section 50. Presumption of consideration.
51. What constitutes consideration.
52. What constitutes holder for value.
53. When lien on instrument constitutes holder for value.
54. Effect of want of consideration.
55. Liability of accommodation party.

§ 50. Presumption of consideration.—Every negotiable instrument is deemed prima facie to have been issued for a valuable consideration; and every person whose signature appears thereon to have become a party thereto for value.

§ 51. What constitutes consideration.—Value is any consideration sufficient to support a simple contract. An antecedent or pre-existing debt constitutes value; and is deemed such whether the instrument is payable on demand or at a future time.

§ 52. What constitutes holder for value.—Where value has at any time been given for the instrument, the holder is deemed a holder for value in respect to all parties who became such prior to that time.

§ 53. When lien on instrument constitutes holder for value.—Where the holder has a lien on the instrument, arising either from contract or by implication of law, he is deemed a holder for value to the extent of his lien.

§ 54. Effect of want of consideration.—Absence or failure of consideration is matter of defense as against any person not a holder in due course; and partial failure of consideration is a defense pro tanto, whether the failure is an ascertained and liquidated amount or otherwise.

§ 55. Liability of accommodation party.—An accommodation party is one who has signed the instrument as maker, drawer, acceptor or indorser, without receiving value therefor, and for the purpose of lending his name to some other person. Such a person is liable on the instrument to a holder for value, notwithstanding such holder at the time of taking the instrument knew him to be only an accommodation party.

Article 5.
Negotiation.

Section 60. What constitutes negotiation.
61. Indorsement; how made.
62. Indorsement must be of entire instrument.
63. Kinds of indorsement.
64. Special indorsement; indorsement in blank.
65. Blank indorsement; how changed to special indorsement.
66. When indorsement restrictive.
67. Effect of restrictive indorsement; rights of indorsee.
68. Qualified indorsement.
69. Conditional indorsement.
70. Indorsement of instrument payable to bearer.
71. Indorsement where payable to two or more persons.
72. Effect of instrument drawn or indorsed to a person as cashier.
73. Indorsement where name is wrongfully designated or misspelled.
74. Indorsement in representative capacity.
75. Time of indorsement; presumption.
76. Place of indorsement; presumption.
77. Continuation of negotiable character.
78. Striking out indorsement.
79. Transfer without indorsement; effect of.
80. When prior party may negotiate instrument.

§ 60. What constitutes negotiation.—An instrument is negotiated when it is transferred from one person to another in such manner as to constitute the transferee the holder thereof. If payable to bearer it is negotiated by delivery; if payable to order it is negotiated by the indorsement of the holder completed by delivery.

§ 61. Indorsement; how made.—The indorsement must be written on the instrument itself or upon a paper attached thereto. The signature of the indorser, without additional words, is a sufficient indorsement.

§ 62. Indorsement must be of entire instrument.—The indorsement must be an indorsement of the entire instrument. An indorsement, which purports to transfer to the indorsee a part only of the amount payable, or which purports to transfer the instrument to two or more indorsees severally, does not operate as a negotiation of the instrument. But where the instrument has been paid in part, it may be indorsed as to the residue.

§ 63. Kinds of indorsement.—An indorsement may be either special or in blank; and it may also be either restrictive or qualified, or conditional.

§ 64. Special indorsement; indorsement in blank.—A special indorsement specifies the person to whom, or to whose order the instrument is to be payable; and the indorsement of such indorsee is necessary to the further negotiation of the instrument. An indorsement in blank specifies no indorsee, and an instrument so indorsed is payable to bearer, and may be negotiated by delivery.

§ 65. Blank indorsement; how changed to special indorsement.—The holder may convert a blank indorsement into a special indorsement by writing over the signature of the indorser in blank any contract consistent with the character of the indorsement.

§ 66. When indorsement restrictive.—An indorsement is restrictive, which either:

1. Prohibits the further negotiation of the instrument; or

2. Constitutes the indorsee the agent of the indorser; or

3. Vests the title in the indorsee in trust for or to the use of some other person.

But the mere absence of words implying power to negotiate does not make an indorsement restrictive.

§ 67. Effect of restrictive indorsement; rights of indorsee.—A restrictive indorsement confers upon the indorsee the right:

1. To receive payment of the instrument;

2. To bring any action thereon that the indorser could bring;

3. To transfer his rights as such indorsee, where the form of the indorsement authorizes him to do so.

But all subsequent indorsees acquire only the title of the first indorsee under the restrictive indorsement.

§ 68. Qualified indorsement.—A qualified indorsement constitutes the indorser a mere assignor of the title of the instrument. It may be made by adding to the indorser's signature the words "without recourse" or any words of similar import. Such an indorsement does not impair the negotiable character of the instrument.

§ 69. Conditional indorsement.—Where an indorsement is conditional, a party required to pay the instrument may disregard the condition and make payment to the indorsee or his transferee, whether the condition has been fulfilled or not. But any person to whom an instrument so indorsed is negotiated,will hold the same, or the proceeds thereof, subject to the rights of the person indorsing conditionally.

§ 70. Indorsement of instrument payable to bearer.—Where an instrument, payable to bearer, is indorsed specially, it may nevertheless be further negotiated by delivery; but the person indorsing specially is liable as indorser to only such holders as take title through his indorsement.

§ 71. Indorsement where payable to two or more persons.—Where an instrument is payable to the order of two or more payees or indorsees who are not partners, all must indorse, unless the one indorsing has authority to indorse for the others.

§ 72. Effect of instrument drawn or indorsed to a person as cashier.—Where an instrument is drawn or indorsed to a person as "cashier" or other fiscal officer of a bank or corporation, it is deemed prima facie to be payable to the bank or corporation of which he is such officer; and may be negotiated by either the indorsement of the bank or corporation, or the indorsement of the officer.

§ 73. Indorsement where name is wrongfully designated or misspelled.—Where the name of the payee or indorsee is wrongly designated or misspelled, he may indorse the instrument as therein described, adding, if he think fit, his proper signature.

§ 74. Indorsement in representative capacity.—Where any person is under obligation to indorse in a representative capacity, he may indorse in such terms as to negative personal liability.

§ 75. Time of indorsement; presumption.—Except where an indorsement bears date after the maturity of the instrument, every negotiation is deemed prima facie to have been effected before the instrument was overdue.

§ 76. Place of indorsement; presumption.—Except where the contrary appears every indorsement is presumed prima facie to have been made at the place where the instrument is dated.

§ 77. Continuation of negotiable character.—An instrument negotiable in its origin continues to be negotiable until it has been restrictively indorsed or discharged by payment or otherwise.

§ 78. Striking out indorsement.—The holder may at any time strike out any indorsement which is not necessary to his title. The indorser whose indorsement is struck out, and all indorsers subsequent to him, are thereby relieved from liability on the instrument.

§ 79. Transfer without indorsement; effect of.—Where the holder of an instrument payable to his order transfers it for value without indorsing it, the transfer vests in the transferee such title as the transferrer had therein, and the transferee acquires, in addition, the right to have the indorsement of the transferrer. But for the purpose of determining whether the transferee is a holder in due course, the negotiation takes effect as of the time when the indorsement is actually made.

§ 80. When prior party may negotiate instrument.—Where an instrument is negotiated back to a prior party, such party may, subject to the provisions of this chapter, re-issue and further negotiate the same. But he is not entitled to enforce payment thereof against any intervening party to whom he was personally liable.

Article 6.
Rights of Holder.

Section 90. Right of holder to sue; payment.
91. What constitutes a holder in due course.
92. When person not deemed holder in due course.
93. Notice before full amount paid.
94. When title defective.
95. What constitutes notice of defect.
96. Rights of holder in due course.
97. When subject to original defenses.
98. Who deemed holder in due course.

§ 90. Right of holder to sue; payment.—The holder of a negotiable instrument may sue thereon in his own name; and payment to him in due course discharges the instrument.

§ 91. What constitutes a holder in due course.—A holder in due course is a holder who has taken the instrument under the following conditions:

1. That it is complete and regular upon its face;
2. That he became the holder of it before it was overdue, and without notice that it had been previously dishonored, if such was the fact;
3. That he took it in good faith and for value;
4. That at the time it was negotiated to him he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it.

§ 92. When person not deemed holder in due course.—Where an instrument payable on demand is negotiated an unreasonable length of time after its issue, the holder is not deemed a holder in due course.

§ 93. Notice before full amount paid.—Where the transferee receives notice of any infirmity in the instrument or defect in the title of the person negotiating the same before he has paid the full amount agreed to be paid therefor, he will be deemed a holder in due course only to the extent of the amount theretofore paid by him.

§ 94. When title defective.—The title of a person who negotiates an instrument is defective within the meaning of this chapter when he obtained the instrument, or any signature thereto, by fraud, duress, or force and fear, or other unlawful means, or for an illegal consideration, or when he negotiates it in breach of faith, or under such circumstances as amount to a fraud.

§ 95. What constitutes notice of defect.—To constitute notice of an infirmity in the instrument or defect in the title of the person negotiating the same, the person to whom it is negotiated must have had actual knowledge of the infirmity or defect, or knowledge of such facts that his action in taking the instrument amounted to bad faith, but the drawing or making of a check or other negotiable instrument by an officer or agent of a corporation against the account of, or in the name of such corporation, to himself as indorsee, and in either case the cashing of such check or other negotiable instrument or the deposit thereof to his personal account and whether such check or other negotiable instrument is drawn against an account standing in the name of such corporation, or in the name of such officer or agent of such corporation as such, shall not be sufficient to put a bank, banker or trust company on inquiry as to the authority of such officer or agent, or impute knowledge of any infirmity or defect in such check or other negotiable instrument, provided such bank, banker or trust company have on file an authorization from said corporation showing that the said officer or agent is authorized on behalf of the corporation to perform any of the above acts for unlimited or limited amounts, and that the amount of the said check or negotiable instrument does not exceed the maximum limits of the amount so contained in the authorization so filed for the said officer or agent, when such a limitation is contained therein. (Amended, L. 1927, c. 473, Sec. 1, eff. July 1, 1927.)

§ 96. Rights of holder in due course.—A holder in due course holds the instrument free from any defect of title of prior parties and free from defenses available to prior parties among themselves, and may enforce payment of the instrument for the full amount thereof against all parties liable thereon.

§ 97. When subject to original defenses.—In the hands of any holder other than a holder in due course, a negotiable instrument is subject to the same defenses as if it were non-negotiable. But a holder who derives his title through a holder in due course, and who is not himself a party to any fraud or illegality affecting the instrument, has all the rights of such former holder in respect of all parties prior to the latter.

§ 98. Who deemed holder in due course.—Every holder is deemed prima facie to be a holder in due course; but when it is shown that the title of any person who has negotiated the instrument was defective, the burden is on the holder to prove that he or some person under whom he claims acquired the title as a holder in due course. But the last-mentioned rule does not apply in favor of a party who became bound on the instrument prior to the acquisition of such defective title.

Article 7.
Liabilities of Parties.

Section 110. Liability of maker.
111. Liability of drawer.
112. Liability of acceptor.
113. When person deemed indorser.
114. Liability of irregular indorser.
115. Warranty; where negotiation by delivery.
116. Liability of general indorser.
117. Liability of indorser where paper negotiable by delivery.
118. Order in which indorsers are liable.
119. Liability of agent or broker.

§ 110. Liability of maker.—The maker of a negotiable instrument by making it engages that he will pay it according to its tenor; and admits the existence of the payee and his then capacity to indorse.

§ 111. Liability of drawer.—The drawer by drawing the instrument admits the existence of the payee and his then capacity to indorse; and engages that on due presentment the instrument will be accepted and paid, or both, according to its tenor, and that if it be dishonored and the necessary proceedings on dishonor be duly taken, he will pay the amount thereof, to the holder, or to any subsequent indorser who may be compelled to pay it. But the drawer may insert in the instrument an express stipulation negativing or limiting his own liability to the holder.

§ 112. Liability of acceptor.—The acceptor by accepting the instrument engages that he will pay it according to the tenor of his acceptance; and admits:

1. The existence of the drawer, the genuineness of his signature, and his capacity and authority to draw the instrument; and

2. The existence of the payee and his then capacity to indorse.

§ 113. When person deemed indorser.—A person placing his signature upon an instrument otherwise than as maker, drawer or acceptor is deemed to be an indorser, unless he clearly indicates by appropriate words his intention to be bound in some other capacity.

§ 114. Liability of irregular indorser.—Where a person, not otherwise a party to an instrument, places thereon his signature in blank before delivery, he is liable as indorser in accordance with the following rules:

1. If the instrument is payable to the order of a third person, he is liable to the payee and to all subsequent parties.

2. If the instrument is payable to the order of the maker or drawer, or is payable to bearer, he is liable to all parties subsequent to the maker or drawer.

3. If he signs for the accommodation of the payee he is liable to all parties subsequent to the payee.

§ 115. Warranty; where negotiation by delivery.—Every person negotiating an instrument by delivery or by a qualified indorsement, warrants:

1. That the instrument is genuine and in all respects what it purports to be;

2. That he has a good title to it;

3. That all prior parties had capacity to contract;

4. That he has no knowledge of any fact which would impair the validity of the instrument or render it valueless.

But when the negotiation is by delivery only, the warranty extends in favor of no holder other than the immediate transferee. The provisions of subdivision three of this section do not apply to persons negotiating public or corporate securities, other than bills and notes.

§ 116. Liability of general indorser.—Every indorser who indorses without qualification, warrants to all subsequent holders in due course:

1. The matter and things mentioned in subdivisions one, two and three of the next preceding section; and

2. That the instrument is at the time of his indorsement valid and subsisting.

And, in addition, he engages that on due presentation, it shall be accepted or paid, or both, as the case may be, according to its tenor, and that if it be dishonored, and the necessary proceedings on dishonor be duly taken, he will pay the amount thereof to the holder, or to any subsequent indorser who may be compelled to pay it.

§ 117. Liability of indorser where paper negotiable by delivery.—Where a person places his indorsement on an instrument negotiable by delivery he incurs all the liabilities of an indorser.

§ 118. Order in which indorsers are liable.—As respects one another, indorsers are liable prima facie in the order in which they indorse; but evidence is admissible to show that as between or among themselves they have agreed otherwise. Joint payees or joint indorsees who indorse are deemed to indorse jointly and severally.

§ 119. Liability of agent or broker.—Where a broker or other agent negotiates an instrument without indorsement, he incurs all the liabilities prescribed by section one hundred and fifteen of this chapter, unless he discloses the name of his principal, and the fact that he is acting only as agent.

Article 8.
Presentment for payment

Section 130. Effect of want of demand on principal debtor.
131. Presentment where instrument is not payable on demand.
132. What constitutes a sufficient presentment.
133. Place of presentment.
134. Instrument must be exhibited.
135. Presentment where instrument payable at bank.
136. Presentment where principal debtor is dead.
137. Presentment to persons liable as partners.
138. Presentment to joint debtors.
139. When presentment not required to charge the drawer.
140. When presentment not required to charge the indorser.
141. When delay in making presentment is excused.
142. When presentment may be dispensed with.
143. When instrument dishonored by non-payment.
144. Liability of person secondarily liable, when instrument dishonored.
145. Time of maturity.
146. Time; how computed.
147. Rule where instrument payable at bank.
148. What constituted payment in due course.

§ 130. Effect of want of demand on principal debtor.—Presentment for payment is not necessary in order to charge the person primarily liable on the instrument; but if the instrument is, by its terms, payable at a special place, and he is able and willing to pay it there at maturity and has funds there available for that purpose, such ability and willingness are equivalent to a tender of payment upon his part. But except as herein otherwise provided, presentment for payment is necessary in order to charge the drawer and indorsers.

§ 131. Presentment where instrument is not payable on demand.—Where the instrument is not payable on demand, presentment must be made on the day it falls due. Where it is payable on demand, presentment must be made within a reasonable time after its issue, except that in case of a bill of exchange, presentment for pay-

ment will be sufficient if made within a reasonable time after the last negotiation thereof.

§ 132. What constitutes a sufficient presentment.—Presentment for payment, to be sufficient, must be made:

1. By the holder, or by some person authorized to receive payment on his behalf;

2. At a reasonable hour on a business day;

3. At a proper place as herein defined;

4. To the person primarily liable on the instrument, or if he is absent or inaccessible, to any person found at the place where the presentment is made.

§ 133. Place of presentment.—Presentment for payment is made at the proper place:

1. Where a place of payment is specified in the instrument and it is there presented;

2. Where no place of payment is specified, but the address of the person to make payment is given in the instrument and it is there presented;

3. Where no place of payment is specified and no address is given and the instrument is presented at the usual place of business or residence of the person to make payment.

4. In any other case if presented to the person to make payment wherever he can be found, or if presented at his last known place of business or residence.

§ 134. Instrument must be exhibited.—The instrument must be exhibited to the person from whom payment is demanded, and when it is paid must be delivered up to the party paying it.

§ 135. Presentment where instrument payable at bank: Where the instrument is payable at a bank, presentment for payment must be made during banking hours, unless the person to make payment has no funds there to meet it at any time during the day, in which case presentment at any hour before the bank is closed on that day is sufficient.

§ 136. Presentment where principal debtor is dead.—Where the person primarily liable on the instrument is dead, and no place of payment is specified, presentment for payment must be made to his personal representative, if such there be, and if with the exercise of reasonable diligence, he can be found.

§ 137. Presentment to persons liable as partners.—Where the persons primarily liable on the instrument are liable as partners, and no place of payment is specified, presentment for payment may be made to any one of them, even though there has been a dissolution of the firm.

§ 138. Presentment to joint debtors.—Where there are several persons not partners, primarily liable on the instrument, and no place of payment is specified, presentment must be made to them all.

§ 139. When presentment not required to charge the drawer.—Presentment for payment is not required in order to charge the drawer where he has no right to expect or require that the drawee or acceptor will pay the instrument.

§ 140. When presentment not required to charge the indorser.—Presentment for payment is not required in order to charge an indorser where the instrument was made or accepted for his accommodation, and he has no reason to expect that the instrument will be paid if presented.

§ 141. When delay in making presentment is excused.—Delay in making presentment for payment is excused when the delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct or negligence. When the cause of delay ceases to operate, presentment must be made with reasonable diligence.

§ 142. When presentment may be dispensed with.—Presentment for payment is dispensed with:

1. Where, after the exercise of reasonable diligence presentment as required by this chapter cannot be made;

2. Where the drawer is a fictitious person;

3. By waiver of presentment express or implied.

§ 143. When instrument dishonored by non-payment.—The instrument is dishonored by non-payment when:

1. It is duly presented for payment and payment is refused or can not be obtained; or

2. Presentment is excused and the instrument is overdue and unpaid.

§ 144. Liability of person secondarily liable, when instrument dishonored.—Subject to the provisions of this chapter, when the instrument is dishonored by non-payment, an immediate right of recourse to all parties secondarily liable thereon, accrues to the holder.

§ 145. Time of maturity.—Every negotiable instrument is payable at the time fixed therein without grace. When the day of maturity falls upon Sunday, or a holiday, the instrument is payable on the next succeeding business day. Instruments falling due or becoming payable on Saturday are to be presented for payment on the next succeeding business day, except that instruments payable on demand may, at the option of the holder, be presented for payment before twelve o'clock noon on Saturday when that entire day is not a holiday.

§ 146. Time; how computed.—Where the instrument is payable at a fixed period after date, after sight, or after the happening of a specified event, the time of payment is determined by excluding the day from which the time is to begin to run, and by including the date of payment.

§ 147. Rule where instrument payable at bank.—Where the instrument is made payable at a bank it is equivalent to an order to the bank to pay the same for the account of the principal debtor thereon.

§ 148. What constitutes payment in due course.—Payment is made in due course when it is made at or after the maturity of the instrument to the holder thereof in good faith and without notice that his title is defective.

Article 9.
Notice of Dishonor

Section 160. To whom notice of dishonor must be give
161. By whom given.
162. Notice given by agent.
163. Effect of notice given on behalf of holder.
164. Effect where notice is given by party entitled thereto.
165. When agent may give notice.
166. When notice sufficient.
167. Form of notice.
168. To whom notice may be given.
169. Notice where party is dead.
170. Notice to partners.
171. Notice to persons jointly liable.
172. Notice to bankrupt.
173. Time within which notice must be given.
174. Where parties reside in same place.
175. Where parties reside in different places.
176. When sender deemed to have given due notice.
177. Deposit in post office; what constitutes.
178. Notice to antecedent parties, time of.
179. Where notice must be sent.

Section 180. Waiver of notice.
181. Whom affected by waiver.
182. Waiver of protest.
183. When notice dispensed with.
184. Delay in giving notice; how excused.
185. When notice need not be given to drawer.
186. When notice need not be given to indorser.
187. Notice of non-payment where acceptance refused.
188. Effect of omission to give notice of non-acceptance.
189. When protest need not be made; when must be made.

§ 160. To whom notice of dishonor must be given.—Except as herein otherwise provided, when a negotiable instrument has been dishonored by non-acceptance or non-payment, notice of dishonor must be given to the drawer and to each indorser,and any drawer or indorser to whom such notice is not given is discharged.

§ 161. By whom given.—The notice may be given by or on behalf of the holder, or by or on behalf of any party to the instrument who might be compelled to pay it to the holder, and who, upon taking it up, would have a right to reimbursement from the party to whom the notice is given.

§ 162. Notice given by agent.—Notice of dishonor may be given by an agent either in his own name or in the name of any party entitled to give notice, whether that party be his principal or not.

§ 163. Effect of notice given on behalf of holder.—Where notice is given by or on behalf of the holder, it inures for the benefit of all subsequent holders and all prior parties who have a right of recourse against the party to whom it is given.

§ 164. Effect where notice is given by party entitled thereto.—Where notice is given by or on behalf of a party entitled to give notice, it inures for the benefit of the holder and all parties subsequent to the party to whom notice is given.

§ 165. When agent may give notice.—Where the instrument has been dishonored in the hands of an agent, he may either himself give notice to the parties liable thereon, or he may give notice to his principal. If he give notice to his principal, he must do so within the same time as if he were the holder, and the principal, upon the receipt of such notice, has himself the same time for giving notice as if the agent had been an independent holder.

§ 166. When notice sufficient.—A written notice need not be signed and an insufficient written notice may be supplemented and validated by verbal communication. A misdescription of the instrument does not vitiate the notice unless the party to whom the notice is given is in fact misled thereby.

§ 167. Form of notice.—The notice may be written or merely oral, and may be given in any terms which sufficiently identify the instrument, and indicate that it has been dishonored by non-acceptance or non-payment. It may in all cases be given by delivering it personally or through the mails.

§ 168. To whom notice may be given.—Notice of dishonor may be given either to the party himself or to his agent in that behalf.

§ 169. Notice where party is dead.—When any party is dead, and his death is known to the party giving notice, the notice must be given to a personal representative, if there be one, and if with reasonable diligence he can be found. If there be no personal representative, notice may be sent to the last residence or last place of business of the deceased.

§ 170. Notice to partners.—Where the parties to be notified are partners notice to any one partner is notice to the firm even though there has been a dissolution.

§ 171. Notice to persons jointly liable.—Notice to joint parties who are not partners must be given to each of them, unless one of them has authority to receive such notice for the others.

§ 172. Notice to bankrupt.—Where a party has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, notice may be given either to the party himself or to his trustee or assignee.

§ 173. Time within which notice must be given.—Notice may be given as soon as the instrument is dishonored; and unless delay is excused as hereinafter provided, must be given within the times fixed by this chapter.

§ 174. Where parties reside in the same place.—Where the person giving and the person to receive notice reside in the same place, notice must be given within the following times:

1. If given at the place of business of the person to receive notice, it must be given before the close of business hours on the day following;

2. If given at his residence, it must be given before the usual hours of rest on the day following;

3. If sent by mail, it must be deposited in the post office in time to reach him in usual course on the day following.

§ 175. Where parties reside in different places.—Where the person giving and the person to receive notice reside in different places, the notice must be given within the following times:

1. If sent by mail, it must be deposited in the post office in time to go by mail the day following the day of dishonor, or if there be no mail at a convenient hour on that day, by the next mail thereafter.

2. If given otherwise than through the post office, then within the time that notice would have been received in due course of mail, if it had been deposited in the post office within the time specified in the last subdivision.

§ 176. When sender deemed to have given due notice.—Where notice of dishonor is duly addressed and deposited in the post office, the sender is deemed to have given due notice, notwithstanding any miscarriage in the mails.

§ 177. Deposit in post office; what constitutes.—Notice is deemed to have been deposited in the post office when deposited in any branch post office or in any letter-box under the control of the post office department.

§ 178. Notice to antecedent party; time of.—Where a party receives notice of dishonor, he has, after the receipt of such notice, the same time for giving notice to antecedent parties that the holder has after the dishonor.

§ 179. Where notice must be sent.—Where a party has added an address to his signature, notice of dishonor must be sent to that address: but if he has not given such address, then the notice must be sent as follows:

1. Either to the post office nearest to his place of residence, or to the post office where he is accustomed to receive his letters; or

2. If he live in one place, and have his place of business in another, notice may be sent to either place; or

3. If he is sojourning in another place, notice may be sent to the place where he is so sojourning.

But where the notice is actually received by the party within the same specified in this chapter, it will be sufficient, though not sent in accordance with the requirements of this section.

§ 180. Waiver of Notice.—Notice of dishonor may be waived, either before the time of giving notice has arrived, or after the omission to give due notice, and the waiver may be express or implied.

§ 181. Whom affected by waiver.—Where the waiver is embodied in the instrument itself, it is binding upon all parties, but where it is written above the signature of an indorser, it binds him only.

§ 182. Waiver of protest.—A waiver of protest, whether in the case of a foreign bill of exchange or other negotiable instrument, is deemed to be a waiver not only of a formal protest, but also of presentment and notice of dishonor.

§ 183. When notice is dispensed with.—Notice of dishonor is dispensed with when, after the exercise of reasonable diligence, it cannot be given to or does not reach the parties sought to be charged.

§ 184. Delay in giving notice; how excused.—Delay in giving notice of dishonor is excused when the delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct or negligence. When the cause of delay ceases to operate, notice must be given with reasonable diligence.

§ 185. When notice need not be given to drawer.—Notice of dishonor is not required to be given to the drawer in either of the following cases:

1. Where the drawer and drawee are the same person;
2. Where the drawee is a fictitious person or a person not having capacity to contract;
3. Where the drawer is the person to whom the instrument is presented for payment.
4. Where the drawer has no right to expect or require that the drawee or acceptor will honor the instrument;
5. Where the drawer has countermanded payment.

§ 186. When notice need not be given to indorser.—Notice of dishonor is not required to be given to an indorser in either of the following cases:

1. Where the drawee is a fictitious person or a person not having capacity to contract, and the indorser was aware of the fact at the time he indorsed the instrument;
2. Where the indorser is the person to whom the instrument is presented for payment;
3. Where the instrument was made or accepted for his accommodation.

§ 187. Notice of non-payment where acceptance refused.—Where due notice of dishonor by non-acceptance has been given, notice of a subsequent dishonor by non-payment is not necessary, unless in the meantime the instrument has been accepted.

§ 188. Effect of omission to give notice of non-acceptance.—An omission to give notice of dishonor by non-acceptance does not prejudice the rights of a holder in due course subsequent to the omission.

§ 189. When protest need not be made; when must be made.—Where any negotiable instrument has been dishonored it may be protested for non-acceptance or non-payment, as the case may be; but protest is not required, except in the case of foreign bills of exchange.

Article 10.
Discharge.

Section 200. Instrument; how discharged.
201. When persons secondarily liable on, discharged.
202. Right of party who discharges instrument.
203. Renunciation by holder.
204. Cancellation; unintentional; burden of proof.
205. Alteration of instrument; effect of.
206. What constitutes a material alteration.

§ 200. Instrument; how discharged.—A negotiable instrument is discharged:

1. By payment in due course by or on behalf of the principal debtor;
2. By payment in due course by the party accommodated, where the instrument is made or accepted for accommodation;
3. By the intentional cancellation thereof by the holder;
4. By any other act which will discharge a simple contract for the payment of money;
5. When the principal debtor becomes the holder of the instrument at or after maturity in his own right.

§ 201. When persons secondarily liable on, discharged.—A person secondarily liable on the instrument is discharged.

1. By any act which discharges the instrument.
2. By the intentional cancellation of his signature by the holder;
3. By the discharge of a prior party;
4. By a valid tender of payment made by a prior party.
5. By the release of the principal debtor, unless the holder's right of recourse against the party secondarily liable is expressly reserved;
6. By any agreement binding upon the holder to extend the time of payment or to postpone the holder's right to enforce the instrument, unless the right of recourse against such party is expressly reserved.

§ 202. Right of party who discharges instrument.—Where the instrument is paid by a party secondarily liable thereon, it is not discharged; but the party so paying it is remitted to his former rights as regards all prior parties, and he may strike out his own and all subsequent indorsements, and again negotiate the instrument, except;

1. Where it is payable to the order of a third person, and has been paid by the drawer; and
2. Where it was made or accepted for accommodation, and has been paid by the party accommodated.

§ 203. Renunciation by holder.—The holder may expressly renounce his rights against any party to the instrument, before, at or after its maturity. An absolute and unconditional renunciation of his rights against the principal debtor made at or after the maturity of the instrument, discharges the instrument. But a renunciation does not affect the rights of a holder in due course without notice. A renunciation must be in writing, unless the instrument is delivered up to the person primarily liable thereon.

§ 204. Cancellation; unintentional; burden of proof.—A cancellation made unintentionally, or under a mistake, or without the authority of the holder, is inoperative; but where an instrument or any signature thereon appears to have been canceled the burden of proof lies on the party who alleges that the cancellation was made unintentionally, or under a mistake or without authority.

§ 205. Alteration of instrument; effect of.—Where a negotiable instrument is materially altered without the assent of all parties liable thereon, it is avoided, as against a party who has himself made, authorized or assented to the alteration and subsequent indorsers. But

when an instrument has been materially altered and is in the hands of a holder in due course, not a party to the alteration, he may enforce payment thereof according to its original tenor.

§ 206. What constitutes a material alteration.—Any alteration which changes:

1. The date;
2. The sum payable, either for principal or interest;
3. The time or place of payment;
4. The number or the relations of the parties;
5. The medium or currency in which payment is to be made;

Or which adds a place of payment where no place of payment is specified, or any other change or addition which alters the effect of the instrument in any respect, is a material alteration.

Article 11.
Bills of Exchange; Form and Interpretation.

Section 210. Bill of exchange defined.
211. Bill not an assignment of funds in hands of drawee.
212. Bill addressed to more than one drawee.
213. Inland and foreign bills of exchange.
214. When bill may be treated as promisory note.
215. Referee in case of need.

§ 210. Bill of exchange defined.—A bill of exchange is an unconditional order in writing addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a sum certain in money to order or to bearer.

§ 211. Bill not an assignment of funds in hands of drawee.—A bill of itself does not operate as an assignment of the funds in the hands of the drawee available for the payment thereof and the drawee is not liable on the bill unless and until he accepts the same.

§ 212. Bill addressed to more than one drawee.—A bill may be addressed to two or more drawees jointly, whether they are partners or not; but not to two or more drawees in the alternative or in succession.

§ 213. Inland and foreign bills of exchange.—An inland bill of exchange is a bill which is, or on its face purports to be, both drawn and payable within this state. Any other bill is a foreign bill. Unless the contrary appears on the face of the bill, the holder may treat it as an inland bill.

§ 214. When bill may be treated as promissory note.—Where in a bill the drawer and drawee are the same person, or where the drawee is a fictitious person, or a person not having capacity to contract, the holder may treat the instrument, at his option, either as a bill of exchange or a promissory note.

§ 215. Referee in case of need.—The drawer of a bill and any indorser may insert thereon the name of a person to whom the holder may resort in case of need, that is to say, in case the bill is dishonored by non-acceptance or non-payment. Such person is called the referee in case of need. It is in the option of the holder to resort to the referee in case of need or not as he may see fit.

Article 12.
Acceptance.

Section 220. Acceptance, how made.
221. Holder entitled to acceptance on face of bill.
222. Acceptance by separate instrument.
223. Promise to accept; when equivalent to acceptance.
224. Time allowed drawee to accept.
225. Liability of drawee retaining or destroying bill.
226. Acceptance of incomplete bill.
227. Kinds of acceptances.
228. What constitutes a general acceptance.
229. Qualified acceptance.
230. Rights of parties as to qualified acceptance.

§ 220. Acceptance; how made.—The acceptance of a bill is the signification by the drawee of his assent to the order of the drawer. The acceptance must be in writing and signed by the drawee. It must not express that the drawee will perform his promise by any other means than the payment of money.

§ 221. Holder entitled to acceptance on face of bill.—The holder of a bill presenting the same for acceptance may require that the acceptance be written on the bill, and if such request is refused, may treat the bill as dishonored.

§ 222. Acceptance by separate instrument.—Where an acceptance is written on a paper other that the bill itself, it does not bind the acceptor, except in favor of a person to whom it is shown and who, on the faith thereof receives the bill for value.

§ 223. Promise to accept; when equivalent to acceptance.—An unconditional promise in writing to accept a bill before it is drawn is deemed an actual acceptance in favor of every person who, upon the faith thereof, receives the bill for value.

§ 224. Time allowed drawee to accept.—The drawee is allowed twenty-four hours after presentment in which to decide whether or not he will accept the bill; but the acceptance if given dates as of the day of presentation.

§ 225. Liability of drawee retaining or destroying bill.—Where a drawee to whom a bill is delivered for acceptance destroys the same, or refuses within twenty-four hours after such delivery, or within such other period as the holder may allow, to return the bill accepted or non-accepted to the holder, he will be deemed to have accepted the same.

§ 226. Acceptance of incomplete bill.—A bill may be accepted before it has been signed by the drawer, or while otherwise incomplete, or when it is overdue, or after it has been dishonored by a previous refusal to accept, or by non-payment. But when a bill payable after sight is dishonored by non-acceptance and the drawee subsequently accepts it, the holder, in the absence of any different agreement, is entitled to have the bill accepted as of the date of the first presentment.

§ 227. Kinds of acceptances.—An acceptance is either general or qualified. A general acceptance assents without qualification to the order of the drawer. A qualified acceptance in express terms varies the effect of the bill as drawn.

§ 228. What constitutes a general acceptance.—An acceptance to pay at a particular place is a general acceptance unless it expressly states that the bill is to be paid there only and not elsewhere.

§ 229. Qualified acceptance.—An acceptance is qualified which is:

1. Conditional, that is to say, which makes payment by the acceptor dependent on the fulfilment of a condition therein stated;
2. Partial, that is to say, an acceptance to pay part only of the amount for which the bill is drawn;

3. Local, that is to say, an acceptance to pay only at a particular place;
4. Qualified as to time;
5. The acceptance of some one or more of the drawees, but not of all.

§ 230. Rights of parties as to qualified acceptance.—The holder may refuse to take a qualified acceptance, and if he does not obtain an unqualified acceptance, he may treat the bill as dishonored by non-acceptance. Where a qualified acceptance is taken, the drawer and indorsers are discharged from liability on the bill, unless they have expressly or impliedly authorized the holder to take a qualified acceptance, or subsequently assent thereto. When the drawer or an indorser receives notice of a qualified acceptance, he must within a reasonable time express his dissent to the holder, or he will be deemed to have assented thereto.

Article 13.
Presentment for Acceptance.

Section 240. When presentment for acceptance must be made.
241. When failure to present releases drawer and indorser.
242. Presentment; how made.
243. On what days presentment may be made.
244. Presentment where time is insufficient.
245. When presentment is excused.
246. When dishonored by non-acceptance.
247. Duty of holder where bill not accepted.
248. Rights of holder where bill not accepted.

§ 240. When presentment for acceptance must be made.—Presentment for acceptance must be made:
1. Where the bill is payable after sight, or in any other case where presentment for acceptance is necessary in order to fix the maturity of the instrument; or
2. Where the bill expressly stipulates that it shall be presented for acceptance; or
3. Where the bill is drawn payable elsewhere than at the residence or place of business of the drawee.

In no other case is presentment for acceptance necessary in order to render any party to the bill liable.

§ 241. When failure to present releases drawer and indorser.—Except as herein otherwise provided. the holder of a bill which is required by the next preceding section to be presented for acceptance must either present it for acceptance or negotiate it within a reasonable time. If he fails to do so, the drawer and all indorsers are discharged.

§ 242. Presentment; how made.—Presentment for acceptance must be made by or on behalf of the holder at a reasonable hour, on a business day, and before the bill is overdue, to the drawee or some person authorized to accept or refuse acceptance on his behalf; and
1. Where a bill is addressed to two or more drawees who are not partners, presentment must be made to them all, unless one has authority to accept or refuse acceptance for all, in which case presentment may be made to him only;
2. Where the drawee is dead, presentment may be made to his personal representative;
3. Where the drawee has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, presentment may be made to him or to his trustee or assignee.

§ 243. On what days presentment may be made.—A bill may be presented for acceptance on any day on which negotiable instruments may be presented for payment under the provisions of sections one hundred and thirty-two and one hundred and forty-five of this chapter. When Saturday is not otherwise a holiday, presentment for acceptance may be made before twelve o'clock noon on that day.

§ 244. Presentment when time is insufficient.—Where the holder of a bill drawn payable elsewhere than at the place of business or the residence of the drawee has not time with the exercise of reasonable diligence to present the bill for acceptance before presenting it for payment on the day that it falls due, the delay caused by presenting the bill for acceptance before presenting it for payment is excused and does not discharge the drawers and indorsers.

§ 245. Where presentment is excused.—Presentment for acceptance is excused and a bill may be treated as dishonored by non-acceptance in either of the following cases:
1. Where the drawee is dead or has absconded, or is a fictitious person or a person not having capacity to contract by bill;
2. Where, after the exercise of reasonable diligence, presentment cannot be made:
3. Where, although presentment has been irregular, acceptance has been refused on some other ground.

§ 246. When discharged by non-acceptance.—A bill is dishonored by non-acceptance:
1. When it is duly presented for acceptance, and such an acceptance as is prescribed by this chapter is refused or cannot be obtained; or
2. When presentment for acceptance is excused and the bill is not accepted.

§ 247. Duty of holder where bill not accepted.—Where a bill is duly presented for acceptance and is not accepted within the prescribed time, the person presenting it must treat the bill as dishonored by non-acceptance or he loses the right of recourse against the drawer and indorsers.

§ 248. Rights of holder where bill not accepted.—When a bill is dishonored by non-acceptance, an immediate right of recourse against the drawers and indorsers accrues to the holder, and no presentment for payment is necessary.

Article 14.
Protest

Section 260. In what cases protest necessary.
261. Protest; how made.
262. Protest; by whom made.
263. Protest; when to be made.
264. Protest; where made.
265. Protest both for non-acceptance and non-payment.
266. Protest before maturity where acceptor insolvent.
267. When protest dispensed with.
268. Protest where bill is lost or destroyed or wrongfully detained.

§ 260. In what cases protest necessary.—Where a foreign bill appearing on its face to be such is dishonored by non-acceptance, it must be duly protested for non-acceptance, and where such a bill which has not previously been dishonored by non-acceptance is dishonored by non-payment, it must be duly protested for non-payment. If it is not so protested, the drawer and indorsers are discharged. Where a bill does not appear

on its face to be a foreign bill, protest thereof in case of dishonor is unnecessary.

§ 261. Protest; how made.—The protest must be annexed to the bill, or must contain a copy thereof, and must be under the hand and seal of the notary making it, and must specify:

1. The time and place of presentment;
2. The fact that presentment was made and the manner thereof;
3. The cause or reason for protesting the bill;
4. The demand made and the answer given, if any, or the fact that the drawee or acceptor could not be found.

§ 262. Protest; by whom made.—Protest may be made by:

1. A notary public; or
2. By any respectable resident of the place where the bill is dishonored, in the presence of two or more credible witnessses.

§ 263. Protest; when to be made.—When a bill is protested, such protest must be made on the day of its dishonor, unless delay is excused as herein provided. When a bill has been duly noted, the protest may be subsequently extendedly as of the date of the noting.

§ 264. Protest; where made.—A bill must be protested at the place where it is dishonored, except that when a bill drawn payable at the place of business or residence of some person other than the drawee, has been dishonored by non-acceptance, it must be protested for non-payment at the place where it is expressed to be payable, and no further presentment for payment to, or demand on, the drawee is necessary.

§ 265. Protest both for non-acceptance and non-payment.—A bill which has been protested for non-acceptance may be subsequently protested for non-payment.

§ 266. Protest before maturity where acceptor insolvent.—Where the acceptor has been adjudged a bankrupt or an insolvent, or has made an assignment for the benefit of creditors, before the bill matures, the holder may cause the bill to be protested for better security against the drawer and indorsers.

§ 267. When protest dispensed with.—Protest is dispensed with by any circumstances which would dispense with notice of dishonor. Delay in noting or protesting is excused when delay is caused by circumstances beyond the control of the holder and not imputable to his default, misconduct, or negligence. When the cause of delay ceases to operate, the bill must be noted or protested with reasonable diligence.

§ 268. Protest where bill is lost or destroyed or wrongfully detained.—Where a bill is lost or destroyed, or is wrongly detained from the person entitled to hold it, protest may be made on a copy or written particulars thereof.

Article 15

Acceptance for Honor.

Section 280. When bill may be accepted for honor.
281. Acceptance for honor; how made.
282. When deemed to be an acceptance for honor of the drawer.
283. Liability of acceptor for honor.
284. Agreement of acceptor for honor.
285. Maturity of bill payable after sight; accepted for honor.
286. Protest of bill accepted for honor or containing a reference in case of need.
287. Presentment for payment to acceptor for honor; how made.
288. When delay in making presentment is excused.
289. Dishonor of bill by acceptor for honor.

§ 280. When bill may be accepted for honor.—Where a bill of exchange has been protested for dishonor by non-acceptance or protested for better security and is not overdue, any person not being a party already liable thereon may, with the consent of the holder, intervene and accept the bill supra protest for the honor of any party liable thereon or for the honor of the person for whose account the bill is drawn. The acceptance for honor may be for part only of the sum for which the bill is drawn; and where there has been an acceptance for honor for one party, there may be further acceptance by a different person for the honor of another party.

§ 281. Acceptance for honor; how made.—An acceptance for honor supra protest must be in writing and indicate that it is an acceptance for honor, and must be signed by the acceptor for honor.

§ 282. When deemed to be an acceptance for honor of the drawer.—Where an acceptance for honor does not expressly state for whose honor it is made, it is deemed to be an acceptance for the honor of the drawer.

§ 283. Liability of acceptor for honor.—The acceptor for honor is liable to the holder and to all parties to the bill subsequent to the party for whose honor he has accepted.

§ 284. Agreement of acceptor for honor.—The acceptor for honor by such acceptance engages that he will on due presentment pay the bill according to the terms of his acceptance, provided it shall not have been paid by the drawee, and provided also that it shall have been duly presented for payment and protested for non-payment and notice of dishonor given to him.

§ 285. Maturity of bill payable after sight; accepted for honor.—Where a bill payable after sight is accepted for honor, its maturity is calculated from the date of the noting for non-acceptance and not from the date of the acceptance for honor.

§ 286. Protest of bill accepted for honor or containing a reference in case of need.—Where a dishonored bill has been accepted for honor supra protest or contains a reference in case of need, it must be protested for non-payment before it is presented for payment to the acceptor for honor or referee in case of need.

§ 287. Presentment for payment to acceptor for honor; how made.—Presentment for payment to the acceptor for honor must be made as follows:

1. If it is to be presented in the place where the protest for non-payment was made, it must be presented not later than the day following its maturity.
2. If it is to be presented in some other place than the place where it was protested, then it must be forwarded within the time specified in section one hundred and seventy-five.

§ 288. When delay in making presentment is excused.—The provisions of section one hundred and forty-one apply where there is delay in making presentment to the acceptor for honor or referee in case of need.

§ 289. Dishonor of bill by acceptor for honor.—When the bill is dishonored by the acceptor for honor it must be protested for non-payment by him.

Article 16.
Payment for Honor.

Section 300. Who may make payment for honor.
301. Payment for honor; how made.
302. Declaration before payment for honor.
303. Preference of parties offering to pay for honor.
304. Effect on subsequent parties where bill is paid for honor.
305. Where holder refuses to receive payment supra protest.
306. Rights of payer for honor.

§ 300. Who may make payment for honor.—Where a bill has been protested for non-payment, any person may intervene and pay it supra protest for the honor of any person liable thereon or for the honor of the person for whose account it was drawn.

§ 301. Payment for honor; how made.—The payment for honor supra protest in order to operate as such and not as a mere voluntary payment must be attested by a notarial act of honor which may be appended to the protest or form an extension to it.

§ 302. Declaration before payment for honor.—The notarial act of honor must be founded on a declaration made by the payer for honor or by his agent in that behalf declaring his intention to pay the bill for honor and for whose honor he pays.

§ 303. Preference of parties offering to pay for honor.—Where two or more persons offer to pay a bill for the honor of different parties, the person whose payment will discharge most parties to the bill is to be given the preference.

§ 304. Effect on subsequent parties where bill is paid for honor.—Where a bill has been paid for honor all parties subsequent to the party for whose honor it is paid are discharged, but the payer for honor is subrogated for, and succeeds to, both the rights and duties of the holder as regards the party for whose honor he pays and all parties liable to the latter.

§ 305. Where holder refuses to receive payment supra protest.—Where the holder of a bill refused to receive payment supra protest, he loses his right of recourse against any party who would have been discharged by such payment.

§ 306. Rights of payer for honor.—The payer for honor on paying to the holder the amount of the bill and the notarial expenses incidental to its dishonor, is entitled to receive both the bill itself and the protest.

Article 17.
Bills in Sets.

Section 310. Bill in sets constitute one bill.
311. Rights of holders where different parts are negotiated.
312. Liability of holder who indorses two or more parts of a set to different persons.
313. Acceptance of bills drawn in sets.
314. Payment by acceptor of bills drawn in sets.
315. Effect of discharging one of a set.

§ 310. Bill in sets constitutes one bill.—Where a bill is drawn in a set, each part of the set being numbered and containing a reference to the other part, the whole of the parts constitutes one bill.

§ 311. Rights of holders where different parts are negotiated.—Where two or more parts of a set are negotiated to different holders in due course, the holder whose title first accrues is as between such holders the true owner of the bill. But nothing in this section affects the rights of a person who in due course accepts or pays the part first presented to him.

§ 312. Liability of holder who indorses two or more parts of a set to different persons.—Where the holder of a note indorses two or more parts to different persons he is liable on every such part, and every indorser subsequent to him is liable on the part he has himself indorsed, as if such parts were separate bills.

§ 313. Acceptance of bills drawn in sets.—The acceptance may be written on any part and it must be written on one part only. If the drawee accepts more than one part, and such accepted parts are negotiated to different holders in due course, he is liable on every such part as if it were a separate bill.

§ 314. Payment by acceptor of bills drawn in sets.—When the acceptor of a bill drawn in a set pays it without requiring the part bearing his acceptance to be delivered up to him, and that part at maturity is outstanding in the hands of a holder in due course, he is liable to the holder thereon.

§ 315. Effect of discharging one of a set.—Except as herein otherwise provided, where any one part of a bill drawn in a set is discharged by payment or otherwise the whole bill is discharged.

Article 18.
Promissory Notes and Checks.

Section 320. Promissory note defined.
321. Check defined.
322. Within what time a check must be presented.
323. Certification of check; effect of.
324. Effect where holder of check procures it to be certified.
325. When check operates as an assignment.
325-a. No stopping payment after certification.
326. Recovery of forged check.
327. Saturday afternoon bank transactions.

§ 320. Promissory note defined.—A negotiable promissory note within the meaning of this chapter is an unconditional promise in writing made by one person to another signed by the maker, engaging to pay on demand or at a fixed or determinable future time, a sum certain in money to order or to bearer. Where a note is drawn to the maker's own order, it is not complete until indorsed by him.

§ 321. Check defined.—A check is a bill of exchange drawn on a bank payable on demand. Except as herein otherwise provided, the provisions of this chapter applicable to a bill of exchange payable on demand apply to a check.

§ 322. --Within what time a check must be presented.—A check must be presented for payment within a reasonable time after its issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay.

§ 323. Certification of check; effect of.—Where a check is certified by the bank on which it is drawn the certification is equivalent to an acceptance.

§ 324. Effect where the holder of check procures it to be certified.—Where the holder of a check procures it to be accepted or certified the drawer and all indorsers are discharged from liability thereon.

§ 325. When check operates as an assignment.—A check of itself does not operate as an assignment of any part of the funds to the credit of the drawer with the

bank, and the bank is not liable to the holder, unless and until it accepts or certifies the check.

§ 325-a. No stopping payment after certification.—A bank, banker or trust company which has certified a check, note or other instrument for the payment of money at the request of the drawer, payee or holder thereof shall not thereafter be required to stop or refuse payment thereof upon the order, demand or request of the drawer or of any other party thereto.

(Added by L. 1944, c. 537, eff. April 15, 1944.)

§ 326. Recovery of forged check.—No bank shall be liable to a depositor for the payment by it of a forged or raised check, inless within one year after the return to the depositor of the voucher of such payment, such depositor shall notify the bank that the check so paid was forged or raised.

§ 327. Saturday afternoon bank transactions.—Nothing in any law of this state shall in any manner whatsoever affect the validity of, or render void or voidable, the payment, certification or acceptance of a check or other negotiable instrument or any other transaction by a bank or trust company in this state, because done or performed on any Saturday between twelve o'clock noon and midnight, provided such payment, certification, acceptance, or other transaction would be valid if done or performed before twelve o'clock noon on such Saturday; provided, further, that nothing herein shall be construed to compel any bank or trust company in this state, which by law or custom is entitled to close at twelve o'clock noon on any Saturday, to keep open for the transaction of business or to perform any of the acts or transactions aforesaid, on any Saturday after such hour except at its own option.

(Added by L. 1929, c. 588, eff. April 12, 1929.)

Article 19.
Notes Given for Patent Rights and for a Speculative Consideration.

Section 330. Negotiable instruments given for patent rights.
331. Negotiable instruments given for a speculative consideration.
332. How negotiable bonds are made non-negotiable.

§ 330. Negotiable instruments given for patent rights.—A promissory note or other negotiable instrument, the consideration of which consists wholly or partly of the right to make, use or sell any invention claimed or represented by the vendor at the time of sale to be patented, must contain the words "given for a patent right" prominently and legibly written or printed on the face of such note or instrument above the signature thereto, and such note or instrument in the hands of any purchaser or holder is subject to the same defenses as in the hands of the original holder; but this section does not apply to a negotiable instrument given solely for the purchase price or the use of a patented article.

§ 331. Negotiable instruments for a speculative consideration.—If the consideration of a promissory note or other negotiable instrument consists in whole or in part of the purchase price of any farm product, at a price greater by at least four times than the fair market value of the same product at the time in the locality, or of the membership and rights in an association, company or combination to produce or sell any farm product at a fictitious rate, or of a contract or bond to purchase or sell any farm product at a price greater by four times than the market value of the same product at the time in the locality, the words, "given for a speculative consideration," or other words clearly showing the nature of the consideration must be prominently and legibly written or printed on the face of such note or instrument above the signature thereof; and such note or instrument, in the hands of any purchaser or holder, is subject to the same defenses as in the hands of the original owner or holder.

§ 332. How negotiable bonds are made non-negotiable.—The owner or holder of any corporate bond or obligation (except such as are designated to circulate as money, payable to bearer), heretofore or hereafter issued in and payable in this state, but not registered in pursuance of any State law, may make such bond or obligation, or the interest coupon accompanying the same, non-negotiable, by subscribing his name to a statement indorsed thereon, that such bond, obligation or coupon is his property; and thereon the principal sum, therein mentioned is payable only to such owner or holder, or his legal representatives or assigns, unless such bond, obligation or coupon be transferred by indorsement in blank or payable to bearer, or to order, with the addition of the assignor's place of residence. Nothing contained in this section, however, shall apply to an obligation issued pursuant to the local finance law.

(Amended by L. 1943, c. 710, pt. 1, Sec. 1600, eff. Sept. 2, 1945; L. 1945, c. 838, Sec. 44, eff. Sept. 2, 1945.)

Article 19A
Provisions for Bank Collections.
(This entire Article added by L. 1929, c. 589, Sec. 1, eff. April 12, 1929.)

Section 350. Definitions.
350-a. Bank as agent for collection.
350-b. Item on same bank.
350-c. Legal effect of indorsements.
350-d. Duty and responsibility of bank collecting agents.
350-e. Rules of ordinary care in forwarding and presentment.
350-f. Items received through mail.
350-g. Items lost in transit.
350-h. Medium of payment.
350-i. Medium of remittance.
350-j. Election to treat as dishonored items presented by mail.
350-k. Notice of dishonor of items presented by mail.
350-l. Insolvency and preferences.

§ 350. Definitions.—For the purposes of this article:

(a) Bank. The term "bank" shall include any person, firm or corporation engaged in the business of receiving and paying deposits of money within this state. A branch or office of any such bank shall be deemed a bank.

(b) Item. The term "item" means any check, note or other instrument providing for the payment of money.

§ 350-a. Bank as agent for collection.—Except as otherwise provided by agreement and except as to subsequent holders of a negotiable instrument payable to bearer or indorsed specially or in blank, where an item is deposited or received for collection, the bank of deposit shall be agent of the depositor for its collection and each subsequent collecting bank shall be sub-agent of the depositor but shall be authorized to follow the instructions of its immediate forwarding bank and any

credit given by any such agreement or sub-agent bank therefor shall be revocable until such time as the proceeds are received in actual money or an unconditional credit given on the books of another bank, which such agent has requested or accepted. Where any such bank allows any revocable credit for an item to be withdrawn, such agency relation shall nevertheless continue except the bank shall have all the rights of an owner thereof against prior and subsequent parties to the extent of the amount withdrawn.

§ 350-b. Item on same bank.—A credit given by a bank for an item drawn on or payable at such bank shall be provisional, subject to revocation at or before the end of the day on which the item is deposited in the event the item is found not payable for any reason. Whenever a credit is given for an item deposited after banking hours such right of revocation may be exercised during the following business day.

§ 350-c. Legal effect of indorsements.—An indorsement of an item by the payee or other depositor "for deposit" shall be deemed a restrictive indorsement and indicate that the indorsee bank is an agent for collection and not owner of the item.

An indorsement "pay any bank or banker" or having equivalent words shall be deemed a restrictive indorsement and shall indicate the creation of an agency relation in any subsequent bank to whom the paper is forwarded unless coupled with words indicating the creation of a trustee relationship; and such indorsement or other restrictive indorsement whether creating an agency or trustee relationship shall constitute a guaranty by the indorser to all subsequent holders and to the drawee or payor of the genuineness of and the authority to make prior indorsements and also to save the drawee or payor harmless in the event any prior indorsement appearing thereon is defective or irregular in any respect unless such indorsement is coupled with appropriate words disclaiming such liability as guarantor.

Where a deposited item is payable to bearer or indorsed by the depositor in blank or by special indorsement, the fact that such item is so payable or indorsed shall not change the relation of agent of the bank of deposit to the depositor, but subsequent holders shall have the right to rely on the presumption that the bank of deposit is the owner of the item. The indorsement of an item by the bank of deposit or by any subsequent holder in blank or by special indorsement or its delivery when payable to bearer, shall carry the presumption that the indorsee or transferee is owner provided there is nothing upon the face of the paper or in any prior indorsement to indicate an agency or trustee relation of any prior party. But where an item is deposited or is received for collection indorsed specially or in blank, the bank may convert such an indorsement into a restrictive indorsement by writing over the signature of the indorser the words "for deposit" or "for collection," or other restrictive words to negative the presumption that such bank of deposit or indorsee bank is owner; and in the case of an item deposited or received for collection payable to bearer, may negative such presumption by indorsing thereon the words "received for deposit" or "received for collection" or words of like import.

§ 350-d. Duty and responsibility of bank collecting agents.—It shall be the duty of the initial or any subsequent agent collecting bank to exercise ordinary care in the collection of an item and when such duty is performed such agent bank shall not be responsible if for any cause payment is not received in money or an unconditional credit given on the books of another bank, which such agent bank has requested or accepted. An initial or subsequent agent collecting bank shall be liable for its own lack of exercise of ordinary care but shall not be liable for the neglect, misconduct, mistakes or defaults of any other agent bank or of the drawee or payor bank.

§ 350-e. Rules of ordinary care in forwarding and presentment.—(a) Where an item is received on deposit or by a subsequent agent bank for collection, payable in another town or city, it shall be deemed the exercise of ordinary care to forward such item by mail, not later than the business day next following its receipt either (1) direct to the drawee or payor in the event such drawee or payor is a bank or (2) to another bank collecting agent, according to the usual banking custom, either located in the town or city where the item is payable or in another town or city.

(b) Where an item is received on deposit or by a subsequent agent bank for collection, payable by or at another bank in the same town or city in which such agent bank is located, it shall be deemed the exercise of care to present the item for payment at any time not later than the next business day following the day on which the item is received either (1) at the counter of the drawee or payor by agent or messenger or (2) through the local clearing house under the regular established procedure, or according to the usual banking custom where the collecting or payor bank is located in an outlying district.

(c) The designation of the above methods shall not exclude any other method of forwarding or presentment which under existing rules of law would constitute ordinary care.

§ 350-f. Items received through the mail.—Where the item is received by mail by a solvent drawee or payor bank, it shall be deemed paid when the amount is finally charged to the account of the maker or drawer.

§ 350-g. Items lost in transit.—Where an agent bank forwards an item for collection, it shall not be responsible for its loss or destruction in transit, or when in the possession of others, for its inability to repossess itself thereof, provided there has been no lack of ordinary care on its part.

§ 350-h. Medium of payment.—Where ordinary care is exercised, any agent collecting bank may receive in payment of an item without becoming responsible as debtor therefor, whether presented by mail, through the clearing house or over the counter of the drawee or payor, in lieu of money, either (a) the check or draft of the drawee or payor upon another bank or (b) the check or draft of any other bank upon any bank other than the drawee or payor of the item or (c) such method of settlement as may be customary in a local clearing house or between clearing banks or otherwise; provided that whenever such agent collecting bank shall request or accept in payment an unconditional credit which has been given to it on the books of the drawee or payor or on the books of any other bank, such agent collecting bank shall become debtor for such item and shall be responsible therefor as if the proceeds were actually received by it in money.

§ 350-i. Medium of remittance.—Where ordinary care is exercised, any agent collecting bank may receive

from any subsequent bank in the chain of collection in remittance for an item which has been paid, in lieu of money, the check or draft of the remitting bank upon any bank other than itself or the drawee or payor of the item or such other method of settlement as may be customary; provided that whenever such agent collecting bank shall request or accept an unconditional credit which has been given to it on the books of the remitting bank or on the books of any other bank, such agent collecting bank shall become debtor for such item and shall be responsible therefor as if the proceeds were actually received by it in money.

§ 350-j. Election to treat as dishonored items presented by mail.—Where an item is duly presented by mail to the drawee or payor, whether or not the same has been charged to the account of the maker or drawer thereof or returned to such maker or drawer, the agent collecting bank so presenting may, at its election, exercised with reasonable diligence, treat such item as dishonored by non-payment and recourse may be had upon prior parties thereto in any of the following cases:

(1) Where the check or draft of the drawee or payor bank upon another bank received in payment therefor shall not be paid in due course;

(2) Where the drawee or payor bank shall without request or authority tender as payment its own check or draft upon itself or other instrument upon which it is primarily liable;

(3) Where the drawee or payor bank shall give an unrequested or unauthorized credit therefor on its books or the books of another bank; or

(4) Where the drawee or payor shall retain such item without remitting therefor on the day of receipt or on the day of maturity if payable otherwise than on demand and received by it prior to or on such day of maturity.

Provided, however, that in any case where the drawee or payor bank shall return any such item unpaid not later than the day of receipt or of maturity as aforesaid in the exercise of its right to make payment only at its own counter, such item cannot be treated as dishonored by non-payment and the delay caused thereby shall not relieve prior parties from liability. Provided further that no agent collecting bank shall be liable to the owner of an item where, in the exercise of ordinary care in the interest of such owner, it makes or does not make the election above provided or takes such steps as it may deem necessary in cases (2), (3) and (4) above. (Amended by L. 1930, c. 436, eff. April 14, 1930.)

§ 350-k. Notice of dishonor of items presented by mail.—In the case of the dishonor of an item duly presented by mail as provided for in the next preceding section, notice of dishonor of such item to prior parties shall be sufficient if given with reasonable diligence after such dishonor; and further in the event of failure to obtain the return of any such item notice of dishonor may be given upon a copy or written particulars thereof, and delay in giving notice of dishonor caused by an attempt with reasonable diligence to obtain return of such item shall be excused.

§ 350-l. Insolvency and preferences.—1. When the drawee or payor, or any other agent collecting bank shall fail or be closed for business by law or by action of the board of directors or by other proper legal action, after an item shall be mailed or otherwise entrusted to it for collection or payment but before the actual collection or payment thereof, it shall be the duty of the receiver or other official in charge of its assets to return such item, if same be in his possession, to the forwarding or presenting bank with reasonable diligence.

2. Except in cases where an item or items is treated as dishonored by non-payment as provided in section three hundred and fifty-j, when a drawee or payor bank has presented to it for payment an item or items drawn upon or payable by or at such bank and at the time has on deposit to the credit of the maker or drawer an amount equal to such item or items and such drawee or payor shall fail or close for business as above, after having charged such item or items to the account of the maker or drawer thereof or otherwise discharged his liability thereon but without such item or items having been paid or settled for by the drawee or payor, either in money or by an unconditional credit given on its books or on the books of any other bank, which has been requested or accepted so as to constitute such drawee or payor or other bank debtor therefor, the assets of such drawee or payor shall be impressed with a trust in favor of the owner or owners of such item or items for the amount thereof, or for the balance payable upon a number of items which have been exchanged, and such owner or owners shall be entitled to a preferred claim upon such assets, irrespective of whether the fund representing such item or items can be traced or identified as part of such assets or has been intermingled with or converted into other assets of such failed bank.

3. Where an agent collecting bank other than the drawee or payor shall fail or be closed for business as above, after having received in any form the proceeds of an item or items entrusted to it for collection, but without such item or items having been paid or remitted for by it either in money or by an unconditional credit given on its books or on the books of any other bank which has been requested or accepted so as to constitute such failed collecting or other bank debtor therefor, the assets of such agent collecting bank which has failed or been closed for business as above shall be impressed with a trust in favor of the owner or owners of such item or items for the amount of such proceeds and such owner or owners shall be entitled to a preferred claim upon such assets, irrespective of whether the fund representing such item or items can be traced and identified as part of such assets or has been intermingled with or converted into other assets of such failed bank.

NEGOTIABLE PAPER

A term usually used to denote those negotiable instruments which evidence the borrowing of money on a short-term basis for commercial purposes, e. g., notes, trade and bankers' acceptances, bills of exchange, etc. (See Negotiable Instruments.)

NEGOTIABLE SECURITIES

Coupon or bearer bonds (whether issued by a Government, state, municipality, railroad, public utility or industrial corporation), certificates of indebtedness, notes, warrants, coupons, and stock certificates, which by their terms permit of transfer of title by delivery or assignment, are negotiable securities.

(See Good Delivery.)

NEGOTIATE

To transfer the title of a negotiable instrument from one person to another by indorsement and delivery, or by mere delivery, so that the transferee becomes the holder and is vested with all the rights of the holder in due course under specified conditions. Negotiation also implies a sale or passing of value. In a collateral sense therefore, since negotiating a note involves relinquishment of its title by the transferor, the term means to sell or discount, i. e., to borrow money.

NEGOTIATION

See Negotiable Instruments, Negotiate.

NET

The balance after all possible deductions, offsets and allowances have been made from the gross amount, bringing it to its lowest terms, e. g., net weight, net price, net wealth, net assets, net debt, and net profits. Some of these terms are explained below.

NET AVAILS

The proceeds of a discounted note; the sum of money given to the borrower in discounting a note, being equivalent to the face of the note less the discount. It is also known as Proceeds.

NET BONDED DEBT

The aggregate of bonds issued less those repurchased by the corporation and held in the treasury, or those retired and cancelled, and less sinking fund assets, if any, set aside to redeem them.

NET CHANGE

The advance or decline of a security for a day or other period. The net change in stocks is released by stock exchanges to the daily newspapers for publication in the financial section, and is determined by taking the difference between the last sale for the current day and the last sale for the first preceding day on which such sale occurred. Normally, net change measures the difference between last sales of two consecutive days, but in the case of inactive stocks which rarely trade, the period covered by net change may vary widely.

NET DEBT

As applied to a corporation, the total fixed and current debt (liabilities), less sinking fund and cash or other assets specifically set aside for their payment. As applied to municipal or state finance, the term refers to the total funded and floating debt outstanding less sinking fund accruals.

NET DEMAND DEPOSITS

A term distinguished from Gross Deposits (q.v.), being the basis upon which the legal reserve of banks is computed. For member banks of the Federal Reserve System, the Banking Act of 1935 defines net demand deposits as the excess of all demand deposits, including deposits due to other banks and the U. S. Government, over demand balances due from other domestic banks (except Federal Reserve Banks, foreign banks or branches thereof, foreign branches of domestic banks, and private banks) and cash items in process of collection. (See Deposits, Net Deposits.)

NET EARNINGS

In bank accounting, net operating or current earnings refer to the net of gross earnings less expenses, before crediting or charging the net of recoveries and profits on sale of securities, and losses and charge-offs. In their reports on bank earnings, the Board of Governors of the Federal Reserve System show net current earnings before income taxes on net profits, but bank managements in reporting such net current earnings usually deduct the income taxes, so that stockholders may have both the net current earnings and the net profits on an after income taxes basis.

Otherwise, net earnings is a non-technical term, as the proper technical term is net income, in the case of railroads and public utilities, and net profits in the case of industrials and banks. (See Net Income Net Profits.)

NET INCOME

Although accounting practice is not uniform, this term is usually confined to the operating statements of railroads and public utilities and is analogous to net profit in the profit and loss statements of industrial and mercantile corporations. For railroad and public utility corporations, net income denotes that portion of income determined after subtracting all operating costs and non-income taxes from gross revenues, and after deduction of interest and other fixed and contingent charges and income taxes from gross income. It is therefore the sum applicable to the allocation of capital and sinking funds, payment of dividends and additions to surplus.

NET INDEBTEDNESS

See Net Debt.

NET PRICE

The price of a commodity or item of merchandise after deducting all discounts, commissions and allowance. In buying and selling securities, the commission for buying is added to the purchase price, and the commission for selling and State and Federal taxes are deducted from the sale proceeds.

NET PROFITS

Although accounting practice is not uniform, net profits is practically synonymous with net income, the former being used of industrial and commercial corporations, the latter of railroads and public utilities. Net profits for a given accounting period are derived in the profit and loss statement by deducting from gross sales the sum of the cost of materials or merchandise sold, selling and general administrative expenses, including insurance, taxes, interest and depreciation, and income taxes. Thus, net profits is the sum applicable to dividends, appropriations and surplus.

NET SURPLUS

In corporation accounting, net Earned Surplus as of the end of a specified period is the result of adding or deducting profit or loss for the period to or from the Earned Surplus at the beginning of the period and deducting dividends paid or declared and other appropriations. In the balance sheet, it is shown as Earned Surplus (or Deficit) as of the end of the accounting period, representing the undivided or accumulated net profits or losses after deduction of dividends and other appropriations.

In bank accounting, the Surplus account is always maintained at a fixed round sum, subject to change by action of the board of directors, as in combination with Capital Stock account, it is the basis for determining the amount of membership stock in the Federal Reserve Bank, the legal limits on loans and investments, acceptance powers, etc. The Undivided Profits account serves as the current surplus account, reflecting net additions or net deductions from net profits or losses, after deduction of dividends paid or declared and other appropriations. (See Surplus.)

NET WORTH

From an accounting standpoint, the excess of assets over liabilities; also known as Proprietorship or Capital. In the case of a corporation, it is represented by the capital stock, surplus and other free and clear equity reserve accounts, if any. Among partnerships, it is represented by the sum of the partners' capital accounts, and in the case of an individual, by the capital account.

From a legal standpoint, net worth represents the equity of the owners in the business, i. e., the net assets determined by subtracting all liabilities from the going value of the assets.

From the standpoint of the credit analyst engaged in judging credit risks, the net worth of a corporation is the sum of the capital stock, surplus and equity reserves, less good will, patents, and other intangible assets, if any. Only actual tangible assets are included in the determination of net worth of a company applying for credit. It is a rule of thumb among bank credit men that unsecured loans should not be extended to exceed one-third of a company's net worth. Among security analysts, book value of a stock is also figured on a net tangible equity basis.

(See Intangibles.)

NEW BUSINESS DEPARTMENT

A department organized in the larger banks which corresponds to the sales promotion department among manufacturing and mercantile concerns. It is also known as the business extension or business development department, and may control or be associated with the advertising or publicity department. This group of departments constitutes a practically new role in modern banking and has arisen out of the increasing competition for new business, and the campaign to educate the public to a greater use of banking facilities. The chief objectives of the new business department are to secure more accounts, to maintain satisfactory relations with old accounts, and to build up small and dormant accounts. Since the primary object of bank advertising is to increase the institution's deposits, and therefore its lending capacity, there are three ways of accomplishing this purpose: (1) by securing new deposit customers; (2) by stimulating accounts already customers; and (3) by encouraging customers of one department to become active customers of other departments.

The work of the department is usually in charge of a senior official, since business development is one of the most insistent problems of bank management. This work may be divided under three heads, correspondence, solicitation, and records. Correspondence is conducted with the list of prospects, and some of the large banks maintain a regular staff of solicitors to find new sources of business.

The chief record of the department is usually the Central File (q.v.). This file should contain a card for each customer and prospect, and show the principal items of information which may be necessary to a continuous following-up of the accounts.

The department works in close co-operation with the credit department, the latter oftentimes furnishing "leads" and checking prospective accounts. Names of prospects are obtained from solicitors, applicants for particular kinds of services, applicants for information, officers, employees, reports of new incorporations, removal notices, newspaper clippings, etc. (See Publicity Department.)

NEW DEAL

The self-adopted political description of the Franklin D. Roosevelt Administration, beginning March 4, 1933. It represented a distinct break with the past, advocating a trend away from "rugged individualism" and industrial freedom toward social control of industry, banking, finance, transportation, agriculture and markets. It did not advocate general public ownership of business, except in public utility projects such as the TVA, nor alter the basis of private property, but imposed strict regulation and supervision of the major departments of economic life in an attempt to achieve a more equitable distribution of the national income through economic balance. In theory, the New Deal contemplated no abrogation of property or Constitutional rights, and laws were enacted to legalize the changes in economic life brought about, among which the National Industrial Recovery Act, the Agricultural Adjustment Act, the Emergency Relief Act, the Gold Reserve Act, and the Securities Act of 1933 were the most important. The province of the Government was held to be not to change the character of corporate or individual action, but to serve as umpire in the prominent areas of controversy.

The New Deal denied any affinity with Fascism, Communism, State Socialism, or dictatorship under any banner. Both Communism and State Socialism imply government ownership of important instruments of production, and a rejection of parliamentary processes. Fascism implied both a dictatorship with compulsions on industry, and a limitation of the political and economic rights of individuals.

Various labels have been given to the New Deal, such as: Controlled Capitalism, Regulated Capitalism, Federal Capitalism, Disciplined Democracy, Co-operative State, Balanced Social State (Wallace), Economic Constitutional Order (Roosevelt). Among the airms attributed to the New Deal were: (1) Substitution of a planned or managed economy for private, individualistic, laissez faire enterprise; (2) Government intervention in business as umpire and planner; (3) redistribution of wealth; (4) use of managed currency and credit to provide a dollar with approximately the same purchasing and debt-paying power in one generation as another;

(5) prevention of accumulation of great private fortunes; and (6) provision against the hazards and insecurities of life by social security system and unemployment insurance.

New Deal Legislation.—The following are the major pieces of legislation to 1945 under the New Deal affecting agriculture, banking, finance, business, labor, securities and securities markets. Invalidated and repealed acts are indicated by foot-notes.

1933

Date Approved	Act
March 3.	Bankruptcy Act Amendment (individuals, railroads and farmers).
March 9.	Emergency Banking Relief Act.
May 12.	[1]Agricultural Adjustment Act, carrying Thomas Inflation amendment (Title III); also known as the AAA Farm Relief and Inflation Act.
May 12.	Federal Emergency Relief Act.
May 18.	[2]Tennessee Valley Authority Act.
May 27.	Securities Act of 1933.
June 5.	[3]Gold Repeal Joint Resolution.
June 10.	Reconstruction Finance Corporation Amendments.
June 12.	Reciprocal Tariff Act.
June 13.	Home Owners' Refinancing Act of 1933.
June 16.	Banking Act of 1933.
June 16.	Farm Credit Act of 1933.
June 16.	[4]National Industrial Recovery Act.
June 16.	Emergency Railroad Transportation Act.

1934

Jan. 30.	[3]Gold Reserve Act of 1934.
Jan. 31.	Farm Mortgage Refinancing Act.
Feb. 23.	Crop Loan Act.
April 7.	[5]Jones-Connally Farm Relief Act.
April 21.	[5]Bankhead Cotton Control Act.
April 27.	Home Owners Loan Act of 1934.
May 9.	Jones-Costigan Sugar Act.
May 10.	Revenue Act of 1934.
May 24.	[6]Municipal Bankruptcy Act (Supplementing National Bankruptcy Act).
June 6.	Securities Exchange Act of 1934.
June 7.	Corporate Bankruptcy Act (Supplementing National Bankruptcy Act).
June 16.	Bank Deposit Insurance Act.
June 19.	Communications Act of 1934.
June 19.	Silver Purchase Act of 1934.
June 27.	National Housing Act.
June 28.	Frazier-Lemke Bankruptcy Bill.

1935

Jan. 31.	Reconstruction Finance Corporation Extension Act.
Feb. 22.	[7]"Hot-Oil" Act.
April 8.	Work Relief Act (appropriating $4,000,000,000).
April 27.	Soil Erosion Act.
May 15.	Livestock Bankruptcy Act.
May 28.	Home Mortgage Relief Act.
June 3.	Farm Credit Act of 1935.
June 14.	Rail Extension Act (extending for 1 year the Emergency Railroad Transportation Act of 1933).
June 14.	[4]NRA Extension Act.
June 28.	Deposit Insurance Extension Act.
June 29.	Farm Research Act.
July 5.	Wagner-Connery Labor Relations Act.
Aug. 9.	Motor Carriers Act of 1935.
Aug. 14.	Social Security Act.
Aug. 23.	Banking Act of 1935.
Aug. 24.	[1]Act to Amend the Agricultural Adjustment Act (including the Potato Act of 1935).
Aug. 26.	Public Utility Holding Company Act of 1935.
Aug. 27.	[3]Gold Clause Act.
Aug. 28.	[8]Frazier-Lemke Farm Mortgage Act (providing limited 3-year moratorium).
Aug. 29.	[9]Wagner-Crosser Rail Retirement Act.
Aug. 30	[10]Guffey Coal Conservation Act.
Aug. 30.	Revenue Act of 1935.
Aug. 31.	Tennessee Valley Amendment Act.

1936

Jan. 27.	Bonus Act.
Feb. 29.	Soil Conservation and Domestic Allotment Act.
Feb. 10.	Cotton-Tobacco-Potato Repeal Act.
April 10.	Commodity Credit Act.
April 25.	Tobacco State Compact Act.
April 30.	National Housing Act Amendment.
May 20.	Norris-Rayburn Rural Electrification Act.
May 27.	Unlisted Securities Trading Act.
June 23.	The Revenue Act of 1936.
June 20.	Robinson-Patman Price Discrimination Act.
June 16.	Commodity Exchange Act.
June 30.	Walsh-Healey Public Contracts Act.

1937

April 26.	Bituminous Coal Act of 1937.
Aug. 16.	Bankruptcy Act Amendment (relating to municipal bankruptcy compositions).
Aug. 26.	Revenue Act of 1937.

1938

Feb. 16.	Agricultural Adjustment Act of 1938.
March 8.	Commodity Credit Corp. Act.
June 21.	Natural Gas Act.
June 22.	Chandler Bankruptcy Act (amendment of the Bankruptcy Act).
June 23.	Civil Aeronautics Act.
June 25.	Fair Labor Standards Act.
June 25.	Railroad Unemployment Insurance Act.

1939

March 4.	Act continuing functions of the Reconstruction Finance Corp.
March 4.	Act continuing functions of the Commodity Credit Corp. and the Export-Import Bank.
April 12.	Public Salary Tax Act.
June 3.	National Housing Act Amendments.
June 29.	Revenue Act of 1939.
June 29.	Extension of Hot Oil Law.
July 6.	Extension of President's powers relative to the Stabilization Fund and dollar devaluation
July 30.	Amendment of Liberty Loan Act to permit issuance of long term Federal bonds beyond former $30 billion limit.
July 28.	Bankruptcy Act Amendment (for railroads in temporary financial difficulties).
Aug. 3.	Trust Indenture Act of 1939.
Aug. 7.	Amendments of Agricultural Adjustment Act.
Aug. 10.	Amendment of Social Security Act.

1940

Jan.	1.	Federal Power Act.
June	25.	Revenue Act of 1940.
July	1.	Bankruptcy Act Amendment.
Aug.	22.	Investment Company Act of 1940; Investment Advisers Act.
Sept.	18.	Transportation Act of 1940.
Oct.	8.	Excess Profits Tax Act of 1940 (Title 6 of this Act is the National Service Life Insurance Act of 1940).

1941

Feb.	19.	Public Debt Act.
March	7.	Excess Profits Tax Amendments.
March	11.	Lend-Lease Act.
Sept.	20.	Revenue Act of 1941.

1942

Jan.	30.	Emergency Price Control Act.
March	28.	Public Debt Act of 1942.
June	22.	Bankruptcy Act Amendments.
Oct.	21.	Revenue Act of 1942.

1943

April	11.	Public Debt Act of 1943. Revenue Act of 1943 (became law Feb. 25, 1944 over President's veto).

1944

March	11.	Farm Mortgage Relief Act.
March	11.	Bankruptcy Act Amendments.
June	9.	Public Debt Act of 1944.
June	22.	Servicemen's Readjustment Act of 1944.
Oct.	3.	Surplus Property Act.

1945

April	3.	Public Debt Act of 1945.
July	31.	Tax Adjustment Act of 1945.
July	31.	Export-Import Bank Act of 1945.
July	31.	Bretton Woods Agreement Act.
Nov.	8.	Revenue Act of 1945.

1 Invalidated as to agricultural provisions, January 6, 1936, by 6-3 decision. Time required for adjudication, 29 days.

2 Upheld as to certain provisions only, February 17, 1936, by 8 to 1 decision. Time required for adjudication, 59 days.

3 Upheld. February 18, 1935, by 5-4 decision. Time required for adjudication, 41 days.

4 Invalidated, May 27, 1935, by 9-0 decision. Time required for adjudication, 25 days.

5 Repealed in conformity with invalidation of AAA on February 10. 1936.

6 Invalidated, May 25, 1936, by 5-4 decision.

7 Invalidated by 8-1 decision. Time required for adjudication, 28 days.

8 Invalidated by 9-0 decision. Time required for adjudication, 29 days.

9 Invalidated by 5-4 decision. Time required for adjudication, 54 days.

10 Invalidated, May 18, 1936, by 6-3 decision. Time required for adjudication, 67 days.

NEW DEAL AGENCIES

The following is a list of New Deal agencies, popularly known as "alphabetical agencies", created during the Franklin D. Roosevelt Administration:

AAA--Agricultural Adjustment Administration.
ACA--Advisory Committee on Allotments.
ACAA--Agricultural Conservation and Adjustment Administration.
ALB--Automobile Labor Board.
AMA--Agricultural Marketing Administration.
AOA--Administration of Operation Activities.
ARA--Agricultural Research Administration.
BAC--Business Advisory Council.
BAE--Bureau of Agricultural Economics.
BEW--Board of Economic Warfare.
BFC--Banks for Cooperatives.
BPA--Bonneville Power Administration.
BWC--Board of War Communications.
CAA--Civil Aeronautics Administration.
CAB--Civil Aeronautics Board, Consumers Advisory Board.
CAP--Civil Air Patrol.
CCC--Civilian Conservation Corps, Commodity Credit Corporation.
CCCR--Coordinator of Commercial and Cultural Relations.
CEA--Commodity Exchange Administration.
CED--Committee for Economic Development.
CES--Committee on Economic Security.
CFB--Combined Food Board.
CMB--Combined Munitions Board.
COI--Coordinator of Information.
CPA--Council of Personnel Administration.
CPLO--Crop Production Loan Office.
CPRB--Combined Production and Resources Board.
CRMB--Combined Raw Materials Board.

CSAB--Combined Shipping Adjustment Board.
CSB--Central Statistical Board.
CSC--Cotton Stabilization Corporation.
CWA--Civil Works Administration.
DAI--Division of Applications and Information of the Works Relief Administration.
DCADA--District of Columbia Alley Dwelling Authority.
DCB--Defense Communications Board.
DGIAB--Durable Goods Industries Advisory Board.
DHC--Defense Homes Corporation.
DLB--Deposits Liquidation Board.
DLC--Disaster Loan Corporation.
DPC--Defense Plants Corporation.
DSC--Defense Supplies Corporation.
EC--Executive Council.
ECFL--Emergency Crop and Feed Loans.
ECNR--Executive Council for National Recovery.
ECW--Emergency Conservation Works.
EHC--Emergency Housing Corporation.
EHFA--Electric Home and Farm Authority.
EIB--Export-Import Bank.
EPCA--Emergency Price Control Act.
FAC--Federal Aviation Commission.
FACA--Federal Alcohol Control Administration.
FCA--Farm Credit Administration.
FCC--Federal Communications Commission.
FCIC--Federal Crop Insurance Corporation.
FCT--Federal Coordinator of Transportation.
FCU--Federal Credit Unions.
FCUS--Federal Credit Union System.
FDA--Food Distribution Administration.
FDIC--Federal Deposit Insurance Corporation.
FEA--Foreign Economic Administration.
FEHC--Federal Emergency Housing Corporation.
FEPC--Fair Employment Practices Committee.
FERA--Federal Emergency Relief Administration.
FESO--Federal Employment Stabilization Office.
FFC--Foreign Funds Control.
FFMC--Federal Farm Mortgage Corporation.
FHA--Federal Housing Administration.

NEW HIGH

Financial reviewers in commenting upon the trend of the stock market sometimes state that the market as a whole or a particular security, group or average of securities, has reached a "new high" for the movement. The expression may also refer to the record of highest price which a particular security has ever reached in its market history.

NEW JERSEY SAVINGS BANKS

Chapter 67, Laws of 1948 of the State of New Jersey, entitled An Act Concerning Banking and Banking Institutions (Revision of 1948), was approved April 29, 1948, to be effective September 16, 1948. This law, called the Banking Act of 1948, outlines in Article 25 the statutory provisions applying to investment of the funds of all savings banks. New Jersey is not a "legal list" State, and in Section 183 of the new Act, the law states that the board of managers of a savings bank, in determining whether any investment is lawful, may rely upon statistical, financial, corporate or other information as to such investment, and upon ratings or other opinion as to the financial or other status thereof or its legality for investment, contained in or offered by any financial, statistical, investment, rating or other publication or service published for the use of investors and accepted as reliable by the Commissioner of Banking and Insurance, or upon information contained in the prospectus circulated with a new issue and filed with the Securities and Exchange Commission.

Ratio analysis of assets and liabilities of member banks of the Savings Banks' Association of New Jersey since 1929 is tabulated in the table shown on page 467.

NEW ORLEANS COTTON EXCHANGE

The second largest cotton exchange in the United States, incorporated January 17, 1871, not long after organization of the New York Cotton Exchange in 1870. Thus it has had a long and colorful history, and is still operating under charter of May 6, 1873, as amended.

The Exchange is capitalized with 500 shares of $200 par value each, and each member is required to own at least one share of stock, thus setting a limit of 500 on membership. In recent years, actual membership has totaled about 400 members. Government of the Exchange is vested in a board of directors elected annually, from whom are in turn elected a president, vice-president and treasurer, and in customary standing committees who supervise various aspects of operation.

The New Orleans Cotton Exchange is one of the three cotton futures markets designated by the Commodity Exchange Administration, the other two being the New York Cotton Exchange, and the Chicago Board of Trade. All three exchanges are Regulated Commodity Exchanges under the Commodity Exchange Administration. The units of trading on the New Orleans Cotton Exchange are the 100-bale contract (50,000 lbs.) and the 50-bale contract (25,000 lbs.). Delivery points are New Orleans, Houston and Galveston. Price fluctua-

---

tions are in hundredths of a cent ($5 on the 100-bale contract and $2.50 on the 50-bale contract), the daily trading limits being 2¢ above or below previous close, and the maximum range being 2¢. Futures trading is permitted as far ahead as the buyer and seller desire to trade. Basic grade and staple deliverable on contracts is middling 15/16 inch. Staples of 7/8 inch and 29/32 inch, and of 31/32 inch and 1 inch are deliverable at the average discounts or premiums measured by the spot markets designated for the purpose by the Secretary of Agriculture--Houston, Galveston, New Orleans, Memphis and Dallas for average of grade differentials, and these markets plus Little Rock, for the average of the staple differentials.

Non-member commission rates are as follows:

Price	100-bale Contract	50-bale Contract
25¢ or under	$15.00	$ 9.00
25.01¢ to 30¢	15.00	9.00
30.01¢ to 35¢	17.50	10.50
35.01¢ to 40¢	20.00	12.00

In addition to trading in cotton futures, trading in cottonseed oil futures was established on the New Orleans Cotton Exchange in 1925. Contract unit is 30,000 lbs, minimum fluctuation being in hundredths of a cent, or $3 per contract. Daily trading limit is 1¢ above or below previous close, and maximum fluctuation range is 1¢. Non-member commission rate to buy or sell one contract is $7.50.

The New Orleans Cotton Exchange is housed in its own 7-story building, erected in 1920-21 at a cost of $1,222,520.

NEW ORLEANS FUTURES SUGAR MARKET

This market, the second American sugar futures exchange, was organized in New Orleans on July 6, 1922, and flourished for a while before going out of business. Some 17 sugar brokefs and commission houses were licensed to trade in sugar futures on the floor of the Louisiana Sugar and Rice Exchange when futures trading began. Regular telegraphic equipment in direct connection with the New York exchange was installed to replace the usual ticker service, and New York prices had a strong influence over trading, as operations were small and the business was not firmly established. New Orleans, however, continues to be an important

sugar center, as raw sugar enters the country at refiners' plants, and New Orleans is second to New York in refinery capacity in this country.

(See New York Coffee and Sugar Exchange.)

NEW YORK BLUE SKY LAW

Refers to the Martin Act, of which the text of registration and exemption provisions will be found under the title Martin Act (q. v.). (See Blue-Sky Laws.)

NEW YORK CITY ASSESSED VALUATIONS

Assessed taxable valuations of New York City, by boroughs, since 1920 have compared as shown in the table below.

NEW YORK CITY FINANCES

A record of major features of the finances of New York City by decades from 1830, and annually from 1930, is shown in table on page 469.

NEW YORK CLEARING HOUSE ASSOCIATION

See Clearing House.

NEW YORK COCOA EXCHANGE

An incorporated commodity exchange, organized on October 1, 1925 to furnish facilities for trading in cocoa bean futures, and located at 92 Beaver Street, New York City. The Exchange at present is not classified as a Regulated Commodity Exchange by the Commodity Exchange Administration.

The Exchange was organized "to meet a world-wide demand for such an institution, and is designed to facilitate the movement of raw cocoa from the plantation to the factory, and to reduce the risks heretofore incident to trading in this staple. Trade in cotton, sugar, coffee and other important commodities has been benefited by the formation of similar organizations, and the cocoa trade with its leading producing centers scattered over the globe, will be materially helped by the new mart."

At the time of organization of the Exchange, the world center for cocoa trading was located in London. As the result of success of the Exchange, which attracted members representing interests in principal consuming and producing countries as well as Wall Street interests, the world center of cocoa trading shifted to the United States, and although cocoa exchange trading was subsequently organized in London and Liverpool, the New York Cocoa Exchange has retained its position as the leading world market.

Membership is international in scope, the present roster including members located in England, France, Holland, Canada, Brazil, Spain and China. Memberships are limited to 150, exclusive of the 33 Founder Memberships issued and outstanding.

The Exchange is organized along lines similar to those of other commodity exchanges in New York. Trading in futures is conducted as far ahead as 12 months. The unit of trade is 30,000 pounds net of cocoa beans in original shipping bags of average weight customary for the growth, deliverable from warehouses licensed by the Exchange. The Standard Grade allows a maximum of 8% defectiveness by count and 10% slatiness (subject to any stricter requirements of the Government), the Standard Growths being the following:

Accra Kinds (product of British Gold Coast Colony), of the main crop;
Bahia (product of Brazil);
San Thome, Fine (product of the Portuguese island of San Thome);
Ivory Coast, of the main crop;
Costa Rican, fermented;
Panama, fermented.

Growths deliverable at premiums are:

Ceylon, not below Native No. 1 (product of Ceylon);
Grenada Estates (product of the British West Indies island of Grenada);
Guayaquils (the product of Ecuador);
Java, not below No. 3 (the product of Java);
New Hebrides, Light Break Fine (product of New Hebrides);
Samoan, Light Break Fine (product of Samoa);
Trinidad (product of Trinidad);
Venezuelans (product of Venezuela);
Grenada Plantation.

Minimum fluctuations in futures contracts are registered in hundredths of a cent, or $3 per contract. Maximum daily fluctuation is 100 points, or $300 per contract. Non-member commission rates to buy or sell one contract are on a graduated scale, being $20 per contract when the price is 15¢ or above. Contracts are cleared daily through the New York Cocoa Clearing Association, which began operations simultaneously

with the Exchange with an original membership of 54 clearing members. Trading hours are from 10 a.m. to 3 p.m. on weekdays. Daily market report is issued.

West Africa is the principal source of supply of cocoa beans, producing approximately 60% of the world's cocoa, the bulk of which comes from the British colonies of the Gold Coast and Nigeria. Cocoa is also produced in other tropical countries such as Brazil (second largest producer), Trinidad, Venezuela, Dominican Republic, Costa Rica, San Thome, Panama, Ceylon, Ecuador, Java, Grenada, etc. Principal consuming countries are the United States, Great Britain, Holland, France and Spain. Practically all cocoa produced in the Gold Coast of Africa comes from small native plantings of a few acres or more, assembled in quantities by trading firms, agents and brokers dealing with exporters and growers. After the fruits have been collected at a central place in the cocoa grove, the pods are broken and the beans fermented. Fermenting is carried on by covering the beans and pulp with plantain leaves and takes from five to seven days. After this process is completed, the beans are dried on mats or tarpaulins for another five to six days so that they will keep in transit and will not be subject to mold invasion. The cocoa is then bagged and delivered to depots or storage places for shipment to various parts of the world.

NEW YORK COFFEE AND SUGAR EXCHANGE

Under the name of the "New York Coffee Exchange", this Exchange first opened for business on March 7, 1882, after a period of unbridled speculation had brought a ruinous crash to the old, disorganized coffee trade, and had emphasized the need for a well-organized market, with regulations for uniform procedure, fixed standards of grades, a recognized court of arbitration, and a futures market in which coffee roasters could protect their legitimate profits by hedging.

Within three years of its opening, the Exchange had so well demonstrated its value that it was chartered by the State of New York under the name of "The Coffee Exchange of the City of New York." Its purposes were set forth in the Charter as follows:

"To provide, regulate and maintain a suitable building, room or rooms for the purchase and sale of coffees and other similar grocery articles in the city of New York, to adjust controversies between its members, to inculcate and establish just and equitable principles in the trade, to establish and maintain uniformity in its rules, regulations and usages, to adopt standards of classification, to acquire, preserve, and disseminate useful and valuable business information, and generally to promote the above mentioned trade in the city of New York, increase its amount, and augment the facilities with which it may be conducted."

In December, 1914, the outbreak of World War I closed the raw sugar exchanges of Hamburg and London. The New York Coffee Exchange met the emergency by expanding its facilities to provide its same services for sugar futures trading in New York. After 21 months of such service to the sugar industry, the Exchange changed its name to "The New York Coffee and Sugar Exchange, Inc." on October 1, 1916. The Exchange has operated under that title ever since.

On February 2, 1931, futures trading was inaugurated in Cane Blackstrap Molasses, a non-edible commodity and an important by-product of the sugar industry. However, because of the presently limited field of use and the relatively small number of firms dealing in it, trading has been negligible up to the present time.

Membership.--Membership in the Exchange is limited to 350. There are now 344 memberships outstanding, leaving 6 memberships to be issued by the Exchange at $50,000 each. The membership list is representative of all divisions of the coffee and sugar industries, and includes members in Belgium, Brazil, Canada, China, Cuba, Czechoslovakia, Egypt, England, France, Holland, India, the Philippines, Puerto Rico and Spain. The 13 leading commercial states of the United States are well represented in the Exchange membership, and branch offices and correspondents of these members can be found in almost every commercially important state of the country.

Government.--The administration of the Exchange is vested in a Board of Managers consisting of three officers--President, Vice-President and Treasurer--and 12 members, divided into 2 classes of 6 members each. Each year, one class of 6 automatically retires. To assist it, the Board appoints 20-odd committees, each to hold office for one year at the Board's pleasure and to perform such duties as their appointed functions may require.

The Board of Managers is charged with the safeguarding of interests of member and non-members trading in futures contracts under the By-Laws and Rules. Abnormal fluctuations in price and injurious speculation incident thereto are avoided by limiting the price change which is permitted for any one day. Margins, original and variation, are provided for.

All contracts made on the Exchange must be cleared through a clearing association, an organization separate from the Exchange. The function of this Association, which is known as the New York Coffee & Sugar Clearing Association, Inc., is similar to that of a clearing house for banks. Each clearing member must advance to the Clearing Association an amount (presently $15,000) which collectively, together with such surplus as the Clearing Association may devote to the same purpose, constitutes a Guaranty Fund. These funds may be used for payment of any loss or damage to the Clearing Association resulting from the default of any clearing member, thus providing protection for the Clearing Association, the Clearing Member and the customer.

Coffee Contracts.--The Exchange believes that through its Coffee futures contract "D" (described as Santos No. 4) and Contract "A" (basis No. 4), the Exchange has provided the coffee industry with the means of handling and distributing this important world commodity with the maximum of protection against fluctuating prices. The "D" contract embraces Santos coffee of the grades No. 2 to No. 6, and has been active since the resumption of coffee futures trading in October, 1946. The "A" contract, adopted by the Membership just prior to the resumption of trading, embraces coffees of all recognized growths, and is the result of study and consultation with various trade interests. Although inactive since the resumption of trading because of the demand for high-priced coffee blends, it is expected that a demand for lower priced roasted blends will increase and the interest in this contract will increase correspondingly. There is still available for trading purposes a Contract styled "H" (Colombian Coffee Contract) which was adopted on October 13, 1932. This contract, however, did not prove sufficiently active to warrant a daily call and trading was suspended in 1935.

All coffees delivered on Exchange contracts must be from warehouses in the Port of New York inspected and licensed by the Exchange, and must under Contract "A" be graded, and under Contract "D" graded and classified, by a panel of graders licensed by the Exchange.

The active coffee futures contract, Contract "D" (described Santos No. 4 Contract) is quoted in multiples of hundredths of a cent per pound. A fluctuation of 1¢ per pound. A fluctuation of 1¢ per pound is equivalent to $325 on each contract of 32,500 lbs. Trading is permitted in contracts for delivery on the current and 12 succeeding months, the active delivery months at present being March, May, July, September and December. Deliveries are from licensed warehouse in the port of New York, each contract of 32,500 lbs. in about 250 bags. Standard Grade is No. 4, premiums being 40 points above for Grade No. 2 and 25 above for Grade No. 3; and discounts being 25 below for Grade No. 5 and 50 below for Grade No. 6. Daily trading limit is 1 1/2¢ above or below previous close, maximum fluctuation being 1 1/2¢. The following rates of commission, including floor brokerage, are the lowest that may be charged on each contract, bought or sold, for future delivery of coffee:

Price	For customer residing in the U.S. and Canada		For customer residing Outside the U. S. and Canada	
	Members	Non-Members	Members	Non-Members
9.99¢ and below	$6.25	$12.50	$8.75	$15.00
10¢ to 19.99¢	7.50	15.00	10.00	17.50
20¢ and above	10.00	20.00	12.50	22.50

Sugar Contracts.--The Membership of the Exchange has adopted three Raw Sugar Contracts: (1) Raw Sugar

Contract No. 2, in which trading suspended by the Board of Managers on August 3, 1939, provides for delivery of duty free raw sugars: domestic centrifugal or domestic beet, or the production of any territorial possession of the U. S., which is admitted free of duty, or any dutible centrifugal sugar on which the U. S. duty has been paid. This contract has been very rarely used and then only on such occasions when a change in duty has been anticipated.

(2) Raw Sugar Contract No. 4, known as the "World" contract, provides for delivery of Cuban raw cane sugar in licensed warehouse in a Cuban port; or Cuban, Santo Domingan, Haitian, Peruvian, Brazilian or Mexican raw cane sugar in bond, in the port of Norfolk, Va. The option of delivery sugar in Norfolk, Va. was adopted primarily as a safety measure in the event that strikes, riots or other conditions existing in Cuba should interfere with the free flow of sugar from Cuba.

(3) Raw Sugar Contract No. 5 (adopted on December 30, 1946), provides for delivery of raw centrifugal cane sugar, which may be: Cuban sugar in bond, and Cuban sugar duty paid, other foreign growth cane sugar duty paid, duty free sugars, cane sugars which are the product of Continental U. S. (at a premium equal to the import duty prevailing on Cuban sugar of like polariscopic test upon the delivery date).

In drawing up Raw Sugar Contract No. 4 and Contract No. 5, the Sugar Committee of the Exchange was concerned particularly with framing contracts which would reduce to an absolute minimum the over-all costs of both delivering and receiving, by eliminating all unnecessary handling, weighing, sampling and testing; and also in equalizing, as far as possible, the remaining costs between deliverer and receiver. This has been possible by the creation of a Weight and Test Certificate which the "Original Deliverer" issues at the time he makes his delivery, which declares an arbitrary weight of 112,000 lbs. and a test of 96° polarization. The contracts classify the various deliverers as (1) Original Deliverer; (2) Intermediate deliverers and receivers; and (3) Final Receiver. Settlement of depreciation between Original Deliverer and Final Receiver is to be made by payment by the Original Deliverer to the Final Receiver if actual depreciation exceeds assumed depreciation, and by Final Receiver to Original Deliverer if assumed depreciation, exceeds actual depreciation, calculated on the basis of 1.50% of the price per degree or fraction thereof on the basis of the average of the spot price fixed by the Spot Sugar Quotation Committee upon the date first delivery notice upon Exchange contracts for the sugar was issued, and the spot price upon the date or average date of final weighing and sampling of sugar.

Contract unit for both the Raw Sugar Contract No. 4 (Cane Raw Sugar for other than U. S. Consumption) and Raw Sugar Contract No. 5 (Quota Cane Raw Sugar for U. S. Consumption) is 50 tons of 2,240 lbs. each. Price multiples are in hundredths of a cent per pound for each pound of sugar, equivalent to $11.20 per contract. A fluctuation of 1¢ per lb. is equivalent to $1,120 per contract. Trading is conducted in contracts for delivery during 18 months, including the current month. Daily trading limit is 1/4¢ above or below previous close, maximum range also being 1/4¢. Minimum commission rates that may be charged on each contract, including floor brokerage, are as follows:

Contract No. 4	Contract No. 5	For customer residing in the U.S.,Cuba, Puerto Rico and Canada		For customer residing outside the U.S., Cuba, Puerto Rico and Canada	
		Members	Non-Members	Members	Non-Members
.99¢ and below	1.99¢ and below	$5.00	$10.00	$7.50	$12.50
1¢ to 2.99¢	2¢ to 3.99¢	6.25	12.00	8.75	15.00
3¢ to 4.99¢	4¢ to 5.99¢	7.50	15.00	10.00	17.50
5¢ to 6.99¢	6¢ to 7.99¢	8.75	17.50	11.25	20.00
7¢ to 8.99¢	8¢ to 9.99¢	10.00	20.00	12.50	22.50
9¢ to 10.99¢	10¢ to 11.99¢	11.25	22.50	13.75	25.00
11¢ to 12.99¢	12¢ to 13.99¢	12.50	25.00	15.00	27.50
13¢ to 14.99¢	14¢ to 15.99¢	13.75	27.50	16.25	30.00
15¢ and over	16¢ and over	15.00	30.00	17.50	32.50

In addition to the customary margins required by the Clearing Association, and as a protection to all participants and to insure the faithful compliance with all the terms of the contracts, the By-Laws require an Escrow Deposit to be made by the Original Deliverer to the Clearing Association. In the case of Contract No. 4, this Escrow Deposit is $25 per 50-ton contract, pending a final settlement of the contract. Should the depreciation, as established by settlement weights and tests exceed assumed depreciation plus $15 per 50 tons, the Original Deliverer shall be liable to the Final Receiver for the whole amount of such depreciation in excess of assumed depreciation plus, in the event that settlement polarization is below 95°, a penal amount equal to 20% of such excess depreciation. Each Receiver also deposits with the Clearing Association $25 per 50 tons, which is subsequently returned to him upon the delivery by him of the sugar on the second day succeeding his issuance of Transferable Notice.

On the No. 5 Contract, the Original Deliverer must deposit with the Clearing Association, when issuing the Transferable Notice, $50 per 50 tons pending final settlement. Should depreciation, as established by settlement weights and tests, exceed the assumed depreciation plus 1/2°, the Original Deliverer is liable to the Final Receiver for the whole amount of such depreciation in excess of the assumed depreciation plus, in the event a settlement polarization is below 95°, a penal amount equal to 20% of such excess depreciation. Each Receiver also deposits with the Clearing Association $50 per 50 tons, which is subsequently returned to him upon the delivery by him of the sugar on the second day succeeding his issuance of the Transferable Notice.

NEW YORK COTTON EXCHANGE

History.—The most important cotton exchange in the world, and the oldest of the four great futures markets—New York, New Orleans, Chicago and Liverpool. Organized as the New York Board of Cotton Brokers in 1868, the work of organizing the New York Cotton Exchange, as such,began in 1870. In that year, officers

and a board of managers were elected on August 15; the constitution and by-laws adopted on September 7; and the exchange opened for business on September 10 at 142 Pearl Street. The exchange was incorporated by an act of the New York legislature on April 8, 1871.

On May 4, 1872, the exchange moved to the building on Hanover Square, now known as India House, but in 1881 plans were begun to construct a building of its own. A new building was subsequently erected, and on April 30, 1885, the facilities were moved into the present site located at 60-64 Beaver Street. Members voted to purchase this building on January 27, 1903. The clearing house system for the adjustment of balances on settlements was introduced on March 5, 1896.

Ranking next in importance to New York are the New Orleans Cotton Exchange, the Liverpool Cotton Association, and the market in Alexandria, Egypt. The Liverpool Cotton Association is the chief distributing agency for American and other cottons in Europe. The New York Cotton Clearing Corporation, a subsidiary for clearing transactions, began operations on July 1, 1915.

Organization.—The governing body of the New York Cotton Exchange is the Board of Managers. Officers consist of a president, vice-president, treasurer, secretary, and assistant secretary. There are 14 standing committees, as follows: Executive, Finance, Supervisory, By-Laws and Rules, Membership, Information and Statistics, Trade, Warehouse and Delivery, Adjudication, Arbitration, Board of Appeals, Commissions, Complaint, and Business Conduct. Officers and fifteen managers are chosen annually.

Membership.—The membership of the New York Cotton Exchange is limited to 450, in the hands of members distributed over the United States and foreign countries. About 40 per cent of the members are located in New York City, and the others are scattered over other parts of the United States, principally the cotton-growing states of the South, and over Canada, Europe, Egypt and the Orient.

Applicants for membership must appear in person before the Membership Committee to establish their financial responsibility, business standing and integrity. Each applicant must be sponsored by one or more members of the Exchange. After approval by the Committee the application is referred to the Board of Managers for final action. An affirmative vote is required of at least 10 members of the Board. Before qualifying each member-elect must procure the transfer to himself of a membership held by another member, and then he must sign the By-Laws and pay an initiation fee of $1,000. Members are divided into two broad categories: (1) producers, ginners, officials of farmer cooperative associations, merchants, manufacturers and textile dealers; and (2) members of commission house firms, and floor brokers. Normally those in the first group are non-resident members and do not actively participate in the trading around the ring, although they enjoy that privilege, unless they are aliens. Instead, they send their orders to those in the second group, who execute and/or carry the contracts for their account. A commission house is a firm in which one or more of the principals hold membership in the Exchange. It is the principal business function of such firms to carry contracts for clients. This function entails the responsibility of having the client keep his account properly margined in accordance with the rules and regulations of the New York Cotton Exchange; to see to it that the business is transacted in accordance with the requirements of the Commodity Exchange Act; and to supervise the delivery of cotton tendered, or cotton received against matured contracts.
price of such transaction exceeds 25¢ per lb., an additional $2.50 for each 5¢ or portion of 5¢ of such excess in price. For each 100 bales bought or sold for any person residing outside of the United States and Canada who is not a member of the Exchange, an additional $2.50 is charged. Rates for members are one-half of the above rates."

The trading floor of the New York Cotton Exchange occupies the entire top floor of its modern office building. Trading takes place around a "ring" located in the center of a large, high-ceiling room. Only members of the Exchange are permitted to execute orders, and all trading must be done by "open outcry," which means the calling of all bids and offers across the ring. When the market opens at 10:00 A.M. (New York Time), brokers representing buyers and sellers congregate around the ring and when the opening gong sounds, each trading month is called in succession by an official of the Exchange. Bids and offers are shouted across the ring for all present to hear. When a bid or offer is shouted across the ring, any member present may accept it or make new offers or bids. This process continues until the bidder finds a seller at his price, or vice-versa, and a contract is made. Brokers having orders to buy and/or sell at specific prices set by their clients must continue offering to buy or sell at those stated prices until the corresponding offer or bid is available. Unexecuted orders expire at the close of the day's trading unless stated to the contrary. Buying and selling orders which do not designate a specific price are known as "market orders," and brokers execute them at the prevailing price at time of receipt.

Charter Purposes.—The Charter of the New York Cotton Exchange defines the fundamental purposes of the Exchange as follows:

"To provide, regulate and maintain a suitable building, room or rooms, for a Cotton Exchange, in the City of New York; to adjust controversies between its members; to establish just and equitable principles in the trade; to maintain uniformity in its rules, regulations and usages; to acquire, preserve and disseminate useful information connected with the cotton interests throughout all markets...."

(See Commodity Exchange Act, Cotton, Cotton Futures, Cotton Futures Act, Cotton Grades.)

It is the principal function of a floor broker member of the Exchange to do the actual trading and execute orders for clients. He does not carry contracts for customers, and his income is derived from commissions charged for his services. He may act for other brokers, commission house firms, merchants and mills, or anyone giving him an order to execute. All contracts consummated by floor brokers are "given up" to commission house firms designated by the client. Floor brokers do not execute all the trade orders reaching the market. Many are sent direct to the commission firm, or carrying house, one or more members of which do the actual trading in the ring for their firm.

Trading.—All futures contracts made in the ring of the New York Cotton Exchange carry the obligation to accept delivery, or to make delivery of actual cotton at a specified future time unless they are liquidated by off-setting purchase and/or sale before maturity.

The New York Cotton Exchange contract is based on

Middling (grade) 15/16 inch (staple), with certain allowances for grades above or below Middling; and certain allowances for staples above and below 15/16 inch. Such premiums and discounts are determined by the average of grade and staple differences quoted by the 10 Southern spot markets officially designated by the Secretary of Agriculture for that purpose. The seller has the option of delivering qualities other than Middling 15/16 inch, provided they fall within the range of grades and staples stipulated in the U. S. Cotton Futures Act, and in the Rules of the New York Cotton Exchange. Grades and staples above Middling 15/16 inch are deliverable at premiums; grades below Middling 15/16 inch are deliverable at discounts. Various combinations of grade and staple are permissible. Grades below Middling, but of staple length better than 15/16 inch often carry premiums, whereas grades above Middling, but of shorter staple length are subject to discounts.

Cotton may be delivered on contract in New York, or at several Southern spot markets designated by the U. S. Department of Agriculture. However, the cotton must be stored in a bonded warehouse licensed by the New York Cotton Exchange to store and handle contract cotton. Before cotton is eligible for delivery or tender, it must be inspected, sampled and weighed under the supervision of the Inspection Bureau of the New York Cotton Exchange, and it must be classed by experts of the U. S. Department of Agriculture, who issue certificates stating the grade and staple of each bale. Cotton handled in this manner is included in the so-called "certificated stocks" eligible for delivery on futures contracts.

All trades on the Exchange are in units of 50,000 pounds, with a tolerance of 1% more or less. Since most American cotton is put up in 500-lb. bales, the unit of trading is approximately 100 bales. The minimum amount which can be bought or sold on one contract is 50,000 lbs., or roughly 100 bales, and larger amounts must be in multiples of that quantity. Prices are quoted in cents and hundredths of a cent per lb., e. g., a price of "JULY 29.56" means twenty-nine and fifty-six one-hundredths of a cent per pound as applied to JULY contracts. Rules of the Exchange impose a limitation on the maximum fluctuation in the price allowed in any one trading day. This rule is designed to prevent unnecessarily wide price changes on sudden and unexpected developments. Daily trading limit is 2¢ above or below previous close, with maximum range being 2¢.

Futures contracts call for delivery in some specified month, but no contract can be made for delivery more than 17 months beyond the current month. Most of the trading is for deliveries in January, March, May, July, October and December. These are designated as the "active months." The value of cotton, as of any commodity, varies with the time of delivery, which accounts for the difference in price or spread between the various contract options.

Exchange rules provide that the lowest rates of commission charged on transactions for future delivery are as follows:
"For each 100 bales bought or sold for any person residing in the United States or Canada, who is not a member of the Exchange, $15 when the price of such transaction does not exceed 25¢ per lb.; and when the

NEW YORK CURB EXCHANGE

The second largest security market in the United States, which until the opening of its building at 78 Trinity Place, on June 27, 1921, was an out-of-doors market, meeting in the street on Broad Street between Exchange Place and Beaver Street. In 1908, the first step toward organization was taken when the New York Curb Agency was formed. By 1911, the Agency had evolved into the New York Curb Market Association, with offices at 25 Broad Street, organized with a Board of Representatives which drew up trading rules and enforced them. Memberships were limited to 500, with annual dues set at $250. The present trading hours were established, and the new listing department admitted the stocks and bonds of qualified corporations to trading privileges.

By 1915, the volume of business on the Outdoor Curb had already grown to a point where indoor operation was becoming imperative. On June 6, 1919, the New York Curb Market Association decided to move indoors and took the first step by the purchase of a building site on Trinity Place. On March 30, 1921, the Board of Representatives ratified and approved a new constitution which became effective when the Curb moved indoors on June 27, 1921. A new class of associate memberships, without floor trading privileges but with the valuable right to reduced commissions on exchange transactions, was added to the 500 regular memberships. With the adoption of the first constitution, the name of the Association was changed to the New York Curb Market.

Less than five years after the Curb Market moved indoors, it began to need larger quarters. From 1924 and 1929, the number of issues traded on the Curb Market more than doubled. Daily volume of transactions reached the million share mark in April, 1928, and a year later reached three and a half million. On October 24, 1929, volume reached 6,337,400 shares, and on October 29, 1929, the all-time record, trading volume attained a peak of 7,096,300 shares.

With all this additional business, the Board of Governors in 1929 decided to incorporate its 8-year old building into a new structure, and actual construction work began on February 25, 1930 on the enlarged building. Trading in securities went on while the construction progressed. On September 14, 1931, the present 14-story building was formally opened, the official title of the market having been changed to the present title, New York Curb Exchange, in 1929. The present building houses all of the modern facilities of the Exchange, including the New York Curb Exchange Securities Clearing Corporation.

When the Curb moved indoors there were 550 regular members and 323 associate members. Today the number of regular memberships is limited by the constitution to a maximum of 499; associate memberships are unlimited in number, and total over 250, most of the associate members being regular members of the New York Stock Exchange. Of the 499 regular members of the Curb, some 265 are floor brokers, of whom 165 are specialists and about 100 are commission brokers, the remaining 234 regular members, more or less, doing their business through the floor brokers.

The New York Curb Exchange is a voluntary, unincorporated association. Primary objectives, as outlined in the constitution, are "to furnish exchange rooms and other facilities for the convenient transaction of their business by its members; to maintain high standards of commercial honor and integrity among its

members, and to promote and inculcate just and equitable principles of trade and business." Senior governing body is the Board of Governors, which consists of 32 members and is headed by the Chairman of the Board and the President of the Exchange. The Board of Governors consists of the following classes of Governors:

Class "A" Governors--total 15 in number, elected from the regular membership to serve 3 years. Five new Governors of this class qualify annually to replace 5 automatically retiring Governors. Class "B" Governors--total 12 in number, elected from non-member partners of regular or associate member firms, to serve 3 years. Four are replaced annually under the rotation system. Class "C" Governors--total 3 in number, being representatives of the public who are non-members of the Exchange and are not engaged in the securities business. They are nominated by the President and appointed by the Board after each annual election, to serve for a 1-year term only. Class "D" Governors--consist of the Chairman of the Board of Governors, who is elected by the regular members at each annual election for a term of 1 year, and who shall be a regular member of the Exchange, and the President of the Exchange, who is elected by the Board, to serve at the pleasure of the Board.

Operating directly under the Board are ten standing committees, as follows:

Executive Committee--composed of the Chairman of the Board, the President of the Exchange, the Chairman of the Committees on Securities, Outside Sipervision, Floor Transactions, and Finance, and the President of the New York Curb Exchange Securities Clearing Corporation. This Committee acts in an advisory capacity to the President and to the Board.

Committee on Securities--composed of 5 Governors. This Committee prescribes the requirements for the listing and admission to unlisted trading privileges of securities and such other requirements as may be deemed expedient or necessary. It may, with the approval of the President of Exchange and without notice, suspend any securities from dealings, and may subject to applicable regulations of the Securities and Exchange Commission without notice, remove any security from listing or from unlisted trading: upon the maturity or redemption thereof, upon its admission to dealings on the New York Stock Exchange, or when it shall appear that the outstanding amount thereof has become so reduced as to make inadvisable further dealings therein upon the Exchange.

Committee on Outside Supervision--composed of 5 Governors. This Committee supervises, investigates and considers all matters relating to the business conduct, capital requirements, financial condition and business transactions off the Exchange of members, member firms and partners of members, including the handling of customers' accounts and margins, distributions of securities, the qualifications, compensation and duties of employees other than floor employees, advertising, solicitation of accounts, extensions of credit, establishment and maintenance of main or branch offices, bookkeeping practices and similar matters. It also has charge of all matters relating to the dissemination and use of the ticker and exchange quotations, requires observance of rules relating to commissions, and may recommend to the Executive Committee changes in commission rates.

Committee on Floor Transactions--composed of 7 Governors. This Committee shall keep in touch with the course of prices, bids and offers, and the volume of trading on the Exchange, for the purpose of determining when improper practices are being engaged in. It has the power to examine into the dealings of any member, member firm or partner of a member firm in stocks and bonds; and to supervise, regulate and make regulations with respect to members' transactions and conduct on the floor as brokers, dealers or specialists in stocks or bonds. It also has the power to prescribe capital requirements for members registered as specialists, as well as make and enforce rules and regulations for the convenient transaction of business on the floor.

Committee on Finance--composed of 7 Governors, who are regular members of the Exchange, and the Treasurer of the Exchange. It has charge of the finances of the Exchange, meeting each month and reporting each month to the Board on the finances of the Exchange.

Committee on Admissions--composed of 7 Governors who are regular members of the Exchange. All applications for membership and all applications of suspended members for reinstatement are referred to this Committee for consideration, and if approved are recommended to the Board of Governors by the Committee. The Committee also approves or disapproves all applications for the formation of, or alteration in, a member firm.

Committee on Arbitration--composed of 5 Governors. Administers the arbitration procedure of the Exchange.

Committee on Public Relations--composed of 3 Governors. This Committee acts in an advisory capacity to the President of the Exchange on matters involving public relations; compiles statistics concerning the operation of the Exchange; and makes recommendations to the President regarding distribution or publication of such information.

Realty Committee--composed of 5 regular members of the Exchange, who need not be Governors. This Committee supervises the operation and maintenance of the Exchange building, and makes such rules with respect to the orderly use of the building as may be necessary to protect the property of the Exchange and insure the proper maintenance of its facilities.

Committee on Business Conduct--composed of 3 Governors. Two alternates, who shall be Governors, are appointed by the President, subject to the approval of the Board. In the absence of a member of this Committee, the Chairman of this Committee, with the approval of the President, selects one of the alternates to serve on this Committee. This Committee investigates violations by members, member firms, partners or employees of members or member firms, of provisions of the constitution of the Exchange, or of the rules of the Exchange or of the provisions of the Securities Exchange Act of 1934. It has the power to examine or to order before it for examination, either by this Committee or by employees or representatives of the Exchange, the books, papers and records of any members or the books, papers and records of his firm or any partner therein or employee thereof.

Listing Requirements.—Listing applications are designed to obtain information as to the history, business and products of the applicant corporation, its capitalization, management, financial condition and operating results, and other pertinent information essential to a proper evaluation of its securities.

The basic listing requirements of most national securities exchanges are substantially similar, insofar as the mechanical form and content thereof are concerned, and listing upon every exchange is subject to effective registration under the Securities Exchange Act of 1934. The registration requirements of the Securities and Exchange Commission are identical as to all exchanges, and call for information generally similar to that contained in the exchanges' own listing requirements. Notwithstanding this similarity of basic listing requirements, there is some variation in the interpretation and application of requirements among exchanges, and the listing standards of the New York Curb Exchange are not so stringent as those of the New York Stock Exchange in the matter of size and national prominence of the applicant corporation, listing fees, public distribution of securities, etc.

The New York Curb Exchange has no rigid policy as to size of applicant corporations from the viewpoint of either assets or earning power. Each case is considered on its own merits. In certain cases, issues of corporations still in the development stage, and without demonstrated earning power, have been listed. In such cases the management of the company, the adequacy of its financing, and its future prospects in its particular line are important factors.

Likewise, there is no formal rule or policy of the New York Curb Exchange which specifies the minimum number of shares of stock which must be publicly distributed or the minimum number of public stockholders among whom such shares must be distributed in order to qualify a stock issue for listing. Each case is considered separately, taking into consideration such factors as (a) the total number of shares outstanding, (b) the number of shares which are "publicly" held (exclusive of holdings of management, underwriters, etc.), and its proportion of the total outstanding shares, (c) the number of stockholders among whom the "publicly" held shares are distributed, and (d) the price of the security, etc. An informal opinion as to the eligibility of a particular issue for listing from the viewpoint of distribution may be obtained in advance of the preparation and filing of a complete listing application.

The New York Curb Exchange does not require (although it prefers) the establishment of transfer agent and registrar facilities in New York City as a condition of listing. Stocks may be listed with such facilities anywhere in the United States.

Two categories of listings are dealt in--securities fully listed, and those admitted to unlisted trading privileges. Under the requirements of the Securities Exchange Act of 1934, there are substantial technical differences between the two categories, but the Act imposes stringent requirements on the admission of securities to unlisted trading privileges, so that the number of issues of securities admitted to unlisted trading privileges since passage of the Act has been small. Securities admitted to unlisted trading privileges still represent a substantial proportion of the total trading list of the New York Curb Exchange, but practically all such securities were admitted to unlisted trading privileges prior to passage of the Act. Stocks fully listed and those admitted to unlisted trading privileges are differentiated by suitable footnote in tabulation of daily transactions published in the daily newspapers.

Included in the securities dealt in on the Curb Exchange are the stocks and bonds of many leading foreign companies, notably English and Canadian, and in fact, the New York Curb Exchange deals in a larger list of foreign stocks than any other securities exchange in the United States. Facilitating business in the stocks of European corporations is the system of trading in American Depositary Receipts pioneered by the New York Curb Exchange.

Range of Seat Prices.--Since 1921, the high and low yearly price range of "seats" transferred is given in the table below. From Agust 31, 1941 to March 31, 1942, the New York Curb Exchange bought 50 memberships at $1,000 each and retired them permanently; subsequently one more was eliminated by purchase to reduce the net regular membership total to its present limit of 499.

Year	High	Low
1921	$8,000	$3,750
1922	10,000	4,200
1923	9,500	3,600
1924	9,000	4,000
1925	37,500	8,500
1926	35,000	17,500
1927	67,500	22,000
1928	170,000	56,000
1929	254,000	150,000
1930	225,000	70,000
1931	137,500	40,000
1932	55,000	16,500
1933	50,000	25,000
1934	40,000	17,000
1935	33,000	12,000
1936	48,000	26,000
1937	35,000	19,000
1938	17,500	8,000
1939	12,000	7,000
1940	7,250	6,900
1941	2,600	1,000
1942	1,700	650
1943	8,500	1,600
1944	16,000	7,500
1945	32,000	12,000
1946	37,500	19,000
1947	25,000	13,500

Trading Volume.—Volume of trading on the New York Curb Exchange has exceeded annually the combined volume of all other national securities exchanges other than the New York Stock Exchange. Since 1921, trading volume in stocks and bonds has fluctuated annually as shown in the following table. At the close of 1947, there were 950 security issues, including 836 stocks and 114 bonds, listed or admitted to unlisted trading privileges on the Exchange, compared with 989 issues at the close of 1946. Of the 836 stock issues dealt in at the year-end 1947, a total of 449, or 54%, were fully listed, compared with 444 fully listed issues, or 52% of the total, for 1946. The number of fully listed issues first exceeded those having unlisted trading privileges in June, 1946.

Year	Stocks (shares)	Bonds (dollars)
1921	15,522,415	25,510,000
1922	21,741,230	55,212,000
1923	50,968,680	90,793,000
1924	72,243,900	200,315,000
1925	88,406,350	500,533,000
1926	115,531,800	525,810,000
1927	125,116,566	575,472,000

Year	Stocks (shares)	Bonds (dollars)
1928	242,323,354	838,722,000
1929	476,140,375	513,551,000
1930	222,270,065	863,541,000
1931	110,313,687	981,297,000
1932	57,144,479	952,144,000
1933	100,916,602	944,374,000
1934	60,050,695	1,013,639,000
1935	75,747,764	1,171,440,000
1936	134,845,196	823,050,000
1937	104,178,804	442,361,000
1938	49,640,238	366,974,000
1939	45,729,888	444,497,000
1940	42,928,377	303,902,000
1941	34,630,254	249,825,000
1942	22,301,852	177,232,500
1943	71,374,283	231,109,000
1944	71,061,783	181,073,500
1945	143,309,392	167,333,000
1946	137,313,214	79,770,000
1947	72,376,027	88,638,000

Securities Clearing Corporation.—The New York Curb Exchange Securities Clearing Corporation in January, 1947, inaugurated a Central Transfer Department, and in November 1947, a new service known as the Delivery Department was opened to provide centralized delivery of securities between clearing member firms and banks and non-member brokerage houses. These new facilities, together with the Central Comparison Department, formed in 1946, have speeded intermediate steps in the transfer of securities from owner to owner.

NEW YORK DOLLARS

Banks in this country having accounts with correspondents abroad may issue letters of credit against which the holder may draw drafts against such correspondents. Instructions are usually given to such correspondents to provide for reimbursement upon cashing such drafts when presented, by a charge against the American bank's account, or else by drawing against the American bank in New York dollars. By New York dollars is meant funds payable in New York, without deduction for interest or other charges, as distinguished from funds available at other points in America, or elsewhere, though payable in dollars.

NEW YORK EXCHANGE

A check drawn upon a bank in New York. New York, being the financial center, a check drawn upon New York should be acceptable in all places, but banks anywhere have an understandable disinclination to cash checks for strangers, requiring personal identification or preferably the indorsement of a depositor of the bank, as protective measures against the risk of payment on bad checks or to the wrong payee.

The Federal Reserve System par collection system has placed most clearings and collections in the United States on a par basis, without deduction of exchange charges. (See Federal Reserve Check Collection System, Par List.)

NEW YORK FEDERAL RESERVE BANK

About one-third of all the earning assets of weekly reporting member banks are within the New York Federal Reserve district. The New York Reserve Bank reports also about one-third of the total resources of the 12 Federal Reserve Banks. The New York Federal Bank was opened for business November 16, 1914, with a staff consisting largely of workers lent to the new organization by neighboring New York City banks. The quarters occupied were in a small building at 62 Cedar Street. In the succeeding few weeks the temporary employes were replaced by a permanent staff, which consisted on January 1, 1915, of five officers and 36 other employes.

In the early months of its existence the principal activity of the bank consisted of taking into custody the reserve funds which all National banks were required by law to deposit as soon as the bank opened. During the first two years of the bank's existence the earning assets were mainly in the form of open market purchases of acceptances and holdings of municipal warrants; there was no large demand from member banks for loans and it was not until later that the subsidiary services, such as check and note collections and wire transfers, became major activities. The offices at 62 Cedar Street were unsatisfactory and provided no opportunity for expansion. It became necessary to move, and on May 1, 1916, the bank relocated on the first and fifth floors of the Equitable Building.

With the country's entrance into the war in April, 1917, the character of the work underwent a transformation. As these tasks were undertaken, it became necessary to increase rapidly the staff of the New York Reserve Bank, and by January 1, 1918, the employes numbered 845, a total nearly five times as large as one year before. The quarters on the first and fifth floors of the Equitable Building became inadequate. Additional space was secured in that building, and the entire building at 50 Wall Street was also occupied. The capacity of the vault was so taken up with Liberty bonds and other material requiring safe storage that it was necessary to use in addition, through the courtesy of the New York Clearing House, one of the vaults belonging to that organization.

The growth of the bank in 1917 and 1918 may in considerable measure be attributed to its use as an emergency institution, but there were developing at the same time other services of a more permanent nature, which engaged a constantly increasing proportion of the bank's staff. What may be called the ordinary services of the bank included: Collection of checks for member banks, collection of notes and drafts, telegraphic transfer of funds from one part of the country to another, settlement of current balances through interdistrict settlement fund in Washington, payment of checks and warrants for the government, exchange of government bonds, payment of coupons upon government bonds, sale and redemption of U. S. certificates of indebtedness, custody and sale of securities for the U. S. Treasury, other government agencies and member banks, shipment of wrapped coin and currency, and maintenance of statistical and other services to aid member banks.

Throughout the period of most rapid growth the housing of the bank's working force was a continual problem. This was solved, however, by construction of the Bank's own $14,000,000 building in 1921 located on the entire block bounded by Nassau, Liberty, Maiden

Lane and William Streets, in the New York financial district.

The Federal Reserve Bank of New York on January 1, 1917 was authorized to establish an agency with the Bank of England, and from that date, it assumed a position of unofficial leadership in the Federal Reserve System in international financial relations with European central banks and bankers, particularly under the governorship of Benjamin Strong. The Banking Act of 1933 specifically amended the Federal Reserve Act, however, to provide that the Board of Governors of the Federal Reserve System shall exercise special supervision over all relationships and transactions of any kind entered into by any Federal Reserve Bank with any foreign bank or banker, or with any group of foreign banks or bankers. All such relationships and transactions shall be subject to such regulations, conditions and limitations as the Board may prescribe. In fact, no officer or other representative of any Federal Reserve Bank shall conduct negotiations of any kind with the officers of representatives of any foreign bank or banker without first obtaining the permission of the Board of Governors. A full report of all conferences or negotiations, and all understandings or agreements arrived at or transactions agreed upon, and all other material facts pertaining to such conferences or negotiations, shall be filed with the Board of Governors in writing by a duly authorized officer of each Federal Reserve Bank which shall have participated in such conferences or negotiations. These provisions, found in Section 14 (g) of the Act, were aimed particularly at the Federal Reserve Bank of New York.

Under the governorship of Benjamin Strong, also, the New York Federal Reserve Bank led the way in development of open market operations as an instrument of credit control. Prior to the Banking Act of 1935, the twelve Federal Reserve Banks had a good deal of independence on open market operations, and could decide not to participate in open market operations upon 30 days' notice. The Banking Act of 1935 established a new Federal Open Market Committee, in which the Board of Governors assumed control, and provided that no Federal Reserve Bank shall engage or decline to engage in open market operations except in accordance with the recommendations of the committee. (See Federal Open Market Committee, Federal Reserve System.)

NEW YORK FUNDS

See New York Exchange.

NEW YORK HIDE EXCHANGE

As a separate entity this exchange no longer exists. Its activities were merged with the Commodity Exchange, Inc. (q. v.) on July 5, 1933.

NEW YORK MERCHANTS ASSOCIATION

See Merchants' Association of New York.

NEW YORK PLAN

See Equipment Trust.

NEW YORK PRODUCE EXCHANGE

One of the most important produce exchanges in the United States, having as of April 30, 1948 a total of 658 members, of whom 92 were associate members. It is located at No. 2 Broadway, which is the southern extremity of Broadway across from the Custom House, in close contiguity with other principal exchanges of the New York financial district. Chartered by the legislature of the State of New York as the New York Commercial Association on April 19, 1862, it has since had a continuous existence as an organized commodity market.

The Exchange affords facilities for trading in and inspecting, testing, weighing, sampling, etc., the following commodities: Animal oils and fats; cottonseed products; grain and flour; lard and provisions; pepper; petroleum; soybean oil; and vegetable oils, waxes and fats. The futures contract markets, licensed under the U. S. Commodity Exchange Act, are maintained in cottonseed oil, soybean oil and black pepper. Most active of these three futures markets is in cottonseed oil. Details of these futures contracts follow:

Cottonseed Oil Futures Contract.—Trading unit is 60,000 lbs. (loose), or one tank car. Trading months are the current month and 11 succeeding months. Price multiples are in hundredths of a cent per pound, or $6 per contract lot. Grade tenderable (determined by the Bureau of Chemistry of the New York Produce Exchange) is Bleachable Prime Summer Yellow of American origin and production. Basis is f.o.b. New York. Deliveries shall be from New York Produce Exchange licensed bonded warehouses. If tender is made from licensed bonded warehouses outside lighterage limits of New York, the seller must make allowance equal to scheduled average refining-in-transit rates from tender point to New York. Commission rates for buying or selling per contract unit are graduated as follows:

Price	Members	Non-Members
15¢ per lb. or less	$20	$30
15.01¢ to 20¢ per lb.	22	33
20.01¢ per lb. and over	24	36

Daily trading limit above or below previous close is 2¢, maximum range being 2¢.

Soybean Oil Futures Contract.—Trading unit is 60,000 lbs. (loose), or one tank car. Trading months are the current month and 11 succeeding months. Price multiples are in hundredths of a cent per pound, or $6 per contract lot. Grade tenderable (determined by the Bureau of Chemistry of the New York Produce Exchange) is Bleachable Refined Soybean Oil of American origin. Basis is f.o.b. New York. Deliveries shall be from New York Produce Exchange licensed bonded warehouses. If tender is made from licensed bonded warehouse outside lighterage limits of New York, the seller must make allowance equal to scheduled average refining-in-transit rates from tender point to New York. Commission rates for buying or selling per contract unit are graduated as follows:

Price	Members	Non-Members
15¢ per lb. or less	$20	$30
15.01¢ to 20¢ per lb.	22	33
20.01¢ per lb. and over	24	36

Daily trading limit is 1¢ above or below previous close, maximum range being 1¢.

Black Pepper Futures Contract.—Trading unit is 33,600 lbs. in bags (15 tons of 2,240 lbs.). Beginning on February 27, 1947, and thereafter, trading is through the twelve months. Price multiples is in hundredths of a cent per lb., or $3.36 per contract lot. Quality tenderable is fair average quality, determined by the Pepper Inspection Department of the New York Produce Exchange, in accordance with type samples approved by

the Committee on Pepper. Price basis and delivery are from New York Produce Exchange licensed warehouses in New York. Commission rates for buying or selling per contract unit are graduated as follows:

Price	Members	Non-Members
9.99¢ per lb. or less	$15	$25
10.00¢ to 19.99¢ per lb.	20	30
20.00¢ per lb. and over	25	37.50

On orders originating outside the United States and Canada, the foregoing rates are increased $2.50 per contract. Daily trading limit above or below previous close is 2¢, and maximum range is 2¢.

In addition to providing services and facilities for trading in and inspection of commodities, the Exchange provides services for the shipping and export trade, and thus is naturally interested in seeing that New York City obtains a larger share of the movement of grain and other commodities for export abroad.

Government.—Government of the Exchange is vested in 15 officers and managers, the officers consisting of a President, Vice-President, Treasurer, and Managing Director. Executive Committee consists of the President as Chairman, and five others consisting of the Managing Director, the Vice-President, the Treasurer, and two of the Managers. Committees are as follows: Publicity, Arbitration, Complaints, Admissions, Trade and Transportation, Steamship Affairs, Grain, Pepper, Soybean Oil, Vegetable Oils, Waxes and Fats, Animal Oils and Fats, Petroleum, Cottonseed Products, and Flour. In addition to the Executive Offices, which include the Floor Statistical Department and Trade and Transportation, departments include the Building Department, Grain (including offices in Buffalo, N. Y., Albany, N. Y., Erie, Pa. and Norfolk, Va.), Flour Department, and Chemistry Bureau.

The total bushels of grain and flaxseed inspected and weighed at all inspection points operated by the Grain Inspection Department amounted to 215,636,436 bushels for 1947, or approximately 41% greater than for the previous 12 months period. Almost the entire gain occurred at points operated outside New York, namely Albany, Buffalo, Norfolk and Erie, Pa.

In November, 1928, the Board of Managers instituted a securities department, known as the Security Market of the Exchange and adopted a code of rules for dealing in unlisted securities. Formal trading in the securities department began December 19, 1928.

Due to lack of business and unwillingness to qualify as a registered exchange under the Securities and Exchange Act, the securities department of the New York Produce Exchange ceased operations at the close of business on February 25, 1935.

NEW YORK REAL ESTATE BOARD

The Real Estate Board of New York, Inc., located at 12 East 41st Street, New York, N. Y., was established in February, 1896, and incorporated on April 2, 1898. Its objects are:

(1) The formation of an association of those professionally engaged in the real estate business, land owners and persons interested in real estate and the welfare of the State and City and to make the Board the center of real estate interests in New York.

(2) To protect and promote the mutual interests of its members, and to facilitate negotiations in real estate.

(3) To promote and encourage the enactment of laws beneficial to and take united action upon legislative and municipal matters affecting real estate.

(4) To oppose and take necessary measures to prevent the enactment or enforcement of unjust or obnoxious legislation, and secure an efficient and economical administration of the affairs of the State and City.

(5) To secure an equitable and uniform system of taxation.

(6) To advocate necessary public improvements and oppose unnecessary, extravagant and wasteful expenditures of public funds.

The Board is managed by a Board of Governors acting under a constitution; by two elected committees, auditing and nominating, and eleven standing committees as follows: admissions, appraisals, arbitration, city planning, ethics, commissions and professional practices, finance, grievances, house, legislation, taxation and assessments, and records. There are also about thirty special committees. There is also a "Management Division" of the Board guided by a board of directors. The Brokerage Division and Owners Division each have executive boards. The board room is equipped with special consulting rooms, maps, property records, telephones and other essential features necessary to the modern administration of such a service organization.

The Real Estate Board is concerned with municipal and state legislation affecting real estate, and in cooperating with other organizations in upholding the real estate interests of New York City. It publishes monthly reports of statistical studies covering bona fide open market sales of Manhattan realty, completed foreclosures, and surrenders to mortgagees in lieu of foreclosure.

NEW YORK RUBBER EXCHANGE

As a separate entity this exchange no longer exists. As of July 5, 1933, its activities were merged with the Commodity Exchange, Inc. (q. v.).

NEW YORK SAVINGS BANKS

Deposits of savings banks in New York State reached a total of over $10 billions and number of accounts, over 7,200,000 as of June 30, 1948. Rate of growth of new savings of New York State savings banks has been higher in the past six years than that in adjoining states. During the first four months of 1948, New York savings banks accounted for 82% of the net new deposits received by all mutual savings banks in the United States. Net gain in deposits of New York savings banks for the first half of 1948 totaled $229 million, or 2.3%, and savings accounts increased 109,849 in number, compared with gains of $304 million in deposits (3.7%) and 111,909 in number of accounts in the first half of 1947.

For legal investments for New York savings banks, see Legal Investments for Savings Banks.

NEW YORK SECURITY DEALERS ASSOCIATION

An association of dealers in unlisted or over-the-counter securities, in New York City, and the largest organization of its kind in the country. This association is a combination formed in 1926 of two predecessor associations: (1) Unlisted Security Dealers Association, and (2) Association of Bank Stock Dealers. Its organization is patterned after the leading stock exchanges,

with a constitution, and rules and regulations. There is a board of governors of twelve members, from which the officers are chosen, and standing committees, e. g., public relations, business conduct, securities, admissions, arbitration and nominating. There are also five special committees--uniform practice, real estate securities, law and interpretation of SEC regulations, credit information, and municipal bonds.

There are about 94 member firms of the association. The daily quotations service on Over-the-Counter securities formerly furnished to newspapers by the association was assumed by the National Association of Securities Dealers, Inc., when the latter body was formed upon passage of the Maloney Act, an amendment to the Securities Exchange Act of 1934, in June, 1938. (See National Association of Securities Dealers, Inc., Over-the-Counter Market.)

NEW YORK SOCIETY OF SECURITY ANALYSTS

A non-profit membership corporation formed in 1937 to foster the interchange of information and opinion among analysts engaged in research in various branches of finance and economics; to improve analytical techniques; to establish and maintain a high standard of professional ethics; and to advance public understanding of the functions of financial analysts and the operation of the security and commodity markets.

Original membership, in 1937, was about 20. This has grown to over 1,000 in 1948. Membership is open to any person 21 years of age or over, who has been regularly engaged in the capacity of security analyst for a period of three years or longer, as an employee, officer or partner of a security house, bank or other financial organization, and regularly engaged in this capacity at the time of application. All persons seeking membership shall be sponsored by a member in good standing. Enlargement of the membership of the Society is now limited each year to 10% of the existing membership at the end of each fiscal year.

Officers consist of a President, Vice-President, Secretary, and Treasurer, and an Executive Committee consists of these officers and 15 other members. Standing committees are maintained on Membership, Standards, Program, Constitution, Employment, Publications, and House.

Regular publication is the quarterly The Analysts Journal, whose first number appeared in January, 1945. Luncheon forums are held about three times weekly, except during the summer, at which leaders in business and finance are invited to address the members on such subjects as rails, utilities, industrials and special subjects.

On June 11, 1947, the National Federation of Financial Analysts Societies was formed, consisting of the Boston Security Analysts Society, Investment Analysts Club of Chicago, Los Angeles Society of Security Analysts, New York Society of Security Analysts, Inc., and the Financial Analysts of Philadelphia.

NEW YORK STATE INCOME TAX

New York State adopted an income tax law in 1919, applicable for the first time to incomes for the year 1920. The tax is imposed upon the net income and net capital gain of residents from all sources and upon non-residents from property owned or business carried on within the State, at non-discriminatory rates for residents and non-residents. The tax also applies to resident and non-resident trusts and estates.

Statute imposing the tax is Article 16 of the Tax Law (Chapter 60, Consolidated Laws). In addition, the Tax Commission has issued official regulations interpreting the statute.

Rates are progressive in principle. At the present time, ordinary tax rates are graduated as follows:

2% on net income not exceeding $1,000;
3% on net income in excess of $1,000, not exceeding $3,000;
4% on net income in excess of $3,000, not exceeding $5,000;
5% on net income in excess of $5,000, not exceeding $7,000;
6% on net income in excess of $7,000, not exceeding $9,000;
7% on net income in excess of $9,000.

The tax on net capital gains is graduated in accordance with the above scale, at one-half of the above normal rates.

Personal exemptions are: individual, single or married but not living with husband or wife, $1,000; married person, living with husband or wife, $2,500; head of family, $2,500; credit of $400 for each dependent, including a dependent over 18 years of age if attending an accredited school or college.

For several years, the Legislature has authorized each year a reduction of the normal tax. The above rates were reduced 25% for the years 1941, 1942, 1943 and 1944. Reduction for the years 1945 and 1946 was 50%. For 1947, the rates were increased 10% after giving effect to the 50% reduction, or a net reduction of 40% for 1947. This 10% increase reflected financing in part of bonus payment to World War II veterans authorized by the new Section 18 of the New York State Constitution, an amendment approved by State voters at general election held November 4, 1947.

NEW YORK STOCK EXCHANGE

A voluntary, unincorporated association without capital, but registered as a "national securities exchange" on September 1, 1934, in conformity with the requirements of section 6 of the Securities Exchange Act of 1934 (q. v.). This latter Act brought the New York Stock Exchange (as well as other stock exchanges) under Federal regulation for the first time in their history through the Securities and Exchange Commission.

History.--The first organized stock market in New York City, constituting the beginnings of the present New York Stock Exchange, had its origins on May 17, 1792, when 24 brokers met and subscribed to an agreement in respect to commission charges in front of what is now 68 Wall Street. Operating as an out-doors market, meetings were held in various locations, including the Tontine Coffee House at Wall and Water Streets. On March 8, 1817, a constitution and the name "New York Stock and Exchange Board" were adopted. A month later, on April 8, 1817, the exchange moved indoors, renting a second-floor room at 40 Wall Street.

On December 16, 1835, a fire destroyed 648 buildings in New York, including the Merchants Exchange on Wall Street, where the exchange was then housed. From 1853 to 1865, the exchange was located at the corner of Wall and Beaver Streets. On January 29, 1863, the title of the exchange was changed from "New York Stock and

Exchange Board'' to the ''New York Stock Exchange,'' and on the following day the first subsidiary, The New York Stock Exchange Building Company, was organized. Later the same year, the building subsidiary purchased the first property at 13 Wall Street and 4 New Street. Removal into the first building of its own took place on December 9, 1865, at 10 and 12 Broad Street, which is a part of the present site. This building was replaced by a new 10-story structure at 18 Broad Street, which was opened April 23, 1903.

With the territorial and economic development of the United States new sources of capital were created and new issues of securities were absorbed rapidly by the public. The consequent broadening of the market for securities made it necessary for the exchange authorities to seek larger quarters, and a new site was chosen in 1879 on Broad Street, near Wall Street, the present location. In 1923, a 22-story addition was completed at the corner of Broad and Wall Streets in order to provide additional facilities. The handling of the greatly increased business of recent years called not only for more commodious quarters but for a higher type of market organization. This was provided by the perfection of the means of communication and reporting—the telegraph, telephone, and electrically operated quotation tickers. The present elaborate communication system of member houses permits the public in distant parts of the country to transact business on the exchange on a practical equality with traders in New York City.

Subsidiaries.—The New York Stock Exchange wholly owns the stock of three subsidiary companies, namely: New York Stock Exchange Building Company; Stock Clearing Corporation; and New York Quotation Company.

Publication of Financial Statements.—For the first time in its history, the New York Stock Exchange on October 29, 1934, released for publication its financial statements for the year 1933. This information, including a balance sheet as of December 31, 1933, and an income account for the year 1933, both for the New York Stock Exchange, and consolidated statements including subsidiaries, was made public in connection with the registration of the exchange as of October 1, 1934, under the Securities Exchange Act of 1934. These statements are required periodically, but the Exchange and Securities Commission may, in its discretion, withhold their publication. Latest financial statements are appended herewith.

Functions.—The functions of the exchange may be stated as follows: (1) it provides for the transfer of ownership of America's leading stocks and bonds, making it possible for owners to sell securities after they are once acquired; in active issues liquidation of holdings or accumulation of investments may be consummated almost instantly; (2) by means of published daily quotations, holders of securities are enabled to determine their market value at all times and bankers who make collateral loans can determine whether margin requirements are continuously satisfactory; (3) it furnishes an important barometer of business conditions, quoted prices being the result of the composite judgment of investors and speculators, and rising or falling in accordance with the trend of business profits and profit prospects; and (4) it makes possible the quotation of securities having no maturity or long-deferred maturities—the proceeds of which are invested by corporations in plant, machinery and other instruments of production; without a place to sell securities, investors would hesitate to so place their funds without the knowledge that they could dispose of them in case circumstances required their conversion into cash; thus, the Stock Exchange is a part of the machinery of raising long-term capital without which it would never have been possible for American industry to assume a position of world supremacy.

The New York Stock Exchange is the most important stock exchange in the world, and according to its constitution, has the following objects: ''to furnish exchange rooms and other facilities for the convenient transaction of their business by its members as brokers; to maintain high standards of commercial honor and integrity among its members; and to promote and inculcate just and equitable principles of trade and business.''

Membership.—Until 1929, membership was limited to 1,100, who after admission, pay for their ''seats'' and contribute annual dues. There are upwards of 200 out-of-town members, who seldom appear on the floor of the exchange. The membership represents about 400 firms, most of which have non-member partners.

On February 7, 1929, the members of the Exchange approved the sale of 275 new ''seats,'' or memberships, equivalent to a 25 per cent. ''stock dividend''. Each member of the Exchange was given the right to one-quarter of a new membership which he could dispose of within three years by sale or transfer. This increased the membership to 1,375. There are also allied members, the number of whom is not limited. There are some 2,300 allied members. Membership represents some 600 firms.

Many members maintain branch offices and ''wire correspondents'' scattered throughout the United States and Canada and a few have offices in London, Paris and Berlin. Memberships belong only to individuals and not to firms or corporations; banks are therefore automatically excluded. When one member of the firm is a member of the stock exchange the firm is permitted to advertise itself as ''Members of the New York Stock Exchange.'' Trading on the floor of the exchange, however, is confined to individual members exclusively. Each member who represents a firm is as responsible for the conduct of the firm as though it were his individual conduct, but he may make contracts in the firm's name. The privileges of membership consist of the right to trade on the floor of the exchange for one's own account without commission, or for the account of others with a commission, or by another member at members' rates. The estate of a deceased member participates in a death benefit.

A membership is secured by purchasing a seat from a retiring, deceased or expelled member, members being elected for life unless they resign or are expelled. Expulsion involves forfeiture of membership, but not the proceeds of sale of such membership. Whenever explusion is caused by insolvency the proceeds of sale of the member's seat are applied to creditors' or members' claims.

Government.—Government of the Exchange was reorganized and simplified in 1938 as the result of the recommendations of the Conway Committee, and further reorganized since. As a result, the former system of standing committees was eliminated, and administration of the Exchange is now organized in departments. Government of the Exchange is vested in the Board of

Governors, consisting of the following: (1) the Chairman of the Board of Governors, who shall be a member of the Exchange; (2) the Vice-Chairman of the Board of Governors, who shall be a Governor and a member of the Exchange; (3) the President of the Exchange, who shall not engage in any other business during his incumbency and who if a member of the Exchange at the time of his election, shall promptly thereafter dispose of his membership; (4) twenty Governors, being both members and allied members or non-members; and (5) two representatives of the public; total, 25 Governors.

The Board of Governors is vested with all powers necessary for the government of the Exchange, the regulation of business conduct of members and allied members, and the promotion of the welfare, objects and purposes of the Exchange. In the exercise of such powers, the Board may adopt such rules, issue such orders and directives and make such decisions as it may deem appropriate. The Board may prescribe and impose penalties for the violations of rules adopted pursuant to the constitution, and for neglect or refusal to comply with orders, directives or decisions of the Board, or for any offense against the Exchange the penalty for which is not specifically prescribed by the constitution. The Board may delegate such of its powers as it may from time to time determine, subject to the provisions of the constitution, to the President, to the other officers and employees of the Exchange, and to such committees, composed either of Governors or otherwise, as the Board may from time to time authorize. Any member, allied member or member firm affected by a decision of any officer, employee or committee acting under powers delegated by the Board may require a review by the Board of such decision, by filing with the Secretary of the Exchange a written demand therefor within 10 days after the decision has been rendered.

The Board of Governors, by an affirmative vote of a majority of the Governors then in office, shall elect the President of the Exchange, to serve at the pleasure of the Board, and shall fix his compensation. At its organization meeting following the annual election of the Exchange, the Board by the affirmative vote of a majority of the Governors then in office, shall elect the Vice-Chairman of the Board, who shall be a Governor and a member of the Exchange. Promptly after the annual election of the Exchange, the Board of Governors on the nomination of the President, shall by the affirmative vote of a majority of the Governors then in office, elect to the Board two representatives of the public, to hold office until the next annual election of the Exchange.

The President shall be the chief officer and the chief executive officer of the Exchange, responsible for the management and administration of its affairs, and shall be the official representative of the exchange in all public matters. He shall during his incumbency be a member of the Board of Governors and ex officio a member of any committee authorized by the Board of Governors. The President may call special meetings of the Board of Governors. Subject to the approval of the Board, the President shall appoint officers of the Exchange other than the Chairman and Vice-Chairman of the Board, and also has jurisdiction over employees.

Annual election of the Exchange is held on the second Monday in May in each year. The members by ballot at such election elect the Chairman of the Board of Governors for a 1-year term and also the non-public Governors in rotating groups for 3-year terms. The members also elect a nominating committee for a 1-year term, but the members may by petition nominate their own nominees, provided any such nominee is endorsed by not less than 40 members, and no member shall endorse more than 1 nominee, and provided also that 100 members may by petition propose an entire ticket or any portion thereof.

In addition to the President, officers consist of an Executive Vice-President; a First Vice-President; two Vice-Presidents; a Vice-President and Treasurer; a Secretary; a Chief Examiner; an Assistant Vice-President and Assistant Treasurer as well as Assistant Secretary; and two Assistant Chief Examiners. The Stock Clearing Corporation is headed by a First Vice-President; the New York Stock Exchange Building Company, by a Vice-President and Secretary; and the New York Quotation Company, by a Vice-President and Secretary.

Volume of Trading.—In its earliest days, the New York Stock Exchange was principally a bond market, as an outgrowth of the public interest in the first United States bonds authorized by Congress in 1790. The physical separation of bond from stock dealing took place in 1902, when the so-called "bond crowd" was formed. When the present trading floor was opened for business in 1903, the "bond crowd" occupied a platform at the east wall. Trading was at the rate of about three-quarters of a billion dollars in bonds each year up to 1914. Transactions ranged between three and four hundred a day and quotations were printed on the stock ticker.

By 1917 dealings in bonds had reached such large proportions that the old quarters no longer sufficed and a new space was allotted to that market in the northeast corner of the floor, a space two and one-half times as large as formerly, and sixty telephones were installed as against the former number of twenty-four. In 1918 total trading in bonds increased about one hundred per cent., due principally to the listing of the large issues of United States Liberty Loans. Congestion caused by printing the stock and bond quotations on the same ticker was so acute that it was necessary to install an entirely separate ticker system for bonds alone. This was accomplished at the beginning of 1919, and in April of that same year the Liberty Loan issues were divided from the rest of the list and placed in a separate space.

During 1921 foreign bonds were separated from the general list and place on the north wall, with twenty more telephone spaces added, making the total of these booths 104. In October, 1922, when the new building at 11 Wall Street was opened, the bond crowd was moved into the eastern half of the new board room, and industrial issues split into "book bonds" and "free bonds." This space, many times larger than that which only five years before had seemed ample to provide for all of the needs of the bond crowd, soon became congested and in November, 1923, the partition separating the stock and bond crowds in the new trading room was moved farther to the west to provide greater floor space for the bond traders.

On May 14, 1928, the new Bond Room, located in 20 Broad Street and connected directly with the Stock Exchange floor, was opened for trading. This room added about 6,000 square feet of space to the Exchange's trading floor and, in addition to providing increased

facilities for the purchase and sale of bonds, it also made possible the extension of the space devoted only to stocks by permitting the installation of stock posts in the section previously alloted to bonds.

These changes in the facilities for bond trading reflect also the expansion in stock trading, which began in the early '20s to assume large proportions until it has outstripped bond trading in both number of issues listed and in value of trading volume.

Publications.—In addition to listing statements, which provide statistical information concerning listing companies at least once a year, the exchange publishes the following: (1) notices to members, (2) "The Exchange", monthly magazine, (3) the President's annual report, and (4) year-book (occasionally).

Securities are listed on the exchange by application to the department of stock list, the decisions of which are subject to review by the board of governors. The exchange is as exclusive in admitting securities as it is in admitting members. The tests and qualifications for admission are treated under Listed Securities (q. v.). Corporations whose securities are listed are required to furnish stockholders with complete annual statements of condition and profit and loss.

The hours for trading are from 10 A. M. to 3 P. M., except on Saturday, when the exchange is open from 10 A.M. to noon, except during the summer months. The floor is open at 9:30 A.M. in order to give members time to arrange for borrowing money and for borrowing and lending stocks. Settlements of active stocks and bonds are made through the Stock Clearing Corporation, daily except Saturday.

Quotation Department.—In September, 1928, the exchange inaugurated, under the supervision of the Committee of Arrangements, a new quotation system for the reporting of bid and asked quotations from the floor of the exchange to members' offices. Installed experimentally at first, the plan was an immediate success and, by February, 1929, full service was being given from all posts on the floor.

Financial Statements.—For the first time in its history, the New York Stock Exchange released for publication its financial records on October 29, 1934. This information was made public in connection with the registration of the exchange under the Securities Exchange Act of 1934, and, under the law, must be kept up to date.

The latest consolidated balance sheet of the New York Stock Exchange, New York Stock Exchange Building Company, New York Quotation Company, and Stock Clearing Corporation are appended herewith.

Number of Issues Listed.—The number of individual issues listed on the New York Stock Exchange on the first of each year since 1867 compares as follows:

Year	Stocks	Bonds	Total
1867	148	175	323
1868	152	162	314
1869	145	195	340
1870	143	200	343
1871	147	203	350
1872	158	230	388
1873	158	274	432
1874	152	279	431
1875	163	348	511
1876	160	345	505
1877	163	334	497
1878	159	329	488
1879	174	347	521
1880	219	408	627
1881	250	445	695
1882	284	533	817
1883	304	571	875
1884	315	610	925
1885	310	628	938
1886	293	639	932
1887	308	678	986
1888	338	704	1,042
1889	346	727	1,073
1890	354	742	1,096
1891	342	760	1,102
1892	375	833	1,208
1893	388	874	1,262
1894	387	900	1,287

1921	756	1,115	1,871
1922	792	1,156	1,948
1923	778	1,234	2,012
1924	889	1,262	2,151
1925	927	1,332	2,259
1926	1,043	1,367	2,410
1927	1,081	1,420	2,501
1928	1,097	1,491	2,588
1929	1,176	1,534	2,710
1930	1,293	1,543	2,836
1931	1,308	1,607	2,915
1932	1,278	1,601	2,879
1933	1,237	1,549	2,786
1934	1,209	1,568	2,777
1935	1,187	1,540	2,727
1936	1,185	1,463	2,648
1937	1,212	1,409	2,621
1938	1,259	1,376	2,635
1939	1,237	1,393	2,630
1940	1,233	1,395	2,628
1941	1,230	1,295	2,525
1942	1,232	1,173	2,405
1943	1,238	1,136	2,374
1944	1,237	1,096	2,333
1945	1,259	1,063	2,322

Year	Stock	Bonds	Total
1946	1,269	982	2,251
1947	1,334	925	2,259
1948	1,379	900	2,279

Volume of Trading Since 1900.—The following table presents a comparison of the annual reported volume of trading in stocks and bonds on the New York Stock Exchange since 1900:

Year	Stocks (Shares)	Bonds (Shares)
1900	139,074,651	$577,763,080
1901	264,951,308	994,554,830
1902	186,733,710	893,048,032
1903	158,578,700	686,434,850
1904	186,921,488	1,032,653,647
1905	260,557,777	1,026,452,550
1906	282,206,863	677,183,331
1907	194,635,640	529,833,269
1908	194,544,462	1,081,172,520
1909	212,419,698	1,314,423,665
1910	163,704,819	634,860,010
1911	125,852,824	889,073,610
1912	131,488,148	673,426,920
1913	82,849,155	501,530,320
1914	47,431,227	461,649,200
1915	172,496,774	961,698,900
1916	232,633,124	1,148,159,550
1917	184,623,326	1,034,568,500
1918	143,279,573	2,012,365,300
1919	318,272,910	3,676,100,600
1920	227,635,768	3,868,421,700
1921	172,778,535	3,386,159,000
1922	260,890,802	4,145,568,008
1923	236,482,731	2,744,966,900
1924	284,044,082	3,801,963,000
1925	459,717,623	3,427,042,210
1926	451,868,353	3,015,344,915
1927	581,702,342	3,307,239,382
1928	930,893,276	2,835,831,560
1929	1,124,608,910	2,996,398,000
1930	810,632,546	2,730,301,800
1931	576,765,412	2,969,770,600
1932	425,234,294	2,991,244,000
1933	654,816,452	3,355,646,000
1934	323,845,634	3,701,916,000
1935	381,635,752	3,339,458,000
1936	496,046,869	3,576,878,000
1937	409,464,570	2,792,531,000
1938	297,466,722	1,859,865,000
1939	262,029,599	2,046,083,000
1940	207,599,749	1,669,438,000
1941	170,603,671	2,111,805,000
1942	125,685,298	2,311,479,250
1943	278,741,765	3,254,717,725
1944	263,074,018	2,694,704,000
1945	377,563,575	2,261,985,110
1946	363,709,312	1,364,174,150
1947	253,623,894	1,075,541,420

Membership or "Seat" Prices.—The following is a record of the high and low prices paid for memberships each year since 1869.

Year	High	Low
1869	$7,500	$3,000
1870	4,500	4,000
1871	4,500	2,750
1872	6,000	4,300
1873	7,700	5,000
1874	5,000	4,250
1875	6,750	4,250
1876	5,600	4,000
1877	5,750	4,500
1878	9,500	4,000
1879	16,000	5,100
1880	26,000	14,000
1881	30,000	22,000
1882	32,500	20,000
1883	30,000	23,000
1884	27,000	20,000
1885	34,000	20,000
1886	33,000	23,000
1887	30,000	19,000
1888	24,000	17,000
1889	23,000	19,000
1890	22,500	17,000
1891	24,000	16,000
1892	22,000	17,000
1893	20,000	15,250
1894	21,250	18,000
1895	20,000	17,000
1896	20,000	14,000
1897	22,000	15,500
1898	29,750	19,000
1899	40,000	29,500
1900	47,500	37,500
1901	80,000	48,500
1902	81,000	65,000
1903	82,000	51,000
1904	81,000	57,000
1905	85,000	72,000
1906	95,000	78,000
1907	88,000	51,000
1908	80,000	51,000
1909	94,000	73,000
1910	94,000	65,000
1911	73,000	65;000
1912	74,000	55,000
1913	53,000	37,000
1914	55,000	34,000
1915	74,000	38,000
1916	76,000	60,000
1917	77,000	45,000

* Ten Share Unit Stocks.

EXPLANATORY NOTES

1. Single Lots. Sales of single lots of stock dealt in in units of 100 shares will be printed with no quantity indicated. Thus, a sale of 100 shares of U. S. Steel at 67 5/8 will be printed X67 5/8.

2. Lots of Two of More. Sales consisting of two or more lots of stock dealt in in units of 100 shares will be indicated by printing the number of lots followed by the letter "S" on the lower line, and then followed by the price. Thus, a sale of 200 shares at 67 5/8 will be printed X2S67 5/8. The quantity of sales of 1,000 shares or more will be printed in full, e. g., X1000S67 5/8.

3: Odd Lots. (a) Sales of odd lots of stock will not be printed, except upon approval of a member of the Committee on Floor Procedure. When so approved a sale of 25 shares at 67 5/8 will be printed, X25SHRS67 5/8.

(b) Sales of odd amounts of more than the trading unit will be printed as follows: X125SHRS67 5/8.

4. 10-Share Unit Stocks. The quantity of sales of stocks dealt in on a 10-share-unit basis will be designated by the letters SS on the lower line. Thus, a sale of 10 shares of N. Y. & Harlem R. R. at 131 will be printed HAR10SS131.

5. Active Markets. When the tape is one minute or more late the first digit of the price will be dropped, except on opening sales, or when circumstances make it advisable to report the full figure.

6. "FLASH" Printing. When the ticker becomes five minutes late, "flash" prices in certain selected stocks are printed at regular intervals. These are intended only to facilitate observation of the market, and the sales establishing the prices are printed in their normal positions.

7. Delayed Print. When a sale is not reported in its proper place, the letters SLD on the upper line will follow the symbol, e. g., X.SLD2S67 5/8.

8. Seller's Option Contracts. Seller's Option contracts will be printed with the word "SELLER" following the price, and then followed by the number of days for which the contract runs, e. g., X67 5/8 SELLER 7.

9. Bids and Offers. Bids will be printed with the letter "B" on the lower line preceding the price, and offers will be printed with the letter "O" on the lower line preceding the price, e. g., XB. 67 1/2..O.67 5/8.

10. Errors: Methods of Correction. (a) When an error in printing is discovered immediately, the last letter or figure will be repeated several times indicating that the sale is to be disregarded, e.g., X67 5/8 5/8 5/8 5/8 5/8.

(b) When an error in printing is discovered after other sales have been printed, the correction will be indicated thus: NO. X 67 1/2, WAS 67 5/8, or NO. 67 5/8, WAS C67 5/8.

11. When an opening sale takes place and is not printed in the usual manner in relation to other sales at about the same time, such opening sale will be printed on the tape accompanied by the ticker symbol "OPD".

12. The "Basis Prices" jointly fixed by the odd-lot dealers will be printed on the stock ticker tape after the close of the market and will be prefaced by the following language: "Basis Prices Established by Odd-Lot Dealers."

The basis price is set by the odd-lot dealers by agreement after the close of the market on every business day in stocks in which: (1) There has been no round-lot sale during the trading session of that day. (2) The closing bid and offer are two points or more apart. (3) An order was received prior to 2:30 P.M. (11.30 A.M. on Saturday) and marked before the close of the market "on basis", provided that in the case of limited and stop orders the basis price is effective.

The differential is 1/8 away from the basis price. The odd-lot dealer will not fill an order to sell "on basis", marked short.

WORDS AND PHRASES

Abbvn.	Words and Phrases
A	Class A.
ASD	Assented.
B	(on upper line) Class B.
B	(on lower line) Bid (Note #9).

C	(on lower line) Cash.
C	(on lower line, in closing prices) See Note #11.

XD	Ex-Dividend.
XW	Without Warrants.

NEW YORK STOCK EXCHANGE BULLETIN

As of April 30, 1930, the New York Stock Exchange published its first monthly "New York Stock Exchange Bulletin." This Bulletin was not intended as a vehicle for editorial comment or opinion. Its object was to collect together in convenient form economic data relative to security markets, and particularly regarding the New York Stock Exchange.

Beginning in 1939, however, the Bulletin was succeeded by the new monthly magazine, "The Exchange". This monthly publication contains articles of current interest on financial subjects, highlighted in modern magazine treatment with pictorial backgrounds and providing readability as well as basic facts and data. "The Exchange" is sold by subscription at $1 per year, which price falls short of meeting actual costs. However, the New York Stock Exchange feels "The Exchange" is an important vehicle in effecting a more realistic appreciation of the listed securities business, and has kept the subscription price at a popular level.

NEW YORK STOCK EXCHANGE CLEARING HOUSE

A subsidiary of the New York Stock Exchange, now known as the Stock Clearing Corporation, the purpose of which is to clear stock transactions among its member brokers in much the same way as checks are cleared through a clearing house for its member banks.

Stock exchange clearing houses were first established in Europe, the Frankfort Stock Exchange inaugurating a system as early as 1867. At the present time, the system is used by all important stock exchanges throughout the world. The New York Consolidated Stock Exchange introduced its system in 1886, and the New York Stock Exchange on May 17, 1892.

Prior to the adoption of stock exchange clearing houses, it was necessary for a broker who had sold stocks to deliver them to the offices of the various purchasing brokers and collect payment therefor. Likewise, brokers from whom he had purchased stocks were compelled to deliver stocks to his offices and receive payment therefor.

At the present time, however, a broker at the close of each day's business makes up a clearing house sheet, displaying the purchases on the left-hand side, and sales on the right-hand. The number of shares, name of security, price, and name of broker to whom delivery or from whom receipt is to be made, are indicated. Thus, the left side shows the amount to be received, while the right side shows the amount to be delivered. If the broker's purchases in money value exceed his sales, the clearing house sheet is accompanied with a check payable to the Stock Clearing Corporation; but if the sales exceed the purchases then a credit memorandum showing the amount due from or draft upon, the Stock Clearing Corporation is forwarded with the clearing house sheet.

In very few cases will a broker buy the same amount of a given stock as he sells, or vice versa. The stock difference, therefore, must be settled as well as the money difference. But the stock difference is provided for at the time the clearing house sheet is made up. "The balances of securities that may appear on one side or the other of the sheet must actually be received or delivered at a fixed 'delivery' or 'settlement' price, published by the clearing house in advance of the making up of the clearing sheet. The totals of these fixed delivery items are taken care of by a system of debits and credits in the clearing house. No injustice results from this practice, because the brokerage firm in making up the statement automatically credits or debits itself on the clearing sheet for any loss or profit (for which, of course, it is not responsible), that may arise because the arbitrary settlement price happens to be higher or lower than the contract price. And all such debits and credits by all brokerage houses concerned in the transactions will necessarily offset one another so that the sum total of all checks sent to the clearing house will just equal all drafts upon it" (Huebner, S.S.: The Stock Market).

The Stock Clearing Corporation was organized in 1920 with a capital of $500,000 divided into shares of $100 each, all of which is owned by the New York Stock Exchange. Charges are paid by the clearing members based on the number of shares cleared and their value. With certain exceptions, all transactions of stock exchange members must be cleared through the Stock Clearing Corporation, except that only transactions involving 100 share lots or multiples thereof, are eligible.

Only active securities, moreover, can be cleared in this way, the Stock Clearing Corporation designating from time to time the list of securities which will be received for clearing purposes. These are known as clearing house stocks.

A system of central delivery of securities was instituted in 1929 between members of the Stock Clearing Corporation and between members and the major New York City banks (non-members).

Income of the Stock Clearing Corporation fluctuates according to the volume of trading, and in 1947 totaled

$1,204,645, compared with $1,567,894 in 1946.

The auditing of the operations of both the day and night clearing branches is in the hands of a department under the direction of the assistant treasurer where is concentrated the routine work of auditing, collecting charges from members, and the continuous check and reconciliation of bank balances. It is an entirely separate department and was organized and operates on the same principles as the auditing departments of large corporations.

Owing to the tremendous value of negotiable securities going through the premises of the day branch, a very complete guarding system is in existence and the premises are protected in the most modern way possible. No employee of a firm is admitted to these premises without having an identification card with his picture thereon and his having filed a complete history sheet that is duly investigated and passed upon by the Division of Records and Investigations. (See Clearing House, New York Stock Exchange.)

NEW YORK SUGAR EXCHANGE

See New York Coffee and Sugar Exchange.

NEW YORK TIMES BUSINESS INDEX

The New York Times Weekly Index of Business Activity is published every Sunday in the Business and Financial News Section. The combined index uses "an estimated normal" because the base periods of the components vary. The six components are adjusted for seasonal variation with the exception of the steel series, which is calculated upon a percentage of capacity. The steel component is also adjusted for long term trend, as is the power series.

The estimated normals for the various components are as follows: Miscellaneous carloadings, 48,000 cars per day, the approximate average for the period 1928-1937; other carloadings, 72,000 cars per day, the approximate average for the period 1928-1937; steel ingot production, 69% capacity, the approximate average for 1919-1939; electric power production, a straight line rising trend to allow for the normal growth of the industry, with a weekly increment of 186,000 kwh in the daily average; paperboard production, 20,240 tons per day, the average of the period 1935-1939; lumber production, 35,660 thousand feet per day, the average for 1935-1939.

The weights for the components are now as follows:

	Effective Weights	Adjusted Weights
Miscellaneous loadings	22	.21
Other loadings	12	.13
Steel ingot production	25	.10
Electric Power production	17	.38
Paperboard production	12	.10
Lumber Production	12	.08

The adjusted weights are obtained from the effective weights by dividing the effective weights by the range or amplitude of each index of the periods from 1934 to 1939. The purpose of this adjustment is to give the assigned weights their true value undistorted by the varying cyclical amplitude of the various components.

To obtain the combined index figure, the component indices are multiplied by the adjusted weights. The results are added and the total multiplied by 1.024, an adjustment factor introduced when the automobile and cotton mill activity series were eliminated because of World War II.

This business index has been compiled by the New York Times weekly since January 5, 1929. Each of the six series is published separately in figures, along with the combined index, for current week, previous week and week of year ago, and the combined index is also charted and published in chart form along with the figures.

(See Business Barometers, Index Numbers.)

NEXT OF KIN

Those persons closest related by blood; but as construed by courts, relatives sharing in the estate according to the provision of the statutes of distribution. In New York State, all distinctions between persons who take as heirs at law or next of kin were abolished September 1, 1930, and the term "distributees" now covers both types of takers.

(See Heir.)

NICKEL COIN

A name given to the United States five cent piece. It is classified as one of the Minor Coins (q. v.) by the Treasury Department. Its composition is 75 per cent. copper (57.87 grains) and 25 per cent. nickel (19.29 grains), or total weight of 77.16 grains. Under the Joint Resolution of Congress of June 5, 1933, all coins and currencies of the United States heretofore or hereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues.

NICK-NAMES OF STOCKS

Many of the leading stocks have nick-names by which they are popularly known in Wall Street. In some cases nick-names have been derived from the ticker abbreviation. For instance, Missouri Pacific is known as "Mop" (abbreviation MP), and People's Gas Light & Coke Company as "Post Office" (abbreviation PO). The following are nick-names, or alternate names, given to some of the American railroads:

Atchison, Topeka & Santa Fe... Santa Fe or Atchison
Atlantic Coast Line ..... Coast Line
Baltimore & Ohio ..... B & O
Canadian National ..... C N R
Canadian Pacific ..... C P R
Central Railroad of New Jersey ..... Jersey Central
Chesapeake Western..... Trans-Virginia route
Chicago & Eastern Illinois ..... Connecting Link
Chicago & North Western ..... North Western
Chicago, Burlington & Quincy ..... Burlington, or "Q"
Chicago, Great Western
Corn Belt Route, or Great Western
Chicago, Indianapolis & Louisville ..... Monon
Chicago, Lake Shore & South Bend .... South Shore Line
Chicago, Milwaukee & St. Paul .. St. Paul, or Milwaukee
Chicago, North Shore & Milwaukee .... North Shore Line
Chicago, Rock Island & Pacific..... Rock Island
Chicago, St. Paul, Minneapolis & Omaha ..... Omaha
Cincinnati, New Orleans & Texas .....Queen & Crescent

Cleveland, Cincinnati, Chicago & St. Louis .... Big Four
Delaware, Lackawanna & Western
Road of Anthractire, or Lackawanna
Detroit, Toledo & Ironton ..... Henry Ford's road
Dominion Atlantic Railway ..... Land of Evangeline route
Elgin, Joliet & Eastern ..... Chicago Outer Belt Line
Florida East Coast.....Flagler system
Fort Dodge, Des Moines & Southern
Fort Dodge Line
Great Northern ..... Hill's road
Hudson & Manhattan
Hudson River Tunnels, the Tube
Kansas City, Mexico & Orient ..... Orient
Kansas City Southern ..... Port Arthur route
Lackawanna & Wyoming Valley ..... Laurel line
Lehigh Valley ..... Black Diamond route
Long Island ..... Sunshine route
Louisiana & Arkansas ..... Natchez route
Louisville & Nashville ..... Ellen N
Louisville, Henderson & St. Louis .... Henderson route
Manitou & Pike's Peak ..... Cog Wheel route
Michigan Central ..... Niagara Falls route
Midland Valley ..... Arkansas River route
Minneapolis & St. Louis ..... Peoria Gateway line
Minneapolis, Northfield & Southern ...Minneapolis belt
Minneapolis, St. Paul & Saulte Ste.....Marie Soo line
Missouri-Kansas-Texas ..... Katy
Missouri Pacific ..... Iron Mountain, or Mop
New Orleans, Texas & Mexico ..... Gulf Coast line
New York Central.....Central
New York, Chicago & St. Louis ...Nickel Plate, or N K P
New York, New Haven & Hartford ..... New Haven
New York, Ontario & Western ..... O & W or "Old Woman"
Northern Pacific ..... Nipper
Pennsylvania ..... Pennsy
Pittsburgh, Cincinnati, Chicago & St. Louis....Panhandle
Pittsburgh, Shawmut & Northern ..... Shawmut route
Pittsburgh & Lake Erie ..... Little Giant
Pittsburgh, McKeesport & Youghiogheny .... P Mickey
Richmond, Fredericksburg & Potomac
Richmond-Washington line or R F & P
St. Louis-San Francisco ..... Frisco
St. Louis Southwestern ..... Cotton Belt route
Seaboard Air Line ..... Seaboard line
Southern Pacific Company ..... Sunset route or S P
Southern Pacific Railroad of Mexico...West Coast route
Tennessee Central ..... Nashville route
Union Pacific ..... Overland route, or U P
Western Pacific ..... Feather River route or Wespac

NO ACCOUNT

When a check is presented for collection through the clearing house, for which the drawer as indicated, has no account on the books of the drawee bank, the latter returns it to the presenting bank for credit, with the memorandum entitled, 'No Account' attached. (See Irregularities.)

NO FUNDS

When a check is presented for collection through the clearing house, for which the drawer as indicated, has no funds to the credit of his account with the drawee bank, the latter returns it to the presenting bank, for credit, with the memorandum entitled, 'No Funds' attached. (See Irregularities.)

NO MINIMUM BALANCE CHECKING ACCOUNTS

As the result of adoption by many banks of service charges and requirement for minimum free balances in checking accounts, the "no minimum balance" type of checking services, also known as "pay-as-you-go" checking services, such as the "Check Master" plan, have been developed in recent years to appeal to marginal bank prospects for checking service.

As indicated by the title, a basic appeal of such plans is the absence of any requirement for minimum balances in the account. Instead, there is a flat charge per check drawn, and the depositor is merely required to have sufficient funds on deposit to cover checks issued. (See Minimum Free Balance.)

NO PAR VALUE STOCK

Stock that has no designated par value. New York State was the first State to authorize no par value stock, one of the motives being to prevent fraud in the sale of $100 par value stock under the misrepresentation to the uninformed that such par value meant actual asset value.

Under Sec. 13 of the New York Stock Corporation Law, the capital of any corporation authorized to issue shares without par value shall be deemed to be an amount computed in accordance with the statements respecting its capital contained in the certificate of incorporation. Sec. 12 of the New York Stock Corporation Law requires the certificate of incorporation to state the number of shares which are to be without par value and in addition, either one of the following statements:

(1) "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus .....dollars (the blank space being filled in with some number representing $1 or more) in respect to every issued share without par value, plus such amounts as, from time to time, by resolution of the board of directors, may be transferred thereto;" or

(2) "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus the aggregate amount of consideration received by the corporation for the issuance of shares without par value, plus such amounts as, from time to time, by resolution of the board of directors, may be transferred thereto."

A corporation may issue and sell its authorized shares without par value from time to time on the following basis: (1) for such consideration as may be prescribed in the certificate of incorporation; (2) for such consideration as shall be the fair market value of such shares, and in the absence of fraud in the transaction, the judgment of the board of directors as to such value shall be conclusive; (3) for such consideration as from time to time may be fixed by the board of directors pursuant to the certificate of incorporation, in the absence of fraud in the transaction; or (4) for such consideration as shall be consented to or approved by the holders of a majority of the shares entitled to vote at a meeting called pursuant to the by-laws and on notice as to such purpose. Any and all shares so issued shall be deemed fully paid and non-assessable, and the holder of such no par value shares shall not be liable to the corporation or to its creditors in respect thereto.

For stock transfer tax purposes, no par value stock is considered the same as $100 par value. Transfer

taxes are imposed by the Federal Government and by New York, Pennsylvania and Massachusetts.

(See Without Par Value.)

NO PROTEST

It is customary banking practice to protest all checks over $10 in amount when payment is refused unless instructions are given to the contrary. Most checks and some drafts and notes are accompanied by the instructions "No Protest" when sent or deposited for collection. When this is desired it is the usual practice to attach a "No Protest" ticket to the item in order to indicate to the collecting bank or agent that it is not to be protested for non-payment.

The reason for not protesting checks or other items of $10 or less, is that the expenses of protesting are not warranted, where the amount involved is so small. Messengers assigned to collecting items carrying "No Protest" instructions should remove or erase them before presentation is made, in order to circumvent the possibility of non-payment. If the drawee is informed in advance of payment that an item drawn on him is not to be protested, he might take advantage of the knowledge, and for technical reasons refuse payment.

Where any negotiable instrument has been dishonored, it may be protested for non-acceptance or non-payment, as the case may be, but protest is not required under the Negotiable Instruments Law except in the case of foreign (out-of-state) bills of exchange. (See Dishonor, Notarial Protest Certificate, Protest.)

NO PROTEST TICKET

See No Protest.

NOIL

Short-fibered wool. (See Wool.)

NOMINAL ASSETS

Assets of doubtful, indeterminable, or of undetermined value, e. g., accounts and notes receivable, judgments, other claims, securities, obsolete items of machinery and equipment, etc. If carried on the books at all, these nominal assets should be carried at a nominal value, e. g., $1.

The term is also sometimes applied to the Intangibles (q. v.), such as goodwill, patents, trademarks, etc.

NOMINAL CAPITAL

The capital of a corporation as determined by the par value of its total outstanding shares, as distinguished from the actual value of its net assets. The first is fixed by the certificate of incorporation; the second, as stated above.

In the case of no par value stock issued by any stock corporation, other than a moneyed corporation, Sec. 12 of the New York Stock Corporation Law requires the certificate of incorporation to contain the following statements:

1. The total number of shares that may be issued by the corporation.
2. The number of shares, if any, which are to have a par value and the par value of each.
3. The number of shares which are to be without par value, and
4. Either one of the following statements:

A. "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus .....dollars (the blank space being filled in with some number representing $1 or more) in respect to every issued share without par value, plus such amounts as, from time to time, by resolution of the board of directors, may be transferred thereto;" or

B. "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus the aggregate amount of consideration received by the corporation for the issuance of shares without par value, plus such amounts as, from time to time, by resolution of the board of directors, may be transferred thereto."

NOMINAL EXCHANGE

The rate of exchange based upon the market value of the Monetary Unit (q. v.) of the two trading countries, instead of the rate based upon the supply and demand of bills of exchange, i. e., market rate. While nominal exchange is synonymous with the Mint Par of Exchange (q. v.) whenever the trading countries are on a gold basis—a free gold market being maintained between them—it differs whenever the standard unit between the two nations is a different metal (due to uneven market fluctuations), when the gold standard is suspended, or when gold is displaced by paper money. (See Gold Basis, Commercial Parities.)

NOMINAL PRICE

A price which is not a "firm" offer to buy or sell, but is quoted merely for information or to give an indication of what the "firm" price might be. (See Nominal Quotation.)

NOMINAL QUOTATION

A price quoted for a security which is not based upon an actual or "firm" bid or offering, but indicative of the possible price, based on last sale or firm quotation, obtainable through a "work-out" on a definite order or otherwise. (See Bid and Asked Quotations.)

NOMINAL RATES

See Posted Rates.

NOMINAL VALUE

Applied to securities this term means par or face value; or market value existing in name only or so low as to be an arbitrary value. Applied to coins, it means statutory or denomination value, as distinguished from metal or bullion value.

NON-ASSENTED SECURITIES

Securities, the owners of which have not consented to some proposed change in their status. (See Assented Securities.)

NON-ASSESSABLE STOCK

Stock, the owners of which cannot be legally called upon for additional payments in case of insolvency or otherwise. Such limited liability is one of the basic advantages of the corporate form of business organization. Stocks are non-assessable if they are fully paid when

issued. Stock not fully paid subjects the holder to personal liability to creditors of the corporation, in an amount equal to the amount unpaid on such stock, for debts of the corporation contracted while such stock was held by the holder. "Double liability", or liability to assessment up to full par value of stock in addition to losing original investment, was formerly characteristic of bank stocks, but such double liability on bank stocks has been generally eliminated, following the lead of the Banking Act of 1935. Assessment liability to restore impairment of capital or to fully pay up capital stock continues for National bank stock under Sec. 5205 of the Revised Statutes. (See Double Liability.)

NON-BROKERS' LOANS

The weekly condition statement of the Weekly Reporting Member Banks in Central Reserve Cities and of the Weekly Reporting Member Banks in Leading Cities shows the following classification of loans:

1. Commercial, industrial and agricultural.
2. For purchasing or carrying securities:
   a. To brokers and dealers.
      (1) U. S. Government obligations.
   b. To others.
      (1) U. S. Government obligations.
      (2) Other securities.
3. Real estate loans.
4. Loans to banks.
5. Other loans.

Loans for purchasing or carrying securities "to others", therefore, indicate the volume of non-brokers' security loans. It is generally assumed that individuals, partnerships or corporations who borrow directly from their banks to finance security purchases tend to be more conservative and are of greater financial responsibility and more experienced than the average margin customer of brokers. Consequently, the trend in volume of such loans should reflect the market judgment and activities of the most astute and resourceful investors and speculators.

Loans by banks for the purpose of purchasing or carrying stocks registered on a national securities exchange are subject to regulation by Regulation U of the Board of Governors of the Federal Reserve System, which in turn was issued pursuant to Sec. 7 of the Securities Exchange Act of 1934. (See Security Loans.)

NON-CALLABLE BONDS

Bonds which by their terms cannot be retired before their obligatory maturity; bonds which have no provision for Prior Redemption (q. v.); bonds which have no optional maturity date. (See Callable Bonds.)

NON-CLEARING HOUSE STOCKS

Stocks not designated by the New York Stock Clearing Corporation to be cleared through that institution because of their inactivity. (See New York Stock Exchange Clearing House.)

NON-CONTINGENT PREFERENCE STOCK

An English title for what corresponds to cumulative preferred stock in this country.

NON-CUMULATIVE DIVIDENDS

Dividends on non-cumulative preferred stock; dividends, which if not paid at the regular fixed dividend period because earnings are not sufficient, are not in arrears, and there is no obligation on the part of the corporation to pay them at any subsequent period before dividends may be paid on the common stock. For example, if a corporation cannot pay the dividends upon its 5 per cent. non-cumulative preferred stock in 1948, the stockholders lose their right to claim these dividends forever; or, if dividends are paid at 4 per cent., the remainder is lost for all time. Non-cumulative dividends, of course, are the reverse of Cumulative Dividends (q.v.).

Unless otherwise stated, all stock is non-cumulative. If the stock of a corporation is all of one class, however, nothing is to be gained by inserting the word non-cumulative, since dividends by their very nature are contingent upon earnings rather than fixed. Interest upon income bonds may be cumulative or non-cumulative. As the result of reorganizations in recent years, particularly in the railroad industry, limited cumulative features have been attached to new preferred stocks or income bonds; e. g., cumulative up to a stated amount, say 15% and non-cumulative beyond that point.

NON-MEMBER BANKS

Banks not members of the Federal Reserve System. The term is also sometimes used to distinguish banks which are not members of a Clearing House Association.

NON-NEGOTIABLE

See Negotiable Instruments, Non-Negotiable Instruments.

NON-NEGOTIABLE INSTRUMENTS

In the hands of any holder other than a Holder in Due Course (q. v.), a negotiable instrument is subject to all defenses as if it were non-negotiable. Title to non-negotiable instruments, therefore, passes by assignment, the assignee "standing in the shoes" of the assignor as far as validity of title and rights are concerned. Any instrument which lacks any one of the requirements of negotiability, as specified in Sec. 1, Uniform Negotiable Instruments Law (Sec. 20, New York Negotiable Instruments Law), is non-negotiable, and superior rights will not be vested in the transferee or assignee by operation of the "law merchant", the Negotiable Instruments Law. This does not mean that non-negotiable instruments are any less valuable than negotiable instruments, although for negotiation in the open market, negotiability is essential. Bills of lading, even though order bills, are not negotiable instruments under the Negotiable Instruments Law, because they are not instruments for the payment of money. Stock certificates, even though endorsed in blank and passing therefore by delivery, are also not negotiable instruments. On the other hand, checks, bills, notes and bonds, even though instruments calling for the payment of a "sum certain in money", may be made non-negotiable by failure to have the other requirements of negotiability. (See Negotiable Instruments.)

NON-NEGOTIABLE PAPER

See Negotiable Paper.

NON-PARTICIPATING PREFERRED STOCK

See Preferred Stock.

NON-PAYMENT

See Notarial Protest Certificates, Protest.

NON-STOCK MONEYED CORPORATION

Under the New York General Corporation Law, a moneyed corporation is a corporation formed under or subject to the banking law or the insurance law. The term "non-stock corporation" includes every corporation other than a stock corporation or a public corporation. Thus, the term Non-Stock Moneyed Corporations refers to savings banks (no stock savings banks in New York, mutualized insurance companies, credit unions, and other banking institutions organized without capital stock, being owned by the depositors or borrowers.

NON-TAXABLE SECURITIES

See Tax Exempt Securities.

NON-VALIDATING STAMP

Banks which collect domestic drafts with bills of lading, warehouse receipts, or other documents attached, usually place a non-validating stamp on the back of all accompanying drafts. The purpose of this practice is to protect the bank against liability, or being any way responsible for the character of the goods designated in the bill of lading or other instrument, accompanying the draft. The indorsement reads as follows:

"This bank hereby notifies all concerned that it makes no representation or guaranty, and assumes no responsibility as to the genuineness, regularity or validity of bills of lading and/or other documents attached to this draft, nor as to the character, quantity, quality or condition of merchandise mentioned in said bills of lading and/or other documents, nor as to any contract made by the endorser of this draft, or by consignor."

NORMAL CROPS

See Crop Reports.

NORMAL GROWTH

See Secular Trend.

NORTHERN NEW JERSEY CLEARING HOUSE ASSOCIATION

One of the largest clearing house associations in New Jersey, embracing Jersey City, Bayonne, Hoboken, Weehawken, Union City and West New York.

Other Clearing House cities in New Jersey are:

Atlantic City
Elizabeth (including Linden, Roselle and Union)
Montclair
Newark (including Irvington, Nutley, Verona and Maplewood)
Orange (including East Orange, South Orange and West Orange)
Passaic (including Clifton and Garfield)
Paterson (including Haledon and Prospect Park)
Phillipsburg (including Easton, Pennsylvania)
Trenton

NOSTRO ACCOUNTS

A term used among foreign exchange bookkeepers. A bank or other institution in this country having balances deposited with correspondent banks in foreign countries, refers to such accounts as "Nostro Accounts" meaning "our accounts." Nostro accounts are kept in foreign currencies, i. e., the Money of Account (q. v.) of the country in which the funds are kept, with the equivalent dollar value noted in an adjacent column. (See Vostro Accounts.)

NOT A DELIVERY

See Good Delivery.

NOT SUBJECT TO CALL

A term used in connection with a bond or note which cannot be retired prior to the compulsory maturity. Such bonds or notes are usually designated non-callable. (See Callable Bonds, Non-Callable Bonds.)

NOT SUFFICIFNT FUNDS

See Insufficient Funds

NOTARIAL PROTEST CERTIFICATE

When a check, draft, or bill of exchange is dishonored, i. e., payment or acceptance is refused, the holder should have it protested before a notary public. The notary public again presents it to the drawee, and if payment is still refused a notarial protest certificate is prepared, together with a separate notice of protest to each of the indorsers. The notarial protest certificate is legal evidence of presentation and refusal to pay by the drawee or maker, and is a legal measure for the purpose of holding the indorsers liable on account of the item dishonored for payment by the maker. Such a certificate is legal evidence of presentation and refusal to pay, even in the case of an inland bill, for which protest is not required, it is preferable to do so because of the prima facie evidentiary value a notarial certificate has in an action at law. The following is the form of a Notarial Protest Certificate (see No Protest):

UNITED STATES OF AMERICA
STATE OF NEW YORK SS:
COUNTY OF NEW YORK

On the ..... day of ..... in the year ....., at the request of the ..... Bank, of the City of New York, I, the subscriber, a Notary Public of the State of New York, duly commissioned and sworn, did present the original Check, Note, Draft or Bill of Exchange hereto annexed to (name of drawee or maker), in the City of New York, (being the place where the said Check, Note, Draft or Bill of Exchange is payable) and demanded payment thereof, which was refused (reason for non-payment).

Whereupon, I, the said Notary, at the request aforesaid, did Protest, and by these presents do publicly and solemnly Protest, as well against the Drawers and Indorsers of said Check, Note, Draft or Bill of Exchange, as against all others whom it doth or may concern, for exchange, re-exchange and all costs, damages and interest already incurred, and to be hereafter incurred for want of payment of said Check, Note, Draft or Bill of Exchange.

In testimony whereof, I have hereunto set my hand and affixed my seal at the City of New York, aforesaid.

.....
Notary Public
For New York County

(Seal)

Indorsement on Notarial Protest Certificate.

Please give notice of the within protest to all parties to the annexed ..... as soon as you receive this.

(Notice to each party to the item)

Date

Please take notice that a (check, draft, note, or bill of exchange) made by .....
for $.....
dated .....
payable .....
made) by you is protested for non-payment and
endorsed)
that the holders look to you for the payment thereof.

Your obedient servant,

.....
Notary Public

To .....

NOTARY PUBLIC

A person commissioned by a state and authorized to administer oaths, to take acknowledgments and depositions, and to protest negotiable instruments for non-payment or non-acceptance. The legal advantages of an instrument sworn to before a notary are: (1) admission into court as prima facie evidence of execution; (2) admissibility as a court record.

A notary has authority (1) to administer oaths in all matters connected with the exercise of his office; (2) to take the acknowledgment or proof of instruments in writing relating to commerce or navigation, and to certify the same under his seal; (3) to demand acceptance and payment of bills of exchange, promissory notes and other commercial paper and to protest them for non-acceptance or non-payment.

NOTE

A promise to pay as distinguished from an order to pay, such as a draft or check. Formally defined, a note is a written promise of the maker to pay a certain sum of money to the person named as payee, on demand or at a fixed or determinable future date. The Board of Governors of the Federal Reserve System has defined a promissory note "as an unconditional promise, in writing, signed by the maker, to pay, in the United States, at a fixed or determinable future time, a sum certain in dollars to order or to bearer."

Consideration is always deemed prima facie to exist in the case of negotiable instruments, and lack of consideration as between the original parties is not a defense against the Holder in Due Course (q.v.). Notes may be issued by individuals, partnerships, corporations, institutions, and Governments. National bank notes, Federal Reserve notes, Federal Reserve bank notes, and United States notes, are monetary forms of promises to pay on demand without interest, and furnish a part of the circulating monetary medium. (National bank notes and Federal Reserve bank notes are now in process of retirement). A note may be drawn without interest, but if drawn with interest with the rate omitted, the maximum legal rate of the state in which it is made, is presumed.

One of the essential characteristics of notes is that they are ordinarily negotiable, i. e., superior rights may be vested in the Holder in Due Course. Negotiation is achieved either (1) by delivery, i. e., handing it from one person to another when the note is made payable "to bearer" or where the indorsement is "in blank", or (2) by indorsement and delivery when it is made payable "to order". A note will be non-negotiable if the words of negotiability, "bearer" or "order", are omitted from its face.

Notes should be presented for payment at the place named. If no place is indicated, presentment should be made at the maker's usual place of business or residence during business hours. The note should be presented on the due date in order to hold the indorsers (if any) liable, and in case of refusal to pay, protest should be made. The liability of the maker is in no wise voided by postponement of presentation beyond the due date, and the note may be protested for non-payment even if past due. Where a bill or note is lost or destroyed or is wrongly detained from the person entitled to hold it, protest may be made on a copy or written particulars thereof, so that loss of a note will not affect the rights and liabilities of the parties.

Formerly three Days of Grace (q. v.) were allowed to persons obligated to pay notes, i. e., three days beyond the indicated maturity date. Under the Negotiable Instruments Law (q. v.) this practice has been abolished so that an instrument matures on the date which it fixes.

Classified by method of determining maturity, notes are of two forms, payable upon a specified date, or at a certain number of days after date. The first is known as a "fixed date" and the second as a "days after date" note. The first reads: "On July 1, 1948, I (We) promise to pay", etc., while the second reads: "Sixty days after date, I (We) promise to pay," etc. In the second case the note must be "timed" in order to determine the maturity date, and in so timing, the exact number of days must be counted. For example, if a note is dated July 20, and runs for 60 days, it becomes due on September 18. If that date happens to be a Sunday or holiday, then the note is due on the next business day.

Banks frequently furnish customers blank forms for notes, and usually insist upon their own forms to evidence loans extended to their borrowers. The following is a form of a promissory note without collateral where the payee is a bank:

$..... New York,.....19...

.....months (days) after date for value received I (we) promise to pay to the ..... Bank, or order, the sum of .....Dollars, with interest at .....per centum per annum.

It is further agreed that if the undersigned shall become insolvent or make a general assignment for the benefit of creditors, or file a voluntary petition in bankruptcy, or if a petition in bankruptcy shall be filed against the undersigned, or a receiver shall be appointed over the property or assets, or any thereof, of the undersigned, then this note and all other present or future demands of any and all kind against the undersigned, whether created directly or acquired by assignment, whether absolute or contingent, shall forthwith be due.

Payable at the .....Bank.

No. ..... Due .....

.....
(Name of maker)

A collateral note ordinarily has the same form as the regular promissory note (above illustrated), together

with the following or its equivalent.

The undersigned has deposited with said bank as collateral security for the payment of this and any and every liability or liabilities of the undersigned to the said bank direct or contingent, due or to become due, or which may hereafter be contracted or existing, the following property (here the specific collateral is described), together with all other securities in the possession of said bank belonging to the undersigned or in which the undersigned has an interest; hereby agreeing to deliver to said bank additional securities to its satisfaction, upon demand of said bank, also hereby giving to said bank a lien for the amount of all said liabilities of the undersigned to said bank upon all property or securities which now are or may hereafter be pledged as collateral with said bank by the undersigned, or in the possession of said bank in which the undersigned has an interest, and, also upon any balance of the deposit account of the undersigned with said bank. On the non-performance of this promise, or upon the non-payment of any liabilities above mentioned, or upon the failure of the undersigned forthwith to furnish satisfactory additional securities on demand, at the option of said bank, this obligation shall become immediately due and payable, and then and in every such case full power and authority are hereby given to said bank to sell, assign and deliver the whole of said securities or any part thereof or any substitutes therefor or any additions thereto through any stock exchange or broker or at private sale, without either advertisement or notice, the same being hereby expressly waived or said bank itself may purchase the same or any part thereof free from any right of redemption on the part of the undersigned, which is hereby expressly waived and released. In case of sale for any cause, after deducting all costs and expenses of every kind, said bank may apply the residue of the proceeds of such sale, as it shall deem proper, toward the payment of any one or more or all of the liabilities of the undersigned to said bank, whether due or not due, returning the overplus if any, to the undersigned, who agree to be and remain liable to said bank for any and every deficiency after application as aforesaid, upon this and all other of said liabilities; the undersigned hereby authorizing the transfer or assignment of said securities and property to the purchaser thereof.

And I hereby authorize any attorney-at-law to appear in any court of record in the United States, after the above obligation becomes due and waive the issuing and service of process and confess a judgment against me in favor of the .....Bank of ....., or any holder of this note, for the amount then appearing due together with the costs of suit, and thereupon to release all errors and waive all right of appeal and stay of execution.

The term note also is sometimes applied to short-term bonds whether corporate or civil issues, and especially if unsecured, e. g., United States Treasury Notes. (See General Loan and Collateral Agreement, Joint Note, Joint and Several Note, Negotiable Instruments, Negotiable Instruments Law, National Bank Note.)

NOTE BROKERS

Dealers, or commercial paper houses, whose business it is to act as middlemen between the issuers of commercial paper and banks, insurance companies, and private investors, who constitute the market on the demand side. Note brokerage firms are usually partnerships having ample capital resources, capital and valuable bank connections, to enable them to secure an adequate supply of funds to finance their transactions. Commercial paper borrowing is a means of raising funds temporarily for financing seasonal inventory requirements. Note brokers derive their profit by buying notes from the makers at one rate of interest and selling them at another, although some of the business may be done on the basis of a small commission which is charged the borrower.

The paper marketed by note brokers is varied in character, and includes single name paper, double name trade paper, collateral notes and trade and bank acceptances. Much of the paper dealt in by note brokers is single name paper of well-known commercial houses.

A large portion of the paper is sold upon a ten days' option to give the proposed buyer an opportunity to investigate the standing of the maker. At the end of the option period it may be retained or returned. Note brokerage is a specialized machinery for facilitating commercial borrowing by prime credit risks in the open market. (See Commercial Paper.)

NOTE LIABILITY

The liability of a National bank for its outstanding circulating notes; also the liability of a Federal Reserve bank for its combined Federal Reserve notes and Federal Reserve bank notes.

Both Federal Reserve Bank Notes (q. v.(and National Bank Notes (q. v.) are now in process of complete retirement.

NOTE TELLER

Among small banks, an employee sometimes also known as the third teller, who supervises the collection of notes and drafts at maturity and such demand items (checks and drafts) and special collection items, as are not drawn on members of the clearing house association and which must be collected by messenger.

Among larger banks, the note teller's department is usually a miscellaneous department of the bank, since it not only supervises the collection of non-clearing house checks, but disposes of miscellaneous types of transactions not important enough to be departmentized.

NOTE TICKLER

See Tickler.

NOTES PAYABLE

Aggregate of notes, acceptances, etc., held by others representing sums of money to be paid at a future time, and constituting a liability of a business. From an accounting point of view, the aggregate of notes contracted to be paid, also known as Bills Payable, and due to others.

NOTES RECEIVABLE

Aggregate of notes held against others and constituting one of the assets of a business. From an accounting point of view, a controlling account in the general ledger, also known as Bills Receivable, to indicate the total of notes, drafts, and acceptances due from trade customers.

NOTICE OF DISHONOR

See Dishonor, Notarial Protest Certificate.

NOTICE OF INTENTION

In the organization of a National bank, the first step is the informal application to organize, sent to the Comptroller of the Currency and stating: (1) the title of the proposed National bank; (2) request to reserve such title until the formal application to organize is submitted; (3) location and proposed capital of the proposed bank. If the proposed title is satisfactory, the Comptroller will normally reserve the title for 15 days, and forward upon request the formal application for charter, stating the intention to organize the National bank, and in addition: (1) title, location, capital and surplus; (2) whether it will succeed some existing bank; (3) whether a banking house will be purchased or built; (4) amount to be invested in banking house and fixtures, or if banking quarters are to be leased, amount of rental; (5) certification that no fees or commissions are being paid for obtaining subscriptions or selling stock in the bank; (6) signatures of at least 5 applicants who are prospective stockholders and preferably also officers or directors, together with their residences, business, financial strength in figures, amount of shares subscribed, and other banks with which the applicants have served as officers or directors; (7) indorsement of the application by three prominent public officials of the place where the bank is to be located.

In most states, incorporators desiring to organize a state bank must sign a Notice of Intention to organize, setting forth their names, title of the proposed corporation, amount of its capital stock, and location. This notice is filed with the state banking department, and a copy must be published in a newspaper in the city of intended location for a certain period in advance of obtaining the charter. Other banks in the location must also be served with a copy of such intention. The foregoing is the practice in New York State.

NOTICE OF PROTEST

See Notarial Protest Certificate.

NUCLEAR FISSION

Aside from development for military uses, for which World War II will always be remembered, whether atomic energy released through nuclear fission can be harnessed into important industrial applications still remains a matter of considerable further development and research as of 1948, two years after organization of the U. S. Atomic Energy Commission under the Atomic Energy Act, passed August 1, 1946.

The Atomic Energy Commission is charged with the responsibility for the control of all source materials of nuclear fission. According to latest reports from the Commission, large scale production of power for industrial and community use is a major long term objective, but will require a number of basic advances in physics, chemistry and metallurgy before such power can be produced at satisfactory efficiency and cost. At the present time, the principal peacetime applications are various kinds of radio-isotopes for research in chemistry, biology and medicine.

NUMERICAL TRANSIT SYSTEM

A system of abbreviations, devised by the clearing house section of the American Bankers Association, for the purpose of simplifying transit work, i. e., to aid in the collection, identification, and tracing of checks, drafts, and notes, forwarded to out-of-town points for collection and credit. The purpose of the system is to save time and labor. Previous to the adoption of this system it was necessary to identify each check (or other item) listed on outgoing transit letters by writing thereon the name and location of the drawee bank. Under the numerical transit system numbers replace names. Every bank in the United States has a distinctive number, made up of two parts: (1) a prefix which designates the city or state in which the bank is located, and (2) a second figure which designates the individual bank. Thus the transit number 1 - 8 indicates the National City Bank of New York; 2 - 3 the Continental and Commercial National Bank of Chicago; 50 - 17 the Lincoln-Rochester Trust Company of Rochester, New York; 53 - 137 the Holyoke National Bank of Holyoke, Massachusetts; and 56 - 8 the Toledo Trust Company of Toledo, Ohio.

Numbers from one to forty-nine, inclusive, are used to designate central reserve and reserve cities, each city being given a distinctive number to be used as a prefix in its numerical title. The clearing house numbers in each of these cities are used as the second figure of the transit number for each of the clearing house members of such cities, and additional numbers are provided for banks not clearing house members. Numbers from fifty to ninety-nine, inclusive, are used to designate states. State numbers are used as a prefix for numbering banks which are located outside the forty-nine cities already provided for. In numbering the reserve cities, Brooklyn was included with New York City; Kansas City, Kans., with Kansas City, Mo., and South Omaha with Omaha. Since there were fifty reserve cities three numbers were left unused, which were given to Buffalo and Memphis, and Alaska, Hawaii and Puerto Rico.

The numbers of the different cities and states are as follows:

CITIES

1	New York, N. Y.
2	Chicago, Ill.
3	Philadelphia, Pa.
4	St. Louis, Mo.
5	Boston, Mass.
6	Cleveland, Ohio
7	Baltimore, Md.
8	Pittsburgh, Pa.
9	Detroit, Mich.
10	Buffalo, N. Y.
11	San Francisco, Calif.
12	Milwaukee, Wis.
13	Cincinnati, Ohio
14	New Orleans, La.
15	Washington, D. C.
16	Los Angeles, Calif.
17	Minneapolis, Minn.
18	Kansas City, Mo.
19	Seattle, Wash.
20	Indianapolis, Ind.
21	Louisville, Ky.
22	St. Paul, Minn.
23	Denver, Colo.

24 Portland, Ore.
25 Columbus, Ohio
26 Memphis, Tenn.
27 Omaha, Neb.
28 Spokane, Wash.
29 Albany, N. Y.
30 San Antonio, Texas
31 Salt Lake City, Utah
32 Dallas, Tex.
33 Des Moines, Ia.
34 Tacoma, Wash.
35 Houston, Tex.
36 St. Joseph, Mo.
37 Ft. Worth, Texas
38 Savannah, Ga.
39 Oklahoma City, Okla.
40 Wichita, Kansas
41 Sioux City, Iowa
42 Pueblo, Colo.
43 Lincoln, Neb.
44 Topeka, Kansas
45 Dubuque, Iowa
46 Galveston, Texas
47 Cedar Rapids, Iowa
48 Waco, Texas
49 Muskogee, Okla.

STATES and TERRITORIES

50 New York
51 Connecticut
52 Maine

95 New Mexico
96 Oregon
97 Utah
98 Washington
99 Wyoming

For further details see "Key to the Numerical System of the American Bankers Association", Rand-McNally Bankers' Directory. (See Transit Department.)

NUMISMATICS

The science which treats of coins and medals, especially rare and old coins of all nations.

NUNCUPATIVE WILL

An oral will, i. e., verbally declared within the hearing of at least two disinterested witnesses under the Model Execution of Wills Act. The various States, however, vary widely in provision for nuncupative wills, with 5 States having no authority at all for such wills, and 13 other States restricting nuncupative wills to soldiers and sailors. (See Will.)

OATS

Normally, futures trading in oats is third most active among the grains, next to wheat and corn. Futures trading in oats is conducted principally on the Chicago Board of Trade, Minneapolis Grain Exchange, and the Kansas City Board of Trade, particularly on the first two exchanges. These exchanges are designated as Regulated Commodity Exchanges by the Commodity Exchange Administration.

Contract unit on these exchanges is 5,000 bushels, minimum fluctuation being 1/8¢ as one "point", or $6.25 per contract. Daily trading limit is 6¢ above or below previous close, the maximum range being 12¢. Non-member commission rates to buy or sell one contract are $15 on the Chicago Board of Trade and $12.50 on the Minneapolis Grain Exchange and Kansas City Board of Trade. Job lots are 2,000 bushels on the Chicago Board of Trade, on which the non-member commission rate is $3 per 1,000 bushels when the order is received in Chicago, and $4 per 1,000 bushels when received from outside Chicago; and 1,000 bushels on the Minneapolis Grain Exchange and Kansas City Board of Trade, on which the non-member commission is $3.50.

(See Grain Exchanges.)

OATS PIT

See Pit.

OBLIGATION

A general term for all classes of indebtedness, the fundamental idea being that the debtor is bound to pay and that the creditor has legal power to compel payment. Frequently, when one business is absorbed by another, the latter is said to assume the former's obligations. Bonds are frequently referred to in this country as obligations. In France, the term obligation is the equivalent of our bond.

The Revised Statutes of the United States define obligations to mean "all bonds, certificates of indebtedness, national bank currency, coupons, United States notes, Treasury notes, gold certificates, silver certificates, fractional notes, certificates of deposit, bills, checks or drafts for money, drawn by or upon authorized officers of the United States, stamps and other representatives of value, of whatever denomination, which have been or may be issued under any Act of Congress."

A direct obligation is an obligation of the original maker of a loan contract. For instance, a note is a direct obligation of the maker and an indirect obligation of the indorser.

A general obligation is one in which the debtor's relation to the creditor is the same as a general creditor's relation to the debtor. In other words, a general obligation is an unsecured one, and subject to prior claims, e. g., preferential claims, (wages, taxes, mechanics' liens), and secured claims (mortgages, mortgage bonds and notes payable secured by a specific pledge of collateral). The term general obligation as applied to municipal bonds indicates those which are a lien upon the revenues of the entire issuing jurisdiction, and not merely upon a part of the jurisdiction or a part of its revenues.

OBLIGATOR

Same as Obligor (q. v.).

OBLIGATORY MATURITY

The absolute, final, or compulsory maturity of a note or bond, as distinguished from the optional maturity or prior redemption date. Bonds which by their terms may be retired at the option of the obligor before the obligatory maturity are known as callable, optional, or (less accurately) redeemable bonds.

OBLIGEE

A creditor; one who can enforce payment of a debt, e. g., a note or bond holder.

OBLIGOR

A debtor; a person, firm, or corporation which is bound to perform an obligation, such as payment of a note or bond. A corporation which has issued bonds is an obligor corporation. The United States Government is obligor in the case of United States Government bonds.

OBSOLETE SECURITIES

Bonds which have matured and have been retired and cancelled; stocks or bonds of abandoned, or defunct corporations, or which have temporarily suspended operations without actually dissolving.

OCEAN BILL OF LADING

All ocean bills of lading issued must be subject to the Carriage of Goods by Sea Act of 1936, which enacted into law the Hague Convention Rules of 1921, and must so provide in a "paramount clause." (See Bill of Lading.)

ODD LOT

A term used to designate a smaller unit of trading than the standard unit of trading, known as a board or full or round lot, which on the New York Stock Exchange for active stocks is 100 shares of stock. Any transaction involving from 1 to 99 shares is called an odd lot, or fractional or broken lot. Odd lot orders are executed through Odd Lot Dealers (q. v.), who specialize in making a market for odd lots.

Assuming a customer places a good until cancelled (G.T.C.) order to buy 50 shares of a stock (having a 100-share unit of trading) at 50, the stock must sell (not as reported on the ticker, but sale on the floor) in a round lot of 100 shares or more at 49 7/8, after the placing of the order in the hands of the broker on the floor acting for the odd lot dealer. A better price than the limit price of 50 fixed by the order can be obtained for the customer only if the next sale after the order is received by the odd lot dealer is below 49 7/8. Should the next sale price for a round lot be 49 1/2, the order will be executed at 49 5/8. However, should the stock sell in a round lot at 50; and the next sale of a round lot declines to 49 1/2, the odd lot order will still be executed at the order's price limit of 50. This is the so-called "trading through the limit" rule, which is designed to give the odd lot buyer an execution no better than what he would have had to pay had he bought a round lot at 50.

However, should the odd lot order fail to be executed during the day, and the stock opens the next morning below the price limit of 50, the order is executed 1/8 of a point above the opening price for a round lot.

Odd lot orders are regarded as a direct index of bona fide public investor buying or selling, and in recent years have accounted for 1/4th to 1/3rd of trading volume on the New York Stock Exchange.

ODD LOT DEALERS

The highly specialized business of providing a market at all times for odd lots of stocks on the New York Stock Exchange, which originated as far back as 1873, is largely in the hands today of three long-established odd lot dealers, firms which have developed the business over a long period of years. In addition, there are a few specialists who do some odd lot business in addition to handling round lots.

The odd lot dealers do not deal directly with the public, instead operating through their brokers on the floor of the Exchange, who receive the orders from commission houses taking odd lot orders from the public. On all odd lot stocks bought or sold to the odd lot dealers, the latter charge 1/8th of a point, which in turn is charged to the public by the commission houses. Federal tax is also charged on odd lots bought or sold, as well as State transfer tax on stocks sold. The commission houses also charge the regular Stock Exchange commission.

In order to provide a market in odd lots, the odd lot dealers themselves buy, sell or sell short round lots, in connection with building up or reducing inventories of stocks maintained for the odd lot market.

In November, 1938, the odd lot dealers inaugurated the "basis market" for execution of odd lot orders in stocks which do not trade during the day. "Basis orders" entered before two o'clock of the trading day in stocks for which there has been no sale during the session are executed at the close of the market at "basis prices", determined by the odd lot dealers based on closing bid and asked prices.

De Coppet & Doremus: Buying and Selling Odd Lots, 1939.

Hardy, C. O.: Odd Lot Trading on the New York Stock Exchange, 1939.

ODD LOT TRADING

See Odd Lot, Odd Lot Brokers.

OFF

A stock market expression indicating lower prices; prices below yesterday's level. It also denotes "without," e. g., "dividend off" means "without dividend."

OFFER

This term has two meanings:

(1) A bid; a price named at which one is willing to buy.

(2) In stock exchange parlance, the term refers to the price at which one is willing to sell. Thus: "The stock is offered at 35; the best bid is 30."

OFFERED DOWN

An expression to indicate that sellers are offering a security (or commodity) for sale at a price lower than that of the last transaction or latest quotation.

OFFERED FIRM

The offer of a security (or commodity) at a specified price, the seller giving the prospective buyer a certain time for its acceptance. Thus, a bond may be offered firm at 95 and accrued interest, for three days. Offered firm differs from Offered Subject to Sale, or Offered Subject to Prior Sale, in that in the latter the offer is good only in case the securities are not previously sold to the other buyers. A dealer who offers securities subject to prior sale is not liable in case he refuses to sell to a party who bids for the offering after they have been sold elsewhere.

When one makes a bid at a definite price to hold good for a certain time, it is known as a firm bid.

OFFERING BOOK (LIST)

A book or list maintained by a dealer in bonds, stocks, commercial paper, etc., which contains a description of each security offered for sale, the price included. (See Offering Sheet.)

OFFERING SHEET

A list of commercial paper offered by a note broker. Large banks which offer participation loans to their bank customers also prepare offering sheets to show the names of loans in which they offer participations. In the investment business an offering sheet in pre-SEC days differed from a bond circular in that the former contained a brief description of a number of issues, whereas the latter contained a more formal description of a single issue. The offering sheet usually closed with a statement such as the following: "We offer for subscription, subject to prior sale or allotment (such of these bonds as may not be taken up by others through the exercise of rights) when, as and if issued, and received by us, and subject to the approval of counsel."

The offering sheet is still used today in the case of U. S. Government, municipal, railroad and other exempt securities, exempt from the Securities Act of 1933, but public offerings, of non-exempt securities under the Act must be accompanied by a prospectus. (See Syndicate, Underwriting, Bond Circular.)

OFFERINGS

A term to denote bonds, stocks, notes, commercial paper, etc., offered for sale to customers.

OFFICE PAPER

Another name for finance bills. (See Finance Bill.)

OFFICERS

Under Section 60 of the New York Stock Corporation Law, the directors of a stock corporation may appoint or elect from their own number a president. Under the New York rule, the president of the corporation has the implied power and the apparent authority to perform any act on behalf of the corporation that can be ratified by the board of directors. Directors must designate the powers of the officers in the by-laws, but any such express limitations are of no avail as to outside parties relying on the apparent authority of the president, unless such outside parties have actual knowledge of such limitations.

The directors may also under the New York statute appoint or elect one or more vice-presidents, a secretary, a treasurer, and other officers, agents and employees. Such officers need not be directors. As in the case of the president, these officers shall have such powers and perform such duties in the management of the property and affairs of the corporation, subject to the control of the directors, as may be prescribed by the directors in the by-laws. The directors may require any officer, agent or employee to give security for the faithful performance of his duties, and may remove him at pleasure.

(See Bank Officers.)

OFFICIAL LIST

A short title for the full title, "The Stock Exchange Daily Official List", which is the London counterpart of the New York Stock Exchange List of security quotations. It is published twice daily with a weekly edition which is a summary of the week's business.

(See London Stock Exchange.)

OFFICIAL LISTING NOTICE

A formal notice to a corporation which has applied to the committee on stock list or similar department of a stock exchange for permission to list its securities on the stock exchange, that the application has been granted. (See Listed Securities.)

OIL

Products and derivatives of crude oil have reached such a variety and importance as the result of advances in refining processes for distillation and cracking and research in chemistry of petroleum hydro-carbons in gaseous, liquid and solid forms as to constitute an indispensable material basis for modern civilization.

Among the products and derivatives are: natural gas and its derivatives and applications; motor fuel for internal combustion engines; fuel oil for Diesel engines and for domestic and industrial heating and power units; benzol, kerosene and related liquid fuels; lubricating oils and greases; paraffines, waxes, solvents, detergents, drugs and medicinal products, cosmetics; low grade oils and asphalts; glycerine, alcohols, synthetic rubber, tuluol and many others.

The United States for years has been the world's leading producer of petroleum, producing areas being found in 26 States, with over 400,000 wells. Producing areas are classified in districts as follows:

District No. 1, East Coast--Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Delaware, Maryland, Virginia, Eastern New York and Eastern Pennsylvania.

District No. 2, Appalachian--West Virginia, Western Pennsylvania, Western New York, and Eastern Ohio.

District No. 3, Indiana-Illinois-Kentucky--Indiana, Illinois, Kentucky, Tennessee, Michigan, Wisconsin, Minnesota and Western Ohio.

District No. 4, Oklahoma-Kansas--Oklahoma, Kansas, Missouri, Iowa, Nebraska, South Dakota, and North Dakota.

District No. 5, Texas (entire State).

District No. 6, Louisiana-Arkansas--Louisiana, Arkansas and Mississippi.

District No. 7, Rocky Mountain--Montana, Idaho, Wyoming, Utah, Colorado and New Mexico.

District No. 8, California--Washington, Oregon, California, Nevada, and Arizona.

Classified according to the nature of the residue base, American crudes are classified broadly as Appalachian (paraffine-base), Mid-Continent (mixed base), and California (asphalt base).

History.—The use of petroleum is not wholly modern. Its lighting, heating and medicinal applications were utilized as early as the sixth century. Marco Polo described the oil springs of Baku in the thirteenth century. However, credit for the first commercial use of crude oil in modern times belongs to James Young, an Englishman, who, in 1850, patented a device for the manufacture of paraffine from petroleum found in Alfreton, Derbyshire.

While for centuries petroleum was known and used in various parts of the world, consumption was confined to those small quantities that seeped to the surface. It devolved upon Col. Edwin L. Drake to demonstrate that it was practical to drill for oil. As a result of his efforts the first oil well in this country was brought in on August 27, 1859, near Titusville, Pennsylvania, at a depth of 69 1/2 feet. Initial production was 25 barrels a day, and the records reveal a production of 2,000 barrels in that year. Thus, "Drake's Folly," as his pioneering was known, laid the foundation of a great industry that was destined to revolutionize human affairs. The Seneca Oil Company, the first regularly incorporated oil company known to history, was the operating company that developed Drake's discovery. This company was, however, a subsidiary of the Pennsylvania Rock Oil Company, which had been incorporated on December 30, 1854, under the laws of New York "to raise, procure, manufacture and sell rock oil." By 1869, crude oil production in the United States increased to 4,215,000 barrels; by 1906, after successive years of larger yields, output had reached 126,493,906 barrels.

Production.—Since 1935, production of the United States has increased 85%, and world production has in-

creased over 75%. The United States alone has accounted in recent years for approximately 60% of total world production.

In the United States, over three-fourths of production in latest years has been produced in Texas (about 40%), California (about 20%), and Louisiana and Oklahoma (each about 10%). Production of Texas, the largest producer, has approximately doubled since 1935.

Among foreign producers, leading countries are Venezuela, Russia and Iran, which account for about 25% of world production. Production in Venezuela and Iran has expanded over 2 1/2 times since 1935. Saudi Arabia, where recent explorations have indicated the existence of huge reserves, has come from nowhere since 1935 as a producer to a position of world's fifth largest in 1946, and may in future years become the world's largest producer.

Crude oil production and imports in barrels (of forty-two gallons) from 1918 to 1947 have fluctuated as follows:

United States Production and Imports
(in thousands of barrels)

Year	Production	Imports
1947	p1,856,100	97,532
1946	1,733,700	86,066
1945	1,713,700	74,337
1944	1,677,904	44,805
1943	1,505,613	13,833
1942	1,386,645	12,297
1941	1,402,228	50,606
1940	1,353,214	42,662
1939	1,264,962	33,095
1938	1,214,355	26,412
1937	1,279,160	27,484
1936	1,099,687	32,327
1935	996,596	32,239
1934	908,065	35,772
1933	905,656	31,908
1932	785,159	44,700
1931	851,081	47,250
1930	898,011	62,129
1929	1,007,323	78,933
1928	900,364	79,767
1927	901,129	58,383
1926	770,874	60,382
1925	763,743	61,824
1924	713,840	77,775
1923	732,407	82,015
1922	557,531	127,308
1921	472,183	125,364
1920	442,929	106,175
1919	378,367	52,822
1918	355,928	37,736

p--Preliminary.

The following table summarizes the trend of world production by leading countries for 1935, 1940 and 1946:

Principal Producing Countries
(in thousands of barrels)

	1946	1940	1935
United States	1,733,700	1,353,214	996,596
Venezuela	388,200	185,570	148,254
Russia	166,827	218,600	182,386
Iran	146,500	66,317	57,273
Saudi Arabia	60,500	5,075	.....
Mexico	49,212	44,036	40,241
Iraq	41,900	24,225	27,408
Netherlands Indies	40,000	62,011	37,171
Roumania	32,450	43,168	61,310
Argentina	22,500	20,609	14,297
Colombia	22,250	25,593	17,598
Other	94,509	101,403	61,954
Total World Production	2,796,737	2,149,821	1,654,488

Source--Bureau of Mines.

OIL SECURITIES

Stocks and bonds of oil producing and refining companies. The oil industry is becoming less speculative, and is now one of the strongest organized groups of industry, dominated by relatively few powerful interests. These companies are highly integrated, and normally control all stages of the industry from prospecting and drilling wells to marketing gasoline. A completely integrated oil company combines at lease four essential divisions, viz., production (ownership of oil lands with proven production, oil wells, storage tanks, etc.), refining, transportation (pipe lines, tank cars, tank ships, etc.), and marketing (distributing stations, tank wagons and in many cases control of retail gasoline stations).

In considering the purchase of oil securities, the investor should distinguish between three groups, viz.: (1) undeveloped properties consisting of leases and option lands, i. e., unproved territory; (2) properties which are producing but are not profitable, and (3) properties which are both producing and profitable.

Oil securities embody many of the same characteristics as Mining Securities (q. v.).

OLD LADY OF THREADNEEDLE STREET

A nickname for the Bank of England (q. v.) the main entrance of which is on Threadneedle Street, London.

OLD LINE RAILS

An expression used in reference to the stocks of the well-known standard railroad corporations of the United States which have a reputation for good management, as shown by the high standard of maintenance of their properties, conservative financing, large earnings and uninterrupted dividend record over a long period of years.

ON A SCALE

See Averaging, Scaling.

ON ACCOUNT

A part payment on the purchase price is a payment on account.

ONE-DAY CERTIFICATES

Among the types of borrowing of the U. S. Treasury

are Treasury bills, which are non-interest bearing and are sold weekly on a discount basis for maturities of 90 days on competitive bidding. Certificates of indebtedness are interest-bearing obligations, issued with maturities of not over one year.

In addition to these types of short-term borrowing, the Treasury in former years of low balances in the General Fund used to issue one-day certificates, usually at about the time of quarterly income tax collection dates, to tide it over for the time elapsing between maturing obligations before actual receipts from income taxes became available. For this purpose, the Treasury determined how much it needed and issued certificates to the Federal Reserve Banks with a computation of one day's interest at a rate slightly below the latest market rate on Government paper. The credit would be renewed from one day to another at varying amounts depending on the sum required, the operation being continued until the account was entirely "washed out." The time for completion of these operations differed, taking but a few days at times and as much as a week at others. The Federal Reserve Banks frequently sold the temporary certificates to member banks.

In recent years, large balances maintained by the Treasury in the General Fund and the system of weekly bill borrowing have eliminated the necessity for one-day certificates. Another factor keeping the Treasury comfortably in cash resources in recent years of heavy issuance of Government securities has been the "book credit" method of subscribing to Government securities by member banks, whereby the Treasury is credited in war loan accounts for the amount of the subscriptions. Whenever the Treasury has needed funds, therefore, it has given notice to the member banks of call upon these Government deposits.

(See U. S. Government Securities.)

ONE-DAY LOAN

See Day Loans.

ONE-MAN COMPANY

A term used to describe a corporation which is dominated by one person, either by ownership of the majority of the stock, or by force of his personality and influence in the trade at large. Among credit men such a company is not considered as good a credit risk as one in which the control is more widely distributed, for the reason that the death of the one man in control may embarrass the future of the concern by leaving it destitute of high grade managerial ability.

ONE NAME PAPER

See Single Name Paper.

OPEN

See Open Account, Open Credit, Opening, Open Market Purchases, Open Market Rates, Open Mortgage, Open Order.

OPEN ACCOUNT

When purchases are made and charged to the buyer's account without being evidenced by a note and for which monthly or other periodical settlements are arranged, the buyer is said to be buying on open account and the seller extending open credit. Whenever open accounts are established there is, or should be, a definite promise of settlement, e. g., payment by the tenth of the succeeding month.

Open book accounts, known also as Accounts Receivable, are not regarded as good assets as notes or bills receivable, since the latter are prima facie evidences of debt and open accounts are not. The amount of credit extended on open account is usually limited, the maximum being known as the line of credit. (See Assigned Book Accounts.)

OPEN BOOK ACCOUNT

See Open Account.

OPEN CREDIT

See Credit, Open Account.

OPEN END BONDS

Mortgage bonds, usually those of a railroad company, in which the amount of bonds issuable under the mortgage is left indefinite, the mortgage permitting the subsequent issue of additional bonds up to a certain limit, usually based upon so many bonds per mile of line. Open end bonds are more familiarly known as open mortgage bonds and are to be distinguished from closed mortgage bonds. (See Closed Mortgage, Open Mortgage)

OPEN INTEREST

A term used in connection with futures trading in grains, cotton, and other commodities. It represents the number of unclosed trading contracts and therefore the quantity in bushels, bales, or other unit in a given commodity, entered into by speculators, either long or short, in future options. Thereby, an index of the speculative interest is ascertained. For example, if the total of long future contracts of all options in wheat held by brokers for the account of all customers is 80,000,000 bushels, that represents the open interest in that grain. Thus, the open interest is the amount carried on open contracts, not yet closed out or terminated by sale or acceptance of delivery in the case of longs, or bought back in the case of shorts. The Commodity Exchange Administration issues reports on the volume of trading and open interest daily.

OPEN MARKET

A broad and freely competitive market; a market which is open to many buyers and sellers, and in which prices (whether commodities, securities, or money rates) are determined by such competition. Most of the organized markets, e. g., New York Stock Exchange, are not open markets, since although trading is engaged in by many buyers and sellers and prices are determined by free competition, trading is limited to members of the exchange. (See Market, Open Market Purchases.)

OPEN MARKET COMMITTEE

The Federal Open Market Committee was created by section 12-A of the Federal Reserve Act, as added by the Banking Act of 1933 and completely revised by the Banking Act of 1935. It consists of the members of the Board of Governors of the Federal Reserve System, and five representatives of the Federal Reserve Banks, elected annually as follows: one by the boards of directors of the Federal Reserve Banks of Boston and New York; one by the boards of directors of the Federal Reserve Banks of Philadelphia and Cleveland; one

by the boards of directors of the Federal Reserve Banks of Chicago and St. Louis; one by the boards of directors of the Federal Reserve Banks of Richmond, Atlanta and Dallas; and one by the boards of directors of the Federal Reserve Banks of Minneapolis, Kansas City, and San Francisco. An alternate to serve in the absence of each representative is elected annually in the same manner. The committee meets at Washington, D. C., at least four times each year, or oftener if deemed necessary at the call of the Chairman of the Board of Governors of the Federal Reserve System, or at the request of any three members of the Committee.

(See Open Market Operations. Also refer to Federal Reserve Board Regulations—Regulation M.)

OPEN MARKET OPERATIONS

As contemplated under section 14 of the Federal Reserve Act, open market operations of the Federal Reserve banks may consist of the following: (1) Purchase and sale of cable transfers and bankers acceptances and bills of exchange eligible for rediscount; (2) dealings in gold bullion, subject to the provisions of the Gold Reserve Act of 1934; (3) purchase and sale of direct and fully guaranteed bonds and notes of the United States, bonds of the Federal Farm Mortgage Corporation, with maturities from date of purchase of not over 6 months, and bills, notes, revenue bonds and warrants with maturities of not over 6 months, issued in anticipation of collection of taxes or receipt of assured revenues, by any State, political subdivision or municipality in the continental United States; (4) purchase and sale of bills of exchange arising out of commercial transactions; and (5) purchase and sale of acceptances of Federal Intermediate Credit Banks and of National Agricultural Credit Corporations whenever the Board of Governors of the Federal Reserve System declare that public interest so requires.

Section 12 A of the Federal Reserve Act, as added by the Banking Act of 1933 and completely revised by the Banking Act of 1935, provides as governing principles that the time, character and volume of all purchases and sales of paper described in Section 14 of the Federal Reserve Act (open market operations) as eligible for open-market operations shall be governed with a view to accommodating commerce and business and with regard to their bearing upon the general credit situation of the country.

The purposes of open market operations may be summarized as follows: (1) to contract and expand the volume of excess reserves of member banks, and thus affect the credit expansion power of member banks; (2) to influence the level of money rates through effect on excess reserves; (3) to provide orderly markets for Government securities; (4) to influence the market for bills and commercial paper and levels of rediscounting by member banks; and (5) to exercise effect upon foreign exchange markets and international gold movements.

It must not be supposed that the open market is a particular location set aside for the transaction of business in prime commercial instruments. The open market consists of the Federal Reserve banks, commercial banks, brokers, acceptance and discount houses which, together with their customers, purchase and sell such paper as is eligible for open market operations, as defined by section 14 of the Federal Reserve Act, and Federal Reserve Board Regulation B. (See Federal Reserve Act—Sections 12 A and 14, and Federal Reserve Board Regulations—Regulation B and Regulation M.)

OPEN MARKET PURCHASES

See Open Market Operations.

OPEN MARKET RATES

Money rates established for different classes of loans and paper in the open market, as distinguished from the rates charged by banks to their own customers, and from rediscount rates established by the Federal Reserve Banks for rediscounting by member banks.

Open market rates for paper which is eligible for open market operations of the Federal Reserve banks are lower than the rediscount rates of these institutions. This is also true of the central banks of Europe. (See Money Market, Open Market Operations.)

OPEN MORTGAGE

One which does not exclude the possibility of incurring further debt thereunder, as distinguished from a Closed Mortgage (q. v.). In an open mortgage, there is no maximum amount of debt in bonds or notes authorized for issuance under its terms, although in practice, protective or restrictive covenants restrict the total amount of debt, including new debt, to prescribed ratios in relation to assets. (See Open End Bonds.)

OPEN ORDER

See Orders.

OPENING

A term which refers to the hour at which trading begins on an organized exchange. The opening of the New York Stock Exchange is at 10 A. M.

OPENING PRICE

The prices at which the first sale for the day of any security is made. Opening prices are furnished by leading exchanges to the daily newspapers which publish stock quotations, together with the high, low, and close.

OPERATING COMPANY

Any company which performs actual manufacturing or merchandising operations; one that conducts business operations as distinguished from a controlling or holding company, which does not itself operate, but controls the policies of its subsidiary operating companies through stock ownership. Operating companies are underlying or subsidiary companies, the majority of the stock of which presumably is owned by a Controlling Company (q. v.).

OPERATING EXPENSES

The costs of conducting business exclusive of what are designated as fixed charges. In an industrial concern, operating expenses include manufacturing (factory) costs, selling and general administrative expenses, except taxes, insurance and interest on funded debt. In a merchandising concern operating expenses are determined in the same way except that the cost of merchandise sold is substituted for manufacturing costs. In a railroad or public utility corporation, operating expenses consist of all expenses, except interest on bonds, rentals and taxes. The Interstate Commerce Commis-

sion defines railroad operating expenses to consist of five groups of costs: (1) maintenance of way and structures; (2) maintenance of equipment; (3) conducting transportation; (4) traffic expenses; and (5) general expenses.

OPERATING RATIO

The ratio of operating expenses to sales or revenues, which is a test of operating efficiency, measuring the total operating expenses per dollar of gross.

In manufacturing or trading concerns, the ratio of gross trading profit, after deduction of cost of goods sold from sales, indicates the extent of the mark-up or gross margin of profit. After selling and administrative expenses are deducted, the net operating profit in relation to sales indicates the over-all operating ratio, including overhead.

In the case of railroads and public utilities, the operating ratio is the ratio of total operating expenses to gross revenues. The lower the ratio, the greater the ability to carry a larger burden of fixed charges and thus ability to incur additional debt.

OPERATORS

A term which refers to persons who speculate more or less actively in securities, either for their own accounts or as agents for a principal. The term especially implies those who treat speculation professionally, and whose dealings ordinarily have considerable influence upon price fluctuations. However, in recent years (1947, 1948) the professional speculative interest on the stock exchanges has been small, at a time of high employment, increased earnings and record production. This condition is ascribed by President Schram of the New York Stock Exchange to the high tax burden, the 75% margin requirement, and the rule by the Board of Governors of the Federal Reserve System prohibiting substitutions of securities in accounts having less than 75% margin, even though there is no increase in the amount of credit being used. The latter factor has the effect of prohibiting the trader from selling one security and purchasing another for substitution in the account.

OPTION

A general term to denote the privilege of buying or selling, or a combination of buying and selling specified securities or commodities in given amount and price at the expiration of, or within a given period, the details being fixed by the execution of a contract. The most customary options are those to buy or sell securities, cotton, grain, commercial paper, foreign exchange, but option contracts may be made for almost anything. Rights under an option are sometimes sufficiently valuable to command a premium. (See Puts and Calls.)

On the New York Stock Exchange one of the methods of trading is by means of buyers' and sellers' options. (See Methods of Trading, Privileges.)

OPTION DAY

The day on which an option, e. g., a "put" or a "call" must be declared.

OPTION PERIOD

The duration of an option as specified in the option contract during which the person taking the option has the privilege of deciding whether or not he will buy or sell, as the case may be. Buyers' and sellers' options in stocks on the New York Stock Exchange may be not less than four, or more than sixty days (see Methods of Trading). Note brokerage houses in offering commercial paper to banks on option usually allow ten days for deciding whether such paper will be purchased or not.

OPTIONAL BONDS

Bonds which the obligor (issuer) retains the privilege of retiring at a date prior to the specified obligatory maturity, if it so elects. Thus, a bond may be due in twenty years, but according to its terms, subject to redemption after five years. Such an optional bond is described as a 5/20. Optional bonds are synonymous with callable or redeemable bonds. (See Callable Bonds.)

ORDER INSTRUMENTS

See Pay to Order.

ORDERS

This term has two meanings:

(1) Written instructions to pay money, such as checks, drafts, bills of exchange, money orders, etc.

(2) Instructions to buy or sell securities (or commodities, e. g., cotton, wheat, etc.) to a broker. Orders may be classified from several different standpoints. They may be to buy or to sell and may originate by letter, telegram, telephone, or personal instructions.

Orders may also be classified as to price and duration. Thus, limit orders name a specific price at which they are to be executed, while market orders are to be executed at the market in order to insure immediate execution. Such orders are executed at the most advantageous price prevailing in the market at the time they are given. As to duration, orders may be for the day only, open or good till cancelled (good till countermanded), more familiarly known as G T C orders, and good this week or this month orders (GTW, GTM).

In addition, "stop orders" (stop loss orders, and stop orders to buy) are protective devices for the seller or buyer. A stop loss order becomes a market order to sell and will be executed at the best price obtainable whenever the stock sells at the stop price or less. A stop order to buy becomes a market order to buy whenever the stock sells at the stop or higher.

Orders may be cancelled at any time before execution and customers are entitled to receive confirmation of all orders and cancellation thereof, except day orders, as well as confirmation of executions. (See Matched Orders, Stop Orders.)

ORDINARY RECEIPTS

An accounting term of the United States Treasury Department.

In current Treasury finance, receipts are stated both gross and net. Gross receipts include: Internal revenue (income taxes, miscellaneous internal revenue, social security taxes, and taxes upon carriers and their employees), railroad unemployment insurance contributions, customs, surplus property disposal (Act of Oct. 3, 1944), and other miscellaneous receipts. From such total gross receipts are deducted net appropriations to the Federal old-age and survivors insurance trust fund, to arrive at net budget receipts. These deductions represent appropriations equal to "social security--employment taxes" collected and deposited as provided under Section 201 (a) of the Social Security

Act amendments of 1939, less reimbursements to the General Fund for those administrative expenses which are not paid directly from the trust fund. Such net amount is reflected as net appropriations to the Federal old-age and survivors insurance trust fund.

ORDINARY SHARES

The English equivalent of common stock in America. But in England, ordinary shares are often divided into two classes, preferred shares and deferred shares. (See Deferred Shares, Preference Shares.)

ORE

A money of Norway, Sweden, and Denmark. (See Foreign Moneys—table 2.)

ORGANIZATION CERTIFICATE

One of the documents necessary to execute and file in the organization of a bank. The execution of this instrument is one of the steps requisite to the organization of a bank. Organization certificate forms for National banks are furnished by the Comptroller of the Currency. When filled out they must state the name of the proposed bank, its location, capital, number of shares, and name, address, financial worth of and number of shares to be held by, each stockholder. The organization certificate must be executed in duplicate before a notary; one copy is forwarded to the Comptroller of the Currency, the other retained by the bank. It must be signed and acknowledged by the same persons who sign the Articles of Association (q. v.). When all the necessary papers have been filed and the subscription to Federal Reserve Bank stock has been paid (3% payment of the subscription of 6% of capital and surplus), either a Certificate of Authority to Commence Business (to be published for specified 60-day period), or a Charter will be issued to the bank by the Comptroller of the Currency.

ORGANIZATION OF A BANK

See Bank Organization.

ORIGINAL BILL

Foreign checks and bills of exchange are issued in duplicate and designated either as original and duplicate, or as first and second of exchange. (See First of Exchange.)

ORIGINATOR

A term referring to an investment banking house that originates or promotes a new issue of stock or bonds. An originator is not necessarily an Underwriter (q.v.).

OUT OF LINE

An expression used by speculators and investors in referring to particular securities, the prices of which are thought to be either above or below that warranted by the general level or average. For example, two stocks may bear the same dividend rate, have the same asset value, the same present and future earning power, and still command widely divergent prices or yields on the market. One may be said to be out of line with the other, or with the general level of securities of like nature.

OUT-OF-TOWN CHECKS

A check drawn on a bank located in another place is an out-of-town item to the bank receiving it for credit to the account of the depositor. Out-of-town checks are collected through the Federal Reserve Check Collection System (q. v.), or through correspondent banks with whom arrangements have been made to act as collecting agents therefor. (See Transit Department.)

OUT-OF-TOWN CLEARINGS

See Federal Reserve Check Collection System, Federal Reserve Interdistrict Collection System, Transit Department.

OUT-OF-TOWN COLLECTIONS

See Collection Items.

OUTSIDE BROKER

One not belonging to the principal stock exchange in a particular location. Thus, in New York City an outside broker is one not a member of the New York Stock Exchange.

OUTSIDE MARKET

A term used to refer to transactions in securities taking place outside of the New York Stock Exchange. Originally it referred specifically to the New York Curb Market (now known as the New York Curb Exchange).

OUTSIDE SECURITIES

Securities not listed or quoted on the principal exchange in the location, i. e., traded on an outside market. Thus, in New York City securities not traded on the New York Stock Exchange are "outside securities."

OUTSIDERS

"The general public"; the non-professional speculating element; speculators who are not in possession of the financial statements and other information regarding the corporations in the securities of which they deal in advance of their publication, i. e., in advance of being made available to the public. The outsiders also usually know nothing about the market's Technical Position (q. v.). An outsider trades on the basis of external facts, Fundamental Conditions (q.v.), etc., rather then upon advance or "inside" information. (See Insider.)

OUTSTANDING BONDS (STOCKS)

The aggregate of bonds (or stocks) which have actually been issued and sold, as distinguished from the amount authorized. The maximum of stock which a corporation is authorized to issue is determined by the certificate of incorporation. Under New York statutes, stock corporations have the power to borrow money and contract debts when necessary for the transaction of business, but consent of at least 2/3rds of stockholders is required for the execution of any mortgage, except purchase money mortgages, to secure such debt.

(See Authorized Bonds, Authorized Capital Stock.)

OVERALL BASIS

A term used in investment analysis to indicate the extent or degree of coverage of all fixed charges by earnings available for such charges. Importance of the term may be illustrated in the case of a company having three bonds issues, each having a lien rank ahead of the

other, in accordance with the following example:

Income available for bond interest		$600,000
Charges, first lien bonds	$150,000	
Charges, second lien bonds	150,000	
Charges, third lien bonds	100,000	400,000
Balance available for surplus		$200,000

On an overall basis, this company covered its total charges 1 1/2 times ($600,000 divided by $400,000). Such a comparison is less favorable than might be stated for each of the bond issues considered separately. Thus, charges on the first lien bonds were earned 4 times ($600,000 divided by $150,000); charges on the second lien bonds after requirements on first lien bonds were earned 3 times ($450,000 divided by $150,000); charges on third lien bonds were also earned 3 times after requirements on first and second lien bonds combined, thus giving the superficial appearance of being as well covered as the second lien bonds. However, if income available for bond interest should shrink by $150,000 or to $450,000, the overall coverage would be 1 1/8 times, and charges on the third lien bonds would be earned only by 1 1/2 times, after allowing for requirements on first and second lien bonds, instead of 3 times as before. In other words, a shrinkage of only 25 per cent. in income available for bond interest would reduce the safety margin for the third lien bonds by one-half.

OVERBOUGHT

The condition of a market when speculative buying has been heavy in spite of advancing prices and which, because of the latent desire of speculators (the long interest) to take their profits, and the probable temporary elimination of the short interest, leaves it in a weak technical position, susceptible to declining prices through profit taking and probable renewed short selling.

OVERCAPITALIZATION

A condition which exists in a corporation when the value of its net assets is less than the par value of its shares. If shares were fully paid for when issued and property values subsequently kept intact, over-capitalization would not occur. It has been held among courts that capital stock should not exceed the market value of a corporations's net assets, but among financiers and accountants, this principle is not regarded as altogether sound or practicable. From the point of view of the latter, overcapitalization does not exist until and unless the capital stock outstanding is so great that the corporation is unable to earn a reasonable and ordinary return upon it. In other words, the test of proper capitalization is not asset value, but the earning power of the assets.

Over-capitalization in the case of a railroad or other public utility is likely to result in a receivership and reorganization by which a scaling down of securities bearing a fixed rate of interest must be effected.

(See Watered Stock.)

OVER-CERTIFICATION

The practice of certifying a check by a bank for an amount greater than the balance credited to the account of the drawer. Over-certification was formerly a customary proceeding among banks in New York City which specialized in furnishing call funds to stock exchange brokers. The practice is now prohibited with penalties by Section 5208 of the Revised Statutes (Federal Reserve Act amendment, September 26, 1918), which follows:

> "It shall be unlawful for any officer, director, agent, or employee of any Federal Reserve bank, or of any member bank as defined in the Act of December 23, 1913, known as the Federal Reserve Act, to certify any check drawn upon such Federal Reserve bank or member bank, unless the person, firm or corporation drawing the check has on deposit with such Federal Reserve bank or member bank, at the time such check is certified, an amount of money not less than the amount specified in such check. Any check so certified by a duly authorized officer, director, agent, or employee shall be a good and valid obligation against such Federal Reserve bank ormember bank."

In effect over-certification is tantamount to a temporary loan and bridges the gap between the time a broker buys securities for customers, and their delivery—when the collateral becomes available. The law against over-certification is technically evaded by the practice of granting so-called "day loans" or "morning loans." (See Certifications, Day Loans.)

OVERCERTIFIED

See Over-Certification.

OVERCERTIFY

See Over-Certification.

OVERCHECK

To overdraw one's account. (See Overdrafts.)

OVER-COMMITMENT

To make contracts involving financial responsibility in excess of the amount of one's capital or credit; for example, to buy securities on a thin margin; similar to Overextension (q.v.).

OVERDRAFTS

An account appearing upon the general ledger and financial statement of a bank to indicate the aggregate amount by which depositors have overdrawn their accounts. From a bookkeeping standpoint, the overdraft occurs when a depositor overchecks, i. e., when not only the credit balance has been exhausted, but a debit balance created.

Overdrafts are equivalent to unsecured loans which occur through the oversight of a customer, or through delay in deposit remittances. Since overdrafts appear as an asset to offset the amount by which depositors' accounts are increased, they obviously increase gross deposits.

Under a ruling of the Comptroller of the Currency, overdrafts are forbidden among National banks. It is consequently a duty of ledger clerks to detect overdrafts and report checks which, if entered, would create overdrafts, to an officer for a decision as to whether the overdraft check should be paid. Most banks refuse to pay such checks, but frequently, as a matter of courtesy and service, the depositor is notified and given opportunity to make good the deficit immediately. This obviates the necessity of returning the check on account of insufficient or no funds and perhaps having it protested. In such cases, the check is temporarily

held awaiting the action of the depositor, who is sent a notice as follows.

"Your account appears to be overdrawn $ ..... This notice is sent in the regular course of business in order that the matter may receive your prompt attention in case the overdraft has been caused by a delayed deposit or remittance."

OVERDRAW

To draw a check which more than exhausts one's credit balance at a bank, thereby creating a debt balance. (See Overdrafts.)

OVERDUE BILLS (NOTES)

Bills or notes which have not been paid at maturity. When an indorsed note is not paid at maturity it should, unless it contains a waiver of protest, be protested in order to hold the indorsers liable. Bills or notes not paid at maturity are transferred from the Time Loans or Bills Discounted accounts which should contain only unmatured items, to an account entitled, Bills Discounted Overdue. For the disposition of bills long overdue, see Bad Debts.

OVEREXPANSION

A term roughly equivalent to Inflation (q.v.). The construction of plant facilities and production of goods in excess of reasonable near-term production requirements, and sales probabilities. Such a condition is characterized by over-accumulation of inventories, thus tying up working capital and freezing any bank loans used to finance inventory expansion. Thus overexpansion in business generally has the effect of placing commercial loans of banks in an overextended position. (See Business Cycle.)

OVEREXTENDED ACCOUNTS

From a broker's standpoint, accounts which are under-margined; from a banker's standpoint, loans which the borrower cannot pay at maturity, thereby requiring renewal.

OVEREXTENSION

From the point of view of a lender, credit is overextended when a line out of proportion to the risk's capital rating, moral responsibility, and business ability, is granted. From the point of view of a trader, overextension is a condition of having purchased securities or commodities in excess of an amount justified by his capital and borrowing power and which, in case of declining prices, is apt to lead to losses through inability to furnish proper margin, or otherwise through pressure by creditors. From the standpoint of business, the term refers to expansion of facilities and equipment beyond the immediate or prospective needs of the concern.

OVERISSUE

An issue of stock or bonds by a corporation in excess of the amount authorized. The purpose of a stock registrar is to prevent an overissue. (See Authorized Bonds, Authorized Capital Stock, Stock Registrar.)

OVERLYING MORTGAGE

A mortgage before which another or other mortgages have prior claim upon the company's property. An overlying mortgage is, therefore, not a first mortgage, and overlying bonds are junior lien bonds. Overlying mortgage is a term synonymous with junior mortgage, and an antonym of underlying mortgage. (See Junior Mortgage.)

OVERNIGHT LOAN

One which is to be paid off the following day.

OVERPLUS

Practically equivalent to surplus, or balance over all expenses.

OVERS AND SHORTS

In banking practice, an account in which items that are either over (credits) or short (debits), producing a state of unbalance, are kept in suspense until they can be located and adjusted. The amount of overs and shorts, if any, is entered in daily department proofs, and later consolidated by the general bookkeeping or auditing department. This department, by having access to the details of all the transactions of the bank, is in a position to locate differences and adjust them.

OVERSOLD

The condition of a market when selling, especially short selling, has been in heavy volume at declining prices, placing the market in a technical position to rally through the latent urgency of covering by the short interest.

OVERSPECULATION

A condition existing when the aggregate of trading in securities or commodities on any exchange is in excess of that needed to furnish a ready market and to keep prices in harmony with actual values.

OVERSTAYED

A term used to describe a trader who, having a paper profit (an unrealized profit), waits for a larger profit and then because of a sudden decline in prices, the profit is reduced or cancelled, or even converted into a loss. He is then said to have "overstayed" his market.

OVERSUBSCRIPTION

When the aggregate of subscriptions contracting to buy an issue of securities offered to the public exceeds the amount of the issue, it is said to be oversubscribed. In such cases, subscriptions over $1,000 in bonds, or say 10 shares of stock, are usually reduced pro rata by the syndicate manager in order to equalize the subscriptions and the amount of the issue, and the larger subscriptions are frequently cut down by a greater percentage than the smaller.

OVER-THE-COUNTER MARKET

The market for securities not listed on any regularly organized exchange. More stocks and bonds are represented by such markets than on the stock exchanges. Frequently, large blocks of bonds and stocks, represented on stock exchanges, are dealt with on such outside markets, one of the functions of the Over-the-Counter markets being to effectuate redistribution of securities not previously digested. For example, United States Government issues, though listed, are frequently bought and sold in large blocks Over-the-

Counter. Practically all dealings in state and municipal bonds are upon Over-the-Counter markets, which also command almost exclusive dealings in bank, insurance and investment company shares as well as real estate bonds.

Over-the-Counter markets in the United States, although lacking in central organization, and for the most part dealing in less known securities, actually are broader and larger markets than the exchanges. As of the middle of 1935, a careful estimate disclosed that quotations are available on not less than 25,000 unlisted bonds and 30,000 unlisted stocks, or fully 55,000 separate over-the-counter securities throughout the United States. By contrast, listings on registered stock exchanges totalled about 7,000, of which about 2,300 were on the New York Stock Exchange.

The National Association of Securities Dealers, Inc. is the only national organization of brokers and dealers embracing the entire Over-the-Counter Market without regard for location, the kind or volume of business done, or collateral affiliations. Local associations of Over-the-Counter brokers, dealers and traders are organized in principal cities. On December 31, 1947, there were 4,011 broker/dealers registered with the Securities and Exchange Commission, as compared with membership as of the same date in the NASD of 2,648 members. Most of the non-members of the NASD are in the real estate and insurance, oil royalties and exempt securities classifications.

Certain types of securities adapt themselves more readily to trading in the over-the-counter markets than to the organized exchanges, as, for example, securities of the following types:

(1) Small capitalizations.
(2) No great speculative interest.
(3) Unsuitability for margin trading.
(4) Concentration of outstanding securities in a few hands.
(5) Desirability for portfolios of institutions, such as insurance companies, etc., that wish to negotiate a sizable block at one price.
(6) Stocks and bonds selling at high prices, as in the case of some bank stocks.

Over-the-Counter quotations, grouped as between stocks and bonds, are furnished in New York City by the National Association of Securities Dealers, Inc. to daily newspapers under the following classifications: Bonds: U. S. Treasury bills, U. S. Treasury Certificates of Indebtedness, U. S. Treasury Notes, Federal Land Bank, Federal Intermediate Credit Bank Debentures, U. S. Insular and Territorial, New York State, New York City, Public Authority Bonds, Other Municipals, Reorganized Rail Bonds, Corporation Bonds. Stocks: Bank and Trust Company Stocks, Industrial, Rail and Utility Stocks, Insurance Company Stocks, Investment Companies, Reorganized Rail Stocks.

Under the Securities Exchange Act of 1934, the Securities and Exchange Commission has required the registration of all dealers in Over-the-Counter securities. Filing of registration statements by such dealers was required by July 1, 1935, but actual registration became effective one month later. Registration was required of all brokers and dealers who use the mails or any instrumentality of interstate commerce to effect securities transactions on markets other than national securities exchanges. Exemptions were provided only to dealers engaging exclusively in handling exempted securities, e. g., commercial paper, bankers' acceptances or commercial bills, or "securities which have not been registered or listed on an exchange and the market in which is predominantly intrastate."

(See National Association of Securities Dealers, Inc.)

OVER-TRADING

Trading in securities or commodities on too small a margin, i. e., buying an amount out of proportion to a given capital. To hold securities on too small a margin is as risky as buying unsound securities.

OVERTURN

A synonym for Turnover (q. v.). Also see Merchandise Turnover.

OWNERSHIP CERTIFICATES

The Internal Revenue Code (Section 147) requires the furnishing of information to the Treasury at the source of payments in order to assist it in tax collection. Section 147 (b) of the Code requires such information ("returns") regardless of the amount (1) in the case of payments of interest upon bonds, mortgages, deeds of trust, or other similar obligations of corporations; (2) in the case of payments of interest upon obligations of the United States or any agency or instrumentality thereof; and (3) in the case of collections of items (not payable in the United States) of interest upon the bonds of foreign countries and interest upon the bonds of and dividends from foreign corporations by persons undertaking as a matter of business or for profit the collection of foreign payments of such interest or dividends by means of coupons, checks, or bills of exchange.

Interpreting the statute, Treasury Regulation 111, Sections 29.143-4, provides as follows: In accordance with the provisions of Section 147 (b), citizens and resident individuals and fiduciaries, resident partnerships and non-resident partnerships, all of the members of which are citizens or residents, owning bonds, mortgages or deeds of trust, or other similar obligations issued by a domestic corporation, a resident foreign corporation, or a non-resident foreign corporation having a fiscal agent or a paying agent in the United States, when presenting interest coupons for payment shall file ownership certificates for each issue of such obligations regardless of the amount of the coupons.

However, in the case of interest coupons presented on or after January 1, 1943, such ownership certificates are required to be filed by such citizens, residents, fiduciaries or partnerships only with respect to interest coupons on bonds, mortgages or deeds of trust, or other similar obligations, issued prior to January 1, 1934 and containing a tax-free covenant.

In the case of interest on obligations of the United States or any agency or instrumentality thereof, regardless of the date of issuance thereof, ownership certificates shall be filed by such citizens, residents, fiduciaries and partnerships only in the case of interest paid prior to January 1, 1943.

Ownership certificates (Form 1001) shall also be filed in the case of interest paid on or after January 1, 1942 on obligations of the United States or any agency or instrumentality thereof, regardless of the date of issuance of such obligations, if such obligations are

owned by the persons described in the first sentence of the Regulation above.

The ownership certificate shall show the name and address of the obligor, the name and address of the owner of the obligations, a description of the obligations, the amount of interest and its due date, the rate at which the tax is to be withheld, and the date upon which the interest coupons were presented for payment.

Ownership certificates need not be filed in the case of interest payments on obligations of a State, Territory or any political subdivision thereof, or the District of Columbia; or the obligations of possessions of the United States.

Ownership certificates are not required to be filed in connection with interest payments on bonds, mortgages or deeds of trust, or other similar obligations, issued by an individual or a partnership.

Ownership certificates are not required where the owner is a domestic corporation, a resident foreign corporation, or a foreign government.

In the case of interest payments on overdue coupon bonds, the interest coupons of which have been exhausted, ownership certificates are required to be filed when collecting the interest in the same manner as if interest coupons were presented for collection.

In all cases where the owner of bonds, mortgages or deeds of trust, or other similar obligations of a corporation, is a non-resident alien, a non-resident partnership composed in whole or in part of non-resident aliens, a non-resident foreign corporation, or where the owner is unknown, an ownership certificate for each issue of such obligations shall be filed when interest coupons for any amount are presented for payment. The ownership certificate is required in such cases whether or not the obligation contains a tax-free covenant.

However, ownership certificates need not be filed by a non-resident alien, a partnership composed wholly of non-resident aliens, or a non-resident foreign corporation in connection with interest payments on such bonds, mortgages or deeds of trust, or other similar obligations of a domestic or resident foreign corporation qualifying under Section 119 (a) (1) (B) of the Code, or of a non-resident foreign corporation.

When interest coupons detached from corporate bonds, or (as to coupons presented on or after January 1, 1942) from obligations of the United States or of any agency or instrumentality thereof, are received unaccompanied by ownership certificates, unless the owner of the bonds is known to the first bank to which the coupons are presented for payment, and the bank is satisfied that the owner is a person who is not required to file an ownership certificate, the bank shall require of the payee a statement showing the name and address of the person from whom the coupons were received by the payee, and alleging that the owner of the bonds is unknown to the payee. Such statement shall be forwarded to the Commissioner of Internal Revenue with the monthly (quarterly for the calendar year 1943 and subsequent calendar years) return on Form 1012.

The bank shall also require the payee to prepare a certificate on Form 1001, crossing out "owner" and inserting "payee", and entering the amount of the interest, and shall stamp or write across the face of the certificate "Certificate furnished", adding the name of the bank.

Ownership certificates are required in connection with interest payments on registered bonds as in the case of coupon bonds, except that if ownership certificates are not furnished by the owner of such bonds, ownership certificates must be provided by the withholding agent.

PACKERS

A term usually applied to companies engaged in the slaughter of meat animals, and the dressing, packing and sale of meat and allied products at wholesale. In particular, the term applies to the largest units of this industry, which are Swift, Armour, Wilson and Cudahy. These companies, called the "Big Four", slaughter under Government supervision about 58% of all cattle killed in the United States, 54% of the hogs, 68% of the calves, and 79% of the sheep. Among the smaller units in the meat packing field are: Gobel, Hormel, Hygrade Food Products, E. Kahn Sons Co., Kingan & Co., Mickelberry's, Miller & Hart, John Morrell & Co., Rath Packing, Stahl-Meyer, etc.

Among the important by-products of the meat-packing business, which until recent years of high profits in meats were mainstays for profitable operation, are: lard, tallow, margarine, glue, glycerine, cleansers and soaps, hides, wool, hair, ammonia, animal feeds, fertilizers, etc.

The term "packers" is also sometimes applied to packers of canned foods, such as California Packing, Beech-Nut Packing, Heinz, Libby McNeill & Libby, Phillips Packing, Stokely-Van Camp, etc.

PACKING LIST

A list accompanying a shipment of goods indicating the number of packages and their contents but omitting prices. (See Certificate of Inspection.)

PAID CHECKS

Same as Cancelled Checks (q. v.).

PAID CREDIT

A short title for the full title, "Paid Letter of Credit." Commercial letters of credit are paid in advance only in rare instances, but travelers' letters of credit are usually paid for when issued. (See Letters of Credit, Traveler's Letter of Credit.)

PAID UP CAPITAL

That part of the subscribed capital stock which has been issued and paid for, the remainder being subject to call and representing uncalled capital. Federal Reserve bank stock, for example, must be subscribed for by member banks in amounts equal to 6 per cent. of the combined capital and surplus of the subscribing bank, but up to the present time only 50 per cent. of the amount subscribed has been called. (See Call.)

PAID UP SHARES (STOCK)

Same as Full-Paid Stock (q. v.).

PANIC

In the past financial history of the United States, a panic has been characterized as a sudden, excited, unreasoning collapse of confidence in the ability of banks and creditors generally to meet their obligations. It has been primarily a financial (rather than a business) phenomenon, and has been immediately traceable to a collapse in the credit structure, usually precipitated by the failure of a conspicuous bank or business house, or a succession of failures without previous warning. This operated as a signal that all banks might not be solvent, and "runs" on banks and demand for cash payments generally were liable to develope like wildfire. Hence, banks were the storm centers of panics.

Fundamentally, a panic has been a reaction against stringent credit conditions, rising security and commodity prices, difficult collections, finally culminating in a "buyers' strike." It has been anticipated by feverish industrial production; rising price, wage, and interest levels; expanding bank loans and falling reserves; extreme prosperity; overexpansion of plant facilities; and overextension of credit.

During a panic business men strove to protect their cash position and to maintain financial solvency. There usually have been plenty of goods and collateral but a shortage of currency, and creditors pressed their debtors for cash payments. But collections were achieved only with great difficulty. For this reason, securities and commodities were thrown on the market for what they would bring in order to raise cash. A panic has been usually of short duration, and has been followed by a period of liquidation and industrial depression. A panic should be distinguished from Crisis (q. v.), Depression (q. v.), and Liquidation (q. v.).

Provision for Elastic Currency (q. v.) in the Federal Reserve Act appears to have solved the shortage of currency problem. Through the rediscount process and advances on Government securities and other assets additional currency can be created with discounted notes as security, and as long as the requirements as to deposits and Federal Reserve Note liabilities of the Federal Reserve Banks themselves are met, additional Federal Reserve currency and reserves can be injected into the member banks. The most critical banking panic of the United States began with declaration of the initial State "moratorium" by Michigan in February, 1933, and culminated in the Banking Holiday declared for the entire nation in March, 1933. Panics of greater or less intensity occurred in 1907, 1903, 1900, 1893, 1873, 1857, 1846, 1837, and 1825. (See Business Cycle.)

PAPER

A general term applied to all short-term evidences of debt not under seal, i. e., negotiable instruments used in borrowing short-term funds, especially funds for commercial purposes. The following classes of paper are frequently referred to, viz: Agricultural Paper (q. v.), Business Paper (q. v.), Commercial Paper, (q. v.), Commodity Paper, (q. v.), Corporation Paper, Mercantile Paper, and Trade Paper (q. v.).

PAPER BASIS

A term used to indicate that a country does not employ (or no longer employs) a metallic basis for its currency system, and that commodity prices and foreign exchange rates are based upon (usually) depreciated paper money. (See Paper Money.)

PAPER MONEY

Paper instruments, e. g., Federal Reserve Notes, silver certificates, U. S. notes, Treasury notes of 1890, and Federal Reserve Bank Notes and National Bank Notes (now in process of retirement), which serve as substitutes for metallic money and form the principal

part of the circulation media. For the principles underlying paper money issues, see Money.

The advantages of paper money over metallic money are: (1) greater portability, i. e., convenience in handling; (2) saving of loss from abrasion; (3) economy of time in counting and weighing (gold coin, now all withdrawn from circulation, also formerly had to be weighed to determine extent of abrasion); (4) greater security in case of loss or theft; (5) saving of interest for the amount by which paper money exceeds the metallic money kept in reserve for its redemption; (6) greater cleanliness, since paper money can be frequently reissued.

For a description of different kinds of United States paper money, and legal tender and redemption qualities thereof, see Monetary Stock (Circulation), and United States Money.

PAPER MONEY INFLATION

The issue of paper money in quantities in excess of the value of the metallic or documentary (Government bonds, commercial paper, etc.) reserve behind it. Wherever it is impossible for a Government to redeem its paper currency in standard money on demand, monetary inflation exists. (See Inflation.)

PAPER PROFITS

Unrealized profits; profits not yet taken; profits existing because of a rise in the market price of a security (or commodity) over its purchase price, or decline in the market price below the selling price, if sold short. For instance, if one hundred shares of United States steel have been bought at 80 and the price is currently quoted at 85, a paper profit of 5 points, or $500 has arisen, but the profit does not become certain until the stock has actually been sold and converted into cash.

PAR

In the original sense, this term means state of equality, or 100 per cent., without premium or discount. The par value of a share of stock is also known as its face or nominal value; the value imprinted or engraved on a bond or stock certificate, and in the case of a bond, the principal amount at which it will be redeemed at maturity. (See Commercial Parities, Mint Par of Exchange, Par Value.)

PAR CLEARANCES

Clearing house checks, i. e., those passing through a local clearing house association, are collected at par, no charge being made to the payee or indorser by the collecting bank (which receives the check for deposit), or to the drawer by the bank on which it is drawn.

The term usually refers, however, to out-of-town collections. In this connection laymen generally appear to be confused concerning the meaning of this term. The Federal Reserve check collection system provides for compulsory collection of out-of-town checks among its members and clearing members at par. This refers to the fact that this system provides that all checks be accepted and remitted for by the drawee bank at par. It does not mean that a bank accepting an out-of-town check for deposit and credit may not make a charge. Such a charge, when made, however, is not a collection or exchange charge. It is an interest or discount charge. If a bank accepts for deposit and credit a check drawn on a bank located at a point five days away, the charge which the collecting bank makes is for the loss of interest incurred while the check is in the process of collection. The depositor is not entitled to draw against uncollected funds. In the case of savings deposits or time deposits (demand deposits no longer are permitted to draw interest), interest may be credited from the date of deposit. The charge made by the collecting bank is exactly parallel to the charge made for discounting a note due in five days. (See Federal Reserve Check Collection System, Federal Reserve Interdistrict Collection System, Gold Settlement Fund.)

PAR COLLECTION OF CHECKS

See Clearing House Exchange Rates, Federal Reserve Check Collection System, Federal Reserve Interdistrict Collection System, Interdistrict Settlement Fund, Par Clearances.

PAR LIST

Among transit men, a term used to denote the banks throughout the United States which accept and remit to presenting banks at out-of-town points for checks drawn upon themselves at par. Member banks of the Federal Reserve System are automatically placed on the par list. Other banks which are willing to accept and remit for checks drawn upon themselves at par may be placed upon the par list and are known as clearing members. This entitles clearing member banks to the advantage of collecting out-of-town checks through the Federal Reserve Check Collection System, for which no charge is made. The Board of Governors of the Federal Reserve System periodically publishes a list of the banks which constitute the par list. (See Federal Reserve Check Collection System.)

PAR OF EXCHANGE

See Mint Par of Exchange.

PAR POINTS

Locations (cities and towns) which, with relation to a given central location, are considered to be within the par area of collections. No charge is made to a depositor who deposits for credit, items drawn on banks located at par points. For any given location, the local clearing house association usually determines which points are par points by designating the area within a certain radius as the par area, and the area beyond this boundary, as the non-par area. In this way, bank members of the clearing house are governed by the same procedure, and standardized minimum exchange rates are fixed for all non-par points.

As the result of inauguration of the Federal Reserve Par Collection System and the membership therein as of June 30, 1948 of 14,086 banks with 4,234 branches and offices, there are only 2,014 banks in the United States, with 318 offices, which are still on a non-par basis. (See Federal Reserve Check Collection System.)

PAR VALUE

(1) Bonds. The par or face value of a bond is the principal amount at which the obligor (issuing organization) contracts to redeem the bond at maturity. It is also the basis upon which the cash interest rate is computed. While bonds are usually issued at an interest rate sufficiently attractive to insure their sale approximately at par or at a slight discount, they afterward

fluctuate in accordance with the trend of money rates and general business conditions and in the case of medium and lower grade railroad, utility and industrial bonds, with the earnings of the issuer. Whether a bond commands a premium or is at a discount, the nearer it approaches maturity the nearer the market value approximates the par value, until at the date of maturity, it should be worth precisely par, since that is its redemption value. In the United States, bonds are usually issued in denominations of $1,000, although $500 and $100 denominations are not infrequent. Higher denominations such as $5,000 and $10,000 occur in a few issues.

(2) Stocks. The par or face value of shares of stock is not uniform, although $100 was formerly the most common par. Shares may be given any specified par value, e. g., $50, $25, $10, and even smaller denominations now most often are found. In speculative enterprises, such as in oil and mining industries, the par value of shares is usually small in order to attract a wider market than would be possible if shares were of higher par value. In many states, shares may be issued without par value. (See Denomination, Par, Without Par Value.)

PARA

A minor currency unit of Cyprus, Turkey and Yugoslavia. (See Foreign Moneys—table 2.)

PARENT COMPANY

A variant of the holding company; a corporation which owns sufficient stock in its underlying or subsidiary companies to insure their control. Control may also be reinforced by leasing territorial or patent rights, or both. A parent company may at the same time be an operating company. The Packard Motor Car Company is of this type, being an operating company but at one time owning seven subsidiaries now reduced to two for tax reasons. The United States Steel Corporation, on the other hand, is a purely holding company, owning some 65 subsidiary operating companies, e. g., Carnegie Steel Company, Illinois Steel Company, etc., but engaging in no industrial operations of its own.

The income of a parent company is derived from dividends, interest, royalties, rents, and where it is also an operating company, its own sales or revenues and net profits or net income. (See Holding Company, Operating Company.)

Bibliography

F. J. Powell: Parent and Subsidiary Corporations, 1931.

PARIS BOURSE

The Paris Stock Exchange, the full title of which is, "The Company of the Paris Bank, Exchange, Trade and Finance Brokers" (Compagnie des Agents de Change de Paris).

This is the most important continental stock market, ranking, after London, as the largest international stock market of the world. Organization may be said to date from 1705, when the Bourse obtained royal recognition from Louis XIV as brokers for the negotiation of loans, but earlier beginnings had dated as far back as the 12th century. The modern Bourse dates from 1801, and its present building was completed in 1827.

The Paris Bourse in reality consists of three major markets: (1) the Parquet, or formal market, which is composed of 70 members having joint liability, not permitted to trade for own account, and occupying semi-public status under the Minister of Finance; (2) the Coulisse, corresponding to a Curb Market; and (3) the Hors-Cote market, corresponding to an unlisted market. Approximately 3,500 issues were listed or traded on these various markets prior to World War II, including arbitrage business with the London Stock Exchange in "internationals", or securities traded in more than one stock exchanges of the world. In September, 1944, the Bourse recommenced business after having been freed from German control during World War II.

Cash transactions, which may be for any number of shares, are more frequent than the more specialized system of futures contracts, which are limited to 25 shares. On the Parquet, settlements are made twice a month, similar to the London Stock Exchange practice, and are made once a month on the Coulisse. Hours of trading are from 12 to 3, except on Saturdays from May through October.

PARITY

Equivalence; a term derived from par, meaning the equivalent price for a certain security or currency quoted in one market reduced to another currency after making adjustments for exchange rates, loss of interest and other factors. (See Arbitrage, Commercial Parities, London Equivalent.)

PARITY INDEX

An index computed and published monthly by the Bureau of Agricultural Economics of the U. S. Department of Agriculture which expresses the relationship of the present purchasing power of designated commodities to that of a given base period, generally 1909-1914 or 1919-1929.

In computing the index, the Bureau takes into account the prices the farmer receives for the commodities, and the prices the farmer must pay for the things he buys. In calculating the latter, the Bureau gives 86% weight to prices paid by farmers for 86 commodities needed for family needs and 94 commodities used in production; 7.2% weight to interest on agricultural real estate debt; and 6.8% weight to taxes payable on agricultural real estate.

When the parity index is multiplied by the base period price of a designated commodity, the result is the Parity Price (q. v.), which is used to measure Government price support loans and also indicates the price at which current holdings of agricultural commodities held by Government agencies, such as the Commodity Credit Corporation, may be sold.

PARITY PRICE

Under the present concept of agricultural aid laws, the parity price for a commodity is a price which will afford when sold the same purchasing power for the things the farmer buys that prevailed during designated base periods. This concept of purchasing power parity has replaced the former simpler concept of price parity.

Base period most applicable is the August, 1909-July, 1914, for such commodities as wheat (88.4¢ per bushel base period price); cotton (12.4¢ per lb.); corn (64.2¢ per bushel); oats (39.9¢ per bushel). Other parity prices for this base period are: barley, 61.9¢ per

bushel; cottonseed, $22.55 per ton; eggs, 21.5¢ per dozen; flaxseed, $1.69 per bushel; hogs, $7.27 per cwt.; milk at wholesale, $1.60 per cwt. and butterfat, 26.3¢ per lb.; rye, 72¢ per bushel; grain sorghums, $1.21 per cwt.; soybeans (derived base period price), 96¢ per bushel; wool, 18.3¢ per lb. Base period for potatoes and various tobaccos, and other commodities on which adequate data are not available for the 1909-1914 base period, is the August 1919-July 1929 base period. Also, burley and flue-cured tobaccos have a special base period of August 1934-July, 1939.

By multiplying these base period prices by the Parity Index (q.v.), the parity price for the commodity is determined. Parity prices are published monthly by the Bureau of Agricultural Economics on some 31 commodities, while parity prices for some 150 other commodities are published semi-annually.

The importance of parity prices lies in their determination of Government loan prices. Government loans at 90% of parity price for the six basic commodities, except cotton, which may be loaned on at 92 1/2% of parity price, have been available under present laws through 1948, as compared with basic range of 52% to 75% of parity specified in the Agricultural Adjustment Act of 1938. The six basic commodities are: cotton, corn, wheat, tobacco, rice, and peanuts (used as nuts). In addition, such loans on the same basis may be extended on the 14 Steagall commodities: hogs, eggs, chickens (subject to exceptions), milk, butterfat, dry peas and edible beans, flaxseed, soybeans, peanuts used for oil, potatoes and cured sweet potatoes, American-Egyptian cotton, and turkeys. Price support is afforded also to some 140 other agricultural commodities. Holdings of Government agencies of agricultural commodities may not be generally sold at less than current parity price.

PARTIAL PAYMENT

Normally, a negotiable instrument is discharged by full payment in money or by check in due course by or on behalf of the principal debtor. Discharge, however, may also occur by any acts which would effect a discharge of a simple contract for the payment of money (Sec. 119 (4), Uniform Negotiable Instruments Law; Sec. 200 (4), New York Negotiable Instruments Law). Among these acts of discharge are an accord and satisfaction, such as by acceptance of partial payment of the negotiable instrument at maturity, with the balance perhaps extended by means of a renewal note, which act would be a novation if the old note is surrendered. Persons secondarily liable on the instrument are discharged by any act which discharges the instrument (Sec. 120 (1), Uniform Negotiable Instruments Law; Sec. 201 (1), New York Negotiable Instruments Law).

PARTIAL PAYMENT PLAN

Sales plans, now no longer operative because of the applicability of margin requirements under the Securities Exchange Act of 1934 (q.v.), which had been previously adopted especially by investment and odd lot dealers, for permitting small investors to buy bonds and the more conservative classes of stocks, by means of partial payments. The down payments, or initial deposits, were usually the same as margins required in margin buying. Monthly payments were then required until the full purchase price was paid. Interest was charged for the amount of the unpaid balance. Some dealers permitted as little as one share to be bought on this plan, with an initial deposit as low as $10.

The owner of a partial payment account could sell his securities in order to realize a profit which may have accrued on his securities, even though the balance was not yet paid. For this reason, the partial payment plan was closely akin to margin buying. In case of a sudden decline in the price of securities held, the broker was entitled to demand additional payments, though not yet due. (See Margin Buying.)

PARTICIPANT

A party—bank, investment house, etc.—which is invited to take, and accepts membership in, a distributing syndicate organized for the purpose of selling an issue of securities, or to which is given a share or partial interest in a loan granted by another bank. (See Participation Loans, Participations.)

PARTICIPATING BONDS

Bonds, also known as dividend or profit-sharing bonds, which, in addition to bearing a minimum fixed rate of interest, are entitled to share in additional payments from profits of the issuing corporation. Participating bonds differ from Income Bonds (q. v.), in that while the minimum interest rate is fixed in the former, and is an enforceable obligation, the maximum rate is only nominal in the latter, and is subject to non-payment, or partial payment, or full payment only if earned. The additional participation by participating bonds above the minimum fixed rate may be limited by a certain maximum rate or else the participating bonds may share in the earnings ratably with, and as fully as, the equity securities (preferred or common stock).

Participating bonds are not common. Like Convertible Bonds (q. v.), they are securities which attempt to combine creditor status of bonds with the ownership appeal and right to net profits of the equity. They are sometimes secured, oftentimes being collateral trust bonds, but most often are unsecured debentures "sweetened up" with such participating features.

PARTICIPATING PREFERRED STOCK

See Preferred Stock.

PARTICIPATION

The portion or share of securities which is allotted each member of a distributing syndicate, known as a participant, by the syndicate managers when an issue of securities is floated by a syndicate. The amount of participation allotted each member depends upon the size of the bank (in the case of Government and municipal securities, which banks are still allowed to underwrite) or investment banking firm or securities dealer, the size of the territory served, the ability of the member to dispose of previous allotments, etc.

The interest of each member of a joint account is also known as a participation. (See Joint Account, Syndicate.)

PARTICIPATION CERTIFICATE

See Participation Loans.

PARTICIPATION LOANS

Loans made by one bank in which another bank is given a part interest. This is a common practice among many of the larger banks in the money centers, which maintain accounts with interior banks, by which

the latter are given an investment outlet for their available funds in time and demand loans. This method of investing available funds of bank correspondents is a convenient one for the latter, since the loans can be made and terminated at their option and without inconvenience. Small correspondent banks use this method of investing temporarily idle funds as a substitute for commercial paper. The correspondent bank usually allows the bank in which the deposits are kept to select the names of the paper in which the participation is granted.

Care must be taken not to permit a participation loan which exceeds the participant's legal maximum loan to one borrower. Participation certificates, containing the details of the transaction, are issued to the participant, as evidence of the participation loan.

The following is a typical form of participation certificate:

No..... $.....

CERTIFICATE OF PARTICIPATION

issued by

Blank National Bank of New York

has allotted to .....Bank.....
in participation of .....
in a note for $ .....
made by .....
dated .....
with interest at .....% per annum.

PARTICULAR AVERAGE

In marine insurance, insurance with particular average, without limitation of percentage, covers any partial loss resulting from marine perils.

(See Average.)

PARTIES (TO A NEGOTIABLE INSTRUMENT)

The parties to a check are the drawer, payee, drawee, and indorsers; to a draft or bill of exchange, the drawer, drawee (called acceptor after he accepts it), payee (often the same party as the drawer), and indorsers; to a note, the maker, payee, and indorsers. (See Acceptor, Drawee, Drawer, Indorser, Maker, Payee.)

PARTNERS' CAPITAL

The amount of money contributed by the partners of a firm for investment in the partnership business. This term is also sometimes applied to the capital contributed by the stockholders of a corporation, presumably represented by the aggregate amount of preferred and common stock outstanding, as distinguished from the amount of capital represented by bonds and other forms of fixed indebtedness. Stocks are sometimes referred to as share capital while bonds, notes, mortgages, debentures, equipment trust certificates, etc., are called loan capital.

PARTNERSHIP

A form of business organization in which two or more persons (no limit as to the number in the United States) are associated for the purpose of carrying on business or professional activities for private pecuniary gain. It is a contractual relationship in which capital and skill are contributed, and profits or losses divided on an agreed basis. As distinguished from a corporation, no formal legal proceedings in the way of a charter or franchise from the State are necessary, although legal incidents of the partnership are governed by State laws, some of the States having enacted the Uniform Partnership Act and the Uniform Limited Partnership Act. The State of New York enacted the former law in 1919, and the latter law in 1922. A partnership and its constituent members are not legally distinct. They are jointly and severally liable for the debts contracted by the partnership and by one another. This form of organization is subject to unlimited liability, each member being personally liable for the debts of the partnership contracted by any other member thereof, and in case of insolvency, members are liable to the full extent of their property. A partnership is automatically dissolved by the death or incapacity of one of its members.

PASS A DIVIDEND

When a board of directors omits to declare a regular and expected dividend, it is said to pass the dividend.

PASS BOOK

A bank book; a book in which deposits, or deposits and withdrawals, are recorded. Pass books are provided both for commercial and savings accounts. In commercial checking accounts the pass book is merely a memorandum of deposits. It is neither a book of original entry nor a statement of account. The Deposit Slip (q. v.) is the original entry and the important record from a legal point of view. The non-savings account pass book is not a contract, as in the case of a savings bank pass book. Entries should not be considered as absolute receipts admissible as court records, but rather as acknowledgments of receipts of deposits corresponding in amount to the footing of the accompanying deposit slips. It is not necessary to present a pass book when making deposits in a commercial checking account. It is only necessary to fill out a deposit slip, a duplicate being rendered, if desired. The acceptance of a deposit for absolute receipt and credit, except for cash, is usually conditional upon the collection and payment of such deposit. Deposits of checks, in other words, are subject to final payment and therefore to cancellation of credit for such portions as may be returned unpaid.

In order that commercial depositors may understand the purpose of a pass book and the conditions under which deposits are accepted, a notation should be imprinted in the fly-leaf book, such as the following:

> This pass book is issued for the convenience of customers and is intended for a record of deposits only. It is not a book of original entry, nor a statement of account. Statements of account will be rendered monthly.
>
> All items, other than money, are subject to cancellation of credit if not paid on presentation. It must be understood that the liability of the bank is limited to the observance of due diligence in selecting its immediate correspondents for the presentation and collection of items in this city and elsewhere and that the indorsement, "Pay to any bank or banker", or its equivalent, shall not exceed such liability, and this bank will not be responsible for loss of any kind due to the acts of negligence of such correspondents in the selection of sub-agents for presentation and collection, etc., or for loss in or through the mails, or

for any failure to present, demand or collect on any Saturday or holiday.

The status of a savings account pass book is legally very different from that issued for a checking account. In savings bank practice, it is used as a voucher or receipt, both for money deposited and withdrawn. It must be presented whenever a deposit or withdrawal is made, and periodically for the credit of interest accumulated on the balance. It is also the evidence of the contract existing between the bank and the depositor. Whenever withdrawals are made the depositor is identified, not solely through the possession of the pass book, but in case he is not personally known to the teller, his signature is compared with that on record. Test questions may also be asked. Among illiterates, many savings banks use the finger-print method of identification.

A savings bank pass book is not negotiable, but may be assigned for the purpose of obtaining a loan, except where a bank prohibits assignments in its by-laws. (See Finger-Print Identification, New York Negotiable Instruments Law (Art. 19 A), Savings Banks.)

PAST DUE BILLS

See Overdue Bills.

PAWN

A pledge for the payment of a debt. In this country the term applies to the pledge of personal belongings—jewelry, furniture, clothing, musical instruments, etc.—for a loan from a pawn broker who is licensed, and permitted to exact extra-legal rates of interest. A pawnbroker requires the actual deposit of the articles pledged for the loan he provides, and is permitted to sell or otherwise dispose of articles pledged in case the loan is not paid at a specified maturity. In England, the term applies to the deposit of collateral as security for a bank loan, as distinguished from hypothecation in which the property itself is not deposited as security, but merely the evidence thereof, such as a mortgage, bill of lading, etc.

PAWNBROKER

See Pawn.

PAY DAY

Account or settlement day; the last day of the fortnightly settlement on the London Stock Exchange. (See Settlements.)

PAY TO BEARER

A negotiable instrument, e. g., check, draft, note, made payable to "bearer," "cash," or "currency" is payable to bearer, and title may be passed by delivery without indorsement. Instruments which are payable to bearer are known as Bearer Instruments (q. v.) and include all forms of money; checks, drafts, and notes made payable to bearer; coupon or bearer bonds; and coupons detached from bonds. (See Sec. 9, Uniform Negotiable Instruments Law; Sec. 28, New York Negotiable Instruments Law.)

PAY TO ORDER

A negotiable instrument which is made payable to order, and which can be negotiated only by indorsement and delivery. A check written "Pay to the order of John Doe" or "Pay to John Doe or order" is an order instrument, and must be indorsed by John Doe before it may be negotiated to another person. (See Sec. 8, Uniform Negotiable Instruments Law; Sec. 27, New York Negotiable Instruments Law; Negotiation.)

PAYABLE THROUGH THE CLEARING HOUSE

Some checks are stamped "Payable through the blank Clearing House," "Through the blank Clearing House," or similar expressions. Such checks cannot be presented at the drawee bank and cashed, but must be deposited for credit and in turn collected through the clearing house. Checks stamped in this way during the panic of 1907 aided the banks in increasing the supply of money, since clearing house balances were settled not by actual cash, but with clearing house loan certificates. These certificates passed as money between members only.

PAYABLE WITH EXCHANGE

See With Exchange.

PAYABLES

A general term in accounting used as a catch-all reference to the combined aggregate of notes and accounts payable. (See Accounts Payable, Notes Payable.)

PAYEE

The party (person, firm or corporation), in whose favor a check, note, draft, or money order is made payable. In the case of a note, the payee is the party to whom the promise to pay is made. The payee may be the maker, drawer, drawee or any third party. Where the instrument is payable to order, the payee must be named or otherwise indicated therein with reasonable certainty. (See Secs. 8, 41, 42, 43, Uniform Negotiable Instruments Law; Secs. 27, 71, 72, 73, New York Negotiable Instruments Law.)

PAYER

The party (person, firm or corporation) upon whom payment devolves, as in the case of a check, draft, note, or bond. In the case of a check, the payer is the drawer; in the case of a draft, the drawer (acceptor after he accepts it); in the case of a note, the maker; and in the case of a bond, the obligor (issuer). Makers of promissory notes and acceptors of bills are primary parties and their liability is unconditioned. (See Secs. 60, 130, 192, Uniform Negotiable Instruments Law; Secs. 3, 110, 214, New York Negotiable Instruments Law.)

PAYING BANK

The bank upon which a check is drawn (also known as the drawee bank), and which pays a check or draft to a collecting bank, or holder. In New York, the liability of paying banks has been defined and limited by amendment to Sec. 95, New York Negotiable Instruments Law (q.v.), as well as the entire Article 19-A of the New York Negotiable Instruments Law (q.v.), entitled Provisions for Bank Collections.

PAYING TELLER

The first teller; the most important teller of a bank. Although the paying teller is usually associated with the paying of cash against checks presented for payment, and the custodianship of that part of the bank's money stock necessary for counter use, his functions are considerably more comprehensive.

The following outline shows the functions of the paying teller in detail:

1. Paying out money—cashing checks, bank drafts and matured coupons, etc., upon identification.
2. Custodianship of money.
   a. Receiving
      (1) Shipments inward from correspondent or other banks.
      (2) From other banking departments, e.g., receiving teller, collection department, etc.
      (3) From original Government sources:
         (a) Federal Reserve Bank of district.
         (b) United States Treasury.
         (c) United States Assay Office.
   b. Counting, examining, strapping, and storing money.
   c. Redeeming worn and mutilated money at original sources.
   d. Detecting counterfeits and raised bills.
   e. Maintaining adequate supply of various kinds and denominations of money.
3. Shipping money to correspondent and other banks.
4. Certifying checks.
5. Settling clearing house balances.
6. Making disbursements for petty expenses.
7. Disbursing payroll cash.
8. Depositing excess cash with Federal Reserve bank or other depository or depositories.
9. Verifying signatures of principals of accounts.
10. Verifying stop-payments.
11. Proving daily work.

Oftentimes the work of counting and inspecting money, and of certifying checks is so heavy that separate sections are created; but always under the supervision of the paying teller. (See Certifications.)

PAYMENT FOR HONOR

The payment of a check or bill of exchange after it has been protested for non-payment by an outside party for the purpose of saving the honor of any person liable thereon. Such payment for honor should be attested by a notarial act of honor. The payer for honor is entitled to receive the bill and the notarial protest certificate upon which the notarial act of honor is appended. (See Secs. 171-177, Uniform Negotiable Instruments Law; Secs. 300-306, New York Negotiable Instruments Law.)

PAYMENT STOPPED

See Stop Payment.

PEGGED

See Pegged Prices.

PEGGED PRICES

The price of a security or commodity is pegged when it is not permitted by those in control to advance above or decline below, a certain fixed point. The market, as a whole, is pegged when prices remain stationary without moving perceptibly in one direction or the other. Pegging, fixing or stabilizing prices of securities on national securities exchanges is unlawful under Section 9 of the Securities Exchange Act of 1934 if in contravention of such rules and regulations as the Securities and Exchange Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors. The Commission has permitted "stabilizing" of prices under regulation (see Manipulation).

Under the Commodity Exchange Act (Sec. 5 d), a commodity exchange may be designated by the Secretary of Agriculture as a contract market when the board of governors of the Exchange among other things provides for the prevention of manipulation of prices and the cornering of any commodity by the dealers or operators upon such exchange.

PENCE

The plural of Penny (q.v.). (See English Money Table).

PENGO

The former international currency unit of Hungary, which is now the forint. (See Foreign Moneys—table 2.)

PENNI

A minor currency unit of Finland, having a value of 1/100th of a markka. (See Foreign Moneys—table 2.)

PENNY

A name given to an English copper coin equal to 1/12th of a shilling, and approximately equal to 2 cents in United States money. The name is also given to the 1-cent piece in this country. (See English Money Table, Foreign Moneys—table 2.)

PENNY STOCKS

An expression sometimes used to denote stocks selling for less than $1, and quoted in cents.

PEPPER-McFADDEN ACT

An Act, also widely known as the McFadden Act, passed on February 25, 1927, which was also the month and day of enactment of the original National Bank Act (q. v.) of 1863. Up to its passage, this was the most important revision of the national bank laws since the passage of the Federal Reserve Act of 1913, but it related rather to national banks than to Federal Reserve banks.

The most drastic modification provided by this Act was the removal of some of the handicaps under which national banks had been competing with state commercial banks by permitting branch banking to national banks in states where the laws granted such powers to state institutions. Because of the greater liberality of most of the state laws in the matter of branch banking, there had been a strong tendency since World War I for a large number of national banks to convert to state charters. At the time of the passage of this Act, the position of the national banks was weaker than that of the state commercial banks, their number being less than half that of the state commercial banks, and their total resources, deposits and capital and surplus also being less than that of state banks and trust companies combined. The tendency toward abandonment of national bank charters in favor of state charters threatened to continue and weaken the Federal Reserve System, since only national banks are made compulsory members. In a report, the Comptroller of the Currency said: "Each time a national bank abandons its charter the Federal government loses an instrumentality through which it maintains a direct control over banking policy and banking operations. Each withdrawal con-

stitutes the loss of a unit in the basic membership of the Federal Reserve System.''

The McFadden Act equalized the powers of national banks and state commercial banks in the matter of branch banking. The aim of the Act was not to encourage branch banking in the broadest sense, e. g., as practiced in Canada and most European countries, but rather to limit branch banking to the degree enjoyed by state banks, which in no case permits banking by a state institution outside the state of incorporation. While the law placed national banks on the same legal basis as state banks, it went no further and perhaps did not go far enough. In no case could a national bank operate branches outside of the city in which it was located, even though, as in California, state banks were permitted to operate branches (with certain limitations) anywhere in the state. It was definitely prescribed that such state institutions as operated branches outside of the city in which the main office was located had to relinguish such branches or stay out of the Federal Reserve System.

Among the other provisions of the McFadden Act were:

(1) Permitted National banks, with approval of the Comptroller of the Currency, and by vote of 2/3rds of stockholders, to increase capital stock by a stock dividend, provided the remaining surplus were equal to at least 20% of the increase capital stock;

(2) Granted National banks the right to deal directly in investment securities (prior to the Act, National banks had no power to join underwriting syndicates or deal in investment securities except as purchasers for own account);

(3) Permitted National banks to have par values of less than $100 per share;

(4) Liberalized capital requirements to the extent that a National bank, notwithstanding the requirement of $200,000 minimum capital in cities of over 50,000, could be organized, subject to the approval of the Comptroller, with capital of less than $100,000 in outlying districts of such cities where the State laws permitted the organization of State banks with capital of $100,000 or less;

(5) Permitted a National bank to make 5-year first mortgage loans (whole loans, fractional interests not being considered real estate loans for the purposes of this provision) on 50% of value of improved real estate, including improved farm land, located within its Federal Reserve District or within a 100-mile radius from the head office, irrespective of District lines. Such real estate loans could aggregate 25% of capital and 25% of surplus, or 50% of savings deposits, at the bank's election.

PER CAPITA CIRCULATION

See Circulation of Money.

PER CAPITA DEBT

See National Debt.

PER CAPITA INCOME

See National Income

PER CAPITA WEALTH

See National Wealth.

PERCENT, PERCENTUM, PERCENTAGE

Interest rates, dividend rates and statistical comparisons are expressed by means of percentages, meaning hundredths. Thus, 6 per cent. interest on $100 for a year is $6.00, or 6/100ths. A 6 per cent. dividend on a share of stock of $100 par value is $6.00; $50 par value, $3.00; $25 par value, $1.50. A 6 per cent. interest rate on a $1,000 bond means interest of $60 annually; on a $500 bond, $30; and on a $100 bond, $6.

PER PRO

See Per Procuration.

PER PROCURATION

A signature given by an agent who has limited authority to sign for, or in behalf of, his principal. The authority may be given verbally, by power of attorney, or by other written evidence. Banks and trust companies frequently empower certain clerks to sign in this manner, especially where official signatures are required in volume, as for instance in the stock registrar and transfer agent business.

A signature by procuration operates as a notice that the agent's authority to sign is limited and that the principal is liable only if the agent acts within the actual limit of his authority. For this reason, persons accepting per pro signatures should ascertain the extent of the agent's authority in order to insure against the possibility of the agent exceeding such authority. The recipient of per pro signatures is entitled to a statement of authority for such signatures. A per pro signature may read either:

The Blank Bank
Per Pro John Doe

or

Per Pro Blank Bank
John Doe

The terms is abbreviated per pro, and p.p. (See Sec. 21, Uniform Negotiable Instruments Law; Sec. 40, New York Negotiable Instruments Law.)

PERIOD OF DISTRIBUTION

In syndicate operations, the duration of the offering period, during which the security is publicly offered through the members of the selling group. (see Syndicate).

The term most often refers to that period near the top of short term, intermediate and long term speculative cycles when the better informed and usually shrewder speculators take their profits and sell. (See Distribution, Period of).

PERMANENT ASSETS

Same as fixed or capital assets. (See Fixed Assets.)

PERMANENT CERTIFICATE

See Definitive Bond.

PERMANENT INVESTMENTS

Real estate, mortgages, stocks, bonds, etc., purchased with the intention of holding indefinitely (in the case of bonds, until maturity), for the primary purpose of deriving an income therefrom and without the intention of trading therein. Thus, bonds held by insurance companies or savings banks are generally regarded as permanent investments, whereas bonds held by an investment house in current position are trading assets.

PERPETUAL ANNUITY

See Annuity.

PERPETUAL BOND

A bond which has no prescribed maturity date. Some of the so-called perpetual issues have provision for optional redemption after a specified time, either at par, or a slight premium. British Consolidated 2 1/2s ("Consols") of 1888 have no maturity date, but are redeemable at any time at par on or after April 5, 1923 on such notice and in such amounts as Parliament may determine. Other foreign Government bonds and a few American corporation issues have been of this class, but they are not popular with issuers. A present example among railroad bonds are the Lehigh Valley Railroad Consolidated Perpetual 4 1/2s and 6s, which under a proposed 1948 debt adjustment plan are to be given a definite maturity of 1989 and be redeemable. Very long maturity bonds are in the nature of perpetual issues. For example, the West Shore Railroad's First 4s, due January 1, 2361, are perpetual bonds for all practical purposes. Such bonds are desirable institutional investments.

Perpetual bonds, in reality, are a contradiction in terms since by definition, a bond is a promise to pay both principal and interest on stipulated future dates. They are also known as Indeterminate Bonds (q. v.) and sometimes, but not properly, as Irredeemable Bonds (q. v.).

PERSONAL CHECK

A check drawn by an individual as distinguished from one drawn by a partnership, corporation, or bank.

PERSONAL CREDIT

Credit given to an individual, or to which an individual is entitled, as distinguished from that given a corporation, or partnership. (See Credit, Person Loans, Personal Security.)

PERSONAL ESTATE

See Personal Property.

PERSONAL HOLDING COMPANY

The Federal Revenue Act of 1934 for the first time defined personal holding companies and imposed special surtax rates on their undistributed profits, as a means of taxing this devise which had been developed by individuals seeking to reduce tax liability. Subsequently, the Revenue Act of 1937 broadened the definition and increased surtax rates as well as the base of taxation.

The definition of personal holding company now contained in the Internal Revenue Code is contained in Sec. 501, as follows:

The term "personal holding company" means any corporation if--

(1) Gross Income requirement.--At least 80 per centum of its gross income for the taxable year is personal holding company income as defined; but if the corporation is a personal holding company with respect to any taxable year beginning after December 31, 1936, then, for each subsequent taxable year, the minimum percentage shall be 70 per centum in lieu of 80 per centum, until a taxable year during the whole of the last half of which the stock ownership required by paragraph (2) below, does not exist, or until the expiration of three consecutive taxable years in each of which less than 70 per centum of the gross income is personal holding company income; and

(2) Stock ownership requirement.--At any time during the last half of the taxable year more than 50 per centum in value of its outstanding stock is owned, directly or indirectly, by or for not more than five individuals.

Exceptions.--The term "personal holding company" does not include--

(1) A corporation exempt from taxation under section 101 (which provides for exemptions from the income tax on corporations).

(2) A bank as defined.

(3) A life insurance company.

(4) A surety company.

(5) A foreign personal holding company as defined.

(6) A licensed personal finance company under State supervision, at least 80 per centum of the gross income of which is lawful interest received from individuals each of whose indebtedness to such company did not at any time during the taxable year exceed $300 in principal amount, if such interest is not payable in advance or compounded and is computed only on unpaid balances.

(7) A loan or investment corporation, a substantial part of the business of which consists of receiving funds not subject to check and evidenced by installment or fully paid certificates of indebtedness or investment, and making loans and discounts, and the loans to a person who is a shareholder in such corporation during such taxable year by or for whom 10 per centum or more in value of its outstanding stock is owned directly or indirectly (including in the case of an individual, stock owned by the members of his family as defined, outstanding at any time during such year do not exceed $5,000 in principal amount.

Corporation making consolidated returns.--If the common parent corporation of an affiliated group of corporations making a consolidated return under the provisions of section 141 (which regulates consolidated returns of corporations) satisfies the stock ownership requirement above provided, and the income of such affiliated group, determined as provided in section 141, satisfies the gross income requirement above provided, such affiliated group shall be subject to the surtax imposed by this subchapter. The preceding sentence shall apply only if the common parent corporation is a common parent of an affiliated group of railroad corporations, which would be eligible to file consolidated returns under section 141 prior to its amendment by the Revenue Act of 1942.

For complete statutory provisions on personal holding companies, see Chapter 2, Subchapter A of the Internal Revenue Code, Secs. 500-511, inclusive.

PERSONAL INCOME

See Income Tax, National Income.

PERSONAL LOAN BROKER

A type of licensed lender under Article IX of the New York State Banking Law. Any personal loan company or personal loan broker duly authorized to do business in 1932, when the article was revised by the Small Loan Act, was deemed to have a license to continue business under the revised article, which provides that no person, co-partnership, association or corporation shall engage without a license in the business of making loans of money, credit, goods or things in action in the amount of $300 or less. (See Personal Loan Company.)

PERSONAL LOAN COMPANY

The corporate existence of every personal loan company and personal loan association organized and oper-

ating in 1932, when the Small Loan Act was enacted in New York State, could be continued for the period specified in its certificate of organization or incorporation, or perpetually if no period was specified, provided such company or association within three months after passage of the act filed a certificate of continuation of corporate existence pursuant to Sec. 363 of the Banking Law in which shall appear a copy of the resolution adopted by vote of at least 2/3rds of the capital stock to continue the corporate existence.

As revised, Article IX of the Banking Law, pertaining to small loans, provides that no person, co-partnership, association or corporation shall engage without a license in the business of making loans of money, credit, goods or things in action in the amount of $300 or less. License requirements call for an annual license fee of $100 plus cost of investigation, and each applicant must prove that he or it has available for the operation of the business at the location specified, liquid assets of at least $25,000. Each applicant must also file a $5,000 bond. If the Superintendent of Banks finds that the financial responsibility, experience, character and general fitness of the applicant are such as to command the confidence of the community, and to warrant belief that the business will be operated honestly, fairly, and effectively, and will promote the convenience and advantage of the community, the Superintendent shall issue a license.

The Superintendent of Banks may at any time, and at least once a year, investigate the loans and business and examine the books, accounts, papers, records, etc. of every licensee. Every licensee annually on or before February 1st shall file a report with the Superintendent of Banks.

Every licensee may loan any sum of money, not exceeding $300, and may charge not exceeding 2 1/2% per month on any part of the unpaid principal amount of the loan not in excess of $100, and 2% per month on any remainder of the unpaid principal balance of the loan. Interest for the use of the money shall not be deducted or received in advance, and shall be computed on the unpaid principal balance, and shall not be compounded. In addition to the maximum rate of interest, licensed lenders may charge lawful fees actually and necessarily incurred, and no others, for filing, recording or releasing in any public office any instrument securing any loan. (See Small Loan Business.)

PERSONAL LOANS

In recent years, a number of commercial banks have followed the lead of the National City Bank of New York, which in 1928 instituted a Personal Loan Department. Such loans are made on one or two co-maker basis, with some banks requiring no co-makers. Some of the New York City banks extend personal loans at rate as low as 3.83% discount per annum. Personal loans are subject to Regulation W of the Board of Governors of the Federal Reserve System, regulating consumer credit.

Under Sec. 108 of the New York State Banking Law, a bank or trust company may be authorized by the Superintendent of Banks to operate a personal loan department at one or more of its authorized places of business, and upon such authorization, may charge interest at a rate not to exceed 12% per annum, inclusive of all charges incident to investigating or making any loan. No fee, commission, expense or other charge whatsoever shall be taken or contracted for except in case of default, when fines and actual expenses may be charged, but fines are limited to a maximum of 2% of the loan and in no event shall exceed $15.

The New York law further provides that personal loans may be repayable in equal or substantially equal instalments at regular periodic intervals of not more than one month over a period not to exceed 24 months, except that in the case of loans made for a period of one year or more, provision may be made for the omission of repayments during not more than three specified months. Personal loans may be made which do not bring the total unpaid loans made by such bank or trust company to any one borrower to an amount which exceeds:

(A) $3,500, if the office of the bank, trust company where the loan is made is located in a city having a population of more than 1,000,000;

(B) $2,500 if such office is located in a city having a population of not less than 300,000 and not over 1,000,000;

(C) $1,500 if such office is located in a city having a population of not less than 25,000 and not more than 300,000;

(D) $1,000 if such office is located in a village, town or city having a population of not less than 5,000 and not more than 25,000;

(E) $500 if such office is located in any other place.

The average amount owed by borrowers at the close of 1947 on regular personal loans of the National City Bank of New York was $301. General practice in New York City is to provide for term insurance on the life of the borrower, without medical examination. The combination of low rates and no co-maker required by some New York City institutions has provided effective competition to the personal loan finance companies operating under the Small Loan Act. (See Instalment Sales, Small Loan Business.)

PERSONAL PROPERTY

Legally, all property can be divided into two classes; personal property (personalty) real property (realty). Personal property consists of all tangible and intangible movable goods or possessions, e. g., money, securities, accounts receivable, merchandise, furniture, live stock, harvested crops, etc.

Personal property is bequeathed, the beneficiary being known as the legatee; whereas real property is devised, the beneficiary being known as the devisee. (See Chattels, Real Property.)

PERSONAL SECURITY

There are two general classes of security, personal and collateral. When a loan is made upon personal security, the note which evidences the debt is signed, not only by the maker, but also by another person having financial responsibility acting as indorser, surety, or guarantor. There is no implication that personal security is based upon the moral risk alone. The financial worth and capacity of the guarantor are also taken into consideration. In personal security, however, there is no specific pledge of collateral. (See Collateral, Guaranty.)

PERSONAL TRUST

See Living Trust, Trusts.

PERSONALTY

See Personal Property.

PERSONNEL DEPARTMENT

A department organized among the larger banks to co-ordinate the problems arising from securing an adequate supply and training of the clerical forces. The scope of the department may be indicated by the following outline of activities:

1. Engaging new employees, receiving applications and interviewing candidates for employment, and eliminating undesirable material.
   Records: Application form, references form, correspondence relating to employment, fidelity insurance applications.
2. Transferring employees.
3. Answering inquiries concerning former employees.
4. Training employees—general and banking education.
5. Attending to discharges of employees.
6. Making salary adjustments.
7. Preparing personal history cards, showing:—
   a. Name and address.
   b. Marital condition.
   c. Age.
   d. Telephone number.
   e. Antecedent educational history.
   f. Antecedent history.
   g. Date of entry.
   h. Initial salary.
   i. Department originally assigned to.
   j. Occupation in that department.
   k. Record of department transfers.
   l. Record of salary revisions with dates.
   m. Record of resignation or discharge with dates and reason.
8. Rating employees in degree of efficiency.
9. Preparing turnover and other statistics regarding the working force.
10. Making job analysis.
11. Promoting healthful employer-employee relations.
12. Conducting the house organ.

PESETA

The international currency unit of Spain. (See Foreign Moneys—table 2.)

PESO

The international currency unit of Argentina, Chile Colombia, Cuba, Dominican Republic, Mexico, Philippines and Uruguay. (See Foreign Moneys--table 2.)

PETROLEUM

See Oil.

PETTY CASH FUND

A fund from which is disbursed cash in payment of petty expenses, e. g., telegrams, postage, carfare, taxicab hire, small supplies, etc. Vouchers are kept for each disbursement and periodically petty expenses are analyzed and charged to various expense accounts. In the meantime they are held as a part of petty cash.

PFENNIG

In the 1924 revaluation of German currency, the reichspfennig succeeded the former pfennig as a minor currency unit of Germany, worth 1/100th of a reichsmark. (See Mark.)

PHILADELPHIA COMMERCIAL EXCHANGE

See Commercial Exchange of Philadelphia.

PHILADELPHIA PLAN

See Equipment Trust.

PHILIPPINE GOVERNMENT DEPOSITARIES

Since the independent Republic of the Philippines was proclaimed July 4, 1946, the designation of fiscal agents or depositaries in the continental United States by the Philippine Government no longer is subject to its former insular status. Under Section 15 of the Federal Reserve Act, deposit of public funds of the Philippine Islands was prohibited in any bank not a member of the Federal Reserve System.

PIASTER (PIASTRE)

The major current unit of Indo-China, and minor currency unit of Cyprus, Egypt, Lebanon, Sudan, Syria and Turkey. (See Foreign Moneys--table 2.)

PICE

A bronze minor currency unit of India, worth 1/4th of an anna. (See Foreign Moneys —table 2.)

PIE

A bronze minor currency unit of India, worth 1/12th of an anna. (See Foreign Moneys—table 2.)

PIG IRON

As defined by the American Iron and Steel Institute, pig iron is a metallic product, the result of blast furnace or electric smelting of iron ores, which is used as part or all of the initial metallic charge in steel making, puddling and producing molten metal for foundry use. Thus it is a basic product in the iron and steel industry. (See Business Barometers.)

PINCH

An expression sometimes used to indicate a sudden advance in prices. An advance in money rates would be called a money pinch or squeeze. If security prices suddenly advance when there is a large short interest in the market, the shorts are said to be pinched. (See Squeeze.)

PIT

A name given to the active center of trading in a commodity exchange. In the Chicago Board of Trade four pits are located on the trading floor, one each for wheat, corn, oats, and provisions. These are the points at which traders transact their business. Structurally, a pit consists of a series of concentric steps arranged in the configuration of an octagon, leading up from the outside and down to the center. This arrangement permits traders to communicate with each other in the minimum of space. The term pit is synonymous with market, except that only one commodity is dealt in at a single pit. A pit in a commodity exchange corresponds to a Post (q. v.) on a stock exchange.

Pit traders on the Chicago Board of Trade are broker members who trade for their own accounts. They correspond to floor traders on the New York Stock Exchange.

PIT TRADERS

See Pit.

PITTMAN ACT

An Act passed April 23, 1918, designed to aid in the stabilization of the currencies of China and India where a shortage of silver increased the world price of this commodity to the highest level in the recent years. The Act provided for the release of approximately 208 million standard silver dollars held in the Treasury as collateral for silver certificates. The silver purchasing provisions of this Act (effective June 1, 1920) provided for the replacement of this silver, and the United States mint was required to purchase the entire domestic silver output at a price of $1 an ounce until the entire amount should be replaced. Purchases under the Pittman Act ceased about July, 1923. American silver producers benefitted under the terms of this Act, since the mint paid $1 an ounce against an average world market price during 1921 of 63 cents, and during 1922, of 67 cents.

PLAIN BONDS

Debentures; unsecured bonds; certificates of debt.

Designation of title for such bonds usually is given a more appealing title than just "Plain Bonds", although one railroad, the Boston & Maine, did actually so entitle one of its issues outstanding years ago. (See Debenture Bonds.)

PLANT

A manufacturing establishment; production unit; works; factory; mill; the buildings, machinery, appliances, tools, implements, and equipment used in production. The fixed investment used to carry on a business.

PLANT ASSETS

The fixed assets of a business, except land, permanently employed for production. They include buildings, machinery, tools, instruments, implements, equipment, and appliances, against which a reserve for depreciation and obsolescence should be provided.

PLANT VISIT

A factory or plant inspection, or industrial survey, undertaken as a regular part of an investigation by an investment banker who frequently retains an industrial engineer to inspect the physical equipment, to determine the efficiency of production, the relation between costs and market prices, the probable future development of the territory served, and the need for and probable return on the new capital which is requested, and which he has been asked to provide by underwriting an issue of securities.

A plant visit is not usually undertaken when a commercial loan is sought, but is sometimes employed where conditions are without precedent, or where there is doubt whether the credit should be granted. When desirable, such an investigation in commercial banking practice need not be technical, since it is the financial condition rather than the plant condition which determines the safety of a short-term loan. It is only insofar as the plant condition may affect the financial condition that the plant visit may be particularly important. In the majority of cases, where it seems advisable at all, it can be undertaken by an experienced credit man or loan officer. The principal points to be considered are location, transportation facilities, plant layout, modernness of equipment, efficiency of workmen, and cost-accounting methods.

PLEDGE

When collateral, e. g., stocks, bonds, etc., is delivered to a bank as security for a loan, the delivery constitutes a pledge for the payment of a debt. A pledge implies a relinquishment of the property of the borrower and the transfer of its custody to the lender. The property pledged must be in negotiable form in order to permit the lending bank to assign it in case of the failure of the borrower to redeem his note. (See Collateral, Hypothecation, Pawn.)

PLEDGEE

The party to whom a pledge is made, i. e., to whom securities or other assignable property are pledged as security for payment of a loan. (See Pledge.)

PLEDGOR

One who pledges or hypothecates securities or other property as security for the payment of a loan. (See Pledge.)

PLUM

An expression indicating that a company has earned or is disbursing extraordinary profits in the form of an extra cash, or stock dividend; in other words, a Melon (q. v.).

PLUNGE

An expression which denotes reckless speculation on a large scale. A plunger is one who takes enormous risks in the expectation of correspondingly large gains.

PLUNGER

See Plunge.

POINT

The unit in which fluctuations in quotations and by which gains and losses are expressed in stocks, bonds, or commodities. On the stock exchange a point is $1.00, although the smallest quotation unit is 1/8 of a point, 12 1/2 cents for stocks and $1.25 for bonds (except for Government bonds, which are traded in 1/32nds).

In cocoa, coffee, copper, cotton, hides, lead, pepper, rubber, soybean oil, sugar and zinc trading, a point is equal to 1/100 of a cent per pound, which is also the smallest quotation unit. Thus, a fluctuation of 25 points would be 1/4 of a cent per pound in these commodities.

POLICY

A written contract between the insurer and the person insured. The policy specifies in detail the terms and conditions under which the parties are bound, the property covered, and the risks insured against in consideration of payment of the premiums. Basic provisions of insurance policies within each major class of insurance--life, fire and casualty--are subject to State regulation and standardization in the industry, but new forms of coverage developed over the years and variables in terms allow for sales appeal and competition among companies. (See Insurance.)

POOL

This term has two meanings:

(1) A combination of persons—brokers, professional traders, or other interests—who organized for the purpose of exploiting a certain stock or stocks. A. W. Atwood (The Exchanges and Speculation) defines a pool to be: "A number of persons uniting or joining their interests for the purpose of buying or selling and thus increasing or depressing the price of one or more securities or commodities."

There was a definite prearranged agreement to divide the loss or gain among the members and which gave the manager of the pool sole power to conduct its operations. While the pool agreement was in force, its members agreed not to trade individually in the security or commodity being exploited. In other words, a pool was a joint venture or temporary association of speculators. In order to be successful, the pool had to have organization, capital, knowledge of fundamental conditions, and had to be able to distribute its holdings to the public at a higher price than that at which they were accumulated.

Pools were the most usual, but least objectional, form of manipulation, and it may be said in their favor that combinations in purchases and sales were not limited to the stock market, but occurred in other lines of business. Furthermore they were by no means always successful. It soon became apparent when a pool was working so that it was not impossible for observing outsiders to take advantage of its operations, which, if carried too far, was likely to defeat its purpose and result in a loss for its members. The terms clique, syndicate, and ring were sometimes used with much the same significance as pool.

Different speculative pools were given special names in accordance with the type of agreement entered into among its members. Thus, there were inside pools, blind pools, bobcat pools, etc.

In the voluminous report of the Senate Banking Committee, which investigated all phases of stock market activities in 1933, the following statement in regard to pools is found:

"The testimony before the sub-committee again and again demonstrated that the activity fomented by a pool creates a false and deceptive appearance of genuine demand for the security on the part of the purchasing public and attracts persons relying upon this misleading appearance to make purchases which relieve the pool of its holdings in the end.

"Attempts have been made to differentiate between 'beneficent' pools and 'nefarious' pools. Pools, operated for the purpose of stabilizing the market prices during periods of secondary distribution or while liquidating blocks of stock held by estates or creditors have been placed in the category of 'beneficent' pools; whereas pools operated merely for the purpose of raising the price of securities so that the participants might unload their holdings of increased prices have been characterized as 'nefarious' pools.

"From the viewpoint of the purchaser outside of the pool circle, there is no substantial or ethical difference in these two types of pool. Although the purpose may be different, the means employed are identical.

"In all cases, fictitious activity is intentionally created and the purchaser is deceived by an appearance of genuine demand for the security. Motive furnishes no justification for the employment of manipulative devices."

Accordingly, the Securities Exchange Act of 1934 prohibited pool operations under penalties (see sec. 9).

(2) A type of combination among large industries and especially railroads. Railroads began to organize themselves in traffic pools as early as 1860. The traffic pool provided for a combination of business among the railroads entering it. Arrangements were made whereby each railroad was allocated that proportion of the total traffic originating at any competitive point which represented the percentage it would have carried under normal competitive conditions. In short, a definite percentage was determined upon and guaranteed to each carrier. Due to difficulties of apportionment, the traffic pool was abandoned for the money pool which was in full operation by 1870, at which time practically all railroads were in some kind of a pool. In the money pool, instead of apportioning actual tonnage among the railroads, according to some prearranged percentage, gross receipts from traffic were pooled and apportioned on a pre-determined percentage basis. Deposits of money were required to secure a pledge of good faith to the pool agreement. Pools were prohibited by the Interstate Commerce Act of 1887.

POPULATION

The following table shows the population of the continental United States by census years from 1790 and 1940, together with increase and percentage increase from one decade to another:

Census Year	Population	*Increase	Per Cent Increase
1790	3,929,214	.....	.....
1800	5,308,483	1,379	35.1%
1810	7,239,881	1,931	36.4
1820	9,638,453	2,399	33.1
1830	12,866,020	3,228	33.5
1840	17,069,453	4,203	32.7
1850	23,191,876	6,122	35.9
1860	31,443,321	8,251	35.6
1870	38,558,371	8,375	22.6
1880	50,155,783	10,337	30.1
1890	62,947,714	12,792	25.5
1900	75,994,575	13,047	20.7
1910	91,972,266	15,978	21.0
1920	105,710,620	13,738	14.9
1930	122,775,046	17,064	16.1
1940	131,669,275	8,894	7.2

* 000 omitted.

Since 1940, estimates as of July 1st by the Bureau of the Census of population in the continental United States, exclusive of armed forces overseas, have been as follows:

July 1	Estimated Population
1940	131,954,144
1941	133,060,045
1942	133,770,500
1943	133,966,319
1944	132,552,005
1945	132,018,525
1946	139,893,406
Jan.1,1947	141,892,185

As the first table above shows, the rate of growth of population in the United States has slowed down con-

siderably. In each of the first two 40-year periods, i.e., from 1790 to 1830 and from 1830 to 1870 population trebled. In the third 40 year period 1870 to 1910 the increase was about 2 1/2 times. In the 40 years ended 1930 population did not quite double. In the first 70 years of the 140 year period ended 1930 each decade showed a gain of at least 30% the largest gain having been 36.4% in the decade ended 1810. In the last 80 years ended 1940, however, the rate of growth has declined so that the largest gain for any decade was 30.1% for 1880, and for the last decade ended 1940, the gain was only 7.2%, the lowest gain for any decade.

Voluntary restrictions on immigration have operated to reduce to a minor factor the part that immigration has played in population growth in recent decades. Immigration of Orientals is prohibited, and at the present time, immigration from other countries except North and South America, is controlled by the quota provisions, effective July 1, 1929, of the Immigration Act of 1924. These provisions fix the total number of admissible aliens eligible for citizenship at 150,000 annually, plus a small number admissible outside the quota. The quota for any given nationality is calculated at a figure which bears the same ratio to 150,000 as the number of inhabitants in the United States of that national origin in 1920 had to the total number of inhabitants in the continental United States. As the result of the quota restriction on immigration, the number of aliens admitted from all countries declined in the decade ended 1940 to 528,431, compared with 4,107,209 for the 1930 decade; 5,705,811 for the 1920 decade; 8,795,386 for the 1910 decade which witnessed the greatest inflow of immigration, including the record year 1907, when 1,285,349 aliens were admitted, 3,687,564 for the 1900 decade; and 5,246,613 for the decade ended 1890. Since 1940, immigration has totaled only another 426,965, as follows: 1941, 51,766; 1942, 28,781; 1943, 23,725; 1944, 28,551; 1945, 38,119; 1946, 108,721; and 1947, 147,292. These figures all indicate gross immigration, without allowance for emigration and deportation.

Natural increase in population, therefore, arising from the excess of births over deaths, is the main reliance of the United States for population growth. Fluctuation in birth and death rates, and excess of birth rate over death rate per 1,000 population, since 1920 have been as follows:

Year	Birth Rate	Death Rate	Excess
1920	23.7	13.1	10.6
1921	24.2	11.7	12.5
1922	22.3	11.8	10.5
1923	22.2	12.3	9.9
1924	22.4	11.7	10.7
1925	21.5	11.8	9.7
1926	20.7	12.2	8.5
1927	20.6	11.4	9.2
1928	19.8	12.6	7.2
1929	18.9	11.9	7.0
1930	18.6	11.4	7.2
1931	17.8	11.1	6.7
1932	17.3	10.9	6.4
1933	16.6	10.7	5.9
1934	17.2	11.0	6.2
1935	17.0	10.9	6.1
1936	16.8	11.5	5.3
1937	17.1	11.3	5.8
1938	17.6	10.6	7.0
1939	17.3	10.6	6.7
1940	17.9	10 8	7.1
1941	18.9	10.5	8.4
1942	21.0	10.4	10 6
1943	21.5	10 9	10.6
1944	20 2	10.6	9.6
1945	19.6	10.6	9.0
1946	23.3	10.1	13.2
1947	26.2	10.1	16.2

As the result of the sharp increase in the birth rate following World War II, which will probably continue at high levels for several years more before resuming "normal" rates, previous projections of population growth into the future have been accelerated by an estimated 10,000,000.

In distribution of population among the States, the most substantial population gains in the decade 1930-1940, and in the period 1940-1946, have occurred among the Pacific States, as the table on page 535 on Population Shifts shows.

World population is estimated to have increased in the past three centuries from about 400 million to over 2 billion, and at its present rate of increase, it is projected that world population will be doubled in another 70 years and total about 3 billion by the end of the 20th century. This expansion in population poses the problems of food supply, fertility and productivity of the land, and "living space" for peoples, and emphasizes the conclusions reached by Malthus that food supply at best tends to increase only arithmetically, whereas population, if left unchecked in growth, tends to increase geometrically and thus impinges upon food supply.

PORPHYRY

The name given to any compound rock or ore, but in finance, applied particularly to a copper mine containing ore reserves, but ore of comparatively low grade. By extension, the term is used to refer to a copper company, or to that group of copper companies, which extract copper from low grade copper ores, as distinguished from the companies engaged in developing mines containing native copper, or ore with a high copper content. The porphyry copper companies are also known as the high cost producers, due to the fact that the cost of developing low grade ores is greater than that of developing high grade ores.

PORTFOLIO

A term used in a loose sense to refer to holdings of loans and securities. A Federal Reserve Bank is said to have "added to its portfolio of bill holdings," or a bank to have liquidated its portfolio of Government securities. The portfolio of an investment company, likewise, is its total list of security holdings.

Population Shifts

State	*1930 Census	*1940 Census	Per Cent Increase	----Estimates---- *July 1, 1940	*July 1, 1946	Per Cent Increase
Alabama	2,646	2,833	7.1	2,827	2,808	−0.7

POSITION

A term used with reference to future contracts, based on the names of the month in which such contracts mature, i. e., delivery becomes due. In all of the future markets, e. g., grain, cotton, sugar, coffee, etc., contracts for delivery at some future date, designated by months, are bought and sold. For example, a contract which matures next December, is known as a December position. The Commodity Exchange Authority of the U. S. Department of Agriculture reports daily the volume of trading and open interest in commodity futures trading upon Regulated Commodity Exchanges.

The current trading inventory of securities of security dealers is called the position.

POSITION SHEET

A name given to an accounting summary designed to show the commitments of a bank or foreign exchange house in foreign currencies. A position sheet is usually prepared daily to show exactly the bank's position with regard to its foreign balances, and the total amount for which it is commited, both on spot and future contracts. In reality, it is a summary of the foreign exchange ledgers, and shows whether the bank is long or short of, each foreign currency. If a bank is long in its sterling position, the aggregate of its sterling accounts, with correspondents abroad will show a net credit balance on the latters' books. A bank is short of sterling when the opposite condition is true, i. e., when the aggregate of sterling accounts with correspondents abroad shows a net debit balance on the latters' books. Thus, a bank is short of sterling when it has not only exhausted available sterling balances against which it can sell sterling drafts, but has overdrawn such accounts, leaving a net debit balance which must be made good. To "even up" accounts it will be necessary for the bank to "cover," that is, to purchase sterling.

In determining the position for each day, future contracts are considered, as well as spot. The position sheet shows the average cost and current marke rate of all commitments and approximately shows the bank's daily profit or loss in each foreign currency.

Bibiography

C. J. Gersbach: Foreign Exchange Control 1945.

POST

A point or position on the floor of a stock exchange at which certain groups of stocks are bought and sold, so called because a post which indicates what stocks are traded in is erected at that point. There is a particular post for certain stocks and brokers interested in specified stocks must transact business at the designated post. Posts in a stock exchange correspond to pits in the Chicago Board of Trade, or other commodity exchange.

POST-DATED CHECK

A check that is dated ahead, i. e., bearing a date that has not yet arrived. A bank has no authority to pay a post-dated check. It may pay checks only when dated as of the day of presentation, or a date prior thereto. A check is a bill of exchange drawn on a bank payable on demand, and must be presented for payment within a reasonable time after its issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay (Secs. 185, 186, Uniform Negotiable Instruments Law; Secs. 321, 322, New York Negotiable Instruments Law). Consequently, a post-dated check in effect is an order to pay a sum certain in money at a future time, and since a bank will not honor a post-dated check, it becomes essentially a promise to pay on the part of the drawer.

POST-OFFICE MONEY ORDER

See Money Orders.

POSTAL MONEY ORDER

See Money Orders.

POSTAL SAVINGS SYSTEM

Established in 1911 under the Postal Savings Act of 1910, at a time when National banks were not authorized to carry savings deposits. The major purpose of the Act, therefore, was to provide a nation-wide system of savings offices in post offices which would provide savings facilities for communities without such. National banks were authorized to carry savings accounts under the Federal Reserve Act in 1913, and the Postal Savings System, although continuing to function, did not carry much of a line of deposits until beginning in 1931 and continuing to the present, the volume of deposits has expanded relatively sharply.

The System is supervised by the Trustees of the Postal Savings System. The Trustees, under the Act are authorized to redeposit the funds deposited in the System with banks located in the same locality where the deposits are received, upon the posting by the banks of eligible Government securities as security, and payment of 2 1/2% interest. In view of this high interest rate, and the lack of Government bonds yielding a suitable return under present low money rates, most banks have not been interested in carrying Postal Savings deposits.

The following information about the U. S. Postal Savings System is provided by the Post Office Department under circular revised in July, 1946:

Safety.--The faith of the United States is solemnly pledged to the payment of the deposits made in postal-savings depository offices, with accrued interest. (Act of Congress approved June 25, 1910.)

Who may deposit.--Accounts may be opened and deposits made by any competent person of the age of 10 years or over in his or her own name, without regard to the residence of the depositor, but no person may at the same time have more than one postal-savings account either at the same post office or at different post offices. Deposits will be accepted only from individuals, and no account will be opened in the name of any corporation, association, society, firm, or partnership, or in the names of two or more persons jointly; neither will an account be opened in the name of one person in trust for or on behalf of another person or persons.

Privacy of accounts.--No person connected with the Post Office Department or Postal Service is permitted to disclose the name of any depositor or to give any information concerning a particular account to any person other than the holder, unless directed to do so by the Postmaster General. The account of a married person is free from any control or interference by the husband or wife.

How to open an account.--An account may be opened in person, through a representative, or by mail. If possible, an intending depositor should appear in person at a depository office or station to open an account. However, if a depositor, because of infirmity or other sufficient reason, is unable to appear in person, he may send a representative who will be given an application form, which the depositor will fill out, sign, and return to the postmaster with the deposit. If the local post office is not authorized to accept postal-savings deposits or if a depositor prefers to keep his account at some other office, an account may be opened by mail at any depository office, and an application form for this purpose may be obtained at or through the local post office.

Nuisance accounts.--The Postal Savings System was

instituted for the purpose of encouraging thrift and to provide a safe depository for the accumulation of savings. No postmaster is required to open an account if it is evident that the depositor desires merely to leave his funds in a safe place for a few hours or otherwise to make unreasonable use of postal savings facilities.

Deposits.--Postal savings deposits, which may be made in person, through a representative, or by mail, are evidenced by certificates which are issued in denominations of $1, $2, $5, $10, $20, $50, $100, $200, and $500. The certificates are made out in the name of the depositor, serve as receipts, and are valid until paid. They are not negotiable or transferable. Certificates which have been lost, stolen, or destroyed will be replaced by new ones, and the postmaster at any depository post office will assist the depositor in applying for them. No depositor may have to his credit more than $2,500, exclusive of accumulated interest, and this amount may be deposited at one time if desired. No account may be opened for less than $1, nor will fractions of a dollar be added to an existing account.

Withdrawals.--The depositor may at any time withdraw all or any part of his deposits, with any interest payable thereon, from the post office where the deposits were made. Withdrawals may be made in person, through a representative, or by mail. As a postmaster may be temporarily short of available funds, it may be necessary at times to give advance notice of withdrawals, particularly if the amount is large.

Interest.--Postal savings deposits earn interest at the rate of 2 per cent a year. (Because of orders by the State Commissioner of Banking and Insurance, the rate in New Jersey was reduced to 1 per cent July 1, 1939, and raised to 1 1/2 per cent July 1, 1946. Because of a similar order, the rate in Mississippi was reduced to 1 per cent March 1, 1945.) A deposit made on any day of the month begins to earn interest on the first day of the next succeeding month, which date is entered on the certificate evidencing the deposit. For each complete quarter-of-a-year period following this date a fourth of a year's interest is collectible. If it is desired to collect only the accrued interest on a deposit, it may be done by exchanging the certificate for a new one; but if a depositor desires to avoid any interest loss in such an exchange of certificates, at least a year's interest must be payable and the exchange must be made during the first month of an interest quarter. For example, for a deposit made in December, 1936, the date "January 1, 1937," would have been entered on the certificate as the "Date when interest begins," and to avoid loss of interest the certificate should be presented in January, April, July, or October of 1938, or any succeeding year. If further information concerning interest computation is desired, a leaflet, Form PS 100, may be obtained from any depository post office.

Deceased depositors.--When a depositor dies and a legal representative of the estate has been appointed by a court of competent jurisdiction, the Post Office Department will authorize payment to the legal representative upon receipt of satisfactory evidence of his authority to collect. If there is no legal representative of the estate and the amount on deposit is such that administration of the estate is not required by the laws of the State in which the account is held, the Post Office Department will authorize payment direct to the surviving spouse, heirs, next of kin, or preferred creditors in accordance with the laws governing the distribution of personal property in the State where the account is held or where the decedent lived, whichever controls.

Taxability.--The question of whether postal savings deposits are subject to taxation has not been passed upon by the courts, but it is believed that such deposits and the interest paid thereon may be taxed by State, county, and municipal authorities unless exempted as a matter of policy or by specific legislation. Local tax officials will furnish definite information upon request. Postal savings deposits are subject to estate and inheritance taxes. Interest credited to postal savings accounts on moneys deposited prior to March 1, 1941, in the various depository offices is wholly exempt from Federal income tax. Interest credited to postal savings accounts on moneys deposited on or after March 1, 1941, is, however, not exempt from income taxes now or hereafter imposed by the United States.

Additional information.--If further information about the Postal Savings System is desired, apply at any postal savings depository post office or address the Third Assistant Postmaster General, Division of Postal Savings, Washington 25, D. C.

The growth of deposits in the Postal Savings System is indicated by the table shown on page 538.

POSTED RATES

(1) Rates quoted daily by bankers dealing in foreign exchange indicating the price at which a certain currency is offered for sale. While posted rates govern for small transactions, they differ from actual rates made directly between bankers or brokers and large buyers, which fluctuate constantly during the day and do not necessarily correspond with posted rates. When actual rates are quoted, they must be accepted immediately when offered. They do not hold firm unless so stated.

(2) The term also applies to the rate for call money quoted on the New York Stock Exchange. Here too, the posted rates may differ from actual rates at which money is being loaned. Posted rates are also called nominal rates.

POSTIL

A term used by bookkeepers to denote an explanatory marginal note written against an item in a journal or ledger. The Boston ledger provides postil spaces.

POTATOES

Futures trading in potatoes is conducted on the Chicago Mercantile Exchange and the New York Mercantile Exchange, both of which are Regulated Exchanges designated for futures trading by the Secretary of Agriculture and regulated by the Commodity Exchange Administration.

Unit of trading on the Chicago Mercantile Exchange is 450 bags (45,000 lbs.), the minimum fluctuation or "point" being 1¢ per 100-lb. bag, or $4.50 per contract. Daily trading limits above or below previous close is 25¢ per 100-lb. bag, or a maximum range of 50¢ per bag. Non-member commission rate to buy or sell one contract is $15.

Unit of trading on the New York Mercantile Exchange is 500 bags (50,000 lbs.). Otherwise, the same information as above applying to the Chicago Mercantile Exchange applies also to the New York Mercantile Exchange. (See Chicago Mercantile Exchange.)

(1) Outstanding principal, represented by certificates of deposit.
(2) Includes working cash with postmasters, 5 per cent reserve fund and miscellaneous working funds with Treasurer of the U. S., accrued interest on bond investments, and accounts due from late postmasters.
Source--Board of Governors of the Federal Reserve System.

POUND

(1) A unit of weight, equivalent to the following equivalents: 16 ounces; 7,000 grains; 454 grams; 0.454 of a kilogram; and 14.58 troy ounces.

(2) The international currency unit of Australia, Bahama Islands, Bermuda, British West Africa (Gold Coast, Nigeria), Cyprus, Egypt, England, Falkland Islands, Irish Free State, Jamaica, Malta, Nassau, New Guinea, New Zealand, Northern and Southern Rhodesia, Solomon Islands, South West Africa, Sudan, Syria, Turkey, and Union of South Africa. The English pound is the currency unit of Bechuanaland, Cayman Islands, and Gibraltar. The New Zealand pound is the currency unit of British Samoa. The Australian pound is the currency unit of Tonga Islands.

The English pound, better known as the pound sterling (to distinguish it from the unit of weight) has 3.58134 grams of fine gold. A troy ounce of fine gold, therefore, is worth 8.68486 pounds sterling, or 173 shillings,

8.367 pence. An American dollar at par value is worth 0.248139 of a pound sterling, or 4 shillings, 11.553 pence. Par value of each pound sterling is $4.03 American dollars.

The pound sterling is also known as the sovereign. It derives its name from the fact that it originally represented a pound of silver. The modern penny, likewise, was originally a pennyweight of silver, and 240 pennyweights made the pound sterling. The pound sterling still consists of 12 shillings or 240 pence. (See English Money Table; Foreign Moneys, Tables 1 and 2; Sterling Area.)

POUND STERLING

The international currency unit of England (United Kingdom). (See English Money Table; Foreign Moneys, Tables 1 and 2; Sterling Area.)

A. E. Feaveryear: The Pound Sterling: A History of English Money, 1931.

POWER OF ATTORNEY

A document witnessed or acknowledged, authorizing the person named therein to act in place of the signing party. A power of attorney may be general or special. In the latter, the authority of the agent is limited, and is valid only for acts defined therein. In financial transactions, a power of attorney is usually special or limited, and is frequently used in the transfer of stock certificates and proxies for voting. It must set forth the powers conferred upon the agent. The common form of assignment and power of attorney approved by the committee on stock list of the New York Stock Exchange for the purpose of transferring stock, and appearing on the reverse side of most certificates, is as follows:

For value received .....
I (We) .....hereby sell, assign and transfer unto .....
.....shares of the capital stock represented by the within certificate and do hereby irrevocably constitute and appoint .....attorney to transfer the said stock on the books of the within named company with full power of substitution in the premises.
Dated .....

In the presence of .....
(See Proxy.)

POWER OF SUBSTITUTION

A form which is stamped or written on the reverse side of a stock certificate when an attorney has been named for the purpose of transferring the stock and who, according to the terms of the power of attorney, is given the privilege of appointing a substitute.

In such cases, the following form is signed by the attorney appointed in the assignment. The substitute is named in the body of the Power of Substitution.

I (or We) hereby irrevocably constitute and appoint .....
my (or our) substitute to transfer the within named stock under the foregoing Power of Attorney, with like power of substitution.
Dated .....

In the presence of .....
(See Power of Attorney, Stock Transfers.)

POWERS OF NATIONAL BANKS

See National Banking System.

PREFERENCE BONDS

Another name given to what are usually railroad income or adjustment bonds, especially when issued in series, as first, second and third; or Series "A," Series "B", Series "C". Interest on preference bonds is paid on each series in the order of preference; thus interest may be earned and declared on Series "A" and "B", but not on Series "C". (See Income Bonds.)

PREFERENCE INCOME BONDS

Same as Preference Bonds (q. v.).

PREFERENCE SHARES (STOCK)

The English equivalent for preferred stock in America. The term is also used in America in preferred stock nomenclature to designate different classes of preferred stock, such as Prior Preference Stock (q. v.). (See Preferred Stock.)

PREFERRED CREDITOR

One who has preferred claims which legally take precedence over those of other creditors. For instance, in the dissolution of an insolvent company, the claims of laborers for wages, of the Government for taxes, and mechanics' liens, take precedence over all others whether secured or unsecured. (See Liabilities.)

PREFERRED DIVIDENDS

See Preferred Stock.

PREFERRED STOCK

Stock which has a claim upon the earnings (and sometimes upon the assets and control) of a corporation prior to the common or other class of stock. Preferred stock represents an equity in the corporation which ranks after all bonds and floating debt, but ahead of common stock. Dividends must be paid upon the preferred stock before any distribution may be made to the common stockholders. Sometimes preferred stock is issued in series, e. g., "Preferred A", "Preferred B", etc., or "Class A", "Class B", etc., or "First Preferred Stock", "Second Preferred Stock", etc. In such cases, dividends must be paid on the first series before a distribution can be made on the second, and on the second before on the third.

Dividends on preferred stock may be "cumulative" or "non-cumulative". A cumulative dividend is one which if not paid in one year, carries over from year to year and accumulates, i. e., in case profits are not sufficient to pay the dividend at the full rate in any given year, then they are said to be in "arrears", and constitute a claim on earnings so long as unpaid prior to dividends on the common stock. Common stockholders are, therefore, not entitled to receive dividends so long as dividends upon cumulative preferred stock remain in "arrears". Non-cumulative dividends are a prior claim in any given year; but in case profits are insufficient to pay the dividend in full, there is no obligation on the part of the corporation to make up the deficiency in any subsequent year prior to dividends on the common stock. In other words, the dividends not paid in

any given year would be lost to the stockholders forever. The courts have held that dividends upon preferred stock are "cumulative", unless otherwise stated.

Dividends upon preferred stock may be at a fixed rate or on an "if earned" basis. Dividends on the latter income basis are payable if earned and if declared by directors. This feature is related to the cumulative or non-cumulative provisions, and if earned, the dividend may or may not accumulate according to whether the dividend is cumulative or not.

Preferred stock may also be preferred as to assets, and as to control. But in no case are preferences more than those specifically set forth. When preferred as to assets, the full par value of the preferred shares must be paid, in case of dissolution or insolvency, before any payment (liquidating dividend) is made to the common shareholders. Prior claims as to voting sometimes rest with the preferred stock, but usually this class of stock has no voting power, the theory being that the common stockholders, bearing the greater part of the risk, should have the control. In other cases of less frequent occurrence, preferred and common stockholders rank equally in voting power.

Preferred stocks have been referred to as "hybrid" securities, affording the disadvantages of fixed return and lack of voting power of bonds, while at the same time affording none of the legal rights and recourse upon default that bonds provide, because of their status as equities. However, as senior equities, preferred stocks have their appeal for income purposes. Their range of yields varies with quality and stability of earnings of the issuer, and many high grade preferred stocks fluctuate in accordance with the trend of money rates similar to high grade bonds. Normally, high grade preferred stocks afford somewhat better returns than those available on high grade bonds.

The attractiveness of preferred stocks may be increased by additional provisions designed to provide further features for the investor who purchases this class of securities. Some of these measures to secure further protection are: (1) preference as to assets; (2) "cumulative" dividends; (3) limited issue; (4) provision for partial or total redemption of the issue at some subsequent date by means of a sinking fund, and usually at a premium; (5) provision requiring that net current assets shall at all times equal or exceed the amount outstanding; (6) provision requiring that net surplus be kept at a certain percentage of capital; (7) provision for automatically placing control in the hands of preferred stockholders in case of failure to pay dividends, etc.

Participating preferred stock carries the right to earn dividends in excess of the specified dividend rate in an amount equal to the rate paid upon the common stock. Under this arrangement, the preferred stockholders share in extreme prosperity along with the common stockholders without relinquishing any of their rights of priority, and in no case can common stockholders receive dividends at a higher rate than the preferred stockholders.

Convertible preferred stock gives the owner the option of converting his preferred shares into common shares at a stated rate of exchange. In case of appreciation of the market value of the common shares, a profit might be made by converting. Thus, participating preferred and convertible preferred stock have additional speculative attractions.

Preferred stocks create a special type of ownership with less risk than common stock, but with definite limitations of control and income. (See Capital Stock, Stock Certificate.)

PREMISES

This term has two meanings:

(1) The introduction of a legal document, such as a deed, conveyance, or mortgage, which sets forth the parties and subject matter, and which is referred to in the document as the premises.

(2) In banking, the term is used as synonymous with Banking House (q. v.).

PREMIUM

This term has four meanings:

(1) The percentage or price which a security commands over its face value. A share of stock of $100 par value selling at 110 is at a premium of 10 per cent., or $10 a share. The amount of premium is based upon par value and if the par value of a stock is $50 and sells for $60, it is at a 20 per cent., or $10 premium. The opposite of Discount (q. v.). For the mathematics and accounting involved in writing off the premiums on bonds, see Amortization.

(2) Gold or silver coin is at a premium when it is necessary to pay more than statutory face value for it in paper money of the same denomination. In this sense, it means the same as the term Agio (q. v.) on the continent of Europe.

(3) The annual, or less frequent, sum paid by an insured party upon an insurance policy.

(4) The price paid on an option contract or other privilege. (See Privileges.)

PREMIUM BONDS

Bonds which are retired at their maturity (or at an optional prior date) at an amount above their par value customarily much higher than the ordinary premium involved in interim call of ordinary bonds, which are retirable at maturity at face amount of principal, without premium. The size of the premium in premium bonds gives them a lottery appeal. Such bonds are not permitted in this country, but are rather frequent among European Government bonds. (See Lottery Bonds.)

Bonds bought or quoted at a premium are sometimes (but in a loose sense) called premium bonds.

PRESENT STANDARD OF WEIGHT AND FINENESS

Most bonds and other long time contracts still outstanding and calling for the payment of money specify that the amount due shall be paid in gold coin of the United States according to the "Present Standard of Weight and Fineness". The purpose of this specification was to avoid future litigation in case any question arose as to the kind of money in which the debt was payable, or in case of a change in the coinage laws to avoid payment in a depreciated currency.

The Joint Resolution of Congress of June 5, 1933 declares that "every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby, is declared to be against public policy; and no such provision shall be contained in or made with respect to any obligation hereafter incurred. Every obligation, heretofore or hereafter incurred, whether or not any such provision is

contained therein or made with respect thereto, shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts.''

PRESENT VALUE

The current or today's worth of a certain sum of money due on a specified future date, after taking interest into consideration. The proceeds or net avails of a discounted note are its present value at a given rate of interest. The term is also used of other conceptions involving complicated mathematical formula, as the present worth of a series of fixed payments due at regular intervals, e. g., an annuity; also of a deferred payment, e. g., an overdue note in which compound interest must be computed. (See Discount.)

PRESENTATION

A term meaning the same as Presentment (q. v.), the latter term being the more correct usage.

PRESENTATION DRAFT

Same as Demand Draft. (See Draft.)

PRESENTMENT

The exhibiting of a matured note, draft, or bill of exchange to the maker or drawee for payment is known as a presentment for payment. When a draft or bill of exchange is handed to the drawee for acceptance, it is known as a presentment for acceptance. Notes and bills of exchange should be presented on the due date in order legally to hold the indorsers. A notarial protest certificate is legal evidence of formal presentment and refusal to pay (or accept). (See Secs. 70-88, Uniform Negotiable Instruments Law, Secs. 130-148, New York Negotiable Instruments Law, Presentment for Payment; Sec. 143-151, Uniform Negotiable Instruments Law, Secs. 240-248, New York Negotiable Instruments Law, Presentment for Acceptance; Notarial Protest Certificate.)

PRICE

The value of anything exposed for sale expressed in money terms; exchange value in money terms; amount of money necessary to purchase goods and services, or money asked by a seller to relinquish title to goods or services. Actual price means sale price; asked price is the price placed upon goods by a seller, i. e., offering price; bid price is that which a buyer is willing to pay; blanket price is that named for an entire lot of miscellaneous goods; cash price is the amount of money that must be paid at the time goods are sold or delivered; close prices indicate that bid and offering prices vary but fractionally; closing prices refer to the last price for the day on the exchange or organized market; cost plus price is the price determined by adding a stipulated fixed profit or percentage profit to the actual cost as in the case of Government manufacturing contracts; current price is that which prevails at the present; Exhaust Price (q. v.); fair price is one that takes into consideration all factors of value, giving the seller a ''normal'' profit and without injustice to the buyer; firm price (see Offered Firm); Issue Price (q.v.); list price is one published in a price catalogue or schedule from which discounts at varying rates may be offered; Making-Up Price (q. v.); market price is that currently prevailing in the market; Mint Price of Gold (q. v.); net price is that after deducting discounts and allowances; nominal price is an approximation to the market price or a bookkeeping price; offered price is that which a seller is willing to take; opening price is the price of the first sale on the market; quoted price is that named by a seller for communication with possible buyers; selling price is that at which sales actually occur; settling price is the same as making-up price; unit price is the pro rata price of a single unit in a lot; upset price is the lowest price that will be accepted, and is a term used at auction or foreclosure sales. (See Prices, Value.)

PRICE INDEX NUMBERS

See Index Numbers.

PRICE MOVEMENTS

See Business Cycle, Fluctuating Principle, Index Numbers, Speculative Cycle, Swings.

PRICES

Prices, the universal expression of the exchange value of goods and commodities, are the most important factor in production and consumption in a capitalistic system, for upon adequate selling prices in relation to costs of production depends the volume of production for future sale, and upon reasonable selling prices depends the effectiveness of demand and consumption. Thus the behavior of prices, pricing policies and price control have been the subject of much study and controversy, particularly as to the role Government should play.

The variability of prices varies directly with the remoteness of the commodity or goods from actual consumption. Finished goods in the hands of retailers tend to vary least in price, whereas primary commodities in the hands of suppliers to processors and manufacturers are most sensitive to changes in price. In theory, prices should be the result of the free play of the law of supply and demand in a capitalistic system. However, in the more mature capitalistic societies, the established interests of producers and labor, the difficulties and unwillingness to incur adjustments to changes in price, and the dependence upon given prices of many estimates or guesses for profitable production, tend to make the law of supply and demand rarely freely operative. Instead, ''institutional'' devices such as price fixing, control of supply, and division of markets are natural efforts in the interests of stability.

Price quotations on securities and commodities on the various exchanges and commodity markets are published and reported daily. The Securities Exchange Act of 1934 and the Commodity Exchange Act prohibit manipulation of prices in securities and commodities. Thus prices of securities and commodities traded upon the exchanges are among those prices most truly reflecting supply and demand. (See Bid Price, Bids and Offers, Exhaust Price, Index Numbers, Market Averages, Quotations.)

PRIMARY DEPOSITS

Deposits which arise from actual lodgment in a bank, of cash or its equivalent, as distinguished from derivative deposits which are deposit credits, created by granting loans and crediting the borrowers' accounts for the proceeds.

PRIMARY LIABILITY

A direct liability as distinguished from a contingent one. (See Liabilities.)

PRIMARY MARKET

See Market.

PRIMARY POINTS

The large cities in the West where grain is received from the country districts, and stored in elevators and warehouses, to be distributed to the various consuming centers as needed. The chief primary points are Chicago, Minneapolis, Duluth, Kansas City, St. Louis, Detroit, Toledo, and Buffalo.

PRIMARY RECEIPTS

Total daily receipts of grain at the Primary Points (q. v.).

PRIME

An expression used to indicate that an investment, whether a bond, acceptance, or commercial paper, is first class, high grade, gilt-edge, conservative, etc.

PRIME BILLS

See Prime.

PRIME INVESTMENTS

See Prime.

PRIME PAPER

See Prime.

PRINCIPAL

This term has two applications:

(1) The face amount or par value of a note, or other evidence of debt; that is, the amount exclusive of interest or premium which the holder is entitled to receive at maturity. It is also the sum on which interest is computed.

(2) The amount of money employed for profit or interest-bearing purposes; the fund invested for the purpose of yielding an income under the name of interest, as distinguished from such income.

PRIOR LIEN

See Lien.

PRIOR LIEN BONDS

These bonds are not necessarily, as the title might imply, first mortgage bonds. Prior lien bonds are those secured by a mortgage taking precedence over another or other mortgages against the company's property. The title generally occurs only among railroad issues and it is necessary to investigate the terms of the mortgage in order to determine the exact nature of the security. (See Lien.)

PRIOR PREFERENCE STOCK

A rare title denoting that two or more classes of preferred stock have been issued, but that the prior preference stock is entitled to dividends in full before the second or third class receives anything. It is more usual, when preferred stock is issued in series, to designate it as first, second and third preferred stock, or as Series, or Class A, Class B, Class C, etc.

PRIOR PREFERRED STOCK

A title having practically the same significance as first preferred stock. (See Prior Preference Stock.)

PRIOR REDEMPTION

When redeemable or optional bonds are called for redemption at a date prior to the obligatory maturity, the act is called prior redemption. Unless provision is made in the terms of an issue, bonds are not subject to prior redemption. (See Optional Bonds.)

PRIOR SALE

See Offered Firm.

PRIORITIES

The claims of creditors against a business, estate, or landed property have certain priorities or preferences. For the priority of claims against insolvent businesses, see Liabilities. For the preferences accorded preferred stockholders, see Preferred Stock. In the case of an estate, the New York Statutes affecting priorities are found in the Surrogate's Court Act (Secs. 212, 216, 222 and 285). Every executor or administrator shall pay, out of the first moneys received, the reasonable funeral expenses of the decedent, which expenses shall be preferred to all debts and claims. Payment of legal and proper expenses of administration and the statutorily prescribed commissions of the executor or administrator is also authorized. Debts of the decedent shall also be paid before distributions to the distributees, debts ranking in the following prescribed priorities:

(1) Debts entitled to a preference under the laws of the United States and State of New York;

(2) Taxes assessed on property of the deceased prior to his death;

(3) Judgments docketed and decrees entered against the deceased according to the priority thereof; and

(4) All recognizances, bonds, sealed instruments, notes, bills and unliquidated demands and accounts.

PRIVATE BANKS

Private banking, conducted either as a partnership or individual proprietorship, as distinguished from incorporated banking, is the oldest form of banking. The private banking houses of Europe for centuries have played an important role in European banking, and in the United States, various private banking houses occupy positions of comparable influence and prestige.

Until passage of the Banking Act of 1933 (q. v.), Congress had not referred in Federal statutes to private bankers, and their supervision and regulation was left to the States. In some States, such as New York, private banks are now regulated in detail comparable to incorporated banks, but in other States, regulation has been liberal, while in others, engaging in the banking business is denied to unincorporated firms.

Congress in Sec. 21 of the Banking Act of 1933 provided that after the expiration of one year after the date of enactment of the Act, which was June 16, 1933, it shall be unlawful for any person, firm, corporation, association, business trust, or other similar organization, engaged in the business of issuing, underwriting, selling, or distributing, at wholesale or retail, or through syndicate participation, stocks, bonds, debentures, notes or other securities, to engage at the same time to any extent whatever in the business of receiving deposits subject to check or to repayment upon presentation of a passbook, certificate of deposit, or other evidence of debt, or upon request of the depositor. This general prohibition does not prohibit National banks or State banks or trust companies (whether or not members of the Federal Reserve System) or other financial institutions or private bankers from dealing in, underwriting, purchasing, and selling investment securities to the extent permitted to National banks under Sec. 5136 of the Revised Statutes. Nor is this to be construed as in any way affecting such right as any bank, banking association, savings bank, trust company, or other banking institution, may otherwise possess to sell, without recourse or agreement to repurchase, obligations evidencing loans on real estate.

Section 21 of the Banking Act of 1933 further provided that it shall be unlawul for any person, firm, corporation, association, business trust, or other similar organization to engage, to any extent whatever with others than his or its officers, agents or employees, in the business of receiving deposits subject to check or to repayment upon presentation of a pass book, certificate of deposit, or other evidence of debt, or upon request of the depositor, unless such person, firm, corporation, association, business trust, or other similar organization--

(A) Shall be incorporated under, and authorized to engage in such business by the laws of the United States or of any State, Territory, or District, or

(B) Shall be permitted by any State, Territory, or District to engage in such business and shall be subjected by the law of such State, Territory, or District to examination and regulation, or

(C) Shall submit to periodic examination by the banking authority of the State, Territory, or District where such business is carried on and shall make and publish periodic reports of its condition, exhibiting in detail its resources and liabilities, such examination and reports to be made and published at the same times and in the same manner and under the same conditions as required by the law of such State, Territory, or District in the case of incorporated banking institutions engaged in such business in the same locality. (As amended by the Banking Act of 1935.)

Prior to passage of the Banking Act of 1933, most private banking houses combined the business of receiving deposits subject to check, doing a foreign exchange, acceptance, loan or discount business, and purchasing, selling and distributing securities through underwriting and participation in underwriting groups. Thus, Section 21 of the Act forced such private banking houses to make an election between their commercial banking and deposit business, and their securities business. The private banking house of J. P. Morgan & Co., for example, accordingly elected to stay in the banking business, and is now incorporated as a State institution entitled J. P. Morgan & Co., Inc. The securities business of the firm was "divorced" and independently organized as the partnership, Morgan Stanley & Co.

Congress also provided in the amended Sec. 8 of the Clayton Act, pertaining to interlocking directorates, that no private bankers shall be at the same time directors, officers or employees of any other bank, banking association, savings bank, or trust company organized under the National Bank Act or organized under the laws of any State or of the District of Columbia, or any branch thereof, except that the Board of Governors of the Federal Reserve System may by regulation permit such service as directors, officers or employees of not more than one other such institution or branch thereof.

The New York State Banking Law defines a private banker as an individual or partnership duly authorized by the Superintendent of Banks to engage in the business of private banker pursuant to Article IV of the Banking Law. Any individual or partnership desiring to engage in business as a private banker shall submit to the Superintendent a verified certificate stating:

1. Full name, residence and post office address of such individual or of each member of such partnership;
2. The state or country of which each individual named in such certificate is a citizen;
3. The amount of permanent capital such individual or partnership will invest in the business as private banker, which shall be not less than--

$400,000 if the office is to be located in a city having a population of more than 100,000;

$300,000 if the office is to be located elsewhere.

3. The place where the office is to be located.

If the Superintendent issues an authorization certificate, such individual or partnership may engage in the business of banking, including receiving deposits subject to check or for repayment upon the presentation of a passbook, certificate of deposit, or other evidence of debt, or upon the request of the depositor, or in the discretion of such individual or partnership; receiving money for transmission; discounting or negotiating promissory notes, drafts, bills of exchange or other evidences of debt; and buying or selling exchange, coin, or bullion, at the office specified in the authorization certificate. In conducting such business, a private banker may make use of the words "bank", "banker", or "banking" or their equivalent or any derivative or compound thereof.

The office of a private banker shall not be located in the same room with or in a room connecting with any bank, trust company, savings bank or National bank.

Every private banker shall segregate and keep separate and apart from all other property and assets of the individual or partnership, all securities and property

and the evidences of title thereto, in which funds held by him as a private banker have been invested. This requires a segregation of his permanent capital and moneys received on deposit.

Every private banker shall maintain total reserves against his deposits of the same amount and kind and on hand or on deposit to the same extent as is at the time required by or pursuant to the Banking Law for a bank doing business in the same place.

Restrictions on acceptance of deposits and payment of interest.--No private banker shall:

(1) Accept any amount for deposit if after the acceptance of such deposit, the average amount of the deposits received from all depositors during the 12 months period ending upon the day on which such deposit is tendered, or during such period if less than 12 months that such private banker has been engaged in business, would be less than $1,000.

(2) Pay or credit interest or pay, credit or give any bonus or gratuity or thing of value on any deposit balance, if the average of the daily credit balances in such deposit account during the period for which interest is paid or credited, is less than $7,500.

Restrictions on investments.--1. Every private banker may, subject to the limitations and restrictions contained in Article IV of the Banking Law, make such investments of funds held by him as a private banker, in real and personal securities, or personal property, as are consistent with safety and prudence of management.

2. No private banker shall appropriate to his own use or lend to any person with whom he is associated as a partner, or invest in any business conducted by a partnership of which he is a member, any funds held by him as a private banker.

3. No private banker shall after June 30, 1938, make with funds held by him as a private banker, any loan to or investment in the capital stock of any corporation of which 50% of the capital stock is owned or controlled directly or indirectly, or as a result of any such investment would be so owned or controlled by such private banker, as a private banker and as an individual, or if such private banker is a partnership, by such partnership and the individual members thereof, if as a result thereof, the total amount of outstanding loans and investments so made after such date will exceed 10% of his permanent capital with respect to any one such corporation, or will exceed 25% of his permanent capital with respect to all such corporations.

Rate of interest.--No private banker shall take, receive, reserve or charge on any loan or discount made, or upon any note, bill of exchange, or other evidence of debt, interest at a rate greater than 6% per annum, except that upon demand advances of $5,000 or over, upon warehouse receipts, bills of lading, certificates of stock, certificates of deposit, bonds or other negotiable instruments, any sum may be charged which may be agreed upon by the parties to such transaction.

No private banker shall after June 30, 1938 purchase any real estate with funds held by him as a private banker except a plot upon which there is or may be erected a building suitable for the convenient transaction of his business; nor make a loan of such funds directly or indirectly upon the security of real estate in excess of 2/3rds of the appraised value of such real estate, or in an amount which added to the amount unpaid upon prior mortgages, liens and encumbrances upon such real estate, exceeds 2/3rds of such appraised value; or if such real estate is subject to a prior mortgage, lien or encumbrance, and the amount unpaid upon such senior liens exceeds 10% of the permanent capital of such private banker.

All real estate acquired by a private banker in satisfaction or reduction of loans of funds held by him as a private banker shall be sold within 5 years after the date of acquisition, unless extended by the Superintendent of Banks.

From the foregoing sections of Article IV of the New York State Banking Law, it is apparent that private bankers in New York State are now subject to the most detailed regulation in their history. Motivating the New York State statutes also were several failures among private banking firms under the former statutes which accentuated the need for closer regulation.

PRIVATE WIRE

Banks, investment houses, and members of stock and commodity exchanges frequently lease telephone or telegraph wires for their own exclusive use, or jointly with other parties, for the purpose of keeping in immediate and convenient contact with their branches or correspondents located in other places, or with certain other houses in the larger centers.

PRIVATE WIRE HOUSES

Members of the New York Stock Exchange, New York Curb Exchange, Chicago Board of Trade, etc. which maintain private wire connections with their branches or correspondents located in other cities and towns throughout the country. Because of the costly overhead involved in maintaining such systems of private wires in recent years of reduced trading volume on the stock exchanges, the number of large wire houses has declined, often through mergers. The number of private wire houses which are members of the New York Stock Exchange is indicated by the total of 605 member firms which maintained a total of 915 branch offices throughout the country as of a recent date. Because of their large public patronage, the wire houses are generally advocates of low commission rates, free services and other measures designed to attract public participation.

PRIVILEGE BROKER

A broker who deals in privileges, e. g., puts, calls, spreads, and straddles. (See Privileges.)

PRIVILEGE OF REGISTRATION

Coupon bonds are sometimes issued with the option given the holder to have them registered, either as to principal and interest, or as to principal only. (See Registered Bonds.)

PRIVILEGED BONDS

A generic title given to convertible bonds and bonds with warrants attached. (See Convertible Bonds, Stock Purchase Warrant.)

PRIVILEGED COMMUNICATION

See Libel.

PRIVILEGES

A general term to include specific financial contracts made with the view of permitting one of the parties to exercise some right, option or privilege, such as to purchase securities or commodities, for a limited time, a price being paid for such privilege. Specific forms of

privileges are the Option (q. v.), Put (q. v.), Call (q. v.), Spread (q. v.), Straddle (q. v.).

According to the rules of the New York Stock Exchange, privileges are not permitted to be dealt in on the floor, but members may deal in them on the outside, and indorsement by members of the New York Stock Exchange is a feature of Put and Call options offered by Put and Call brokers and dealers.

PROBATE

Upon the death of a testator, his will must be proved. Probate is the term generally applied to the formal establishment and proof of execution of a document as the last will and testament of the deceased. In its broader legal meaning, probate refers to all matters over which probate courts, variously designated among the States as Probate Court, Surrogate's Court, Orphans' Court, etc., have jurisdiction. Probate proceedings are initiated by the filing of petition for probate of the will by specified interested persons. After a will has been admitted to probate by decree of the probate judge or surrogate, any person entitled to Letters Testamentary (q. v.) thereunder who is competent by law to serve and who appears and qualifies, will be issued such authority to act under the will.

PROCEEDS

This term has three applications:

(1) The sum which a borrower receives from a bank when a note is discounted. The proceeds are equal to the face amount of a note, less the discount, and are sometimes known as the net avails. (See Discount.)

(1) The sum realized from the sale of any property, whether securities, commodities, land, etc., after deducting the expenses of sale.

(3) The sum collected upon a check after deducting exchange, or collection charges.

PRODUCE EXCHANGES

Spot markets in produce (perishable provisions such as butter, eggs, vegetables, fish, poultry, etc.) are maintained in most consumption centers of population, and in the larger cities, such produce markets are supplemented by public markets operated by the municipality.

Produce exchanges designated by the Commodity Exchange Administration as authorized contract markets are the Chicago Mercantile Exchange and the New York Mercantile Exchange, both of which are contract markets in butter, eggs and potatoes. The Chicago Mercantile Exchange also maintains a contract market for trading in onions. The New York Produce Exchange maintains a contract market for trading in cottonseed oil, soybean oil and black pepper.

For a list of commodity exchanges and commodities traded in, see Commodity Exchanges. Other important markets located throughout the United States are as follows:

Market	Location
American Cotton Waste and Linter Exchange	Boston, Mass.
Atlanta Commercial Exchange	Atlanta, Ga.
Augusta Cotton Exchange	Augusta, Ga.
Baltimore Chamber of Commerce	Baltimore, Md.
Birmingham Grain Dealers Association	Birmingham, Ala.
Boston Grain and Flour Exchange, Inc.	Boston, Mass.
Buffalo Corn Exchange	Buffalo, N. Y.
Cairo Board of Trade	Cairo, Ill.
Charleston Cotton Exchange	Charleston, S. C.
Chicago Livestock Exchange	Chicago, Ill.
Cincinnati Board of Trade, Inc.	Cincinnati, Ohio
Clarksdale Cotton Exchange	Clarksdale, Miss.
Dallas Cotton Exchange	Dallas, Texas
Denver Grain Exchange Association	Denver, Colo.
Des Moines Board of Trade	Des Moines, Iowa
Detroit Board of Trade	Detroit, Mich.
Enid Board of Trade	Enid, Okla.
Fort Worth Grain and Cotton Exchange	Fort Worth, Texas
Galveston Cotton Exchange and Board of Trade	Galveston, Texas
Greenwood Cotton Exchange	Greenwood, Miss.
Houston Cotton Exchange and Board of Trade	Houston, Texas
Hutchinson Board of Trade	Hutchinson, Kans.
Indianapolis Board of Trade	Indianapolis, Ind.
Little Rock Cotton Exchange	Little Rock, Ark.
Los Angeles Cotton Exchange	Los Angeles, Calif.
Memphis Cotton Exchange	Memphis, Tenn.
Memphis Merchants Exchange	Memphis, Tenn.
Mobile Cotton Exchange	Mobile, Ala.
Montgomery Cotton Exchange	Montgomery, Ala.
National Wool Exchange	Boston, Mass.
New Orleans Board of Trade	New Orleans, La.
New Orleans Green Coffee Association	New Orleans, La.
New Orleans Sugar and Rice Exchange	New Orleans, La.
New York Cocoa Exchange, Inc.	New York, N. Y.
New York Coffee and Sugar Exchange, Inc.	New York, N. Y.
New York and New Jersey Livestock Exchange	Jersey City, N. J.
Norfolk Cotton Exchange	Norfolk, Va.
Ogden Grain Exchange	Ogden, Utah.
Omaha Grain Exchange	Omaha, Neb.
Peoria Board of Trade	Peoria, Ill.
Philadelphia Commercial Exchange	Philadelphia, Pa.
Pine Bluff Cotton Exchange	Pine Bluff, Ark.
Pittsburgh Grain and Hay Exchange	Pittsburgh, Pa.
Richmond Grain Exchange	Richmond, Va.
St. Joseph Grain Exchange	St. Joseph, Mo.
Salina Board of Trade	Salina, Kans.
Savannah Cotton Exchange	Savannah, Ga.
Sioux City Grain Exchange	Sioux City, Iowa
Texarkana Cotton Exchange	Texarkana, Ark.-Texas
Toledo Board of Trade	Toledo, Ohio
Topeka Board of Trade	Topeka, Kans.
Vicksburg Cotton Exchange	Vicksburg, Miss.
Wichita Board of Trade	Wichita, Kans.
Yazoo City Cotton Exchange	Yazoo City, Miss.

PRODUCTION AND MARKETING ADMINISTRATION

An agency in the U. S. Department of Agriculture, established on August 18, 1945 by the Secretary of Agriculture, to operate the Commodity Credit Corpora-

tion and integrate with it related activities and departments in the Department of Agriculture. Administrator is also president of the Commodity Credit Corporation.

Organization includes the Commodity Credit Corporation, nine commodity branches (Cotton, Dairy, Fats and Oils, Fruits and Vegetables, Grain, Livestock, Poultry, Sugar and Tobacco), four staff offices, and eight other branches. The Price Support and Foreign Supply Branch coordinates branch operations with Commodity Credit Corporation operations. (See Commodity Credit Corporation.)

PRODUCTION CREDIT ASSOCIATIONS

The Farm Credit Act of 1933 provided for the establishment of 12 Production Credit Corporations and as many local Production Credit Associations as were needed to make available to farmers the short-term credit facilities of the Federal Intermediate Credit Banks.

Production Credit Associations.—These are local associations of farmer-borrowers through which loans for financing the production of crops and livestock may be obtained. The funds loaned by the associations are obtained by discounting farmers' notes with the Federal Intermediate Credit Banks, or, upon approval by the Governor of the Farm Credit Administration, with other credit agencies.

By the end of March, 1934, Production Credit Associations had been organized in every Farm Credit Administration district, and were ready to serve every agricultural county in the United States. On December 31, 1947, there were 504 Production Credit Associations, whose territory included every agricultural county in the continental United States and Puerto Rico.

Management.—The associations are under the supervision of 12 Production Credit Corporations and the Governor of the Farm Credit Administration. The corporations, with the approval of the Governor, prescribe rules and regulations under which the associations invest their funds and make loans to farmers. Included in the scope of the regulations are terms and conditions of loans, the rates of interest charged, and the security required.

The charter of each association must be approved by the Governor of the Farm Credit Administration. His power also extends to prescribing the amount of stock, fixing the territory within which the association may operate, fixing the method of selection and the compensation of officers and employees, fixing the maximum amount of individual loans, prescribing conditions under which the stock may be retired, and providing for the consolidation of two or more associations. He may at any time direct such changes in the charter as he finds necessary in accomplishing the purposes of the act.

Capital Stock.—Capital stock of each association is divided into two classes. Class A stock may be purchased either by investors or by the Production Credit Corporation of the district. It shares equally with class B stock in dividends, but is preferred as to assets in liquidation. Through purchases by the Production Credit Corporation, the amount of class A stock outstanding in each association is maintained at not less than 20 per cent. of the amount of its loans in force. Except by the consent of the local association, the amount of class A stock may not at any time be less than $5,000. Class B stock may be owned only by borrowers or those eligible to borrow. Each borrower is required to own, at the time his loan is made, class B stock of the association in an amount equaling in fair book value (not to exceed par), as determined by the association, $5 per $100 or fraction thereof borrowed. It carries all voting privileges, with one vote to each shareholder regardless of the amount of stock owned. Upon liquidation of a loan, class B stock is not retired, but if a holder thereof ceased to be a borrower for a period of two years, he must either dispose of the stock to another borrower, or exchange it for class A stock. As of December 31, 1947, member stockholders owned $46,488,483 of Class A and B stock in the Production Credit Associations. The 12 Production Credit Corporations owned $34,822,100 of the Class A stock of Production Credit Associations, on December 31, 1947.

Reserves.—Earnings of a Production Credit Association in excess of operating expenses are to be applied, under the act, first, to making up any losses in excess of its reserve for bad and doubtful debts; second, to the restoration of any impairment of capital; third, to the creation and maintenance of a reserve account of bad and doubtful debts, the amount of which is to be prescribed by the Production Credit Corporation; and fourth, to the creation and maintenance of a guaranty fund equal to at least 25 per cent. of the paid-in capital of the association. Any sums remaining may, with the approval of the Production Credit Corporation, be applied to the payment of dividends, but no dividend in excess of 7 per cent. may be paid. The guaranty fund is to be treated according to regulations prescribed by the Production Credit Corporation, but may not be invested in loans.

Limitations on loans.—No borrower may be indebted to an association at any one time to an amount greater than 20 per cent. of the paid-in capital and surplus of the associations, except that loans may be made up to 50 per cent. of the capital and surplus of an association upon pledge of collateral approved by the Production Credit Corporation. Individual loans exceeding 50 per cent. of the capital and guaranty fund of a given association may be made with the approval of the Production Credit Commissioner of the Farm Credit Administration. No loans may be made for an amount less than $50.

Purposes of loans.—Loans may be made to farmers and stockmen for general agricultural purposes, under the terms of the act. In order for an association to secure funds from a Federal Intermediate Credit Bank, these agricultural purposes must be kept within the definitions laid down by the bank and approved by the Governor of the Farm Credit Administration.

Interest rates and maturities.—Interest rates and maturities of loans are determined under regulations issued by the Production Credit Corporations, but in order for funds to be secured from Federal Intermediate Credit Banks, both interest rates and maturities of loans are subject to the limitations prescribed in the Agricultural Credits Act of 1923, as amended. The interest rate authorized provides a spread for the associations in addition to the rate charged for the source of funds by the Federal Intermediate Credit Banks. Interest rates charged by associations ranged from 4 1/2% to 5 1/2% as of December 31, 1947.

(See Farm Credit Administration.)

PRODUCTION CREDIT CORPORATIONS

These are located in the same cities as the Federal

Land Banks, the Federal Intermediate Credit Banks, and the regional Banks for Co-operatives. The twelfth corporation was chartered on December 19, 1933. Each corporation supervises the operations of the Production Credit Associations within its Farm Credit District. They also assisted in the organization of the associations and provided their initial capital.

Management.—The directors of the Federal Land Bank in each district are ex-officio directors of the Production Credit Corporation.

Capital.—The originally paid in capital stock of the Production Credit Corporations, all paid in by the Farm Credit Administration on behalf of the United States Government, was $120,000,000. A total of $27,350,000 had been repaid by December 31, 1947, and early in 1948 another $11,015,000 was repaid further, thus reducing the Government capital in the 12 Production Credit Corporations to $81,635,000. The amount of stock in any corporation may be changed from time to time by the Governor in accordance with the credit needs of the district. Out of the funds so provided, each corporation must invest in class A stock of the Production Credit Associations within its district, for the corporation is required to maintain the paid-in class A stock in each association equal to not less than 20 per cent. of the volume of the association's loans outstanding. The corporation may require an association to retire stock held by the corporation if, in the judgment of the corporation, the association has resources available therefor. The corporation may, under conditions stipulated in the act, invest in capital stock of the associations not organized under the act, if such associations are operated on a co-operative basis.

Earnings.—Production Credit Corporations, like the associations, are required to apply earnings in excess of operating expenses toward losses and impairment of capital, and thereafter to the creation and maintenance of a reserve fund equal to at least 25 per cent. of the paid-in capital of the corporation. The surplus is to be invested as prescribed by the Governor, either in direct obligations of the United States or in class A stock of Production Credit Associations, or both. Earnings above these requirements must be used to retire stock of the corporations held on behalf of the United States.

(See Farm Credit Administration; Production Credit Associations.)

PRODUCTION INDEX

An index computed to show the trend of production in the composite as well as to measure the trend of production in each component series. Such indexes are usually presented in two forms, unadjusted and adjusted for seasonal variation.

Perhaps the most cited index of industrial production is the monthly index compiled by the Board of Governors of the Federal Reserve System. It has as its base the 1935-1939 average, is calculated on the unadjusted as well as adjusted basis, measures production in physical volume as well as dollar value, and in addition to showing an over-all or composite index, presents separate index numbers for different series components by types of production of manufactures, both durable and non-durable, and minerals. A total of some 125 separate indexes are thus compiled monthly.

Among other production indexes currently compiled are those of the Cleveland Trust Company, Barron's, and Standard-Poor's Corporation. (See Business Indexes, Index Numbers.)

PROFESSIONAL

An operator who habitually makes a business of speculating, either in the stock or commodity markets, or both. Speculators are divided, roughly, in two classes, the professionals and the public. Professionals are "professional" traders who engage in speculation as a vocation; the public are "amateur" traders who enter the market either occasionally, or continuously but as an avocation.

The stock market is said to have a professional appearance when the public is out of it, or when the participation by the public is small, and prices consequently are controlled by the professionals. (See Operator.)

PROFIT

(1) In economics, profit is the concept of reward of the entrepreneur for risk taking and management.

(2) In business operations, profit is the gain from manufacturing, merchandising and selling operations after all expenses are met. Since profit normally is added to net worth, it may be measured by the increase in net worth over the previous accounting period. The amount of a concern's profits thus may be determined not only through the Profit and Loss Statement, but also by a comparison of the earned surplus or net worth in balance sheets, which, however, is the residue of profits after dividends and any other appropriations, and does not reveal details of sources of income and expenses, such as is found in the Profit and Loss Statement.

(3) In speculative transactions, profit is the excess of the net selling price over the cost (including all charges), of the security or commodity traded in. (See Net Profits.)

PROFIT AND LOSS

A bookkeeping term to indicate the temporary or summary account through which all expenses and profits are cleared in order to determine the net profit or loss for the accounting period. Expenses and losses are entered on the debit side and sales or other income items on the credit side. In banking practice, the balance of this account is carried to Undivided Profits. P. & L. is the abbreviation for Profit and Loss.

PROFIT-SHARING BONDS

See Participating Bonds.

PROFIT TAKING

The selling of securities or commodities when the price has advanced over that of the purchase price, in order to convert paper profits into cash, i. e., to realize a profit on a speculative transaction through selling at a higher price. In a case of short selling, profit taking consists in buying (covering) when the current price has fallen below the original selling price.

PROGRESSIVE DISCOUNT RATES

Federal Reserve Banks were permitted under the Phelan Bill which amended Sec. 14 (d) of the Federal Reserve Act and became a law April 13, 1920, to increase the rediscount rates of those member banks whose rediscounts exceeded a specified base to which the normal rate applied. The purpose of the progressive discount rate plan was to discourage further bor-

rowing and rediscounting at times when the volume of credit outstanding was dangerously high and when prices reached excessive levels. In the latter months of 1920, effective use was made of progressive rates in two Federal Reserve districts. The plan was put forward because the general raising of the normal rediscount rate throughout the United States did not sufficiently restrict rediscounting operations, and as an alternative to the plan of refusing to accept certain classes of paper for rediscount regardless of the discount rate.

Sec. 14(d) of the Federal Reserve Act was further revised by Act of March 4, 1923 and the Banking Act of 1935 (August 23, 1935), so that today the section merely provides generally that every Federal Reserve Bank shall have power to establish from time to time, subject to review and determination of the Board of Governors of the Federal Reserve System, rates of discount to be charged for each class of paper, which shall be fixed with a view of accommodating commerce and business.

(See Rediscount Rate.)

PROMISOR

One who promises to do a thing. A promisor is legally responsible for fulfilling a promise made in contemplation of legal relations, provided it has been made for a valuable consideration and its fulfillment is not contrary to law. A maker of a note or the acceptor of a bill is a promisor, and his liability as a primary party is unconditioned (Sec. 192, Uniform Negotiable Instruments Law; Sec. 3, New York Negotiable Instruments Law).

PROMISSORY NOTE

A negotiable promissory note, within the meaning of the Negotiable Instruments Law, is an unconditional promise in writing made by one person to another signed by the maker, engaging to pay on demand, or at a fixed or determinable future time, a sum certain in money to order or to bearer. (Sec. 184, Uniform Negotiable Instruments Law; Sec. 320, New York Negotiable Instruments Law). For the definition by the Board of Governors of the Federal Reserve System, see Regulation A. (See Note.)

PROMOTER

A person who brings together a newly conceived business enterprise and financiers; that is, one who secures the necessary capital from financial interests, bankers, underwriters, private investors, etc., to inaugurate a new business. The promoter is a kind of middleman who discovers business opportunities and sells them to capitalists.

The function of a promoter of a new enterprise is to conceive or discover the proposition, to assemble the factors—its technical and legal feasibility—procure options upon property, patents, etc., issue the informal "prospectus" (not the prospectus required under the Securities Act of 1933), aid in the flotation of securities, and launch the enterprise. The promoter is in reality an entrepreneur pro tem.

Under Regulation C of the Securities and Exchange Commission, which governs every registration of securities under the Securities Act of 1933, the term "promoter" is defined to include:

(1) Any person who, acting alone or in conjunction with one or more other persons, directly or indirectly takes initiative in founding and organizing the business or enterprise of an issuer;

(2) Any person who, in connection with the founding and organizing of the business or enterprise of an issuer, directly or indirectly receives in consideration of services or property, or both services and property, 10% or more of any class of securities of the issuer or 10% or more of the proceeds from the sale of any class of securities. However, a person who receives such securities or proceeds either solely as underwriting commissions or solely in consideration of property shall not be deemed a promoter within the meaning of this definition if such person does not otherwise take part in founding and organizing the enterprise.

Such compensation of the promoter is an integral part of the Registration Statement, it is subject to the review of the Securities and Exchange Commission. Compensation of promoters and their activities are also subject to the Blue Sky Laws of the various States.

There are both occasional and professional promoters. Occasional promoters may be bankers, lawyers, engineers or business executives, who, because of their business contacts and knowledge of the technical, legal and financial phases of business, are in a position to discover propositions the exploitation of which appear to promise large returns. The professional promoter is regarded with more or less suspicion, due to the fact that in the nature of things he is bound to attempt promotions which lack feasibility.

The promoter performs an incalculable service for society by setting into motion ideas by which the wealth of the nation is enhanced.

PROMOTERS' STOCK (SHARES)

A special form of stock peculiar to England, sometimes also known as Deferred Stock (q. v.), or Founders' Shares (q. v.). Such stock is issued with limited and deferred privileges as payment for the services of the promoters, who have been instrumental in organizing a corporation.

In America, compensation of the promoter or promoters has usually been in the common stock, the extent of the compensation being dependent on the importance of the promoter's services and his bargaining power. Speculative exterprises, involving much promotion, usually provide high compensation for the promoter. (See Promoter.)

PROMOTION

See Promoter.

PROPERTY

In law, the courts define property as the right to possession, enjoyment and disposition of all things subject to ownership. Popularly, however, the term property is generally applied to the things themselves which are the subject of ownership.

Property is broadly classified as Real Property (q.v.), and Personal Property (q.v.). Real property consists of land, all things growing therein or appurtenant thereto, and all rights or interests issuing out of or concerning the land. Personal property, by exclusion, is everything else that is not real property, and is defined by New York Statute (Sec. 39, General Construction Law), as chattels, money, things in action, and all written instruments themselves, as distinguished from the rights or interests to which they relate, by which any right, interest, lien, or incumbrance in, to, or upon property, or any debt or financial obligation is created,

acknowledged, evidenced, transferred, discharged or defeated, wholly or in part.

In old time property systems, real property constituted the major basis of wealth. In modern times, however, as the result of development of the corporation as the principal form of business organization, and diffusion of corporate ownership through widespread distribution of bonds and stocks, personal property has become the more important type of property.

PROPERTY RISK

That risk involved in lending money which varies according to, and therefore is determined by, the value of the net assets or net worth of the borrower. If a loan is well protected, the borrower should possess sufficient unpledged net tangible assets which if converted into cash would be sufficient to cover amount of loan, whether secured or unsecured. In the case of bills discounted, bank or trade acceptances, or unsecured commercial paper where no collateral security is offered, there is always the presumption that the borrower has current assets, which if converted into cash, would be more than sufficient to liquidate the loan. The property risk can be determined by an examination of the borrower's statement and the lending bank should always determine whether the prospective borrower had already borrowed from other lending institutions, and in what amount.

The property risk is distinguished from moral and business risk. Together they constitute the classical three-fold divisions of a credit risk. Property risk is usually regarded as less important than the moral of business risk. (See Business Risk, Credit, Credit Risk, Moral Risk.)

PROPRIETARY COMPANY

Another name for Controlling Company (q. v.), or Parent Company (q. v.). A proprietary company is usually not an operating company.

PRORATION

Restriction of output of crude oil through allocation of production, imposed either on a voluntary or compulsory basis, for the purpose of conservation and maintaining orderly markets for crude oil.

Proration is imposed by the States in varying degrees of strictness, ranging from the compulsory proration imposed by Texas through its "Railroad Commission" (the State Public Service Commission), to the largely voluntary proration imposed by the Oil Conservation Committee of California. On the other hand, no proration at all is imposed by Illinois, one of the important producing States. The Interstate Oil Compact among the States is given recognition by Congress, which under the Connally "Hot Oil" Act prohibits the interstate shipment of oil produced in excess of that established as allowable by State proration laws. Basis for establishing the "allowables" under State proration laws is the monthly estimate of demand for crude oil prepared by the Bureau of Mines in the U. S. Department of the Interior. (See Oil.)

PROSPECT

A possible customer; a person, firm, or corporation whose business is desired and solicited, but with whom no business relations have been established.

In extractive industries, a new development, such as a mine or newly drilled well is termed a prospect.

PROSPECTUS

(1) In activities of the promoter, the informal typewritten or printed plan of organization of a new enterprise, or for the expansion of an existing enterprise, usually prepared by the promoters and their associates for the purpose of interesting financiers in the purchase of the securities. The prospectus usually contains detailed representations of the nature of the proposed corporation, the probable demand for the product, the technology and cost of production, plans for financing, location and initial size of the plant, and the grounds upon which profits are expected.

The prospectus is intended for distribution, not to the general public, but to the underwriters or financiers whom it is designed to interest in the proposition.

(2) Under the Securities Act of 1933, the term "prospectus" means any prospectus, notice, circular, advertisement, letter, or communication, written or by radio, which offers any security for sale. However, a communication shall not be deemed a prospectus if it is proved that prior to or at the same time with such communication a written prospectus meeting the requirements of Section 10 of the Act was sent or given to the person to whom the communication was made. Also, a notice, circular, advertisement, letter, or communication in respect of a security shall not be deemed to be a prospectus if it states from whom a written prospectus meeting the requirements of Section 10 of the Act may be obtained and, in addition, does no more than identify the security, state the price, and state by whom orders will be executed.

Under Section 5 of the Act, it shall be unlawful for any person, directly or indirectly, to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to carry or transmit any prospectus relating to any security registered with the Securities and Exchange Commission, unless such prospectus meets the requirements of Section 10 of the Act. It shall also be unlawful to carry or to cause to be carried through the mails or in interstate commerce any such security for the purpose of sale or for delivery after sale, unless accompanied or preceded by a prospectus that meets the requirements of Section 10 of the Act.

Section 10 of the Act provides that a prospectus relating to securities other than those issued by a foreign government or political subdivision shall contain the same statements made in the Registration Statement, but need not include the documents referred to in paragraphs 28 to 32, inclusive, of Schedule A of the Registration Statement, which are such documents as agreements with underwriters, opinions of counsel, material contracts, copies of articles of incorporation or partnership or association, underlying agreements or indentures, etc. When relating to a security issued by a foreign government or political subdivision, the prospectus shall contain the same statements made in the Registration Statement, but need not include the documents referred to in paragraphs 13 and 14 of Schedule B of the Registration Statement, which are documents relating to agreements made with underwriters in the United States and opinions of counsel concerning legality of issue.

There may be omitted from any prospectus any of the

statements required under Section 10 which the Commission may by rules or regulations designate as not being necessary or appropriate in the public interest or for the protection of investors; and any prospectus shall contain such other information as the Commission may by rules or regulations require as being necessary or appropriate in the public interest or for the protection of investors. In the exercise of these powers, the Commission has authority to classify prospectuses according to the nature and circumstances of their use, and by rules and regulations and subject to such terms and conditions as it shall specify, to prescribe as to each class the form and contents which it may find appropriate to such use and consistent with the public interest and the protection of investors.

When a prospectus is used more than 13 months after the effective date of the Registration Statement, the information in the statements contained in it shall be as of a date not more than 12 months prior to such use, so far as such information is known to the user of such prospectus or can be furnished by such user without unreasonable effort or expense.

Article 2 of Regulation C of the Commission prescribes the form and content of prospectuses. The following statement is required in all prospectuses, on the outside front cover page, printed in type at least as legible as ten-point boldface leaded type:

"THESE SECURITIES HAVE NOT BEEN APPROVED OR DISAPPROVED BY THE SECURITIES AND EXCHANGE COMMISSION NOR HAS THE COMMISSION PASSED UPON THE ACCURACY OR ADEQUACY OF THIS PROSPECTUS. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE."

In any case in which the registrant or any of the underwriters knows or has reasonable grounds to believe that the price of any security may be stabilized to facilitate the offering of the registered securities, there shall be set forth, either on the outside front cover page or on the inside front cover page of the prospectus, a statement in substantially the following form, subject to appropriate modifications where circumstances require, in capital letters, printed in type at least as legible as ten-point boldface leaded type:

"IN CONNECTION WITH THIS OFFERING, THE UNDERWRITERS MAY EFFECT TRANSACTIONS WHICH STABILIZE OR MAINTAIN THE MARKET PRICE OF (identify each class of securities in which such transactions may be effected) AT A LEVEL ABOVE THAT WHICH MIGHT OTHERWISE PREVAIL IN THE OPEN MARKET. SUCH TRANSACTIONS MAY BE EFFECTED ON (identify each exchange on which stabilizing transactions may be effected. If none, omit this sentence.) SUCH STABILIZING, IF COMMENCED, MAY BE DISCONTINUED AT ANY TIME."

Under the "Red Herring" regulation of the Commission, which was adopted in December, 1946, advance distribution of a preliminary prospectus, called the "Red Herring" because of the red ink clauses on the outside front cover calling attention to its nature, is authorized, provided it contains substantially all the required disclosures except price and related data which normally is fixed just prior to the effective date and public offering. Use of the "Red Herring" Prospectus does not constitute an offer to sell the security, and is of material assistance to the underwriters in giving advance information to members of the selling group and other dealers.

In practice, the Prospectus is prepared by the principal underwriter's counsel and members of the underwriting firm and issuer, with the counsel guiding the preparation as to legal requirements, statement of facts and avoidance of "puffing". In addition to the three copies of the proposed prospectus included in the body of the Registration Statement proper, five copies of the prospectus shall be filed with the Registration Statement at the time the statement is filed, and within five days after the commencement of the public offering, 20 copies of each form of prospectus used in connection with the offering shall be filed in the exact form used with the office of the Commission with which the Registration Statement was filed. Thus the Commission is in position to reject any prospectus which it considers out of line with the Registration Statement.

(See Securities Act of 1933, Syndicate, Underwriting.)

PROSPERITY

That phase of the trade cycle characterized by business activity, as shown by the volume of trade and bank clearings, rising prices, large profits, low percentage of business failures, high wages, liberal buying, etc. This phase of the business cycle usually follows the period of recuperation, which in turn, follows a depression. The close of a period of prosperity is likely to be characterized by inflated bank credit and currency, low bank reserves, high money rates, high commodity prices and wages, speculative activity and profiteering, until finally a crisis arises, which is a reaction against the period of high prices and marks the end of prosperity. (See Business Cycle.)

PROTECT PROFITS STOPS

Stop orders placed with a broker by a client to protect profits on a security once they have accumulated. Stop orders are generally regarded as "stop-loss" orders, and in a sense they are since they are placed at a point below the current market and if executed give a realized amount something less than the maximum that might have been attained. Many stop orders are placed, however, to insure the realization of a part of the paper profit that has accumulated. In this sense, such a stop order is for the purpose of "protecting profits," rather than preventing increased losses. (See Stop Loss Order.)

PROTECTIVE DEVICES

Being depositories for large amounts of cash and other valuables which are negotiable by delivery, banks are subject to attacks by hold-up men, burglars and safe-blowers. Defensive measures have kept pace with offensive tactics. Among the banks in larger cities, the employment of special guards in uniform is an almost universal practice. Their purpose is preventative, as well as furnishing a means of apprehending hold-up men in case an assault is attempted. The daring of hold-up men is in direct, proportion to chances of success, and hold-ups are not likely where the promise of success is slight.

Modern banks are equipped with various kinds of protective equipment. Safes and vaults are now made with armor plate consisting of an alloy steel that is as nearly burglar-proof as possible. Other means of protecting a bank, and especially its cash, are:

(1) Electric signal systems communicating with a local burglar alarm company, prepared upon alarm to dispatch detectives in case of trouble. For night protection this system involves a periodic turning in of signals from electric signal boxes located in various parts of the bank building.

(2) Emergency alarms with buttons placed at the finger-tips of tellers to call special guards located at other stations in the bank.

(3) Protection of the paying teller and the cash in his cage by erecting bullet-proof, armored glass in front of the cage.

(4) Automatic door-closing devices operating from the paying teller's cage to close all means of escape to hold-up men who may attempt an assault.

(5) Time lock and a burglar alarm signal on the door of the vault or safe.

For the protection of checks against alterations and forgeries see Check Protecting Devices. Also see Identification, Finger-Print Identification, Vault.

PROTEST

A declaration made by a notary public in behalf of the holder of a check, bill of exchange, or note, that presentment has been made and that the instrument has been dishonored (payment refused), and a protest that any loss arising shall be borne by the drawer and indorsers. Protest is not required of domestic bills and promissory notes which are drawn and payable in the same state, but in the case of foreign bills, protest is required. Protest proceedings are admissible court evidence of presentment and refusal to pay, and bind the indorsers. When in doubt, and for the evidentiary value of the notarial certificate, it is always desirable to have an unpaid instrument protested. For method of issuing protest papers, see Notarial Protest Certificate. (See Secs. 152-160, Uniform Negotiable Instruments Law; Secs. 260-268, New York Negotiable Instruments Law.)

PROTEST FEES

Fees paid to the notary public before whom protest of a negotiable instrument is made, and any other incidental charges in connection with protest. Protest fees are ordinarily paid by the holder of the instrument at the time of protest. Where such protest is necessary in order to fix the liability of the parties, as in the case of a foreign bill of exchange, protest fees may be recovered by the holder from the drawer, the acceptor or the last indorser, as they are in the nature of special damages or expenses arising out of the dishonor. Where protest is not necessary in order to charge the parties, as in the case of inland bills of exchange, there is a conflict of authority among the courts as to whether the drawer would be chargeable with protest fees.

(See Protest.)

PROTEST WAIVED

When there are no indorsements on a negotiable instrument or where the indorser writes "Protest Waived", or words of similar import above his signature as an indorser on the instrument, protest is not necessary to hold the indorser liable. Where the waiver is embodied in the instrument itself, it is binding on all parties (Sec. 110, Uniform Negotiable Instruments Law, Sec. 181, New York Negotiable Instruments Law). According to Sec. 13 of the Federal Reserve Act, when notes are rediscounted for a member bank, they must be indorsed by such member, and such indorsement shall be deemed a "waiver of demand, notice and protest."

PROTESTED FOR NON-ACCEPTANCE

Protest of a time "foreign" (out-of-state) bill of exchange for refusal of the drawee to accept. Where a foreign bill appearing on its face to be such is dishonored by non-acceptance, it must be duly protested for non-acceptance. If it is not so protested, the drawer or any indorsers are discharged (Sec. 152, Uniform Negotiable Instruments Law; Sec. 260, New York Negotiable Instruments Law). Protest of a domestic time bill of exchange for non-acceptance is not required, but is desirable to do because of the evidentiary value of the notarial certificate. (See Notarial Protest Certificate.)

PROTESTED FOR NON-PAYMENT

See Protest.

PROXY

Authority given in writing legally witnessed, by which a stockholder confers upon another person the right to vote the stock owned by him. In most large corporations, many of the stockholders find it impossible, even if interested, to attend stockholders meetings. Since shares of stock usually carry the right to vote as one of the incidents of ownership, the right may be conferred upon someone else. In many cases stockholders are asked for their proxies by other stockholders who are more interested in the affairs of the corporation. Sometimes the secretary of the corporation requests proxies from all out-of-town stockholders.

The Securities Exchange Act of 1934 prohibits the solicitation of proxies, or the giving of proxies by brokers or dealers, except under such rules and regulations as the Securities and Exchange Commission may prescribe. The Commission by Regulation X-14 has regulated in detail the solicitation of proxies, including requirements as to information to be furnished to security holders, requirements as to form of proxy, presentation of information in the proxy statement, and advance filing with the Commission of copies of the proxy statement, form of proxy and any other soliciting material.

The following is a customary form of proxy:

"Know all men by these Presents, That .....
the undersigned, Stockholders in the .....
..... do hereby appoint .....
..... true and lawful Attorney, with power of substitution, for ..... and in ....., to vote at the meeting of the stockholders in said .....to be held at ....., or at any adjournment thereof, with all the powers .....should possess if personally present, hereby revoking all previous proxies.

.....19

Witness

....

Under the regulation of the Securities and Exchange Commission, the form of proxy shall identify clearly and impartially each matter or group of related matters which is intended to be acted upon, whether proposed by the management or by security holders. Means shall

also be provided in the form of proxy whereby the person solicited is afforded an opportunity to specify by ballot a choice between approval or disapproval of each such matter or group of related matters, other than elections to office. The proxy shall also provide that the shares represented thereby will be voted in accordance with the specifications so made. A proxy may confer discretionary authority with respect to matters as to which the person solicited does not make the specification provided for, if the form of proxy states in boldface type the bona fide intention as to the manner in which the shares represented by the proxy will be voted if the ballot is not marked. A proxy may also confer discretionary authority with respect to matters which the persons on whose behalf the solicitation is made are not aware will be presented for action at the meeting. No proxy shall confer authority to vote for the election of any person to any office for which a bona fide nominee is not named in the proxy statement.

PUBLIC

Public participation in the securities markets is usually directly indicated by the volume of buying and selling in Odd Lot (q. v.) transactions. (See Professional).

PUBLIC ACCOUNTANT

A professional accountant or auditor whose services are available for the auditing of books, installation of accounting systems, preparation of financial statements, tax returns, valuations, etc. If the public accountant passes an examination provided by the State, he is given a certificate and is entitled to style himself a Certified Public Accountant (q. v.). (See Auditor.)

PUBLIC ADMINISTRATOR

A public official who is appointed to administer the estates of intestate persons whose heirs cannot be immediately determined or located, or who may be appointed in lieu of a private administrator. (See Administrator.)

PUBLIC COMMISSION

See Public Service Commission.

PUBLIC CREDIT

A term applied to the credit enjoyed by a National Government, state, county, municipality, etc. The same principles govern public credit as commercial, agricultural, banking, and other forms of credit. Thus, a Government, state or municipality may have a good or bad credit standing, depending upon its reputation and ability to pay its obligations.

PUBLIC DEBT

Practically synonymous with national debt, i. e., the debt of a central government to individual creditors. Although the term is usually restricted to the debt of the Federal Government in the United States, it could also be applied to all public debt incurred by sovereign jurisdictions--the Federal Government, States, political subdivisions, and municipalities. (See Internal Debts, National Budget, National Debt.)

The Federal Government debt consists of the direct and guaranteed obligations issued by the U. S. Government, which are limited by the latest amendment to the Second Liberty Loan Act of 1917, to a total of $275 billion. As of June 30, 1948, total direct issues were $160,346,000,000, and total guaranteed issues were $27,000,000, among marketable issues; and $252 million grand total.

The various types of U. S. Government marketable public securities, outstanding as of June 30, 1948, were as follows:

(in millions of dollars)

Issue and Coupon Rate	Amount
Treasury Bills(1):	
July 1, 1948	$1,200
July 8, 1948	1,205
July 15, 1948	1,007
July 22, 1948	1,002
July 29, 1948	1,006
August 5, 1948	905
August 12, 1948	1,006
August 19, 1948	1,004
August 26, 1948	1,108
Sept. 2, 1948	1,101
Sept. 9, 1948	1,105
Sept. 16, 1948	1,104
Sept. 23, 1948	1,006
Certificates of Indebtedness:	
July 1, 1948, Series "F", 7/8%	2,742
July 1, 1948, Series "G", 7/8%	1,127
July 1, 1948, Series "H", 7/8%	2,209
October 1, 1948, Series "J", 1%	1,354
October 1, 1948, Series "K", 1%	1,467
January 1, 1949, 1 1/8%	2,592
February 1, 1949, 1 1/8%	2,189
March 1, 1949, 1 1/8%	3,553
April 1, 1949, 1 1/8%	1,055
June 1, 1949, 1 1/8%	4,300
Treasury Notes:	
September 15, 1948, 1 1/2%	3,748
October 1, 1948, 1%	4,092
January 1, 1949, 1 1/8%	3,535
Treasury Bonds:	
September 15, 1948*, 2 1/2%	451
December 15, 1948-50*, 2%	571
June 15, 1949-51, 2%	1,014
September 15, 1949-51, 2%	1,292
December 15, 1949-51, 2%	2,098
December 15, 1949-52*, 3 1/8%	491
December 15, 1949-53*, 2 1/2%	1,786
March 15, 1950-52, 2%	1,963
September 15, 1950-52*, 2 1/2%	1,186
September 15, 1950-52, 2%	4,939
December 15, 1950, 1 1/2%	2,635
June 15, 1951-54*, 2 3/4%	1,627
September 15, 1951-53, 2%	7,986
September 15, 1951-55*, 3%	755
December 15, 1951-53*, 2 1/4%	1,118
December 15, 1951-55, 2%	510
March 15, 1952-54, 2 1/2%	1,024
June 15, 1952-54, 2%	5,825
June 15, 1952-55, 2 1/4%	1,501
December 15, 1952-54, 2%	8,662
June 15, 1953-55*, 2%	725
June 15, 1954-56*, 2 1/4%	681
March 15, 1955-60*, 2 7/8%	2,611
March 15, 1956-58, 2 1/2%	1,449
September 15, 1956-59*, 2 3/4%	982
September 15, 1956-59, 2 1/4%	3,823
June 15, 1958-63*, 2 3/4%	919
June 15, 1959-62**, 2 1/4%	5,284

December 15, 1959-62**, 2 1/4%	3,470
December 15, 1960-65*, 2 3/4%	1,485
June 15, 1962-67**, 2 1/2%	2,118
December 15, 1963-68**, 2 1/2%	2,831
June 15, 1964-69**, 2 1/2%	3,761

(1) Sold on a discount basis.
*Partially tax-exempt.
**Restricted as to ownership by commercial banks.
Source--Board of Governors of the Federal Reserve System.

In addition to the above marketable issues, as of June 30, 1948, there were outstanding a total of $59,506 million in non-marketable public issues, including U. S. Savings bonds ($53,274 million), Treasury tax and savings notes ($4,394 million), adjusted service bonds, depositary bonds, Armed Forces Leave bonds, and 2 1/2% Treasury investment bonds, series A-1965. Also in addition, there was outstanding a total of $30,211 million in special issues, and $42 million in non-marketable fully guaranteed interest- bearing securities, as well as $2,229 million in non-interest bearing debt.

For further data on types of U. S. Government issues and financing, see U. S. Government Securities.

PUBLIC DEPOSITS

Deposits in banks by the Federal Government, States, political subdivisions, and municipalities.

U. S. Government deposits may be deposited in banks designated as depositaries by the Treasury and in "war loan accounts" authorized under the Liberty Loan Acts. Sec. 9 of the Federal Reserve Act provides that State member banks may be designated as depositaries of public moneys, and under Sec. 5153 of the Revised Statutes, National banks may be designated as depositaries of public moneys. Although Sec. 15 of the Federal Reserve Act prohibits the deposit of public moneys in non-member banks, proceeds of sale of Liberty Bonds of the 1st, 2nd and 3rd issues could be deposited in non-member banks, and Sec. 8 of the Second Liberty Loan Act, as last amended January 30, 1934, authorizes the Secretary of the Treasury in his discretion to deposit in such incorporated banks and trust companies as he may designate, Government receipts arising from the payment of income and excess profits taxes. Postal savings funds also may be deposited in non-member banks.

In addition to posting eligible security, member banks are required to maintain the same reserves against deposits of public moneys of the United States as against other deposits. Beginning in April, 1943, deposits in U. S. Government war loan accounts were exempted from reserve requirements for a period expiring six months after cessation of hostilities in World War II.

Any National bank may, upon deposit with it of public moneys of a State or any political subdivision thereof, give security for the safe-keeping and prompt payment of the moneys so deposited, of the same kind as is authorized by the law of the State in which such National bank is located in the case of other banking institutions in the State (Sec. 5153 of the Revised Statutes).

The prohibition of interest payment on demand deposits applies to public deposits as well as private deposits, under Sec. 19, paragraph 12, of the Federal Reserve Act, which paragraph was added by the Banking Act of 1933 (q. v.), and amended by the Banking Act of 1935 (q. v.).

(See Government Depository, Government Deposits.)

PUBLIC FINANCE

The subject which, "deals with the revenues of government, with their expenditure, and their administration" (Ely, R. T.: Outlines of Economics).

Public finance includes the science of budgeting, the principles and administration of taxation, the expenditure of public revenues and accounting therefor. The Government in undertaking those functions necessary for promoting collective welfare—administration of the laws and courts of justice, protection afforded through the army, navy and police system, education and extension of public works—is concerned with financial principles just as any concern would be which might administer these functions privately.

PUBLIC HOUSING ADMINISTRATION

Created July 27, 1947 as successor to the Federal Public Housing Authority, and as a constituent agency under the Housing and Home Finance Agency (q. v.). The Public Housing Administration supervises and administers the provision of temporary housing for veterans from converted war housing and facilities; public war housing provided during World War II for veterans' families and civilian employees of the War and Navy Departments; sale or other disposition of surplus war housing over and above these needs; and the program of Federal aid to local low-rent housing projects designed to keep rents low to low-income groups. As of March 31, 1948, the Public Housing Administration reported total assets of $530 million, largely $295 million in loans receivable and $203 million in real estate holdings; U. S. Government interest, or net worth, totaled $520 million. Affiliate of the Public Housing Administration, the Defense Homes Corporation, reported as of the same date total assets of $54 million.

PUBLIC LOAN

Obligations issued by a sovereign, whether a Federal Government, State, province, political subdivision thereof, or a municipality, for public purposes and for

the public welfare. Public loans are either temporary or short term, to meet temporary deficits or unanticipated deficiencies in revenues; or long term or permanent loans, to finance the cost of permanent public improvements or supplement current revenues by capitalizing future taxes in the present. Public credit is reflected in the terms of public loans and ordinarily commands the best terms as compared with private credit, so that the "riskless cost of money" is most closely indicated by the short term or long term cost of public loans.

PUBLIC REGULATIONS

A term used in politics, economics, and in business to denote the intervention of public authority, i. e., the Federal or State Government in business affairs. Public regulation is the mean between the evils of monopoly or of unrestrained competition on the one hand and public ownership (or even some form of socialism) on the other. The purpose of regulation is to secure the benefits of private initiative and ownership and at the same time prevent the abuses of monopoly power and evils of uncontrolled competition.

Public regulation was first applied to public service industries—the railroads and public utilities. Competition in these industries is wasteful because of the necessity of duplicating extensive and expensive plant facilities, so that monopoly in these fields has come to be accepted as a fundamental necessity. To prevent the abuse of monopolistic power, particularly with reference to charges for services, regulation of industries in the public service field by the states and Federal Government has become thoroughly institutionalized. In late years, the extension of public regulation to the industrial field has also made headway.

The basis for regulation of industry lies in the common law and in specific statutes. In the United States, the supervision of the affairs of companies coming under the statutory regulations is by commission. The most important of these are the Interstate Commerce Commission (q. v.), the Public Service Commissions (q. v.) of the various states, and the Securities and Exchange Commission (q. v.).

The principal Federal laws under which the regulation of industry was enforced prior to the "New Deal" are (1) Interstate Commerce Act of 1887, with its amendments; (2) Sherman Anti-Trust Act of 1890; (3) Panama Canal Act of 1913; (4) Clayton Act of 1914, with amendments; (5) Federal Trade Commission Act of 1914; (6) Webb Export Trade Act of 1918; (7) Transportation Act of 1920; and (8) Packer and Stockyards Act of 1921. The states also have laws regulating public utilities situated within their borders.

Public regulation was greatly extended under the "New Deal" Administration beginning March 4, 1933, affecting agriculture, banking, public utilities, air-mail, stock exchanges, securities business, and industry. Among the regulatory laws enacted in the first years of the New Deal 1933-34 were the Agricultural Adjustment Act (q. v.), Bankhead Cotton Control Act (q. v.), Banking Act of 1933 (q. v.), National Industrial Recovery Act (q. v.), Securities Act of 1933 (q. v.), Securities Exchange Act of 1934 (q. v.), and Tennessee Valley Authority Act (q. v.).

Regulation of public utilities in such a state as New York involves the following features: (1) establishment of standardized uniform accounts; (2) publication of earnings and other statistical data; (3) quasi-trade journal functions; (4) service (a) improvement of service upon complaint or upon commission's own initiative, and (b) extension or abandonment of service upon complaint or commission's own initiative; (5) safety; (6) valuation of property—physical and other; (7) capitalization; (8) regulation of rates; (9) issuance of new securities, admission of new companies in the field, permission of mergers and transfer and sale of properties. (See Interstate Commerce Commission, New Deal, Public Utility Corporation, Railroad Legislation.

PUBLIC RESOLUTION OF JUNE 5, 1933

See Gold Repeal Joint Resolution.

PUBLIC SERVICE COMMISSION

Every State except Delaware has established a Public Service Commission (variously entitled among the various States) for regulating and supervising public utility corporations as to both operating and financial activities. The purpose of these commissions is to harmonize the interests of the corporations, the public as consumers, and security holders. The personnel of these commissions are usually competent and fair-minded men, so that the commission regulation of public utilities has in most cases operated to the advantage of the investor. Regulation finds tangible expression in control of rates, franchises, capital issues, and uniform accounting reports. (See Public Utility Bonds.)

PUBLIC SERVICE CORPORATION

See Public Utility Corporation.

PUBLIC TRUSTEE

The exercise of trust powers by a governmental bureau or office. A public trustee office by which the functions of executor, administrator and trustee are exercised was created by statute in New Zealand. A public trustee law became operative in England and Wales, January 1, 1908. Under its provisions trust functions are undertaken by an office established by the Government. In the case of such a sovereign trustee, a beneficiary has no legal power to enforce the trust without its consent, on the legal principle that a sovereign cannot be sued except with its consent. In the United States, there is no comparable office of public trustee in the Federal Government or the States, but any sovereign (the Federal Government, the States, political subdivisions and municipalities) has the perfect power to act as trustee, and instances are numerous where property has been conveyed in trust to a State or municipality for a stated public use. (See Trusts.)

PUBLIC UTILITIES

See Public Utility Industry.

PUBLIC UTILITY ACT OF 1935

An Act providing for the control and regulation of public-utility companies, and for "other purposes," approved August 26, 1935. It is divided into two titles as follows:

Title I. Control of Public-Utility Holding Companies. (Cited as the "Public Utility Holding Company Act of 1935.")

Title II. Amendments to Federal Water Power Act. (Cited as the "Federal Power Act.")

A brief description of the sections of Title I follows:

Section 1. Necessity for control of holding companies.

(a) Because of interstate nature of business.

(b) To prevent financial abuses.

Section 2. Definitions—"Electric Utility Co.," "Gas Utility Co.," etc. Holding Co.—a company owning 10 per cent. or more of a public utility's voting stock or another holding company. "Integrated Public Utility System"—a system interconnected and operated economically as a single system in a single area or region in one or more states.

Section 3. Power to grant particular exemptions regarding holding companies, subsidiary companies and affiliates. The Securities and Exchange Commission may exempt from act if:

1. Operations are predominantly intrastate, if incorporated in state in which it operates and operations do not extend beyond that state and the states contiguous thereto.

2. Holding company is only incidentally a holding company being interested in one or more other businesses.

3. Company is temporarily a holding with securities to liquidate or distribute.

4. Subsidiary company exempt if it derives no material income from within the United States.

Section 4. Transactions by unregistered holding companies.

After December 1, 1935, it became unlawful for an unregistered holding company to do anything interstate.

Section 5. Registration of holding companies.—Holding companies shall file complete registration statements on and after October 1, 1935.

Section 6. Unlawful security transactions by registered holding and subsidiary companies, as in Section 7.

Section 7. Declarations by registered holding and subsidiary companies in respect of security transactions.

Securities and Exchange Commission shall pass on merit of security offering.

Section 8. Acquiring interest in electric and gas utility companies serving same territory.

Must have state utility commission's approval.

Section 9. Acquisition of Securities and Utility Assets and Other Interests.

1. Unlawful to acquire—through interstate commerce—any securities, utility assets or any other interest in any business—unless approved by the Securities and Exchange Commission in section 10, except United States Government bonds and other assets approved by the Securities and Exchange Commission, or commercial paper.

Section 10. Approval of Acquisition of Securities and Utility Assets and other Interests.

Must apply to the Securities and Exchange Commission for approval to do, and give complete details, with stockholders' names who own 1 per cent. or more of the stock.

Section 11. Simplication of Holding Company Systems.

(a) Securities and Exchange Commission must examine capital set-up of every registered company with view toward simplification, and contine business to that of an "integrated public utility" system.

(b1). After January 1, 1938, Securities and Exchange Commission must require each holding company system to be limited to a single "integrated public utility" system with these exceptions:

1. If each additional system cannot be operated as an independent system without the loss of substantial economies which can be secured by the holding company retaining control.

2. If all such additional systems are located in a restricted area.

3. If the continued combination of such systems controlled by one holding company is not so large as to impair the advantages of local management, efficient operation and effectiveness of regulation.

(b2). Each company in the system shall take the action directed by the Securities and Exchange Commission so that no holding company shall be a holding company to its subsidiaries which itself has a subsidiary company which is a holding company. (This will cause holding companies to cease to be such beyond the second degree.) However, the Securities and Exchange Commission may not require any change in the corporate structure or existence of any company which is not a holding company or of any company whose principal business is that of a public utility company, except where such action is for the purpose of fairly and equitably distributing voting power.

Any order under 11-b must be complied with within a year.

Plan may be submitted to Securities and Exchange Commission after January 1, 1936, by holding company to divest itself of assets.

Unlawful to solicit proxies by mail for or against reorganization plan unless such plan is proposed or reported on by the Securities and Exchange Commission.

Section 12. Intercompany loans; dividends; security transactions; sale of utility assets; proxies; other transactions.

Unlawful to engage in such transaction by mail or interstate except with approval of the Securities and Exchange Commission.

Section 13. Service, Sales and Construction Contracts.

Unlawful to make such contracts and sales by mail or interstate except with approval of the Securities and Exchange Commission.

Section 14. Periodic and Other Reports.

Every registered holding company must make such certified periodic reports and answer such questions as the Securities and Exchange Commission may direct.

Section 15. Accounts and Records.

Section 16. Liability for Misleading Statements.

Section 17. Officers, Directors and Other Affiliates.

Section 18. Investigations, Injunction, Enforcement of Title and Prosecution of Offenses.

Section 19. Hearings by Commissions.

Section 20. Rules, Regulations and Orders.

Section 21. Effect on Existing Law.

Section 22. Information filed with the Commission.

Section 23. Annual Reports of the Securities and Exchange Commission.

Section 24. Court Review of Orders.

Section 25. Jurisdiction of Offenses and Suits.

Section 26. Validity of Contracts.

Section 27. Liability of Controlling Persons; Preventing Compliance with Title.

Section 28. Unlawful Representation.

Section 29. Penalties.
Section 30. Study of Public Utility and Investment Companies.
Section 31. Employees of the Commission.
Section 32. Separability of Provisions.

PUBLIC UTILITY BONDS

Bonds which are the obligations of a Public Utility Corporation (q. v.) engaged in furnishing such facilities as electric light and power, gas, water, telephone, traction, etc., as distinguished from railroad and industrial bonds. Public utility bonds are usually secured by some kind of mortgage upon the properties of the issuing corporation. The demand for the services of public utilities has grown very rapidly since 1870, with the result that property values in all growing and progressive communities have undergone considerable enhancement. This situation may be expected to continue, so important are public utility corporations in city development and in raising the standard of American life. Consequently, their extensive properties are normally capable of providing ample and increasing security for bond issues, which are generally in high investment favor and are legal investments for savings banks and trust funds in must States when they meet statutorily prescribed requirements for eligibility.

Except Delaware, each state has created a Public Service Commission (q. v.) for the purpose of regulating the public utilities within its jurisdiction. It is their function to supervise the operations of public utility corporations, to require accounting and operating reports, and to approve or disapprove the issuance of new or additional securities, with a view to protecting the rights of the corporation, public, and investors. Securities bearing the approval of a public service commission are reasonably certain to possess all the qualifications of a thoroughly sound investment. In addition, the Securities and Exchange Commission, acting under the Public Utility Holding Company Act of 1935, the Securities Exchange Act of 1934, and the Securities Act of 1933, and the Federal Power Commission add their powers of review and jurisdiction over security issues and interstate activities of public utility companies.

In testing the soundness of public utility bonds, the following points should be investigated: (1) desirability and possibility of growth of the territory served; (2) nature of the lien, i. e., whether a first mortgage or lien junior thereto; (3) capability of the management; (4) Reasonableness of rate regulation and rate of return; (5) whether earnings show the margin of safety over operating expenses and fixed charges requirements; (6) whether the equity behind the issue is sufficient to provide a strong margin of safety; (7) whether the franchise situation is satisfactory; and (8) marketability.

PUBLIC UTILITY COMMISSION

Same as Public Service Commission (q. v.)

PUBLIC UTILITY CORPORATION

A corporation which supplies services regarded as indispensable to the consuming public. Railroads, traction lines, electric light and power, gas, telephone and telegraph, bus and ferry lines, and water companies, are public utility or public service corporations. In classifying the securities of these companies, however, railroads are placed in a separate division, since they have characteristics of their own, developed first into importance, and are far more extensive than the other utilities.

Public utility corporations are operated under the law of public callings which requires these corporations (1) to serve all who apply for services, (2) to charge reasonable rates, (3) to charge equal (non-discriminatory) rates, and (4) to give adequate service. Railroads and public utilities operating interstate are subject to control by the Interstate Commerce Commission and the Federal Power Commission, and railroads and other public utilities operating intrastate come under the jurisdiction of the Public Service Commissions (q.v.) of the states in which the utilities are located.

Usually public utilities have a monopoly in the field and territory in which they operate which is granted by a Franchise (q. v.).

PUBLIC UTILITY INDUSTRY

Largest of the public utility industries is the electric light and power industry, with total investment at the close of 1946 of $15 1/2 billion, and installed capacity at the close of 1947 of 41.8 million kw, compared with 33.2 million kw in 1938. Total kilowatt-hour production for 1947 reached a new high record of 208 billion kwh, compared with 181 billion kwh in 1946 and 104 billion kwh in 1938, a doubling of production over the decade.

At the close of 1947, over 38.4 million customers were served, an increase of 37% over 1938, most of the 10.4 million increase in customers having been gained in residential customers, which gained 8.5 million in number. During the decade 1938-1947, kwh sales per residential customer expanded from 853 kwh in 1938 to 1,438 kwh in 1947 per customer, and average annual bill for residential customers increased from $35.31 to $44.43. However, this was traceable to increased use of electricity, as revenue per kwh declined from 4.14¢ in 1938 3.09¢ in 1947. During the same decade, the relative proportions contributed by types of customers have not changed much; residential customers, although contributing only 20% of kw sales, contribute 35% of total revenues, followed by industrial customers, which contribute 52% of sales, but 28% of revenues, and commercial customers, 17% of sales and 26% of revenues.

Longer term growth has been equally impressive. Capacity, which was about 14 million kw in 1920, practically doubled to over 34 million kw in 1930. Production has approximately tripled as compared with the 68 billion kwh produced in 1925. Total revenues, which were $1.5 billion in 1925, have increased 2 1/2 times at the 1947 total of $3.7 billion, a record high for the industry. On the other hand, average revenue per kwh on residential sales has declined from 7.30¢ in 1925 to 3.06¢ in 1947, indicating the longer term trend towards lower rates for residential customers, the type of customers most contributing to revenues.

These gains have been achieved despite the agitation for public ownership which gained impetus with the New Deal. Federally owned capacity has expanded from 300,000 kw in 1935 to 5 million kw in 1947, and other publicly owned capacity has increased in the same period from 2.3 million kw to 5.3 million kw. Total production of publicly owned plants has increased from 5.9 billion kwh in 1935 to 47.7 billion kwh in 1947, more than half of the increase having been in Federally produced power.

As a result of continued expansion in service during

World War II and inability because of shortages and restrictions on use of needed materials to make normal or extraordinary additions to capacity, private electric light and power utilities are now faced with the largest peacetime construction program in their history, involving a total construction program of some $5 to $6 billion over the next four years. As these additions to capacity are achieved, new highs in production, sales and revenues will no doubt be seen, a far cry from the small beginnings of the industry in the late '80s.

The first electric company using incandescent lamps was the Edison Electric Illuminating Company of New York, incorporated in 1880 and commercially operated for the first time in 1882. This company was unquestionably the forerunner of the present electric industry. The genius of Edison had not only invested the incandescent bulb but also developed a complete system of generating facilities, distribution lines, meters and other essential appliances. Over the course of the next two generations a profound change took place. Electricity almost entirely supplanted gas for both interior and outdoor lighting purposes. Gas, on the other hand, after a period of readjustment, emerged as a valuable fuel for domestic cooking and heating and for many industrial purposes. Accordingly, from the turn of the century on, these two great industries have grown side by side and the financial problems of the one have been common to the other.

The Edison Electric Illuminating Company of New York was the forerunner of countless local "Edison Companies" throughout the country. The early financial history of these companies is largely the same. The original capital was provided by local citizens through subscription to common stock. The growth of business was so rapid that additional subscriptions were soon required. The original capitalization of the New York Company of $1,000,000 had to be increased in five years by 150 per cent., bringing the total to $2,500,000 in 1887. In 1890 the common stock again had to be increased, this time by an additional $2,500,000.

The next development of the industry was toward the consolidation of small companies into larger, more compact, operating organizations. This tendency naturally appeared earlier in the gas industry than in the electric field. In August, 1892, the Brush Electric Light Company and the Thomson Houston Electric Light & Power Company of Buffalo were consolidated to form the Buffalo General Electric Company, serving the enture city of Buffalo. In 1907 the Chicago Edison Company and the Commonwealth Electric Company were consolidated to form the Commonwealth Edison Company. In New York, on May 1, 1901, the original Edison Electric Illuminating Company was consolidated with the New York Gas & Electric Light, Heat & Power Company to form the New York Edison Company. Nearly all of the consolidations effected in those days were based upon straight exchanges of capital stock. In some few cases smaller companies were absorbed by large companies by means of outright cash purchases. (See Federal Power Commission, Public Service Commission, Public Utility Act of 1935, Rural Electrification Authority, Tennessee Valley Authority, Tennessee Valley Authority Act.)

PUBLIC UTILITY STOCKS

Preferred and common stocks of public utility companies in the electric power and light, natural gas, manufactured gas, water, telephone, telegraph and traction industries. Seasoned operating company equities of well established companies in these fields, with the exception of most traction company equities, are generally held in high investment regard. Although railroads are also public utilities by definition, railroad securities are generally classified separately under Railroads.

Merits of public utility stocks may be summarized generally as (1) monopolistic nature of operation conferred by franchises for specified territories; (2) essential nature of the services rendered; (3) State and Federal regulation, which in the interests of both the consumer and the investor, regulates rates, rates of return, capitalizations and security issues, financial practices, and accounting systems; (4) expansion and growth, through economic development of territories served, increase in population, extensions of power lines and pipelines, and increase in average loads.

Financial developments in the past decade have greatly strengthened the position of public utility equities. Outstanding debt and preferred stock of the electric utility industry have been reduced by about $800 million during the period 1937-1946. During this period, fixed charges and preferred dividends have been reduced also by refundings into lower interest and dividend rates. As a result, the industry's coverage of fixed charges and preferred dividends has increased from approximately 1.9 times in 1937 to 2.5 times in

1946. Arrears on preferred stocks, which amounted to about $140 million in 1938, have now been nearly all eliminated.

Common stocks have also benefited substantially from the write-downs aggregating over $1 billion in plant accounts, as compared with more than doubled depreciation reserves and increase of about $500 million in net working capital.

Despite this substantial betterment in financial resources, however, the electric utility industry will need a tremendous amount of new capital to finance a construction program aggregating $5 to $6 billion over the next four years. About 10% of this total, according to the Edison Electric Institute, must come from the sale of common stock. Despite an increase in generating capacity of 25% over the decade 1937-1946, reserve capacity has been reduced to low levels as the result of the substantial gains in kilowatt hour output and sales, which have almost doubled compared with 1937.

Added to the problems involved in obtaining such a large amount of new capital, various holding companies subject to divestment orders under the Public Utility Holding Company Act of 1935 still await favorable market conditions for the distribution of additional operating company equities to be divested. Holding companies with total system assets of $3,218 million are still subject to liquidation or dissolution orders by the Securities and Exchange Commission.

As the result of the break-up of holding company systems already effected, many operating company equities have become available to the public for the first time. From December 1, 1935 to June 30, 1948, a total of some 275 companies in the electric utility industry have been divested by some 55 registered holding companies. During the same period, a total of some 141 companies in the gas utility industry have been divested by some 43 registered holding companies. Non-utility properties of some 163 companies have also been divested by 34 registered holding companies during the same period.

Among the holding companies whose shares are widely held and which are still subject to divestment under the Public Utility Holding Company Act, are:

American Power & Light
Commonwealth & Southern
Electric Bond & Share
Electric Power & Light
General Public Utilities
Louisville Gas & Electric

Middle West Corp.
Niagara-Hudson Power
North American Co.
Philadelphia Co.
Standard Gas & Electric
United Corp.
United Gas Improvement

Divestment plans have often called for listing the operating company equities being distributed, and as a result the number of utility equities listed on the Exchange has increased. The following is a list of various operating company equities listed on the New York Stock Exchange and New York Curb Exchange:

Bridgeport Gas Light*
Brooklyn Union Gas*
California Electric Power **
Central Hudson Gas & Electric*
Cincinnati Gas & Electric*
Cleveland Electric Illuminating*
Columbus & Southern Ohio Electric*
Commonwealth Edison*
Community Public Service**
Consolidated Edison*

Consolidated Gas (Baltimore)**
Consumers Power*
Dayton Power & Light*
Detroit Edison*
Duke Power**

El Paso Natural Gas*
Empire District Electric*
Florida Power*
Gulf States Utilities*
Hackensack Water*

Hartford Electric Light**
Houston Lighting*
Idaho Power*
Illinois Power*
Indianapolis Power & Light*

Laclede Gas Light*
Lone Star Gas**
Maine Public Service**
Missouri Public Service**
Montana-Dakota Utilities**

Mountain States Power**
Mountain States Telephone & Telegraph**
New England Telephone & Telegraph**
Northern Natural Gas*
Ohio Edison*

Oklahoma Natural Gas**
Pacific Gas & Electric*
Pacific Lighting*
Pacific Telephone & Telegraph*
Peninsular Telephone**

Pennsylvania Power & Light*

PUBLIC WAREHOUSE

See Warehouse Company.

PUBLIC WORKS ADMINISTRATION

Originally created by the National Industrial Recovery Act, passed June 16, 1933, as the Federal Emergency Administration of Public Works, and later reorganized as the Public Works Administration. Under the Government reorganization plan of 1939, the Public Works Administration was transferred to the Federal Works Agency (q.v.). Essentially a "pump priming" agency to stimulate national recovery, the PWA was subsequently placed in liquidation, and is at present reported wholly liquidated.

PUBLICATIONS OF THE NATIONAL MONETARY COMMISSION

See National Monetary Commission.

PUBLICITY DEPARTMENT

A department organized among the larger banks usually under the supervision of a vice-president and in direct charge of a manager. In smaller banks the work may be supervised by the cashier. The chief function of this department is to sell the bank's services and to create new business. In many instances, its activities are grouped together with those of the New Business Department (q. v.).

Bank publicity may be general (indirect) or direct. General publicity is that which makes an indirect appeal, usually through the medium of newspaper and magazine advertisements. The material most frequently used for this purpose is the financial statement. Direct publicity consists of advertising materials, circulars, pamphlets, etc., distributed to a mailing list of selected prospects or present accounts. These circulars may call attention to a new service, e. g., a trust or foreign exchange department; it may be informative, making an appeal to a prospect to use some department of the bank now being neglected; or it may be entirely general in character for the purpose of maintaining contact.

The nature of publicity required depends largely upon the type of institution, commercial banks, savings banks and trust companies all needing to appeal to different motives. Many commercial banks distribute among their customers and prospects a monthly analysis of business and financial conditions. Frequently house organs containing both inspirational and educational material are employed. Savings banks usually make an appeal on the importance of savings as an aid to business opportunity, as a protection against reverses, and as preparation for old age. Trust company literature is still very largely informative, since the average person knows very little about trust company facilities, or the advisability of organizing an estate plan.

Other mediums of publicity applicable to all banking types are street car cards, theatre programs, window displays, trade papers, electric signs, billboards, pamphlets for enclosing with statements, exhibits at fairs, news stories, publication of addresses of officers, and booklets digesting current business conditions, and legislation affecting business and finance.

PUMP PRIMING

Under the New Deal (q.v.), Federal Government expenditures designed to stimulate general business recovery by injecting Government spending into the money stream. Pump priming expenditures were provided for Federal public works, allocations to State and local governments for public works projects, subsidies and grants to farmers in consideration of reduction of production, unemployment relief, etc.

For the fiscal years 1933-1941, Federal expenditures for the agricultural aid program and unemployment relief totaled as follows:

(in millions)

Fiscal Year	Agricultural Adjustment Program	Unemployment Relief
1933	.....	$345
1934	$289	1,846
1935	712	2,351
1936	533	2,309
1937	527	2,432
1938	362	1,914
1939	787	2,595
1940	1,002	1,919
1941	877	1,694
Totals	$5,089	$17,405

PURCHASE MONEY BONDS

Bonds secured by Purchase Money Mortgage (q.v.), a type of mortgage so called because it is executed as part of the consideration and in part payment for property acquired. Proceeds of issue of Purchase Money Bonds are used to purchase the property by which they are secured. This type of issue is usually resorted to whenever there are outstanding mortgage bonds with after acquired clauses therein, under which any property subsequently acquired would come under the lien. By issuing Purchase Money Bonds, the operation of the after acquired clause of existing mortgage bonds is avoided. (See Purchase Money Mortgage.)

PURCHASE MONEY MORTGAGE

A mortgage given by the purchaser to the seller at the same time of conveyance of land to the purchaser, designed to secure the unpaid balance of the purchase price. The New York Civil Practice Act (Sec. 514) provides that where real property is sold and conveyed, and at the same time a mortgage thereupon is given by the purchaser to secure the payment of the whole or a part of the purchase money, the lien of the mortgage upon that real property is superior to the lien of a previous judgment wholly or partly for a sum of money or directing the payment of a sum of money against the purchaser. Independent of statute, however, New York case law holds that a purchase money mortgage executed and recorded at the same time as another mortgage given in the same transaction has priority over such other mortgage. (See Mortgage.)

PURCHASED PAPER

Commercial paper which has been purchased outright, as distinguished from paper which has been discounted. The Federal Reserve Act defines it as "paper bought through brokers or others with whom the purchasing bank has no direct business relations."

PURCHASING POWER

Ability to buy as determined by income in relation to the price level. The purchasing power of a fixed income, for example, varies inversely with the general price level. That is, a rising price level diminishes the purchasing power of a fixed income whereas a falling price level increases it. An index of purchasing power can be computed by reversing an index of commodity prices. In fact, the Bureau of Labor Statistics computes an index of purchasing power which is a reciprocal of this organization's commodity price index. A cost of living index is, in effect, a purchasing power index, if considered reciprocally. (See Cost of Living Index.)

PUT

A contract which entitles the holder thereof upon demand to sell to the maker (in the New York Put and Call Market, to the endorser, a member firm of the New York Stock Exchange) at any time within the life of the contract, a specified number of shares of a stock at the price fixed in the contract. A Put is the opposite of a Call (q.v.), while a Straddle (q.v.), is both a Put and a Call on the same stock written at the same price and at the same time and identical as to the number of shares and the life of the contract. A Spread (q.v.), is both a Put and a Call on the same stock and identical as to the expiration of the contract, and like a straddle, the spread is really two separate options and either or both sides may be exercised during the life of the contracts.

These options are dealt in by Privilege Brokers (q.v.), who in New York have organized the Put and Call Brokers and Dealers Association, Inc. Put and call contracts sold by members of the Put and Call Brokers and Dealers Association, Inc. carry a guarantee by a member firm of the New York Stock Exchange that the contract will be fulfilled and such endorsement adds to the strength of the contract. Members of the New York Stock Exchange are not permitted to deal in options or privileges on the floor of the Exchange.

Puts and Calls may be purchased for thirty, sixty and ninety days or longer duration, as agreed to by both parties to the contract. They can be purchased at the market price of the stock for an agreed premium at the time of sale between the buyer and the seller or they can be purchased at a price away from the market fixed by negotiation between the buyer and seller.

The insurance function of Put options and Call options is the most important feature of the use of such privileges. Persons who are in the stock market on either the long or short side can use options as a means of protection. The holder of stock who buys a Put or the short seller who buys a Call for protection thereafter knows the exact extent of his risk, irrespective of market fluctuations. Thus, the owner of stock when he purchases a Put knows that if the market price of the stock which he owns moves downward he can, during the life of his Put option, sell stock at the price specified in his Put contract by exercising such Put contract on or before the time of expiration. Conversely, the short seller of stock also knows that if the market advances far beyond his expectation, he can, during the life of his Call option contract, demand delivery or purchase of stock at the price specified in his privilege or option contract.

Puts or Calls need not necessarily be purchased at the time a stock is bought or sold. Individuals who have a substantial profit on their purchases or short sales, which they do not wish to take, because of a further expected rise or decline, but which they nevertheless wish to insure, can do so by purchasing Puts or Calls which serve the purpose of protecting profits.

Illustrating the use of privileges as compared with Stop Loss Order (q.v.), if A and B each buy 100 shares of XYZ at 50; and A buys a Put contract at 48 1/2, but B does not buy a Put contract, but enters a Stop Loss order at 48 1/2: If stock XYZ declines to 47, B is stopped out at or near 48 1/2, since a sale at 481/2 or lower causes his Stop Loss order to become a Market order, and his broker must sell his stock at the best possible price then obtainable. A, who is protected by his Put option, knows that he can always sell during the life of his contract his 100 shares of XYZ at 48 1/2. If stock XYZ rallies to 53, A can sell his stock at a profit because his Put contract enables him to hold his stock until the expiration of the contract, whereas B, whose Stop Loss order became a Market order and was executed, does not benefit from the upturn in market price to 53 subsequently.

If A buys 100 shares of XYZ at 50 and carries it for a period of three months or longer so that he has a substantial profit on it, he can insure his profit by buying a Put at the market for three months (for about $400). If his profit should be 15 points ($1,500), buying a Put would guarantee him a profit of $1,500 less the $400 paid for the Put. If the stock should continue to advance and at the end of six months the stock is selling at 75, he can then sell his stock, thus establishing a $2,500 long term profit, and abandon the Put, thus making the $400 paid for it a short term loss. If the stock did not continue to advance, but reacted to 55, he would exercise his Put at original Put price at 65, thereby establishing a long term profit of $1,100.

There is no tax on Put contracts. Federal and State taxes are required by law to be affixed to Call contracts and must be paid by the buyer of the Call contract. Maximum Federal and State taxes are $10 per 100 shares. All dividends and bonuses on shares which sell "ex" during the life of the option go with the stock. Thus the holder of a Put which sells "ex" must pay to the endorser such dividend or bonus only if he Puts the stock, and the holder of a Call receives such dividends and bonuses only if he Calls the stock. In the matter of rights, the Put and Call Brokers and Dealers Associations, Inc. have ruled that the opening sale of the rights when stock sells ex-rights on the Exchange is automatically the agreed price between the owner of and the seller of the option, and this price is the settlement price when either a Put or Call contract is exercised.

New York Stock Exchange Bulletin M. F. No. 31, dated January 24, 1946, contains the following provisions for member firms in regard to Put and Call contracts:

"Whenever a creditor endorses or guarantees a 'Put' or 'Call' for a customer, the creditor must obtain in the customer's general account the margin customarily required by him on such endorsement or guarantee. A customer owning a 'Call' may sell the stock 'short' in a

general account and later cover the 'short' position by exercising the 'Call.' Such a combination of transactions effected on the same day will not result in an increase of the adjusted debit balance over the maximum loan value of the securities in the account and, therefore, will not require the deposit of margin in the account. A customer owning a 'Put' may instruct his broker to exercise the 'Put' which will create a 'short' position in the account and later in the day cover the 'short' position by a purchase of the stock. Such a combination of transactions effected on the same day will not result in an increase in the adjusted debit balance over the maximum loan value of the securities in the account and therefore will not require the deposit of margin in the account. When a 'Put' or a 'Call' is exercised in a general account resulting in a profit, such profit may not be withdrawn if the account is 'restricted' after the withdrawal."

PUT OF MORE

See Call of More, Put.

PUTS AND CALLS

See Put, Call.

PYRAMIDING

The use of paper profits as a basis for additional margin, thus permitting further purchases. The term is also applied to the use of collateral,—real estate, stocks, bonds, etc.,—the value of which is temporarily inflated, due to a boom, as a basis for buying more property for speculative purposes. Pyramiding is dangerous practice and is to be condemned.

PYROTECHNICS

An expression used in speculative circles to denote the rapid moving of the price of a stock up or down over a wide range, as a result of manipulation. The expression "gyrations" is sometimes used to indicate the same phenomenon.

QUANTITY THEORY OF MONEY

The theory that prices (and, therefore, the value of money) vary, other things being equal, with the quantity of money in circulation. As used in this connection, money includes not only gold, but all forms of metallic and paper currency, credit instruments, bank deposits, etc. The quantity theory of money has its basis in the "Equation of Exchange" developed by economists to express the derivation of the price level, which is as follows: $P = \frac{MV + M^1V^1}{T}$ in which P represents the price level; V and V^1, the velocity or turnover of money and bank deposits subject to check; M, the volume of money (specie and paper currency); M^1, bank deposits subject to check; and T, total goods and services sold.

The logic for the theory is found in the general economic principle, that the price of a given commodity depends upon its supply and demand. Since money is a commodity, its value rises and falls in accordance with its supply or quantity. If the quantity of money increases, its value decreases, i. e., prices rise, though not necessarily, in proportion. Likewise, if the quantity of money decreases, its value increases, i. e., prices fall. An increase in money or deposit currency based on gold without a corresponding increase in goods would tend to make money less valuable in terms of goods, and therefore, prices would go up. In other words, as the number of currency units plus credit units rises or falls relative to the volume of goods to be exchanged (or more accurately, to the volume of exchanging or turnover of goods), prices must rise or fall. Thus, prices are the resultant of dividing the total volume of business transactions by the total amount of money available to perform them.

Applied over the long-term, the quantity theory has statistical support. Protagonists of this theory contend that the rise of prices in this country since 1850, and especially since 1896, is to be explained chiefly by the increased production of gold in the world since 1850, and the expansion of credit which has been based upon this increased gold supply. Since gold is a commodity which is not subject to decay or destruction, the total stock increases year by year, and thus adds to the monetary basis for increased supply of money. So long as gold production is maintained, therefore, the world's monetary gold stock will be augmented, and prices will eventually climb. The effects on the price level of increasing the quantity of paper money without gold support are too well known to require further emphasis.

Some economists, while conceding the relation between the quantity of money and the general price level as stated above, maintain that prices rise, not because of an increase in the supply of money, but rather because of an increased demand for goods. Such increased demand compels higher prices, and the supply of money and deposit currency is automatically increased (especially whereever elastic currency is available) in order to perform the added money work made necessary by the augmented volume of trade and higher unit prices. The monetary history of the United States during and after World War I is cited as proof of this contention. This apparent contradiction may be reconciled by stating that the quantity theory of money operates over the long-term, whereas short term or cyclical price changes are not to be explained in the same way, but rather in terms of supply and demand, i. e., short-term market conditions. (See Gold Production, Money.)

QUARANTINE

(1) In navigation law, the regulation itself or the period of time during which a vessel is detained in the harbor or treatment station without unloading or discharging passengers or permitting the crew to go ashore while segregation and treatment for infectious disease proceeds. Every ship clearing a foreign port for a port in the United States is required under U. S. Navigation Laws to obtain from the consular officer of the United States thereat, a bill or certificate of health for the vessel, covering its cargo, crew and passengers.

(2) In real estate law, the common law right of a widow to continue living in her deceased husband's residence for a period of forty days following his death.

QUARTER

This term has two meanings:

(1) The United States silver 25 cent piece. It contains 86.805 grains of pure silver and 9.645 grains of copper alloy, or total weight of 96.45 grains, exactly one-half that of the half-dollar piece. Under the Joint Resolution of Congress of June 5, 1933, all coins and currencies of the United States heretofore or hereafter coined or issued shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues. (See Token Money.)

(2) A unit of measure used in English markets, chiefly in connection with grains. A quarter is 8 bushels.

QUARTER DAYS

The days marking the beginning of each quarter of the calendar year, January 1, April 1, July 1 and October 1,—being the most usual dividend and interest payment dates. In law, quarter-days are those days on which rent, debt instalments, etc. payable quarterly are by law or custom payable.

Most bond interest is paid semi-annually, on January 1, and July 1. The February 1, May 1, August 1 and November 1, quarterly payment dates for stocks have also increased in popularity with corporations and dividend disbursing agents as a means of spreading the load. (See Quarterly Disbursements.)

QUARTER-EAGLE

A former United States gold coin with a denomination of $2.50. It is no longer coined. (See Gold Coins.)

QUARTERLY DISBURSEMENTS

Dividends on stocks, and in rarer cases, interest on

bonds, usually are paid quarterly. The most popular quarterly dates are the calendar quarter-days, January 1, April 1, July 1, and October 1, or "JAJO", the first letters of the quarter-months involved. The next most popular quarterly dates are February 1, May 1, August 1, and November 1, or "FMAN".

Bond interest is usually paid semi-annually, on January 1 and July 1. Income bond interest is customarily paid annually, usually on April 1 or May 1, if earned and declared by directors out of earnings for the preceding calendar year. Bonds which carry a "mixed" rate--the interest rate being partly in fixed interest and partly in contingent interest dependent upon earnings and declaration by directors---usually provide for regular semi-annual payment of the fixed portion of the rate, and for annual payment of the contingent portion, usually on April 1 or May 1, out of earnings for the preceding calendar year.

Corporations which do their own paying of interest and dividends on bonds and stocks, or appoint fiscal agents to distribute interest and dividends, are torn between the desire to place their securities on an investment basis by affording investors periodic disbursements during the year, and the cost-minded objective of keeping down the cost of such disbursements by having fewer disbursement dates. A basic advantage of investing in Investment Company shares is the function of investment companies in collecting interest and dividends paid by corporations on varying disbursement dates, and in turn paying out their own dividends to shareholders based on dividend and interest income on uniform dates, usually quarterly or semi-annually.

In former years, when money rates were sensitive to changes in Excess Reserves (q.v.) of banks, the volume of interest and dividend disbursements, particularly on the heaviest dates, January 1 and July 1, like the volume of income tax payments on income tax dates, used to affect money rates temporarily because of the money "pinch" caused until the payments flowed back to the banks.

QUASI-MUNICIPAL BONDS

See Semi-Municipal Bonds.

QUETZAL

The international monetary unit of Guatemala, which contains the same number of grams of fine gold per unit--0.888671--and has the same par value as the United States dollar- (See Foreign Moneys--Tables 1 and 2.)

QUICK ASSETS

Assets which, in the ordinary course of business, will be converted into cash; or which, in case of emergency, can be quickly realized upon without appreciable sacrifice. (See Current Assets.)

QUINTAL

A metric measure of weight, consisting of 100 kilograms, and equivalent to 220.46 pounds.

See under Metric System.

QUIT-CLAIM DEED

A type of deed which recites that by way of release, the grantor releases to the grantee any and all title or interest which the grantor has in the described property, but containing no warranty or covenants of title

See Deed.

QUORUM

The Comptroller of the Currency requires that the by-laws of all National banks be in conformity with their own articles of association and the National Bank Act. The definition of what constitutes a quorum for the board of directors must be stated in the by-laws. The specimen by-laws which are furnished by the Comptroller of the Currency on request, provide that a majority of directors is required to constitute a quorum and that no business can be transacted without a quorum. It is accordingly the custom among all banks to provide that a majority of the board of directors be present in order to constitute a quorum for the transaction of business. (See Directors.)

QUOTA

(1) In immigration restrictions, the allowable immigration annually for specified nationalities under the Immigration Act of 1924 (see Population).

(2) Under the Sugar Act, imports of sugar into the United States from particular countries are subject to quotas (see Sugar).

QUOTATION TICKER

An instrument—in reality an electrical telegraphic typewriter which can be operated at a great distance—for recording quotations of bonds, stocks, foreign exchange, grain, cotton or other commodities. The instrument, which is the most important item of equipment in every broker's office, prints quotations on a narrow paper ribbon which unwinds from a roll, and is familiarly known as tape. Each important exchange has its own ticker service. (See Ticker.)

Ticker service is not confined to members of the respective exchanges. The service may be purchased by outsiders as well. The New York Stock Exchange owns and manages the New York Quotation Company, which reports quotations to member brokers in the Wall Street district, through the instrumentality of the ticker. The Gold & Stock Telegraph Company, a subsidiary of the Western Union Telegraph Company, receives quotations from the New York Stock Exchange and transmits them by means of its tickers throughout the United States, and Canada, to anybody who may subscribe for the service. An annual rental is paid to the exchange for this concession. (See Quotations.)

QUOTATIONS

Prices at which securities, commodities and other property for which there is a large and ready market are being currently sold, or prices at which they are being currently offered for sale, or which are being bid or offered.

Quotations on principal commodities and securities are of incalcuable importance to the business world, as a means of evaluating collateral and portfolios, inventories, purchases and sales. Speaking of the importance of security quotations, the House of Representatives Committee, which investigated the New York Stock Exchange said:

> "Quotations on its floor determine the current value of all securities there traded in, which means the securities of all the greatest corporations in the coun-

try. Such quotations are adopted by the Courts and Comptroller of the Currency as measures of value, and upon them banks base the amount to be lent on a given security.''

The New York Stock Exchange makes available for publication all quotations, i. e., actual selling prices, and bid and asked quotations at the close of each day's market but does not guarantee them. In fact, no official list of stock exchange quotations is kept; otherwise, the officials of the exchange might find themselves in endless controversies over prices and stock transactions. Complete non-official quotation sheets, giving both stock and bond prices, are published daily by a private concern.

In 1928, the New York Stock Exchange introduced a quotation department to supply bid and asked quotations by telephone to members during the trading session. The quotation department has grown into an important service, with a large permanent staff of operators and pages, automatic board of its own, and building space assigned. A code system and operating procedure have been developed for use in requesting and furnishing such quotations which expedites the service.

RAID

An expression which denotes the free selling of stocks by professional operators who, because the market is temporarily over-bought or because of unfavorable news or knowledge that the market is honeycombed with stop orders not far below current quotations, take advantage of the situation to depress prices in order to enable them to cover at a profit. The term is usually used in connection with the term bear. Market reviewers sometimes report: "The bears raided the market."

RAILROAD AID BONDS

Bonds issued by counties and municipalities for the purpose of rendering financial assistance to projected railroad companies,—especially in the Southern and Middle Western states during the reconstruction period following the Civil War. Some of the railroads were projected by dishonest promoters and in certain instances, were never built, or if started, abandoned and the proceeds of the bonds dissipated or pocketed in whole or in part. Where the railroads were never completed, many of the issues were repudiated, with the result that this class of bonds was very distinctly in public disfavor.

The legality of bond issues for the purpose of aiding private enterprises is questionable and reverts back to one of the fundamental tests for a safe municipal bond—the legality of the purpose and authority for issue. Generally, railroad aid bonds were investments to be avoided.

RAILROAD BONDS

Bonds of railroad corporations. They may be classified as follows:

1. As to Class of Lien
   a. First mortgage
   b. Second mortgage
   c. General mortgage
   d. Debenture
   e. Adjustment
   f. Income
1. As to Security
   a. Mortgage issues
   b. Equipment trust issues
   c. Collateral trust issues
   d. Debentures (unsecured)
3. As to Purpose
   a. Divisional bonds
   b. Extension bonds
   c. Equipment bonds
   d. Terminal bonds
   e. Consolidated mortgage bonds
   f. Refunding bonds.

Railroad bonds of long-established railroad companies are among the most seasoned of corporation bonds, since they have been on the market longer than many other issues, and the value of underlying properties and earning power of the various roads are matters of historical record, and can be readily ascertained. As a class, therefore, railroad bonds customarily enjoyed in the past a higher investment regard than public utility or industrial bonds, but during the 1929-1932 depression, the large number of railroads which went into receivership led to a decline in investment regard for railroad bonds which has since been revived under trimmed capitalizations and adequate rates authorized by the Interstate Commerce Commission.

The greatest drawback to railroad bonds was the narrow margin of net earnings that often prevailed over bond interest charges. As the result of many reorganizations and voluntary retirement of debt, however, American railroads now have a relatively low percentage of bonded debt to total capitalization. As of the close of 1945, the ratio between bonds and stocks of American railroads as a whole was approximately 2 1/4:1. In the decade ended 1945, American railroads reduced funded debt by $2.6 billion, or 23%. (See Adjustment Bonds, Collateral Trust Bonds, Consolidated Mortgage Bonds, Debenture Bonds, Divisional Bonds, Equipment Bonds, Extension Bonds, First Mortgage Bonds, General Mortgage Bonds, Income Bonds, Refunding Bonds, Second Mortgage Bonds, Terminal Bonds.)

RAILROAD CONTINGENT FUND

See Contingent Fund, Recapture Clause.

RAILROAD EARNINGS

The decade 1930-1939 witnessed the worst period of earnings for American railroads in their modern history. A combination of depression influences, inadequate rates, increased costs, and increased competition from competing forms of transportation combined to result in this poor pre-World War II record. The first phase of this period, the depression cycle 1930-1932, saw a 40% shrinkage in operating revenues and a 50% drop compared with 1929. In 1933, operating revenues failed to recover over those for 1932 and the railroads remained in the "red" on net income. The trouble continued in 1934, when despite a gain of over $176 million in operating revenues, net deficit increased. Improvement finally began in 1935 and continued in 1936, but retrogression returned in 1937, and in 1938 the railroads really lost ground. A decline of over $600 million in operating revenues resulted in a net deficit of $122.9 million, the worst showing on net since the 1932 net deficit of $139.2 million.

During this decade, railroad credit touched a low point, with 110 railroads, operating 80,957 miles and with total capitalization of $5,718 million, being placed in receivership or bankruptcy. Worst year in this respect was 1935, when a total of 16 railroads, operating 29,018 miles and with total capitalization of $2,183 million, were placed in receivership or bankruptcy.

Beginning in 1939, the railroads began to recover, and by 1940, gross revenues increased $731.1 million (20%) over the 1938 total, and net income returned to the best level since 1930. Increase in tonnage to past the billion ton level, as compared with 772 million tons in 1938 freight, and rate relief on March 28, 1938, when Ex Parte 123 increases added an estimated $150 million to revenues, were responsible for this pre-World War II improvement.

If it had not been for the substantial 1931-1945 revenues and earnings during World War II, however, it is doubtful that the railroads would be reporting the materially strengthened financial and operating situation of today. War revenues enabled many railroads, especial-

ly those in the hands of receivers or trustees, to increase maintenance outlays and thus improve the physical condition of properties, and in addition, funded debt and fixed charges were reduced, and still net working capital position emerged at a materially higher level. For the period 1940-1945, funded debt was reduced a total of $2,195 million (about 20%), fixed charges were reduced by $95.8 million or 15%, provision for maintenance of way and equipment rose from 30.6% of gross operating revenues in 1940 to 40% in 1945, and net working capital rose from $536.5 million at the close of 1940 to $1,909.9 million at the close of 1945.

Thanks to substantial rate relief since the close of World War II granted by the Interstate Commerce Commission, the railroads have been able to keep operating revenues and earnings at a high level and ahead of the general inflationary rise in costs. Since the close of World War II (to 1948), the railroads have been granted total freight rate increases of 43%. Aided by this rate relief and the rise in freight tonnage in 1947, railroads in 1947 were able to report in many cases the best peacetime earnings in history. However, should tonnage turn downward, maintenance of earnings in the face of continued rise in costs would depend upon further rate relief. Although increases in passenger fares have been also granted to the railroads, passenger business for most railroads is unprofitable even on the basis of the ICC formula for allocation of expenses, and passenger operating revenues in 1947 averaged only 11% of total operating revenues. Basis of railroad earning power, therefore, is freight business.

Tables I and II summarize the fluctuation in recent decades of revenues and expenses, and of coverage of fixed charges and dividends of Class I railroads.

RAILROAD EQUIPMENT BONDS

See Equipment Trust.

RAILROAD INDUSTRY

One of the oldest basic industries in the United States, the railroad industry in America has undergone the full cycle of promotion and development, growth, and maturity since the first railroad in America, the Baltimore & Ohio, was opened in 1829.

Until 1850, the railroads were in a trial period of promotion and experimentation, and the canals were dominant in inland transportation until about the '70s. Beginning in 1850, however, the railroads began to expand aggressively, aided by large land grants from the

Table I.

Condensed Income Account, Class I Railways

(in millions)

	1947	1946	1945	1944	1943	1942	1941	1940	1929

*In millions. d--Deficit.

Federal Government and the States and subsidies and in 1869, the first transcontinental line was completed, in the decade beginning 1880 total mileage was more than doubled, and in 1887 the Federal Government stepped in for the first time with regulation through the Interstate Commerce Act. The development period may be said to have culminated by 1890, when total mileage owned reached a total of 163,597 miles, with 1,013 steam railroads operating, and with $8 billion investment in road and equipment

In the period 1890-1920, the railroad industry may be said to have reached the zenith in growth. During this period, the number of steam railroads reached a high of 1,564 (1907), and mileage owned reached a high of 254,251 miles (1916). Investment in road and equipment jumped from $8 billion in 1890 to $19.8 billion in 1920, and mileage owned, from 163,597 miles to 252,845 miles. Total operating revenues increased from $1,052 million in 1890 to $6,310 million in 1920.

Beginning in 1920, however, a period of maturity set in which witnessed declines in number of railroads, mileage, and gross revenues. In the two decades 1920-1940, the number of railroads was reduced from 1,085 to 574; mileage owned, from 252,845 miles to 233,670 miles; and gross revenues, from $6,310 million to $4,355 million, gross revenues reaching a low point of $3,138 million in 1933. In the period 1930-1939, a total of 119 railroads, with total mileage of 80,957 miles, or about one-third of all owned mileage, went into receivership or trusteeship. Rate of return upon net property investment declined from 5.35% in 1926 to 1.61% in 1938. During this period, the loss of passenger business and short haul traffic to the automobile and the truck, competition from oil and gasoline pipe lines, air transport, and water carriers, inadequate rates, and the adverse effect of leverage in railroad capitalizations and operations during the decline in gross revenues, all combined to make the railroads a "sick" industry.

Fortunately for the railroad industry, the railroads remained under private operation during World War II, and with competing forms of transportation curtailed by War conditions, a resurgence of railroad prosperity has enabled the railroads to regain their best financial and operating position since that enjoyed before the Federal Government took them over in World War I. During World War II, the railroads took advantage of their refound prosperity by reducing debt and fixed charges, increasing maintenance and capital outlays, strengthening working capital, and emerging from receivership or reorganization with scaled down capitalizations and charges. Since 1940, funded debt has been reduced from $10.6 billion to $8.5 billion, and fixed charges, from $619 million to $435 million; capital expenditures increased from $429 million in 1940 to $865 million in 1947, maintenance increased from $497 million for roadway and structures and $819 million for equipment in 1940 to $1.2 billion for roadway and structures and $1.6 billion for equipment in 1947; and net working capital, despite the large capital expenditures and retirement of debt, has increased from $536.5 million at the close of 1940 to $1.6 billion at the close of 1947.

In the post-World War II years, substantial rate relief and a more sympathetic attitude on the part of the Interstate Commerce Commission towards earnings

problems have been of material assistance to the railroads in retaining earnings gains. For the period 1939-1948, railroad costs have increased about 75%, but substantial rate relief in the form of a 40.8% total rise in freight rates, the "bread and butter" of railroad earnings, and fare increases which have reduced the burden of unprofitable passenger business on operations, have kept railroad earnings from fading in the face of the general inflationary rise in costs. At the close of 1947, the railroad industry operated a total of 226,000 miles of line, with net property investment of $22.9 billion on which rate of return was 3.41% in 1947, and there were 513 steam railroads operating, including 134 Class I roads and 38 Class I switching and terminal companies. At the close of 1947, only 17 Class I and 35 other railroads were in receivership or trusteeship, with total mileage of only 24,200 miles. At the year-end of 1947, there were 6,611 electric, gasoline and Diesel-electric locomotives in services, compared with 5,248 in 1946 and 4,636 in 1945, the rise of the Diesel being one of the chief hopes for more efficient railroad operation in the future.

RAILROAD LEGISLATION

The history of railroads in the United States is largely a matter of the conflict between the railroads and the Government, the former attempting to effect some means of co-operation in order to avoid unrestrained competition; the latter, on the other hand, attempting to break up forms of co-operation, to compel competition, and at the same time to control rates. As the railroad industry has matured and has encountered problems of over-capitalization, inadequate rates, and competition from competing modes of transportation, previously punitive legislation has given way since 1933 to measures designed to facilitate railroad reorganization and debt adjustment, adequate rates, and equalized competitive conditions. On page 569 will be found an historical chart showing the evolutions of forms of railroad co-operation, control and legislation since 1830. For bankruptcy legislation, see Bankruptcy, National Bankruptcy Act.

RAILROAD STATISTICS

Principal source of statistics on American railroads is the Interstate Commerce Commission. Among the regular monthly publications by the Commission are:

Freight and Passenger Operating Statistics of Class I Steam Railways.

Graphical Supplement to Monthly Reports.

Operating Revenues and Operating Expenses, Class I Steam Railways.

Revenue Traffic Statistics of Class I Steam Railways.

Selected Income and Balance Sheet Items of Class I Steam Railways.

Wage Statistics, Class I Steam Railways.

Fuel for Locomotives, Class I Steam Railways.

Operating Revenues and Operating Expenses of Large Steam Roads--Selected Items for Roads with Annual Operating Revenues above $25,000,000.

Operating Statistics of Large Steam Roads--Selected Items for Roads with Annual Operating Revenues above $25,000,000.

Annual publications of the Commission include:

Annual Report of the Interstate Commerce Commission.

Operating Revenues and Operating Expenses by Class of Service, Class I Steam Railways in the United States.

Comparative Statement of Operating Averages, Class I Steam Railways in the United States.

Statistics of Railways in the United States.

Wage Statistics.

Freight Commodity Statistics, Class I Steam Railways in the United States.

Other primary sources of statistics on railroads are:

Association of American Railroads.

Eastern Railroad Presidents Conference.

Railway Age (Weekly).

Traffic World (monthly).

Mundy's "Earning Power of Railroads".

The statistical services (see Manuals) also provide factual and interpretative services on railroads and their securities. Among these are Moody's "Steam Railroads" (annual manual) together with semi-weekly news supplements; and Standard-Poor's Railroad Securities service.

RAILROAD STOCKS

Equities of railroads, both preferred and common stocks. Guaranteed Stocks (q.v.) of railroads are a separate classification.

Because of the earnings leverage, provided by funded debt in railroad capitalizations and by the high proportion of relatively fixed expenses in operations, railroad equities are ordinarily subject to wide variation in earnings. Consequently, relatively few railroad equities have achieved long term investment status. Among the most highly regarded railroad common stocks are: Atchison, Topeka & Santa Fe; Atlantic Coast Line; Chesapeake & Ohio; Louisville & Nashville; Norfolk & Western; Pennsylvania; Southern Pacific; and Union Pacific. Among railroad preferred stocks, highly regarded issues are: Atchison, Topeka & Santa Fe 5% Preferred, Chesapeake & Ohio 3 1/2% Preferred, Norfolk & Western $1 Adjustment Preferred, and Union Pacific $2 Preferred.

Dividend-paying railroad preferred stocks in which there is widespread public interest or ownership include:

Alabama Great Southern
6% Participating Preferred ($50 par); non-callable.
Atchison, Topeka & Santa Fe
5% Non-Cumulative Preferred ($100 par); non-callable.

EVOLUTION OF RAILROAD LEGISLATION AND CONTROL

Period	Device Used by Roads to Secure Co-operation and Prevent unrestrained Competition	Form of Control	Federal R. R. Legislation.
1830-1850		Unrestrained Competition	
1850-1860	Agreements to maintain rates.		
1860-1870	Pooling—Traffic.	Control by State Legislation.	
1870-1887	Pooling—Money.	Judicial Control (State and Federal)	
1887-1898	Joint Traffic Associations.	Commission with Advisory powers. (No power to fix rates.)	Interstate Commerce Act (1887); Sherman Anti-Trust Law (1890).
1898-1904	Stock Control—formation of securities companies.	Interstate Commerce Commission in 1906 vested with mandatory powers (Power to fix rates subject to determination of reasonableness by Courts).	Elkins Amendment (1903) Hepburn Amendment (1906).
1904-1918	Consolidation (a) By purchase (b) By lease (c) By interlocking directorates.	ICC given power to fix maximum rates.	Mann - Elkins Amendment (1910).
1918-1920	Governmental control; regional co-operation.	Governmental Administration (Complete Powers.)	Federal Control Act (1918).
1920-	Permissive consolidation pursuant to ICC regional plans; pooling permitted subject to approval.	Commission Control with Plenary Powers (full rate-fixing Powers); recapture clause; ICC given authority over security issues.	Transportation Act (1920).
1933	Federal Co-ordinator of Transportation.	Recapture clause repealed; new rate-making rule of lowest cost consistent with adequate and efficient service.	Emergency Transportation Act (1933).
1940	Equalized competition among competing modes of transportation through fair and impartial regulation.	Repeal of requirement that consolidations follow official ICC plans; water carriers placed under ICC; widened aid from RFC.	Transportation Act of 1940.
1948	Agreements between carriers, subject to ICC approval.	Exemption from anti-trust laws.	Bulwinkle Bill (became law in 1948).

Union Pacific
$2 Non-Cumulative Preferred ($50 par); Non-callable.
Virginian
6% Cumulative Preferred ($25 par); non-callable.
Wabash
$4.50 Non-Cumulative Preferred ($100 par); callable at 100.
Western Maryland
$7 Cumulative First Preferred ($100 par); non-callable. Dividend arrears, $140 per share as of July 1, 1948.
Chesapeake & Ohio
3 1/2% Cumulative Convertible Preferred ($100 par); callable at 105.

Chicago & Eastern Illinois
$2 Class "A" ($40 par); cumulative if earned; callable at 40.
Chicago, Milwaukee, St. Paul & Pacific
5% Series "A" Non-Cumulative Preferred ($100 par); callable at 100. Currently outstanding in the form of Voting Trust Certificates.
Chicago & Northwestern
5% Cumulative Convertible Series "A" Preferred ($100 par); cumulative to extent earned; callable at 105.

Chicago, Rock Island & Pacific
5% Non-Cumulative Convertible Preferred ($100 par); cumulative if earned; callable at 105.

Denver & Rio Grande Western
5% Cumulative Preferred ($100 par); cumulative if earned; callable at 100.
Erie
5% Cumulative Series "A" Preferred ($100 par); cumulative up to $15 per share); callable at 100.
Gulf, Mobile & Ohio
$5 Preferred (no par); cumulative to extent earned); callable at 100.
Illinois Central
$6 non-Cumulative Preferred ($100 par); callable at 115.
Kansas City Southern
$4 Non-Cumulative Preferred ($100 par); non-callable.
New York, Chicago & St. Louis
$6 Cumulative Preferred ($100 par); callable at 110. Dividend arrears, $81 per share as of October 1, 1948.
Norfolk & Western
$1 Non-Cumulative Adjustment Preferred ($25 par); non-callable.
Reading
4% Non-Cumulative First Preferred ($50 par); callable at 50.
4% Non-Cumulative Second Preferred ($50 par); callable at 50.
St. Louis-San Francisco
$5 Cumulative Series "A" Preferred ($100 par); cumulative if earned; callable at 100. Currently outstanding in the form of Voting Trust Certificates.
St. Louis Southwestern
5% Non-Cumulative Preferred ($100 par); non-callable.
Seaboard Air Line
$5 Non-Cumulative Convertible Preferred ($100 par); callable at 100.
Southern Railway
$5 Non-Cumulative Preferred ($100 par); callable at 100.
Western Pacific
$5 Cumulative Participating Series "A" Preferred ($100 par); cumulative to the extent earned; callable at 100.

Railroad preferred stocks which are currently non-dividend paying include:

Baltimore & Ohio
$4 Non-Cumulative Preferred ($100 par); non-callable.
Boston & Maine
7% Cumulative Prior Preference ($100 par).
5% Cumulative First Preferred Series "A" ($100 par).
8% Cumulative First Preferred Series "B" ($100 par).
7% Cumulative First Preferred Series "C" ($100 par).
10% Cumulative First Preferred Series "D" ($100 par).
4 1/2% Cumulative First Preferred Series "E" ($100 par).
6% Non-Cumulative Preferred ($100 par).
In August, 1948, Adjustment Plan under the Mahaffie Act was filed, providing for issuance of new $100 par Common in varying ratios for all of the above preferred stocks.
Chicago Great Western
5% Cumulative Preferred ($50 par); callable at 50.
Chicago, Indianapolis & Louisville
5% Participating Class "A" ($25 par); callable at 25; cumulative to extent earned.
Colorado & Southern
4% Non-Cumulative First Preferred ($100 par); callable at 100.
4% Non-Cumulative Second Preferred ($100 par); callable at 100.
Maine Central
6% Cumulative Prior Preference ($100 par).
Missouri-Kansas-Texas
7% Cumulative Preferred Series "A" ($100 par); callable at 110. Adjustment Plan under the Mahaffie Act was in process of formulation in mid-year 1948 to settle arrears of interest on the road's Adjustment 5s, 1967 and arrears of dividends on this preferred stock.
Missouri Pacific
$5 Cumulative Preferred (in receivership).
New York, New Haven & Hartford
$5 Series "A" Cumulative Convertible Preferred ($100 par); cumulative if earned; callable at 100.
Western Maryland
$4 Non-Cumulative Second Preferred ($100 par); callable at 100.

Dividend-paying common stocks include:

New York, Ontario & Western
Pittsvurgh & West Virginia
St. Louis-San Francisco
Seaboard Air Line
Western Maryland

RAILROAD TRANSPORTATION (EMERGENCY) ACT OF 1933

An act, approved June 16, 1933, which, among other things:

(1) Established a system of railroad control headed by a Federal co-ordinator of transportation to work in co-operation with the roads and with labor to effect economies, but not at the expense of wage-earners;

(2) Provided that appeals from the decisions of this co-ordinator, appointed by the President with Senate consent, might be taken to the Interstate Commerce Commission, his orders, unless revoked by the commission, to have the force and effect of orders of the commission;

(3) Authorized the creation of three co-ordinating committees to operate with the co-ordinator, one each for the Eastern, Southern and Western groups of roads, each committee containing seven members, five representing the major roads, one representing steam roads with operating revenues under $1,000,000 in 1932 and another representing electrical systems not connected with steam railways. The act provided that the railroads were to be assessed $1.50 a mile to cover the expenses of this set-up;

(4) Required the co-ordinator and the committees to encourage, promote and require action by the carriers to avoid waste and preventable expense; to promote financial reorganization of the carriers, with due regard to legal rights, to reduce fixed charges to the extent required by public interest and improve carrier credit, and also to provide for the immediate study of other means of improving conditions surrounding transportation in all its forms; and

(5) Set aside the anti-trust laws whenever necessary to carry out the co-ordinator's orders.

RAILS

An expression used in stock market parlance and reviews to designate railroad stocks as a class, as distinguished from the "industrials," meaning industrial stocks.

(See Railroad Stocks.)

RAISED BILLS

Paper money the denominations of which have been fraudulently raised. Raised bills are much more frequent and persistent in their recurrence than counterfeits. There are two methods of raising the denominations on paper money. One is to cut off the figures on the corners of a large denomination and paste them over the figures on the corners of a smaller denomination. Another method is to bleach out by acid the figures on small denominations and skillfully insert higher ones with waterproof ink. Raised bills are much more readily detected than counterfeits. By knowledge of the engraved portraits which the genuine bills carry, it is a simple matter to distinguish a raised bill. Each denomination, of the various kinds of paper money carries a given engraved portrait. For instance, the $1 United States note carries the portrait of Washington; the $5 Federal Reserve note carries the portrait of Lincoln, etc. Paying tellers, receiving tellers, money clerks and other employees handling money should acquaint themselves with the portraits appearing on each denomination of various kinds of paper money. These are given in a chart under Denominational Portraits (q.v.).

RAISED CHECK

See Alteration, Check, Check Protecting Devices.

RALLY

An expression used in stock market parlance and literature to indicate a rise in prices following a sudden decline.

RATE

See Bank Rate, Foreign Exchange, Money Market, Rate of Exchange, Rediscount Rate.

RATE BASE

In public utility regulation, the valuation placed upon property in use for the purpose of authorizing schedules of rates allowing a fair rate of return, usually 6%, in the absence of franchise restrictions. Despite State provision for administrative agencies (see Public Service Commission) to regulate such matters, the courts from an early period have entertained appeals on the issue of fairness or reasonableness of rate bases and rate matters.

Until recent years, most State regulatory commissions followed reproduction cost new, less accrued depreciation, in determining rate bases. However, as the result of the Hope Case, in which the U. S. Supreme Court held reasonableness to be the test, State and Federal regulation has been free to adopt prudent investment or original cost as well in determining rate bases. (See Public Utility Industry.)

RATE OF EXCHANGE

The market or commercial price at which a foreign currency is quoted; the price of the money of one country quoted in the money of another. "The rate of exchange is that rate expressed in terms of local currency which bills of exchange drawn on foreign currency payable at a foreign point, command" (L. H. Langston). (See Foreign Exchange.)

RATE OF INTEREST

See Interest, Money Market.

RATING

Grade; classification. A credit rating is a letter or number used by a mercantile or other agency in reports and credit rating books to denote the ability and disposition of various businesses (individual proprietorship, partnership or corporation) to meet their financial obligations.

Ratings are used as a guide to the investment quality of bonds and stocks, based on security of principal and interest (or dividends), earning power, mortgage position, market history, and marketability. (See Bond Ratings, Capital Ratings, Credit, Credit Rating, Grades.)

RATIO

See Credit Barometrics, Current Ratio, Federal Reserve Statement, Mint Ratio, Reserve Ratio.

RATION BANKING

The ration banking program, as announced in the Federal Reserve Bulletin (August, 1947), was terminated effective July 1, 1947. The Ration Banking Plan, as described in the Federal Reserve Bulletin for February, 1943, was developed by the Office of Price Administration with the cooperation of Federal and State bank supervisory authorities, the American Bankers Association, and representative bankers. After having been tested in 33 banking offices in the Albany-Troy-Schenectady area of New York, the Plan was placed in operation on a nation-wide basis in January, 1943. Under ration banking, ration stamps, coupons, certificates, tokens, and other ration evidences taken in by storekeepers, wholesalers, and other sellers of rationed commodities in the course of business from their customers were deposited with the participating banks to the credit of the ration accounts of the depositors. Ration bank accounts were handled in much the same manner as regular bank accounts except that they were kept in units of measure instead of units of value. The ration depositor drew ration checks on his ratio account in favor of his supplier of goods. The general public did not participate in ration banking. In addition to thousands of commercial banks which participated in the Ration Banking Program, states the Federal Reserve Bulletin, the facilities of the Federal Reserve Banks and their 24 branches were used in effecting the clearance of ration checks.

Although now terminated, the Ration Banking Program is noteworthy as evidence of the broadened new business policies of commercial banks in recent years. (See New Business Department.)

RATIO OF CURRENT ASSETS TO CURRENT LIABILITIES

Same as Current Ratio (q. v.).

RATIO OF CURRENT ASSETS TO TOTAL LIABILITIES

One of the tests applied to a financial statement by bank credit men in the appraisal of a credit risk. The purpose of this test is to determine the immediate position of the prospective borrower in case of forced liquidation. Fixed assets cannot be converted into cash in a short time; consequently if the current assets are sufficient to liquidate the entire liabilities, the position is regarded as extremely sound. That is to say, a 1 to 1 ratio would be highly satisfactory. Wherever bonds mature within a short time and no sinking fund or other assets exist with which to redeem the issue, a 1 to 1 ratio between current assets and total liabilities is obviously insufficient, unless it is intended to refund the bonds. Where there are no fixed liabilities, this ratio will be identical with the Current Ratio (q. v.). (See Statement Analysis.)

RATIO OF DEBT TO NET WORTH

One of the tests applied to a financial statement by bank credit men in the appraisal of a credit risk. The purpose of this test is to determine the proportion of the capital used in the business which has been furnished by the owners as compared with that furnished by creditors, i. e., the relation between "share capital" and "loan capital." Each type of business must set its own standard and this ratio should be studied from year to year in order to determine what ratio is normal to it. The idea of normality can also be gained by comparison with conditions among other concerns in the same line of business. If the proportion of total debt to net worth is too high, such over-trading on the equity may expose solvency to danger, because earnings upon borrowed capital may not be sufficient to pay the cost of carrying it.

Generally speaking, total debt should not exceed net worth. A business which has a low ratio of debt to net worth is in a better credit situation than one which has a high ratio. From a comparative standpoint, if the tendency from year to year is toward increasing net worth rather than increasing total debt, the condition may be regarded as favorable; contrariwise, as unfavorable.

(See Statement Analysis.)

RATIO OF FIXED ASSETS TO NET WORTH

One of the tests applied to a financial statement by bank credit men in the appraisal of a credit risk. The purpose of this test is to determine whether the investment in fixed assets has been furnished by the owners of the business. Properly the owners should furnish all the capital required for plant and in addition a considerable portion of the working capital, since it gives them greater power to expand their business and draw upon the credit of banks.

Generally speaking, the lower the ratio of fixed assets to net worth, the better the condition disclosed. (See Statement Analysis.)

RATIO OF MERCHANDISE TO RECEIVABLES

One of the tests applied to a financial statement by bank credit men in the appraisal of a credit risk. This ratio is determined by dividing the value of merchandise by the sum of the accounts and notes receivable. Usually these items constitute the greater part of the current assets, but they are quite dissimilar in nature. Receivables represent claims against others, while merchandise represents possession of physical goods. The value of the former depends upon the credit standing of the names to which goods have been sold and therefore does not represent certain value, since experience shows that losses are bound to occur in converting receivables into cash. Merchandise, however, represents value in hand, since it may be sold for cash as well as for credit. On the other hand, profits have been anticipated in receivables, whereas merchandise is still carried at cost or market (whichever is lower).

While it cannot be absolutely stated that receivables represent a better asset than merchandise, under normal conditions where credits are cautiously extended and where the merchandise is specialized in character and subject to wide market fluctuations, they are ordinarily regarded as superior.

The purpose of this ratio is to determine the relative balance between receivables and merchandise particularly with reference to (a) whether the business is overbuying or overproducing, and (b) whether the accounts are fully collectible. If receivables increase relatively faster than merchandise, it may indicate laxity in collection methods or a too liberal policy, but if merchandise increases relatively faster than receivables, then overbuying or overproducing may be indicated. Generally speaking, a swing toward receivables accompanied by a rising current ratio is a favorable indication. (See Statement Analysis.)

RATIO OF MERCHANDISE TO SALES

Same as Merchandise Turnover (q. v.).

RATIO OF NET PROFITS TO NET WORTH

One of the tests applied to a financial statement by bank credit men in the appraisal of a credit risk. The purpose of this test is to determine the capacity of the business to make sustained profits over a period of time. The rate of profits for a single year is not conclusive nor necessarily significant. The period of review should include both prosperous and depressed times. In applying this test, note should be taken of the following points: (1) whether the rate of net profits is normal for the type of business in question; (2) to what extent profits are due to a rise in inventory values; and (3) whether the trend of the ratio is upward, downward, or stationary. (See Statement Analysis.)

RATIO OF PLANT TO NET WORTH

Same as Ratio of Fixed Assets to Net Worth (q. v.).

RATIO OF RESERVES TO LIABILITIES

See Reserve Ratio.

RATIO OF SALES TO RECEIVABLES

Same as Account Turnover (q. v.)

REACTION

This term is used in a specific and general sense. A reaction in the stock market or of a special stock means a reversal of the price trend which up to the time of the reaction has been upward. A temporary reaction in prices in an advancing market is sometimes said to be normal and healthy. In a general sense, also, reaction means a decline in the volume of business transacted in the country, i. e., a period of depression. (See Business Cycle.)

READILY MARKETABLE STAPLES

As defined by the Board of Governors of the Federal Reserve System in Regulation C, a readily marketable staple is: "An article of commerce, agriculture, or industry of such use as to make it the subject of constant dealings in ready markets with such frequent quotations of price as to make (a) the price easily and definitely ascertainable, and (b) the staple itself easy to realize upon by sale at any time."

According to rulings of the Board of Governors of the Federal Reserve System, while non-perishable commodities are not expressly restricted as eligible staples, banks, as a matter of prudence, should not consider as eligible any staple which is in its nature so perishable as not to be reasonably sure of maintaining its value as security, at least for the life of the draft which is drawn against it.

(See Eligible Paper, Rediscount.)

READJUSTMENT

This term has two meanings:

(1) A term similar in its meaning to reorganization, the chief difference being that in the former, the proceedings are under Court jurisdiction under a receiver or trustee, while a readjustment is made voluntarily on the part of the security holders under company jurisdiction without resort to the courts. The Mahaffie Act of 1948 permits railroads, under Interstate Commerce Commission supervision, to effect readjustment plans upon consent of 75% of each class of security affected, without the necessity of invoking Bankruptcy Act reorganization procedure. (See Recapitalization.)

(2) That phase of a business cycle following a crisis, or panic and emergency liquidation, in which the normal equilibrium between demand and supply is in the process of being restored. It is characterized by a curtailment of production in most lines but in varying degrees, by achieving lower production costs through increased efficiency in labor and management, by lower prices, smaller profits, greater thrift exercised by consuming public, etc. The readjustment period precedes the period of recuperation which leads finally to prosperity. The period of readjustment immediately follows the period of industrial or business depression.

(See Business Cycle.)

REAL ESTATE

The non-legal term for Real Property, and comprising land, buildings and appurtenances thereto. Mortgage companies, real estate brokers, agents and operators generally classify land as rural, farm, and urban (city) property. The latter also includes suburban property. City real estate is further classified as essential and non-essential. Residences, and business property (stores, offices, and factory sites) are essential; theatres, museums, club houses, churches, and other buildings of like character, also outlying vacant land, are non-essential.

Residential property is subdivided into single and multiple family houses (apartment or tenement houses). Business property is subdivided into retail, wholesale, factory, and office buildings. Of business property, buildings occupied by retail stores usually offer the highest class of security. Special purpose properties are those improved for a specialized use. (See Real Property.)

REAL ESTATE BOARD OF NEW YORK

See New York Real Estate Board.

REAL ESTATE BONDS

Bonds secured by mortgages or trust conveyances of real estate. In the investment sense, real estate bonds are a series of bonds issued in convenient denominations with a mortgage on real estate as security. Usually such bonds were issued by a mortgage or investment company, which, in addition to furnishing mortgage security, guaranteed the bonds by indorsement. Mortgage Certificates (q. v.) were a variant of real estate bonds.

The investment quality of real estate bonds depends upon (1) the productivity of the mortgaged real estate; (2) the ratio of bonds issued to the conservative value of the mortgaged property; (3) whether the real estate is adequately insured; (4) provision for amortization of the loan by the mortgagor. and (5) the financial standing of the issuing company. Where real estate bonds are lawfully issued and in conformity with conservative principles of mortgage finance, they are comparable in safety with mortgage loans, but the 1929-1932 depression exposed weaknesses in many real estate bonds traceable chiefly to non-observance of conservative financing practices during the boom of the late '20s.

(See Mortgage Bonds, Mortgage Loans.)

REAL ESTATE LOANS

See Mortgage Loans.

REAL ESTATE MORTGAGE

See Mortgage, Mortgage Bonds, Mortgage Loans.

REAL MONEY

Roughly, metallic money. Money made of a commodity (and in the leading commercial nations, one of the precious metals having value otherwise than in its money function). Money manufactured from a metal having known and recognized commodity (commercial) value, e. g., gold, silver, nickel, copper. Such money is not necessarily standard money, although gold is a standard with most nations. Real money is to be distinguished from paper money, which is representative money (e. g., Federal Reserve Notes or silver certificates), or credit or fiduciary money with or without a specific pledge of assets as security. Real money is also to be distinguished from such money equivalents as checks, drafts, promissory notes, and money orders.

REAL PROPERTY

In law, the term Real Property is technically defined as including land, tenements and hereditaments. "Land" includes the soil or ground and everything growing therein, attached or appurtenant thereto, such as grass, trees, growing crops, fences, buildings, etc. In Anglo-American jurisprudence, ownership of the land extends to the surface, the soil beneath "to the center of the earth", and the air space above (under modern modification of this doctrine, the air space above subject or reducible to user or to a reasonable height). "Tenements" is an inclusive term including land as well as all rights or interests in or pertaining to land. "Hereditaments" is an all-inclusive term embracing everything that may be inherited, tangible or intangible, including family heirlooms. (See Personal Property, Real Estate.)

REAL STOCK

"Long" stock; stock held and deliverable by outright or margin owners, as distinguished from stock which has been sold short.

REALIZATION

The process of converting assets,—securities, receivables, merchandise, or fixed property, etc.,—into cash by sale. It is a variant of the term sale, or selling, whether the sale is in the ordinary course of business, a forced sale, or profit-taking sale.

REALIZATION VALUE

The price at which an asset is actually sold, as distinguished from its book, cost, or inventory value; the prices realized through liquidation.

REALTY

See Real Estate, Real Property.

REBATE

In banking practice, a deduction, drawback, allowance, if a borrower pays interest in advance on a six months' note and then by consent of the lender, pays off the debt one month before maturity. Wherever a note is liquidated before maturity with the lender's consent, the borrower is entitled to receive back interest for one month. This is called a rebate of interest.

Rebates on freight rates were prohibited by the original Interstate Commerce Act of 1887 (see Interstate Commerce Act).

REBATED ACCEPTANCE

The same as Anticipated Acceptance (q. v.).

RECAPITALIZATION

Any voluntary changes in respect to the capitalization of a corporation, effected by the corporation without resort to the jurisdiction of the courts, as in Reorganization (q. v.).

Under the Stock Corporation Law of New York State, a stock corporation may effect changes in capitalization by filing certificate in accordance with Sec. 36 of the Stock Corporation Law outlining the changes in capitalization and including specification that such changes were approved by stockholders at meeting called upon notice pursuant to Sec. 45 of the Stock Corporation Law.

If the certificate classifies or reclassifies outstanding shares of any class, or authorizes shares having preferences which are in any respect superior to the preferences of the outstanding shares of any class having preferences, or provides that shares of any class may be converted into shares of any other class or into shares of any other series of the same class, or alters the terms or conditions of shares of any class which are either convertible or issuable upon conversion, the certificate shall include a statement that the officers subscribing and acknowledging the certificate as required have been authorized to execute and file it by the votes, cast in person or by proxy, of the holders of record of two-thirds of the outstanding shares of each class which will be adversely affected by the proceedings provided for in the certificate and which was entitled to vote at the stockholders' meeting called for the purpose.

Dissenting stockholders are entitled to the appraised value of their stock upon timely notice and demand therefor. Sec. 38 of the Stock Corporation Law provides that if the certificate:

(a) Alters or abolishes any preferential right of any outstanding shares having preferences, affecting the holders of such shares adversely; or

(b) Creates, alters or abolishes any provision or right in respect of the redemption of any outstanding shares or of any sinking fund for the redemption or purchase of any such shares, affecting the holders of such shares adversely; or

(c) Limits or denies any pre-emptive right of the holders of any outstanding shares to subscribe for shares or other securities of the corporation, or alters or abolishes any provision affecting any such right contained in the certificate of incorporation or other certificate filed pursuant to law, so as to affect adversely the preemptive right of such holder; or

(d) Abolishes any voting right of the holders of shares of any class or limits their voting rights, except as the same may be limited by the voting rights given to new shares of any class authorized by the certificate;

--Any holder of any such shares not in favor of such action may at any time prior to the vote authorizing such action--or if notice of the meeting to vote upon such action was not mailed to stockholders entitled to receive such notice at least 20 days prior to the taking of such vote, then within 20 days after the mailing of such notice--object to such action and demand payment for his stock, and thereupon such stockholder or the corporation shall have the right, subject to the conditions and provisions of Sec. 21 of the Stock Corporation Law (which outlines the procedure for determination of the value of stock of objecting stockholder) to have such stock appraised and paid for as provided in that section.

Such objection and demand must be in writing and filed with the corporation. If the action is effected without a meeting, the time of such stockholder to file his objection and demand shall expire on the 20th day after the mailing to such stockholder of a notice stating the nature of such action and the date on which a certificate pursuant to Sec. 36 of the Stock Corporation Law and executed as prescribed by Sec. 37.

Sec. 37 of the Stock Corporation Law imposes an important limitation upon recapitalization, designed for the benefit of creditors. If the amount of the capital be reduced, or if issued shares be reduced as to par value or eliminated thereby, there shall be annexed to the certificate an affidavit of the president or a vice-president of the corporation and also an affidavit of the treasurer or of a majority of the directors stating either (a) that no distribution of assets to the stockholders will be made in connection with the proposed reduction, or (b) that the actual value of the assets of the corporation is not less than the total amount of the debts and liabilities of the corporation plus the proposed amount of its capital.

RECAPTURE CLAUSE

Part of section 15a of the Interstate Commerce Act, as amended in section 422 of the Transportation Act of 1920, but which was repealed retroactively, as explained below, by the Emergency Railroad Transportation Act of 1933. The recapture clause, in effect from 1920 to 1933 provided that if any carrier received for any year a net railway operating income in excess of 6 per cent. of the value of its railway property it was to pay over one-half of such excess to the Commission for the purpose of establishing and maintaining a general railway contingent fund. The other half of the excess was to be placed in a reserve fund. The carriers which earned in excess of 6 per cent. on property value might draw upon this reserve fund to the extent that their net railway operating income for any year was less than a sum equal to 6 per cent. of the value of their property devoted to the service of transportation. When this fund equalled 5 per cent. of the value of its railway property, such excess railway operating income as is payable to the carrier might be used for any lawful purpose, including extra dividends.

This clause was sustained in a decision rendered in December, 1923, of the United States Supreme Court in an appeal taken by the Dayton-Goose Creek Railway Company (in which nineteen other large railroads joined) from the decision of the United States District Court for the Eastern District of Texas.

Repeal of the recapture clause was provided for in the Emergency Transportation Act of 1933, which stated:

"All moneys which were recoverable by and payable to the Interstate Commerce Commission, under paragraph (6) of Section 15A of the Interstate Commerce Act, as in force prior to the enactment of this act, shall cease to be so recoverable and payable; and all proceedings pending for the recovery of any such moneys shall be terminated.

"The general railroad contingent fund established under such section shall be liquidated and the Secretary of the Treasury shall distribute the moneys in such fund among the carriers which have made payments under such section, so that each such carrier shall receive an amount bearing the same ratio to the total amount in such fund that the total of amounts paid under such section by such carrier bears to the total of amounts paid under such section by all carriers; except that if the total amount in such fund exceeds the total of amounts paid under such section by all carriers such excess shall be distributed among such carriers upon the basis of the average rate of earnings (as determined by the Secretary of the Treasury) on the investment of the moneys in such fund and differences in dates of payments by such carriers."

The amount which had been paid into the railroad contingent fund during the approximate thirteen years of effectiveness of the recapture clause was about

$10,000,000. (See Transportation Act of 1920, Railroad Transportation (Emergency) Act of 1933.)

RECEDE

A term meaning to incur a setback in commodity and security prices; to experience a decline or shrinkage in values. To distinguish between a major cyclical downswing and a mild intermediate recession, business activity may in the latter case be said to recede. (See Business Cycle.)

RECEIPT

An evidence of payment; a written acknowledgment given by one who receives money or other property to one who pays money or delivers property. The use of formal receipts has been practically abandoned in modern business. It is more customary for creditors to render statements of account to debtors periodically, and if payment is made in cash, the statement is stamped, "Paid." Payments are usually made by check, however, and since the check must be indorsed by the payee (creditor) it constitutes a satisfactory evidence of payment after it has been returned to the drawer by his bank. Many concerns print upon their statements a notice to the following effect: "No receipt necessary. Your cancelled check is your voucher.' An ordinary receipt acknowledging payment of a debt is non-negotiable because it is not a promise to pay money, and thus not negotiable under the Negotiable Instruments Law. On the other hand, non-negotiable instruments made to order, such as an order bill of lading a warehouse receipt, can be assigned by indorsement. (See Cancelled Checks, Temporary Receipt, Trust Receipt, Warehouse Receipt.)

RECEIVABLES

A general term to include the combined aggregate of accounts and notes receivable.

RECEIVER

A person appointed by an equity court to take custody of the property of a debtor and preserve the business for the benefit of creditors under the supervision of the court. In non-statutory equity receivership, the receiver's duties and powers are defined by the order of the court appointing the receiver, but where statutes apply, the receiver's duties and powers are governed by the statutes under the supervision of the court.

Statutory receivership procedure is outlined in Chapters I-VII of the National Bankruptcy Act (q.v.). Where Federal statutes do not apply, State bankruptcy statutes will govern; and should there be no applicable State statutes, equity receivership under principles of equity jurisprudence will be applied by the court. Equity receiverships, however, are now rare in view of the coverage of most cases by statutes.

(See Receivership, Reorganization.)

RECEIVER'S CERTIFICATES

Obligations issued by a Receiver (q.v.) with the approval of the court having jurisdiction, to provide working capital for an insolvent concern, the affairs of which are in the custody of the receiver. Issuing receiver's certificates is the most convenient means by which additional capital can be secured to revive a business in straits, since business failures are often caused by a lack of adequate capital.

In order to procure a ready market for receiver's certificates, the court usually permits them to take precedence over first mortgage bonds, or other debt of the debtor, especially in the case of a railroad, or other public utility corporation, where public policy demands its continuance as a going concern. They are usually short term obligations and are ordinarily unsecured.

Due to the conditions under which they are issued and practical certainty that both principal and interest will be paid, receiver's certificates are entitled to an investment rating at least equal to the first mortgage bonds of the debtor in receivership. Receiver's certificates are not preferred claims, such as taxes and wages.

RECEIVERSHIP

The legal status of a debtor placed in either equity or statutory proceedings as an insolvent. Equity receiverships refer to non-statutory proceedings, governed by principles of equity jurisprudence in the absence of statutes, as contrasted with statutory receiverships governed by the details of the applicable statutes. With the passage of Federal bankruptcy legislation in 1898 and numerous amendments since, Federal statutes have supplanted State statutes, or where no State statutes applied, non-statutory equity procedures, as Congress is vested by the United States Constitution with power to legislate on the subject of bankruptcies. Equity receiverships today are therefore rare, as either Federal or State statutes invariably control.

Chapters I-VII of the National Bankruptcy Act cover receiverships. The Act applies to debtors insolvent both in the equity sense, inability to meet debts as they mature, and in the bankruptcy sense, an excess of liabilities over assets. The former concept of liquidation for the benefit of creditors has been supplemented by the modern concept of reorganization and arrangements, as covered in other chapters of the Act.

In receiverships, the debtor is placed in the jurisdiction of the court, and the management loses control. The court appoints initially a Receiver (q.v.), whose duties are prescribed in the court order appointing him and often include, besides the basic duty of taking custody and preserving the property of the debtor, operation and administration of the business, including the borrowing of money for current purposes through issuance of Receiver's Certificates (q.v.) with court approval. Upon adjudication of bankruptcy of the debtor by the court, the receiver was usually supplanted by a trustee for the benefit of creditors. Where State or Federal statutes apply, however, the court follows the applicable statute, and the receiver's duties are defined thereby.

Under Sec. 12B of the Federal Reserve Act, the Federal Deposit Insurance Corporation (q.v.) shall be appointed by the Comptroller of the Currency as receiver for any closed insured National bank or District of Columbia bank, closed either by action of its board of directors or by the Comptroller of the Currency on account of inability to meet the demands of its depositors. No other person shall be appointed as receiver of such closed insured bank. It shall be the duty of the corporation as such receiver to realize upon the assets of the closed bank, having due regard to the condition of credit in the locality; to enforce the individual liability

of directors thereof; and to wind up the affairs of such closed bank in conformity with the provisions of law relating to the liquidation of closed National banks except as modified by this Section (other laws relating to receivership of National banks include Secs. 5205, 5220 and 5234 of the Revised Statutes, and Sec. 31 of the Banking Act of 1933). The corporation shall retain for its own account such portion of the amounts realized upon such liquidation as it shall be entitled to receive on account of its subrogation to the claims of depositors, and it shall pay to depositors and other creditors the net amounts available for distribution to them. With respect to such closed bank, the corporation as receiver shall have all the rights, powers, and privileges possessed by or granted by law to a receiver of an insolvent National bank.

Similarly, whenever any insured State bank (except a District bank) shall have been closed by action of its board of directors or by the authority having supervision of such bank, on account of inability to meet the demands of depositors, the Federal Deposit Insurance Corporation shall accept appointment as receiver thereof, if such appointment is tendered by the authority having supervision of such bank and is authorized or permitted by State law. With respect to any such insured State bank, the corporation as receiver shall possess all the rights, powers and privileges granted by State law to a receiver of a State bank.

RECEIVING TELLER

The teller, sometimes known as the second teller, whose function it is to receive deposits of cash items from customers over the window. His duties are exactly opposite to those of the paying teller, but the two tellers jointly handle the inflow and outflow of the bank's cash. In a commercial bank, the deposits over the receiving teller's window consist of cash (metallic and paper money), checks, drafts, and matured coupons; checks being in the great majority. The receiving teller receives only those deposits which are the equivalent of cash, and for which the depositor receives credit at the time of deposit before collection is actually effected. Checks may not be drawn on uncollected balances, and interest on out-of-town checks is deferred until collection is made. All items, except cash, are subject to cancellation of credit in case they are returned unpaid.

The receiving teller's responsibilities are second in importance only to those of the Paying Teller (q.v.). In receiving deposits he is required to observe the following points:

(1) Compare the title of the account on the passbook with that on the deposit slip for agreement. This is important since depositors may have several special accounts, e. g., payroll account, dividend account, interest coupon account, named officer as treasurer account, sinking fund account, etc.

(2) The deposit slip must be correctly dated. It is an original entry record and as such it is admissible into court as evidence. If found to be incorrect, the receiving teller should correct it.

(3) After separating the cash from the checks, the cash should be counted first. Should the cash be in excess of the amount listed on the deposit slip, it is advisable to notify the depositor immediately over the telephone. The depositor's instructions may be to increase the deposit by the difference, or to return the amount of the difference. If the cash is short, the amount of the deposit is reduced accordingly. In this case the depositor should be required to submit a corrected deposit slip.

After the cash is counted, the amount is entered on the cash sheet and the cash amount on the deposit slip checked to indicate that it is correct and the entry recorded. While the cash is being counted, it should be examined for counterfeits and raised bills.

(4) Prove the checks with their listing on the deposit slip, or with the adding machine list accompanying it. While theoretically, the receiving teller should examine the indorsement of all the checks deposited, it is usually only practical for him to examine the indorsement upon the last check in a bundle. Whenever checks in large volume are deposited, they are not examined in detail at the time of receipt, because of the time it would consume. Entry is made in the passbook to correspond with the deposit slip and is subject to revision, if later found to be incorrect. The work of detailed examination of a check is left to the receiving teller's clerks, or to an hour in the day when the receiving teller is not busy at the window. In practice, it is only possible for the receiving teller to verify the actual cash with each deposit, the checks being examined and proved, in case of volume, by means of the Block System (q.v.).

RECIPROCAL TARIFF ACT

An act, approved June 12, 1934, which among other things:

(1) Authorized the President, for a period of three years, to negotiate trade agreements with foreign government without the traditional advice and consent of the Senate.

(2) Empowered the President, by proclamation, to raise or lower tariff rates by not more than 50 per cent.

(3) Provided that the President, before entering into reciprocal tariff trade agreements, must not only determine that trade expansion would be encouraged but that foreign duties or other import restrictions were unduly burdening and restricting American foreign trade.

(4) Stipulated that every foreign trade agreement concluded under the new act should be subject to termination on notice to the foreign government concerned, at the end of not more than three years from the date on which the agreement comes into force, and thereafter upon not more than six months' notice.

(5) Any interested person likely to be affected by any proposed foreign trade agreement must be given an opportunity to be heard before the trade agreement is concluded.

Subsequent to the Reciprocal Tariff Act of 1934, the United States Congress passed a similar 1945 Act, which permitted negotiation of tariff reductions up to a maximum of 50% of 1945 levels. By early 1947, some 28 reciprocal trade agreements had been concluded by the United States with trading nations. More recently, however, further tariff revision and reciprocal reduction have been subject to political changes, although available along two principal lines: (1) multilaterally, through such international organizations as the International Trade Organization (q.v.); and (2) bilaterally, through special agreements with trading nations.

RECOINAGE

The melting of abraded, mutilated, and short weight coins, and manufacturing them into new coins. This

expense is borne by the Government mint. (See Light Coins, Light Gold.)

RECONCILEMENT OF ACCOUNTS

The verification by a bank of its accounts with depositors. Periodic reconcilement of accounts is one of the important tests of clerical efficiency and accuracy in handling bank accounting transactions. The most approved and convenient means of reconciling accounts is to attach a reconcilement blank as a stub or separate form to each statement of account as rendered. These are usually forwarded to customers monthly or periodically, or when they call in person. The reconcilement blank requests the customer to report the correctness of the statement immediately and to note any errors. When the reconcilement blank is returned signed, a mutual verification of accounts has been established. If errors are reported the bank can proceed to trace and investigate them, and if in error, the difference is adjusted.

The following is a typical form of reconcilement blank:

RECONCILEMENT BLANK

Please Return Promptly

.....19.....

TO THE ..... BANK.

Your accounts rendered to the close of business .....showing balance $.....due.....agree with our books, with the exceptions noted below.

Yours truly,

.....

(Authorized Signature.)

Please use signature of Officer or Principal as now authorized to us.

RECONSTRUCTION

This term has two meanings:

(1) A term used in much the same sense as readjustment; meaning that phase of the business cycle in which business is attempting to restore the normal equilibrium between supply and demand. (See Readjustment.)

(2) The English equivalent of the American term Reorganization (q. v.).

RECONSTRUCTION FINANCE CORPORATION

The leading Federal Government domestic financing and credit corporation, originally created by the Reconstruction Finance Corporation Act, approved January 22, 1932. Its original capital was limited to $500,000,000, but was extended by later amendments and other laws adding to the powers and scope of the Corporation. The general purpose of the laws creating this corporation was "to stop deflation in agriculture and industry and thus to increase employment by the restoration of men to their normal jobs."

In the years 1933-34, the financial strength of the Corporation was increased and the scope of its lending activities broadened. Loans were made to banks, railroads, insurance companies, agricultural credit institutions and mortgage banks, industries and public works. Large amounts were also granted to states for work and direct relief without necessity of repayment. In 1948, life of the Corporation's charter was extended for six more years, but lending power was reduced from $2 billion to $1 1/2 billion, the corporation retaining its authority to buy insurance company preferred stock and to maintain a secondary mortgage market. As of March 31, 1948, the corporation reported total assets of $1,387 million, including $911 million in loans, and a net worth, all owned by the U. S. Government, of $1,152 million.

RECONSTRUCTION FINANCE CORPORATION ACT

See Reconstruction Finance Corporation.

RECOURSE

The ability to call upon a person to meet an obligation. The term is most frequently found in the law of negotiable instruments, wherein the indorsement "without recourse" is recognized as a qualified indorsement. The indorser without recourse nevertheless makes the warranties specified in Sec. 65, Uniform Negotiable Instruments Law (Sec. 115, New York Negotiable Instruments Law). (See Indorsement.)

RECOVERY

This term has three meanings:

(1) Whenever a bank collects a note, or a part payment thereon, that has been previously written off as a loss, and charged to reserves or undivided profits, it is known as a recovery. Since the amount of such a recovered note has already been charged off, it is allowable to credit reserves or undivided profits account for the amount recovered.

(2) As used in financial reviews, the term signifies an advance in prices following a previous decline.

(3) In a broad commercial sense, the term is roughly equivalent to business revival or recuperation. It indicates a period of business betterment following a period of liquidation and depression. (See Business Cycle.)

REDEEMABLE

Both bonds and preferred stock are sometimes issued with the redeemable feature; that is, optional retirement before the obligatory maturity. (See Callable Bonds, Optional Bonds, Preferred Stock.)

REDEEMABLE BONDS

See Callable Bonds, Optional Bonds.

REDEMPTION

The act of redeeming a debt; payment of a debt; retirement of an issue of bonds or notes. The cancellation of a debt whether on a date prior to maturity, or upon the date of obligatory maturity.

REDEMPTION AGENT

Among the redemption activities of the Office of the Treasurer of the United States, which is one of the four organizational units in the Fiscal Service of the Treasury Department, are the following functions:

(1) Maintaining the accounts for the issue and redemption of Federal Reserve Notes, Federal Reserve Bank Notes, and National Bank Notes. The latter two types of currency are in process of complete retirement,and funds have been on deposit since 1935 for this purpose.

(2) Directing the shipment of currency and coin be-

tween the United States Mints, Federal Reserve Banks, etc.

(3) Examining and redeeming public debt securities presented for redemption either directly to the Treasurer of the United States, or through the various Federal Reserve Banks.

(4) Acting as special agent for the payment of the principal of and interest on the obligations of Government corporations and agencies, and maintaining the accounts to show such payments.

(5) Examining and redeeming paper currency.

Formerly the term redemption agent was applied to a National bank located in a central reserve or reserve city which was designated to redeem the National bank notes of other National banks not located in such cities. The Act of June 20, 1874 abolished this practice, and National bank notes became redeemable only at the bank of issue or at the Treasury Department in Washington.

REDEMPTION BONDS

Practically the same as Refunding Bonds (q. v.). To be precise, the term redemption bonds should be reserved for issues supplanting those called for redemption, whereas the term refunding bonds should be reserved for those supplanting maturing issues. Redemption bonds are not to be confused with redeemable, i. e., optional bonds.

REDEMPTION CHECK

A special form of check issued by banks, members of a clearing house association, in payment of items which have passed through the clearing house, but which are not acceptable by the drawee bank because of technical irregularities or invalidities, and therefore returned. Redemption checks are payable only to members of the clearing house association, are not negotiable, and are payable only through such clearing house association.

REDEMPTION FUND

Pursuant to Sec. 16 of the Federal Reserve Act, the Board of Governors of the Federal Reserve System require each Federal Reserve Bank to maintain on deposit in the Treasury of the United States a sum in gold certificates sufficient in the judgment of the Secretary of the Treasury for the redemption of the Federal Reserve Notes issued to such bank. In no event is such redemption fund to be less than 5% of the total amount of Federal Reserve Notes issued, less the amount of gold certificates held by the Federal Reserve Agent as collateral security. Such deposit of gold certificates shall be counted and included as part of the gold certificates reserve required to be maintained against outstanding Federal Reserve Notes.

Federal Reserve Bank Notes and National Bank Notes, which are in process of retirement, were also required to maintain similar redemption funds. Balances have been on deposit with the Treasury since March, 1935 for retirement of all outstanding Federal Reserve Bank Notes, and since August, 1935 for retirement of all outstanding National Bank Notes. (See Five Per Cent Redemption Fund, Federal Reserve Bank Notes, Federal Reserve Notes, National Bank Notes.)

The Gold Standard Act of 1900 provided for the redemption in gold coin of United States notes or "legal tenders" when presented to the Treasury. In order to secure prompt and certain redemption of these notes, the Secretary of the Treasury is required to set apart in the Treasury, a reserve fund of $150,000,000 in gold coin and bullion, which may be used for this purpose alone. If, on account of redemption of these notes, the fund falls below $100,000,000 the Secretary of the Treasury is authorized to restore the fund to the original amount by issuing United States bonds therefor. United States Notes are the only type of currency other than Federal Reserve Notes now being issued regularly, the low requiring reissuance whenever they return to the Treasury on any account.

REDEMPTION NOTICE

See Sinking Fund Redemption Notice.

REDEMPTION OF MONEY

In accordance with Sec. 6 of the Gold Reserve Act of 1934, no currency of the United States shall be redeemed in gold, except to the extent permitted in regulations which may be issued by the Secretary of the Treasury with the approval of the President. This general prohibition is also subject to the proviso that gold certificates owned by the Federal Reserve Banks shall be redeemed at such times and in such amounts as in the judgment of the Secretary of the Treasury are necessary to maintain an equal purchasing power of every kind of currency in the United States; and subject to the further proviso that the reserve for United States Notes and for Treasury Notes of 1890, and the security for gold certificates (including the gold certificates held in the Treasury for credits payable in such gold certificates) shall be maintained in gold bullion equal to the dollar amounts required by law, and the reserve for Federal Reserve Notes shall be maintained in gold certificates, or in credits payable in gold certificates maintained with the Treasurer of the United States under Sec. 16 of the Federal Reserve Act. No redemptions in gold shall be made except in gold bullion bearing the stamp of a United States mint or assay office in an amount equivalent at the time of redemption to the currency surrendered for such purpose.

Under authorization of the Act of May 29, 1920, which discontinued the functions of Assistant Treasurers and sub-treasuries, the Secretary of the Treasury transferred to the Federal Reserve Banks and branches the functions performed by the former Assistant Treasurers of the United States in connection with the issue, exchange and replacement of United States paper currency and coin and the receipt for redemption of National bank notes and Federal Reserve Bank notes. Except for the duties in this respect performed by the Treasurer of the United States as may be indicated from time to time by the Secretary of the Treasury, distribution of available supplies of United States paper currency and coin, exchanges and replacements thereof, and payments on account of redemption of currency and coin were, so far as practicable, transferred to the Federal Reserve Banks and branches. Federal Reserve Banks and branches were instructed by the Treasury to make an equitable and impartial distribution of available supplies of United States paper currency and coin in all cases, and applications therefor thereafter were to be made to the Federal Reserve Bank or branch located in the same district with the applicant.

Redemption of money, distribution of available supplies, orders for shipments of money, etc. are centralized and coordinated in the Office of the Treasurer of

the United States in Washington, D. C., which is part of the Fiscal Service of the Treasury.

(See Monetary Stock (Circulation); Money Circulation.)

REDISCOUNT

A term given to the process of discounting a second time, commercial paper (notes, acceptances, and bills of exchange) by one bank for another, or by a Federal Reserve bank for a member bank; also to such rediscounted paper itself. Since the Federal Reserve System has been in operation the term applies almost solely to the discounting of paper by a Federal Reserve bank for a member bank. In substance, however, any note is rediscounted whenever an indorser negotiates it.

Even before the Federal Reserve System, rediscounting was a common practice among banks. Banks which had exhausted their loanable resources or lacked sufficient funds to meet their obligations, resorted to this practice as an expedient to obtain additional funds. Consequently, it was often regarded as an evidence of weakness on the part of the borrowing bank. However, there should be no stigma attached to rediscounting under the Federal Reserve Act, as the rediscount process is one of the normal operating procedures contemplated by the Act.

Rediscounting is one of the chief features and facilities offered by the Federal Reserve System (q. v.). Section 13 of the Federal Reserve Act empowers Federal Reserve banks to discount notes, drafts, and bills of exchange for agricultural, industrial, or commercial uses and known as Eligible Paper (q. v.), as distinguished from paper issued for the purpose of carrying or trading in real estate, stocks or bonds other than Government bonds, or other non-commercial transactions. The tests of eligibility for rediscount are largely left to the Board of Governors of the Federal Reserve System for definition, and are described in detail in the Federal Reserve Board Regulations (q. v.), and in the opinion of its counsel.

In addition to rediscounting Eligible Paper (notes, drafts, bills of exchange, and bankers acceptances arising out of commercial, industrial and agricultural transactions of specified maturities), the Federal Reserve Banks are authorized to make advances to member banks of the following types:

(1) Advances for periods not exceeding 15 days to member banks on their promissory notes secured by the deposit or pledge of Government securities;

(2) Advances for periods not exceeding 90 days to member banks on their promissory notes secured by eligible paper, instead of outright rediscounting;

(3) Advances to any member bank on its time or demand notes having maturity of not less than 4 months and which are secured to the satisfaction of such Federal Reserve Bank. Each such note shall bear interest at a rate not less than 1/2 of 1% higher than the highest rediscount rate in effect at the Federal Reserve Bank on the date of such note;

(4) Advances in such amounts as the board of directors of each Federal Reserve Bank may determine, upon receiving the consent of not less than 5 members of the Board of Governors of the Federal Reserve System, to groups of five or more independently owned member banks within the district, upon their time or demand promissory notes, provided that the banks which receive such advances have no adequate amounts of eligible and acceptable assets available to enable such banks to obtain sufficient credit accommodation from the Federal Reserve Bank through rediscounts or advances other than under (3) above.

The Federal Reserve Banks also possess the following additional powers to discount and make advances:

(1) Under Sec. 13 of the Federal Reserve Act, the power to discount directly for any individual, partnership, or corporation, notes, drafts, and bills of exchange of the kinds and maturities made eligible for discount for member banks, when such paper is indorsed or otherwise secured to the satisfaction of the Federal Reserve Bank. This power, however, is for use in unusual and exigent circumstances, and by affirmative vote of not less than 5 members of the Board of Governors of the Federal Reserve System. Before discounting any such paper, the Federal Reserve Bank shall obtain evidence that such borrower is unable to secure adequate credit accommodations from other banking institutions.

(2) Under Sec. 13b of the Federal Reserve Act, the power to make loans to or purchase obligations of established industrial or commercial businesses located in the district, or make commitments therefore on a reasonable and sound basis, for the purpose of providing working capital. However, this power shall be used in exceptional circumstances, when it appears to the satisfaction of a Federal Reserve Bank that such business is unable to obtain requisite financial assistance on a reasonable basis from the usual sources, and shall be exercised pursuant to authority granted by the Board of Governors. No obligation shall be acquired or commitment made with a maturity exceeding 5 years.

(3) Each Federal Reserve Bank under Sec. 13b of the Act also has the power to discount for or purchase from any bank, trust company, mortgage company, credit corporation or other financing institution operating in its district, obligations having maturities not exceeding 5 years, entered into for the purpose of obtaining working capital for established industrial or commercial businesses; to make loans or advances direct to any such financing institution on the security of such obligations; and to make commitments with regard thereto. However, each such financing institution shall obligate itself to the satisfaction of the Federal Reserve Bank for at least 20% of any loss which might be sustained upon any of the obligations acquired. In lieu of such obligation against loss, the financing institution may advance at least 20% of such working capital for any established industrial or commercial business without obligating itself to the Federal Reserve Bank against loss on the amount advanced by the Federal Reserve Bank, provided that such advances by the financing institution and the Reserve Bank shall be considered as one advance and repayment made pro rata under regulations of the Board of Governors.

(4) Any Federal Reserve Bank under Sec. 13 of the Act has the power to make advances directly to any individual, partnership or corporation on the promissory notes of such individual, partnership or corporation secured by direct obligations of the United States. Such advances shall be subject to limitations, restrictions and regulations of the Board of Governors, and shall be made for periods not exceeding 90 days and bear such interest rates as may be fixed by the Federal Reserve Bank subject to review and determination of the Board of Governors.

These extraordinary methods of extending Federal

Reserve credit reflect the desire of Congress to have the Federal Reserve System play a more positive role in credit operations, particularly in view of the relatively low volume of Eligible Paper in recent decades.

The rediscount process practically insures adequate banking accommodations to all legitimate commercial borrowers; since eligible paper carried by member banks is always subject to rediscount, thus constituting a secondary reserve. Rediscounts in the possession of Federal Reserve banks become the collateral basis for the issue of Federal Reserve notes, which constitute the only elastic currency medium of the country.

Volume of rediscounts outstanding for the system, by annual highs and lows since 1917, is shown herewith:

The Board of Governors of the Federal Reserve System may by regulation limit to a percentage of the assets of a Federal Reserve Bank the amount of notes, drafts, acceptances or bills having a maturity in excess of 3 months, but not exceeding 6 months, which may be discounted by such bank; and also the amount of notes, drafts, bills, or acceptances having a maturity in excess of 6 months, but not exceeding 9 months, which may be rediscounted by such bank. The aggregate of paper upon which any one borrower is liable and which is rediscounted for any member bank shall at no time exceed the amount for which such single borrower may lawfully become liable to a National bank under the Revised Statutes, or to a State member bank under the same limitations as apply to a National bank.

Another important limitation, in connection with advances to member banks on promissory notes secured by Government securities, is the provision that if any member bank to which any such advance has been made, shall during the life or continuance of such advance, and despite official warning of the Reserve Bank or of the Board of Governors to the contrary, increase its outstanding loans secured by collateral in the form of securities (except Government securities), such advance shall be deemed immediately due and payable, and such member bank shall be ineligible as a borrower at a Reserve Bank for such period as the Board of Governors shall determine. This limitation is designed to prevent the use of Federal Reserve credit for the purpose of stimulating speculation in securities through security loans. (See Limitations on Bank Loans, Rediscount Rate.)

REDISCOUNT RATE

The rate of discount charged by a Federal Reserve Bank for rediscounting commercial, industrial or agricultural Eligible Paper (q.v.) or other paper. Under Sec. 14 (d) of the Federal Reserve Act, every Federal Reserve Bank has the power to establish from time to time, subject to review and determination of the Board of Governors of the Federal Reserve System, rates of discount to be charged by the Federal Reserve Bank for each class of paper, which shall be fixed with a view of accommodating commerce and business, but each Federal Reserve Bank shall establish such rates every 14 days or oftener, if deemed necessary by the Board of Governors.

In addition to rediscount and bill buying rates, the Federal Reserve Banks are empowered to establish interest rates on various types of authorized advances:

(1) Emergency advances to groups of member banks under Sec. 10 (a): Rate shall be not less than 1% above the discount rate in effect at time of making the advances.

(2) Discounts for individuals, partnerships and corporations under Sec. 13: Rates to be established in accordance with Sec. 14 (d) referred to above.

(3) Advances to individuals on direct obligations of the United States (Sec. 13): Rates to be fixed from time to time by the Federal Reserve Bank, subject to review and determination of the Board of Governors.

(4) Advances to individual member banks on satisfactory security, under Sec. 10 (b): Each such advance shall bear interest at rate not less than 1/2 of 1% per annum higher than the highest discount rate in effect at the Federal Reserve Bank on the date of such advance.

(5) Advances to member banks on their promissory notes secured by Government securities, under Sec. 13: At rates established by the Federal Reserve Banks, subject to review and determination of the Board of Governors.

(6) Rediscounts by one Federal Reserve Bank for another (Sec. 11 (b)): At rates of interest fixed by the Board of Governors of the Federal Reserve System.

(7) Industrial loans and commitments under Sec. 13b: All operations of the Federal Reserve Banks under this section are subject to regulations of the Board of Governors. Rates charged vary from district to district, and according to whether the loans are to industrial or commercial businesses direct, or to financing institutions.

The tables on pages 583 and 584 indicates the various Federal Reserve rates for discounts and advances, as well as bill buying rates. The term "rediscount rate", unless otherwise limited, normally refers to the Federal Reserve Bank rate for rediscounting eligible paper.

In the past and perhaps "normal" times, with member banks "in at the Federal" for a steady volume of discounts throughout the year, the rediscount rate had been one of the instruments of money market control at the disposal of the Federal Reserve System. Raising the rediscount rates, making it more costly for member banks to tap Federal Reserve credit, tended to act as a discouraging if not absolute deterrent factor to increased borrowing and speculation, as it was accompanied by higher money rates generally. On the other hand, lowering the rediscount rates, making it cheaper to use Federal Reserve credit, and accompanied with lower money rates generally, made credit "easy" and acted as an encouraging if not positive stimulant to credit expansion. Thus, the rediscount rate as an instrument of control is most effective in times of large member bank borrowing, and in times of little or no such borrowing, its passive nature makes it of little or no significance as a positive factor in credit control. As specified in the Federal Reserve Act, rediscount rates shall be fixed with a view of accommodating commerce and business, but during the era of managed low money rates beginning with the Roosevelt Administration in 1933, rediscount rates were pegged at low levels and the large volume of excess reserves created by large scale gold imports and domestic money management soon made the level of rediscount rates of academic interest to the member banks.

In the early '20s, the rediscount rate was considered dependent upon several factors, among which were the open market rate for commercial paper and bankers' acceptances, the rate on call and time loans secured by stock exchange collateral, and the Federal Reserve ratio of reserves to deposit and note liabilities. As a general principle, a high ratio of reserves to deposit and note liabilities, indicated easy credit conditions, and as the ratio rose, the rediscount rate could be safely lowered. Conversely, a low ratio of reserves to deposit and note liabilities, especially when near the legal minimum, indicated that the resources of the bank were already largely utilized, whence a higher rediscount rate became necessary as a means of discouraging further borrowing. The rates of discount effective at the central banks of Europe, particularly in England, also lent the weight of their influence.

There was also considerable controversy concerning the relation which should exist between the rediscount rates of the Federal Reserve banks and open market rates. The central banks of Europe had long followed the practice of keeping the rediscount rate slightly above open market rates. The theory underlying this principle was that the rediscount privilege at the reserve or central banks should be used only in times of stress or credit expansion; that in normal times the central reservoir of credit should remain untouched, member banks furnishing whatever accommodation is required without resorting to rediscounting. In other words, the rediscount rate should be above open market rates as a means of discouraging rediscounting except when necessary, since the process would always be un profitable to the borrowing banks. If rediscount rates were below the open market, rediscounting became a profitable transaction, and member banks were likely to be stimilated to resort to the privilege, when there was any feasibility for it. In the United States, however, it was somewhat difficult to determine which class of paper should be taken as representative of the true open market rate. The principle was that the rediscount rates should always be somewhat above the open market rates; that it should cost the member banks something to rediscount; that they should not be encouraged to borrow by making the operation profitable, but discouraged from it by making it cost them something; that borrowing should involve a slight penalty rather than a discount, so that member banks would want to pay off their borrowings rather than continue them.

The history of the New York Federal Reserve bank's rediscount rate for eligible paper affords a perspective from which present rates may be interpreted in their relationship to the past. The changes in the rate follow:

4 per cent.—1914, 1915, 1916, and up to December 21, 1917.
4 1/2 per cent.—December 21, 1917, to April 6, 1918.
4 3/4 per cent.—April 6, 1918, to January 23, 1920.
6 per cent.—January 23 to June 1, 1920.
7 per cent.—June 1, 1920, to May 5, 1921.
6 1/2 per cent.—May 5 to June 6, 1921.
6 per cent.—June 6 to July 21, 1921.
5 1/2 per cent.—July 21 to September 22, 1921.
5 per cent.—September 22 to November 3, 1921.
4 1/2 per cent.—November 3, 1921, to June 22, 1922.
4 per cent.—June 22, 1922, to February 23, 1923.
4 1/2 per cent.—February 23 to May 1, 1924.
4 per cent.—May 1 to June 12, 1924.
3 1/2 per cent.—June 12, 1924.
3 per cent.—August 8, 1924.
3 1/2 per cent.—February 27, 1925.
4 per cent.—January 8, 1926.
3 1/2 per cent.—April 23, 1926.
4 per cent.—August 13, 1926.
3 1/2 per cent.—August 4, 1927.
4 per cent.—February 3, 1928.
4 1/2 per cent.—May 18, 1928.
5 per cent.—July 13, 1928.
6 per cent.—August 9, 1929.
5 per cent.—November 1, 1929.
4 1/2 per cent.—November 15, 1929.
4 per cent.—February 7, 1930.
3 1/2 per cent.—March 14, 1930.
3 per cent.—May 2, 1930.
2 1/2 per cent.—June 20, 1930.
2 per cent.—December 24, 1930.
1 1/2 per cent.—May 8, 1931.
2 1/2 per cent.—October 9, 1931.
3 1/2 per cent.—October 16, 1931.
3 per cent.—February 26, 1932.
2 1/2 per cent.—June 24, 1932.
3 1/2 per cent.—March 3, 1933.
3 per cent.—April 7, 1933.
2 1/2 per cent.—May 26, 1933.
2 per cent.—October 20, 1933.
1 1/2 per cent.—February 2, 1934.
1 per cent.—August 27, 1937.
1 per cent.—April 25, 1946.
1 1/4 per cent.—January 12, 1948.
1 1/2 per cent.—August 13, 1948.

REDRAFT

A bill of exchange drawn by a holder of a dishonored bill upon either the drawer or an indorser, for the amount of the original bill plus the protest fees. Also known as a "cross bill". Where foreign exchange is involved, the redraft or cross bill also includes the

San Francisco	1 1/2	Aug.13,1948	2	Aug.13,1948	2 1/2	Apr.25,1946

*Rates shown also apply to advances secured by obligations of Federal Intermediate Credit Banks maturing within 6 months.

Source--Board of Governors of the Federal Reserve System (Federal Reserve Bulletin).

Note (by Board of Governors of Federal Reserve System, in Federal Reserve Bulletin): Maximum maturities for discounts and advances to member banks are:

15 days for advances secured by obligations of the Federal Farm Mortgage Corp. or the Home Owners' Loan Corp. guaranteed as to principal and interest by the U. S., or by obligations of Federal Intermediate Credit Banks maturing within 6 months;

90 days for other advances and discounts made under Sec. 13 and 13a of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively;

4 months for advances under Sec. 10 (b).

The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Sec. 13 is 90 days.

---

amount of "re-exchange" measured by the rate of exchange where the drawer or indorser is located. (See Bill of Exchange.)

REFINED SUGAR

See Sugar.

REFLATION

A term apparently coined in the years 1932-33 meaning the employment of the monetary powers of the government to stop deflation, and to induce the opposite course, i. e., inflation in sufficient measure to counteract the preceding deflation. Reflation implies monetary and/or credit manipulation to restore prices to a preconceived "desirable" level, and not excessive inflation which would ruin the value of money. Reflation advocates are those who favor a Managed Currency (q. v.). Also see Inflation.

REFUNDING

The process of refinancing a debt which cannot conveniently be paid when due. More especially it consists of selling a new issue of bonds from the proceeds of which a maturing issue will be retired. Railroads and other public utility corporations secure a large part of their capital by means of bond issues which are never intended to be permanently retired. Instead, capital is permanently secured by the refunding process, which is legitimate finance where property values are kept intact. (See Refunding Bonds.)

REFUNDING BONDS

Bonds issued for the purpose of providing funds to retire bonds previously issued either to effect a reduction in interest rate, such refunding interest savings being important in a period of low money rates, or to replace bonds about to mature. Strictly refunding bonds should not be authorized to exceed the amount of the original issue (except when mortgages are consolidated), and should be for the same purpose. Frequently, however, new issues entirely unrelated to the issues being retired have the effect of refunding as well as bringing in

(2) Rate charged borrower less commitment rate.
(3) Rate charged borrower.
(4) Rate charged borrower but not to exceed 1 per cent above the discount rate.
(5) Charge of 1/4 per cent is made on undisbursed portion of loan.
Source--Board of Governors of the Federal Reserve System (Federal Reserve Bulletin).

Table III.

Federal Reserve Bank Effective Minimum Buying Rates on Bankers Acceptances (per cent per annum)

Maturity	Rate on August 31, 1948	In Effect Beginning	Previous Rate
1 - 90 days	1 1/2%	(1)Aug.13,1948	1 1/4%
91 - 120 days	1 5/8	(1)Aug.13,1948	1 3/8
121 - 180 days	1 3/4	(1)Aug.13,1948	1 1/2

(1) Date on which rate became effective at the Federal Reserve Bank of New York. The same rates generally apply to any purchases made by the other Federal Reserve Banks.
Source--Board of Governors of the Federal Reserve System (Federal Reserve Bulletin).

additional working capital. To make clear the purpose of a refunding issue, it is advisable that the title be clarified by adding a word descriptive of such purpose; Thus, refunding water bonds, or refunding first mortgage bonds.

In the case of civil refunding bonds, i. e., bonds of states, counties, and other political subdivisions, arbitrary statutory limits are placed on their terms in some states. In fact, some states and their political subdivisions are altogether prohibited from issuing refunding bonds. In no case should civil refunding bonds be allowed when the asset purchased by the proceeds is not permanent. Thus, refunding bonds issued to replace bonds the proceeds of which were used to acquire parks, playgrounds or land for streets are justifiable and permissible, but not for school buildings, fire stations and apparatus, local relief purposes, etc.

REFUNDING FIRST MORTGAGE BOND

A refunding bond (usually issued by a railroad or

public utility corporation) which is secured by a first mortgage and having, therefore, the same security as the issue whose place it takes. Refunding first mortgage bonds are not to be confused with First Refunding Mortgage Bonds (q. v.).

REFUNDING RECEIVER'S CERTIFICATES

Receiver's certificates issued to provide funds to pay off maturing Receiver's Certificates (q. v.).

REGIONAL AGRICULTURAL CREDIT CORPORATION

A Government agricultural credit agency, now of minor importance as the result of liquidation of its loans, in the organization of the Farm Credit Administration. Its active function was formerly the financing of production of crops and livestock in specified areas at the direction of the Secretary of Agriculture, such loans being for not over one year, although renewable, at interest rates of 5% to 5 1/2%. As of March 31, 1948, the corporation had total assets of only $2 million, of which $1 million were in cash, remaining loans being less than half a million. (See Farm Credit Administration.)

REGIONAL BANK

Each of the twelve Federal Reserve banks is known as a regional bank, or regional reserve bank, because each serves a single, clearly defined Federal Reserve district. Before the passage of the Federal Reserve Act, two plans were proposed. One recommended the establishment of one central reserve bank (the Aldrich Plan), such as exists in England and France. The other provided for "regional banks, each to be operated by a different board of directors and owned by member banks within its district." The latter was adopted in order to prevent concentration of control in the East. Although each regional bank is a separate institution and serves a given territory, cooperation of the twelve regional banks is secured through control by the Board of Governors of the Federal Reserve System, which was increased by the Banking Acts of 1933 and 1935. For instance, this body has power to require one Federal Reserve bank to rediscount the discounted paper of another. Thus, the regional banks combine the features of centralization and decentralization. (See Federal Reserve System.)

REGISTER CHECKS

The "Register Check" service is a copyrighted checking service offered to banks as more profitable, simpler to operate, and more popular with customers than money orders or other forms of streamlined popularized checking services. The service features a small flat fee, usually 10¢, for each Register Check, which the customer obtains at the bank and fills out. The Register Check is then presented to the Register Check window, where a teller completes it, hands it back to the customer, and notes it on a credit slip which is kept on file until the check is presented for payment. A minimum of bookkeeping through the credit slips and Register Check account is involved. (See Bank Money Order, No Minimum Balance Checking Accounts.)

REGISTERABLE AS TO PRINCIPAL ONLY

When the principal, and not the coupons of a bond may be registered in the name of the owner, it is said to be "Registerable as to principal only." (See Registered Bonds, Registered Coupon Bonds.)

REGISTERABLE BONDS

See Registered Bonds.

REGISTERED BONDS

Classified as to form, bonds may be registered or coupon bonds. Registered bonds may be subdivided into those which are "registered both as to principal and interest," and "registered as to principal only."

In a registered bond the name of the owner is written on its face and it cannot be negotiated except by indorsement and transfer on the books of the issuing organization. In other words, registered bonds are transferred in the same manner as stock certificates. The bonds contain a form of assignment and transfer on the reverse side. Registration is usually a privilege offered optionally in the sale of certain issues of coupon bonds to appeal to those investors who may wish to avail themselves of the opportunity to protect the equitable owner, in case of theft.

The registration of bonds necessarily entails the maintenance of complete records by the issuing organization. Usually, therefore, a bank or trust company is appointed to act as registrar. The registrar maintains the necessary records which show the owner's name and address, and when sales occur, the name of the transferor and transferee. In this way, the ownership of each bond can be traced.

When bonds are registered as to principal only, coupons are attached, but such coupons are negotiable by delivery just as those detached from coupon bonds. The principal, however, can only be negotiated by indorsement and transfer of title to the buyer on the books of the registrar. These are known as registered coupon bonds.

When bonds are registered both as to principal and interest, no coupons are attached. Checks for interest are remitted to the registered holder at each coupon date and for the principal at maturity.

The market price of registered bonds is usually somewhat less than coupon bonds of the same issue, because of the inconvenience incident to transfer.

REGISTERED COUPON BONDS

Coupon bonds which are registered as to principal only. Coupons attached to such bonds are negotiable by delivery, and are payable to bearer, just as those attached to coupon bonds.

REGISTERED SECURITIES EXCHANGE

Beginning with the effective date of application, October 1, 1934, it has been unlawful to transact business on any securities exchange not registered with or exempted from registration by the Securities and Exchange Commission. See Section 6 of the Securities Exchange Act of 1934. For list of registered exchanges, see under Stock Exchange.

REGISTERED STOCK

Stock which cannot be transferred without placing the signature of the owner upon the books of the issuing corporation and delivery of the certificate. The owner of the certificate may, however, appoint an attorney to act in his stead.

All stock in American corporations is "registered" since the name of the stockholder is recorded on the stock transfer books and dividends are mailed to stockholders of record. In England, "coupon" stock is more

commonly found, the stock certificates having coupons which are detachable for collection of dividends declared. Imperial Oil of Canada stock is issued in both coupon and registered form. In England also, "inscribed" stock is commonly found (see Inscribed Stock).

REGISTRAR

A corporate agent appointed to perform the function of authenticating issues of stocks and bonds, and thus to prevent overissue of spurious bonds or stocks.

See Stock Registrar.

REGISTRATION OF MORTGAGES

Under Sec. 235 (g) of the Banking Law of New York State, every mortgage and assignment of a mortgage taken or held by a savings bank shall immediately be recorded or registered in the office of the proper recording officer of the county in which the real property described in the mortgage is located. The objectives of the Recording Act are to preserve the evidence of real estate conveyances, and to afford protection to purchasers in good faith and without notice from those claiming title to land. A recorded mortgage has priority over a mortgage subsequently recorded. The New York Recording Act requires that the mortgagee be a "purchaser" in good faith, and for a valuable consideration. Thus, a recorded mortgage given to secure an antecedent debt (past consideration) has been held to be not paramount to a prior unrecorded mortgage, because past consideration is not held to be a "valuable consideration" under the Recording Act. (See Torrens System of Land Title Registration.)

REGISTRATION OF STOCK

See Stock Registrar.

REGISTRATION PRIVILEGE

See Registered Bonds.

REGISTRATION STATEMENT

Under Sec. 5 (a) of the Securities Act of 1933 (q. v.), unless a registration statement is in effect as to a non-exempt security, it shall be unlawful for any person, directly or indirectly, to make use of any means or instruments of transportation or communication in interstate commerce or of the mails to sell or offer to buy such security through the use or medium of any prospectus or otherwise; or to carry or cause to be carried through the mails or in interstate commerce, by any means or instruments of transportation, any such security for the purpose of sale or for delivery after sale.

Secs. 6, 7 and 8 of the Act further relate to the registration statement. Sec. 6 prescribed the filing of the registration statement in triplicate, at least one copy of which shall be signed by each issuer and its principal officers and majority of the board of directors. Sec. 7 prescribes that the information specified in Schedule A outlined in the Act shall be contained and required in the registration statement, subject to any further requirements prescribed by regulations of the Securities and Exchange Commission (Regulation C). Sec. 8 prescribes that normally the effective date of a registration statement shall be the 20th day after the filing thereof.

Sec. 11 of the Act then prescribes the civil liabilities arising on account of any false registration statement. In case any part of the registration statement, when such part becomes effective, contains an untrue statement of a material fact or omits to state a material fact required to be stated therein or necessary to make the statements therein not misleading, any person acquiring such security (unless it is proved that at the time of such acquisition he knew of such untruth or omission) may, either at law or in equity, in any court of competent jurisdiction, sue every person who signed the registration statement; every person who was a director of or partner in the issuer at time of filing; every person who with his consent is named in the registration statement as being or about to become a director or partner; every accountant, engineer, or appraiser, or any person whose profession gives authority to a statement made by him who has with his consent been named as having prepared or certified any part of the registration statement; and every underwriter.

An integral part of the registration statement is the Prospectus (q.v.), which contains the same statements made in the registration statement, but need not include detailed documents required for the registration statement.

REGULAR DIVIDEND

A dividend established on a periodic "basis" of so much annually, payable semi-annually, quarterly, or monthly, as the case may be. Seasoned and well-established companies place their stocks on a regular dividend basis in order to enhance the investment appeal of their securities by affording stockholders steady income. The regular dividend should be established at a point well within average earning power, so that it need not be often changed should earning power fluctuate, and may be supplemented by extra dividends or special dividends as earnings warrant. On the other hand, companies whose earnings are subject to wide fluctuation prefer not to establish regular dividend basis, as it would be liable to frequent changes, and instead pay periodic dividends as earnings, working capital needs, and the earnings outlook warrant, leaving them free to change the amount as necessary. Nevertheless, in a long period of good business, such companies may pay a consistent amount regularly, thus giving rise to an "indicated" annual rate which has empirical regularity.

REGULAR LOT

The standard unit of trade on a stock or commodity exchange; the full or Board Lot (q. v.).

REGULAR WAY

The customary method of trading on the New York Stock Exchange. (See Methods of Trading.)

REGULATION

See Public Regulation.

REGULATIONS OF BOARD OF DIRECTORS OF FEDERAL RESERVE SYSTEM

See Federal Reserve Board Regulations.

REHYPOTHECATE

To repledge; to pledge collateral a second time.

Whenever a bank, broker, or other lender advances funds against collateral (in the form of stocks, bonds, or notes) and uses the collateral so pledged to secure in turn a loan from another lender, the process is called rehypothecation. The most typical example of rehypothecation is that which occurs when stock exchange brokers repledge collateral held as security against balances due on margin accounts with a bank as security for a loan. Member banks sometimes pledge securities held against customers' loans as collateral for loans from a Federal Reserve bank. Rehypothecation is legally permissible if the customer's consent thereto is obtained in writing. Loan agreements usually provide for such power on the part of the pledgee (lender). (See Hypothecate, Pledge.)

REHYPOTHECATION

See Rehypothecate.

REICHSBANK

No longer is operation following the defeat of Germany in World War II, the Reichsbank was the central bank of Germany, and the dominant financial institution in the country, operating both as a bankers' bank and bankers for the public through its large system of country-wide branches.

REICHSMARK

Same as mark. The reichsmark was the monetary (gold) unit of the German Republic established by the revaluation of 1924.

REIMBURSEMENT DRAFT

A draft remitted by a foreign bank in payment of items (bills of exchange, checks, postal orders, etc.), forwarded to it for collection. For example, suppose bank "A" in New York sends a draft for one thousand pounds to bank "B" in London for collection, with instructions to remit the proceeds by draft. Bank "B" upon collecting the funds, will forward a draft to bank "A" drawn upon a domestic bank, perhaps bank "A" itself, for one thousand pounds, less collection charges.

REINVESTMENT

Buying additional securities with the interest and dividends on present holdings, or new securities with the proceeds of sale, or funds realized upon maturity of old ones. The term usually refers to the investment of the principal of bonds which have matured, or interest derived therefrom. Since the heaviest bond and interest coupon maturities fall on January and July first, a large demand for reinvestment of capital normally occurs at or about these dates.

REIS

A secondary currency unit of Portuguese India, 192 reis being equivalent to one Rupia. Formerly, the reis was a monetary unit of Brazil and Portugal. (See Foreign Moneys, Table 2.)

RELEASE

In general, the relinquishment or discharge of any right, claim or privilege, either expressly, impliedly, or by operation of law. A mortgage may be discharged by satisfaction, by payment, by tender of payment (which extinguishes the lien and stops the running of interest, although it does not satisfy the mortgage debt), by merger of the mortgagee interest and the legal title to the mortgaged land in one person at the same time, by extinguishment where the owner of the land acquires the mortgage, and by lapse of time. A release or satisfaction of a mortgage is a statutory instrument in New York, and is a conveyance within the meaning of the Recording Act.

REMAINDERMAN

The person who receives the remainder of an estate after the termination of a prior interest set up in the estate by the terms of the creation thereof by the testator or settlor. The remainderman may come into possession of the estate upon the death of the life tenant, or at the end of a certain period designated in a trust. It is the duty of a trustee to harmonize the interests of both the life tenant and the remainderman and to preserve the remainder of the estate for the remainderman. (See Trusts.)

REMARGINING

Placing additional margin against a loan collateralled by securities which have declined in value. In stock exchange loans the amount of the margin must be kept constantly good. Most brokers advise margin customers to keep a comfortable credit balance, in order to avoid the risk of the account's being placed in the restricted category under Regulation T in the event of a sudden market decline. If there is a decline in the market, the borrower is required to furnish additional securities, or to pay a part of the loan. (See Margin.)

REMEDIAL LOANS

See Small-Loan Business.

REMEDY ALLOWANCE

A technical term used by the British mint to indicate the variation from the exact weight and fineness of a coin, as defined by the Coinage Act, allowed from the weight and fineness when actually produced. In gold coins, the remedy for fineness is two parts in one-thousand and for silver coins, four parts in one-thousand. The remedy allowed in weight per English sovereign is 0.20 of a grain.

In the United States the legal variation allowed in coinage is known as the "Remedy of the Mint." (See Tolerance.)

REMITTANCE

This term has two applications:

(1) In general the term applies to any form of payment in cash, or its equivalent, in satisfaction of a debt, which is forwarded from one point to another.

(2) In banking practice the term is frequently used to indicate the forwarding for credit of deposits (checks, cash, money orders, matured coupons, etc.) by customers through the mails, although more properly restricted to a check from a bank in payment of the proceeds of checks previously sent to it for collection.

REMITTANCE ACCOUNT

Among transit and collection departments this term is used to indicate a collecting agent or correspondent with whom arrangements have been made to remit by check in payment of the proceeds of checks previously sent to it for collection. Such collection agents are to be distinguished from those with whom arrangements

have been made to offset items sent for collection by charges to their accounts on the books of the forwarding bank.

REMITTANCE LETTER

See Return Remittance.

REMONETIZATION

The endowment of a metal with the power of acting as a monetary standard, i. e., permitting its coinage without limit as to quantity and giving the coin manufactured from it full legal tender powers, after such coin has once been deprived of this power by reason of being degraded to the rank of token money. (See Demonetization.)

RENEWAL

When a bank extends a loan by permitting a borrower to substitute a new note for a maturing note, the new note is called a renewal, and in the legal sense, constitutes a novation if the old note is surrendered. The renewal of a loan should always entail the cancellation of the maturing note and the making of a new one, and bookkeeping records should show such cancellation and renewal. In many classes of loans, renewals are regularly expected. Real estate mortgage loans, both on farm and urban property, and live stock loans are usually subject to renewal. The buyer of commercial paper sold in the open market by note brokers is under no obligation to renew. (See Frozen Credits.)

RENEWAL BONDS

Bonds issued to extend a maturing issue; another title for what are virtually extended bonds and are practically equivalent to refunding bonds. (See Extended Bonds, Refunding Bonds.)

RENEWAL RATE

The rate which standing call loans in the New York call money market carry for the day. The rate is fixed each day at the "Money Desk" on the floor of the New York Stock Exchange. The rate fixed on Friday stands over Saturday and Sunday; that fixed on a day previous to a holiday holds good for the holiday. (See Call Money Market.)

RENTES

This term has two applications:

(1) A name given to the annual interest payable upon the bonded debt of the Governments of France, Italy, Greece, and several other European countries.

(2) By extension of the above meaning the term also applies to the Government securities themselves; for example, French Rentes. These occupy the same position in France as Government bonds in the United States, or consols in England.

The majority of French Government bonds are known as Rentes, many of which are perpetual issues, but with optional redemption provisions.

REORGANIZATION

The financial readjustment of a corporation under procedures prescribed by Federal or State statutes, as compared with voluntary Readjustment (q.v.), The National Bankruptcy Act (q.v.) now provides for reorganization procedures under court supervision, including Chapter VIII (the former Sec. 77) for railroads, and Chapter X (the former Sec. 77-B) for other corporations. These statutory reorganization procedures were enacted to meet the shortcomings of equity procedure for reorganization, particularly the necessity for paying off in full the claims of dissenting security holders. Under the present statutory reorganization procedures, the required ratio of consents upon approval and confirmation of the reorganization plan by the court binds the dissenting minorities.

W. H. Lough defines reorganization as "A rearrangement of the company's liabilities so as to make them conform more closely to the assets and earnings . . . . a new financial plan which replaces the old plan that has proved faulty" (Business Finance). A United States Court has defined reorganization as "an effort of the security holders independent of the closing out of the old corporation, to replace the company upon a firm and stable financial footing."

The principal causes leading to the necessity for reorganization among industrial corporations are (1) over-capitalization (especially errors in capitalization which involve excessive fixed charges), and (2) overproduction combined with disastrous competition. Among railroads, the chief causes of reorganization have been over-capitalization through issuance of excessive bond issues, and prolonged business depression which cause leverage in capitalization to operate adversely on net earnings. The special causes necessitating railroad reorganization are: (1) the accumulation of large or pressing floating debt; (1) low working capital, and (3) unexpectedly low earnings. No class of business organizations has resorted to reorganization more persistently than railroads. More than 40 per cent. of the railway mileage of the United States underwent reorganization during the depression following the panic of 1893, and approximately one-third of total railroad mileage went into receivership or trusteeship during the period 1930-1939.

The most usual specific objects to be accomplished in a reorganization are: (1) to raise additional capital; (2) to reduce fixed charges; (3) to pay off floating debt; (4) to eliminate unprofitable departments of the business; (5) to scale down the capital issues or substitute contingent obligations for fixed ones; and (6) to balance the corporate budget. In order to reorganize a corporation, funds are needed to pay off pressing obligations and to purchase needed equipment and supplies. This money is usually obtained through the sale of Receivers' Certificates (q.v.), which take priority over all other obligations.

The chief rules to be observed in a reorganization plan are: (1) the maximum charges under the reorganication should approximate minimum net earnings under the old regime; (2) the junior security holders should suffer the heaviest losses; (3) the nominal value of outstanding securities need not be reduced, provided contingent obligations are substituted for fixed ones, and (4) bondholders whose claims are not settled in full should be given an opportunity to participate in future increased earnings of the property by giving them shares of stock for a portion of the old bonds which are cancelled. (See Receivership.)

Palmer, H.: Investment Salvage in Railroad Reorganizations, 1938.
Weinstein, J. I.: The Bankruptcy Law of 1938, 1938.

REORGANIZATION BONDS

Bonds issued in connection with a reorganization, usually issued in exchange for bonds authorized and outstanding under the old capitalization, and customarily in railroad reorganizations in "packages" of so much per new bonds, plus stock or cash, in exchange for the old securities. The bond title, Adjustment Bonds (q. v.), indicates that such bonds are issued in connection with reorganization, but many new bonds issued in reorganizations of recent years do not carry the term "Adjustment" as part of their title.

REORGANIZATION COMMITTEE

Under equity receivership practice, the investors in the debtor's securities, acting through their reorganization committees, developed and presented reorganization plan for approval of the Court. Under Chapter VIII (the former Sec. 77) of the National Bankruptcy Act, reorganization plans are proposed for debtor railroads by interested parties by filing such with the Interstate Commerce Commission, which after holding public hearings thereon, approves or disapproves such plans. The law provides that no plan shall be approved or confirmed by a Court unless first approved by the Interstate Commerce Commission.

Under Chapter X (the former Sec. 77B) of the National Bankruptcy Act, the Court sets a time by which the trustee is to prepare and file either a plan of reorganization or a report advising against reorganization and explaining the reasons for liquidation instead of reorganization.

The National Bankruptcy Act closely regulates the work of protective committees, representing various security owning interests: (1) Any committee representing more than 12 creditors or stockholders must file with the Court copies of the deposit agreement and other papers relating to functions and authority; (2) no committee is allowed to appear or intervene in a Chapter X proceeding unless it has complied with all existing laws governing activities and personnel; (3) in regard to solicitations of acceptances to a Chapter X plan of reorganization, no committee is allowed, except by Court permission, to solicit acceptances in advance of Court approval of the plan; and (4) under Chapter VIII, relating to railroad reorganizations, no committee or persons, except mutual institutions acting in their own interests, groups of not more than 25 persons, and persons acting in their own behalf, may solicit deposit of securities or proxies authorizing the committee or persons to act, except as approved by the Interstate Commerce Commission.

(See National Bankruptcy Act, Reorganization.)

REPARATIONS

The amount of damages assessed at the Treaty of Versailles in 1919 by the victorious Allies against Germany and other defeated nations of the World War. (See War Debts.)

Bibliography

Wheeler-Bennett, J. W.: The Wreck of Reparations, 1933.

REPLEDGE

To rehypothecate; to pledge collateral a second time. When a lender who holds collateral as security for a loan, becomes a borrower, and deposits the same collateral with the consent of his borrower as security for his own loan, the collateral is repledged. To deposit securities pledged as collateral against customers' loans, as by a bank or broker, from another institution, as collateral for a loan. (See Rehypothecate.)

REPRESENTATIVE MONEY

Paper money issued against, and secured by, monetary metal deposited in a National Treasury, or other public depository, in amounts sufficient to redeem such money in full. Thus, silver certificates are examples of representative money, since they are payable on demand, and sufficient silver is deposited to redeem them in full. Federal Reserve Notes, the principal form of paper money outstanding in the United States, although fully secured by gold certificates and other collateral and payable in lawful money, are not representative money because not supported by a 100 per cent. metallic reserve. (See Money, United States Money.)

REPUDIATING STATES

See Repudiation.

REPUDIATION

Wilful refusal to pay a debt. The dishonor or rejection of an obligation or contract, as distinguished from an unavoidable failure or Default (q.v.). Repudiation may be complete or partial. The term is usually applied to the refusal of a government or civil subdivision thereof to pay a bonded obligation. Whenever a sovereign power, e. g., a national government or state, repudiates its debts, the citizens who have bought its bonds have no recourse, since an individual has no power to sue a sovereign power without its consent. A municipality, however, may be sued.

Although a national government may repudiate its obligations, very few instances of such repudiation are on record. The United States has never repudiated any of its bonds. Several of the states and certain counties have been guilty of repudiation, illegality of the issue being the chief excuse. According to Lawrence Chamberlain, there were two periods of repudiation in the United States; the first was from 1837 to 1844, due to the depressed conditions which followed the panic of 1837, and the second from 1870 and 1884 which is characterized as a "period of bad faith."

REPURCHASE AGREEMENT

This term has two applications:

(1) Bonds are sometimes sold by one bank or investment house to another with the privilege of repurchase. This transaction is tantamount to securing a loan equal to 100 per cent. of the collateral offered. For instance, should an investment house desire to borrow funds with bonds as collateral, it may, instead of applying for a loan, arrange to temporarily sell them to a bank with an agreement to repurchase them at the same price at some specified future date—when the need for the funds has passed. When such an agreement is concluded, the

bank purchases the bonds outright at a flat price, or flat price plus accrued interest, with an agreement to sell them back to the borrowing institution at the same price upon the expiration of a certain period plus interest at a stipulated rate. The price agreed upon for purchase and resale is usually the prevailing market price, or a few points below.

Regulations of the Comptroller of the Currency authorize member banks to enter into repurchase or resale agreements only when the member bank concerned has the sole right or option under the agreement.

The following is a typical form of Bond Repurchase Agreement:

AGREEMENT MADE THIS
..... DAY OF .....19 .....
Between
.....Bank
and
.....

WHEREAS, in consideration of the agreement to purchase hereinafter expressed .....Bank has this day agreed to purchase from .....
$000,000 par value, Treasury 2's,
due Sept. 15, 1951-53
at a price of .....flat.

The .....Bank hereby agrees to resell said lot of bonds to the .....on or before 60 days from the purchase date at the same price .....flat, plus interest on the purchase price at the rate of .....per cent. per annum and the said .....hereby agrees to repurchase said lot of bonds from the .....Bank on or before 60 days from the selling date, at the said price .....flat plus interest on the sale price at the rate of ..... per cent. per annum.

THE .....BANK
By .....
Cashier.

(2) Member banks may borrow from a Federal Reserve bank through the instrumentality of a repurchase agreement, which, to all intents and purposes, is a collateral advance. Eligible collateral is of four classes: Treasury Bonds, certificates of indebtedness, bankers' acceptances, and eligible commercial paper.

The form of repurchase agreement used by Federal Reserve banks is as follows:

New York, ...19....
TO FEDERAL RESERVE BANK,
NEW YORK, N. Y.

The .....Bank hereby offers for rediscount for ..... days from date the bills and/or notes which are listed in this application and agrees on .....19..... to pay you the face value of the same which are thereupon to be released to us. If such payment is not made on said date, you are hereby authorized to charge to our account the face value of said bills and/or notes and to hold them for collection for our account, subject to our order.

.....Bank
.....

RESERVATION

In practice before passage of the Securities Act of 1933, in printing descriptive circulars it was customary for the issuing investment house or syndicate to append a statement purportedly to preclude any liability which might accrue because of misstatements or inaccuracies which might be contained. Typical examples of such reservations were.

"The information contained in this circular is not guaranteed, but is believed to be correct." "The statements and figures presented herein are not guaranteed, but are taken from sources which we believe to be accurate." "All information given herein is from official sources or from sources which we regard as reliable, but in no event are the statements herein contained to be regarded as representations of the undersigned." "The statements contained herein are based upon information which we consider entirely trustworthy. While we do not guarantee the information, we believe it to be correct."

Although the legal efficacy of such "disclaimer" clauses is subject to actual litigation and the facts of each case, such hedge clauses have continued to be generally used. In view of the principle of disclosure of interest of the Securities Act of 1933, it is now customary to add an indication of the interest that the firm issuing such descriptive circulars has in the security described. An example of the modern hedge clause follows:

"The data contained herein have been obtained from reports of the company to its stockholders and from various statistical services and other sources which we believe reliable, but without further verification or investigation by us. This information is not intended to and should not be relied upon as comprising a complete report or analysis. Neither the facts herein presented nor the opinions herein expressed constitute representations by us. We deal, as principals or agents, in the security described herein."

RESERVE

This term has four applications:

(1) In accounting, a reserve as distinguished from Reserve Fund (q. v.), is an account appearing among the liabilities to indicate a reservation of profits. Usually a reserve account is specially earmarked to designate its purpose but represents neither cash nor other assets in particular. It is a part of the proprietorship set aside out of earnings to prevent its distribution as dividends.

There are three general classes of reserves, each of which is fundamentally different from the others. In the first group may be placed all reserves that represent shrinkages in asset values. These are really suspended credits to asset accounts and are sometimes referred to as "valuation reserves." Examples are: reserve for depreciation, reserve for bad debts, reserve for depletion, reserve for probable losses, and reserve for depreciation in market value of securities. The advantage in setting up a reserve for depreciation on fixed assets such as buildings, machinery, furniture, and fixtures, and automobiles over crediting the estimated depreciation to the asset accounts at the end of each year is that the balances of the asset accounts will at all times represent the accumulated costs of such items of asset value as are still on hand and the balances of the reserve for depreciation accounts will represent accumulated depreciation on the same assets. This information is necessary if annual depreciation is to be computed as a percentage of the cost of the asset based on its useful life. If a business is operated on a

conservative basis a reserve for bad debts is usually advisable, for after all accounts known to be worthless are charged off, experience has shown that a part of the remaining receivables which are uncollected at the end of the year will subsequently be lost. These accounts cannot be charged off at the end of the year for their identity will not be known. However, the same net result as far as statements of operation and balance sheets are concerned can be secured by setting up a reserve for bad debts, the amount of which should be based on past experience. Reserves for depletion are used by mining and quarrying enterprises to measure the decrease in value of ore deposits as a result of operation. If securities held as an investment and carried at cost depreciate in value profit and loss or undivided profits are sometimes charged and an account called "reserve for depreciation in market value of securities" is credited for the amount of shrinkage. This procedure is preferable to writing the asset account down to market value for the reason that there is usually no allowable deduction from taxable income until a loss has been incurred as the result of a sale or until the securities have become worthless. Since all of these reserves represent shrinkages in the value of particular asset accounts they should be shown in the balance sheet as deductions from the cost of various assets. Such reserves indicate conservative business policies.

The second group of reserves represents liabilities, usually of a current nature, the exact amounts of which are not known. Examples are: reserve for taxes and reserve for interest. These reserves are nothing more or less than estimated liabilities and should be shown in the balance sheet under the caption of liabilities. If the exact amounts were known such items would be shown in the books and statements as taxes accrued and interest accrued or taxes payable and interest payable depending upon whether or not they have become due.

In the third class are found such items as reserve for new building, reserve for extension of plant, reserve for accidents, reserve for contingencies, etc., all of which represent appropriated surplus and should be so shown in the balance sheet. These accounts are usually set up as a result of resolutions of boards of directors and are credited periodically with a portion of profits.

The only object of such accounts is to limit the distribution of profits as dividends. These accounts register the intent of the directors to hold back or reserve certain amounts out of profits and the directors can at any time have the balances of the accounts transferred back to the surplus or undivided profits account.

(2) In life insurance, the reserve is an accumulating fund from such portions of premiums as are not currently used to pay death claims and expenses, but held for the credit of policy-holders in future years. In fire and marine, and casualty insurance, unearned premiums, representing premiums paid in advance but not yet earned, are required by law to be set up in unearned premiums reserves.

(3) In banking, the term is used in several applications, but each has a technical meaning quite different from the term used in accounting and insurance. A bank reserve is an asset in the form of a cash balance maintained in a bank's own vault or deposited with a compulsory or optional depository or depositories representing a certain proportion of the bank's deposits. In the United States, the amount of reserve against demand and time deposits, the method of its computation, the place of deposit, and composition (for Federal Reserve banks), are prescribed by law. In England and most of the European countries, however, the amount of reserve against deposits is not regulated, but is left to the discretion of the individual banks.

Deposit reserve requirements did not exist in the United States until after the panic of 1857; but thereafter, due to the insistence of public demand for prescribed reserves, many of the states modified their banking laws by fixing legal reserve requirements. The principle of legal minimum reserves against deposits, which was one of the leading features of the National Bank Act of 1863, became firmly established at that time.

The purpose of required reserves is to maintain the confidence of the depositors in the ability of the banks to pay in cash. It is also a deterrent to unhealthy expansion of loans, since deposit credits cannot be extended to an amount exceeding the legal ratio of reserves to deposits. It is therefore a safeguard against unsound inflation of credits. A bank reserve cannot be regarded as an emergency fund to be used in times of credit stress, because it must be continually kept good, and cannot be drawn upon. The one exception to this rule is in the case of the Federal Reserve banks, which with permission of the Board of Governors of the Federal Reserve System, and under certain penalties, may temporarily suspend their reserve requirements. With the privilege of rediscount under the Federal Reserve System, however, the reserves of member banks are far from being rigid. The reserve requirements of members of the Federal Reserve System are determined by the class of city in which they are located, in the following range authorized by Sec. 19(c) of the Federal Reserve Act:

	Against demand deposits	Against time deposits
Central reserve cities	13% to 26%	3% to 6%
Reserve cities	10% to 20%	3% to 6%
Other cities	7% to 14%	3% to 6%

State banks and trust companies which are not members of the Federal Reserve System keep their reserves in their own vaults or in designated depositories, i. e., other approved banks usually in larger cities. But members of the Federal Reserve System are required to keep their entire legal reserves with the Federal Reserve bank of their district, and cash which is maintained in their own vaults or in other banks cannot be counted as reserve. The first is technically known as "legal reserve," the second as "till money." The reserve requirements for state banks and trust companies vary among the separate states from 10 per cent. to 25 per cent., with a strong predominance toward 15 per cent. Banks in the larger cities, however, are usually required to keep larger reserves than those in the smaller localities.

The form prepared by the Board of Governors of the Federal Reserve System for the computation of the required reserve which is to be carried by member banks with Federal Reserve banks, is given below.

A. GROSS DEMAND DEPOSITS (1)
(including demand balances of
other banks): $ ...
1. Deposits of individuals,
partnerships and corporations $ ...

2. U. S. Government deposits(2) ...
3. State, county, and municipal deposits ...
4. Deposits of other banks in the U. S. (except private banks and American branches of foreign banks) ...
5. Deposits of private banks and American branches of foreign banks ...
6. Deposits of banks in foreign countries (including balances of foreign branches of other American banks, but excluding amounts due to own foreign branches) ...
7. Certified and officers' checks, letters of credit and travelers' checks sold for cash, and amounts due to Federal Reserve Bank (transit account) ...

B. DEDUCTIONS ALLOWED IN COMPUTING RESERVES: $ ...

1. Balances subject to immediate withdrawal due from other banks, including cash items forwarded to a correspondent bank for collection and credit, and charged to item "Due from Banks" (except balances due from Federal Reserve Banks, from foreign banks or branches thereof, from foreign branches of domestic banks, or from private banks) $ ...
2. Cash items in process of collection, except to the extent included in item B-1 (including checks with Federal Reserve Banks in process of collection and checks on hand which will be presented for payment or forwarded for collection on the following business day) ...

C. NET DEMAND DEPOSITS (item A minus item B): $ ...

D. TIME DEPOSITS: $ ...

1. Deposits (except savings deposits), of individuals, partnerships, and corporations:
   (a) Certificates of deposit (other than for money borrowed) $ ...
   (b) Open accounts ...
   (c) Christmas savings and similar accounts ...
2. Deposits evidenced by savings pass books ...
3. Postal savings deposits ...
4. State, county, and municipal deposits ...
5. Deposits of other banks in the U. S. (except private banks and American branches of foreign banks) ...
6. Deposits of private banks and American branches of foreign banks ...
7. Deposits of banks in foreign countries (including balances of foreign branches of other American banks, but excluding amounts due to own foreign branches) ...

E. RESERVE REQUIRED:

1. On net demand deposits (item C above), 26%, 20%, or 14% for central reserve city, reserve city, and "country" member banks $ ...
2. On time deposits (item D above), 6% for all member banks ...
3. Total reserve to be maintained with Federal Reserve Bank (item E-1 plus item E-2) $ ...

Notes: (1) Regulation D of the Board of Governors of the Federal Reserve System defines Gross Demand Deposits.

(2) Under Act of April 13, 1943, U. S. Government deposits in "war loan" accounts were exempted from reserve requirements until 6 months after cessation of hostilities.

Federal Reserve banks are required to keep a reserve of 35 per cent. against their deposits. While the composition of reserves for member banks with Federal Reserve banks is not specifically designated, Federal Reserve banks may count as reserve only those forms of money coming under the head of Lawful Money (q.v.). This includes specie, Treasury currency and gold certificates.

In banking also are found the terms "primary" and "secondary" reserves. Primary reserves are the legal reserves required to be maintained against deposits, as well as other cash. "Secondary" reserves are earning assets in such highly liquid investments and at full value, such as short-term Government securities, call loans, bankers' acceptances, etc. "Excess" reserves (q.v.) in banking are the excess of actual over required legal reserves maintained against deposits with the Federal Reserve Banks or other legal depositories.

(4) In monetary science, the term reserve is also applied to the gold or other metal, or to bonds or other documentary evidences of debt, which are used as collateral to support paper money. Thus, Federal Reserve notes are required to be secured by a reserve in gold certificates equal to 40 per cent. of the amount outstanding plus rediscounted commercial paper in an amount sufficient to bring the total security up to 100 per cent. United States Notes (q.v.) are secured by a partial gold reserve. In fact, all forms of paper money in the United States are supported by collateral in some form, which may be regarded as reserve. (See Paper Money.)

Bibliography

Fisher, I.: One Hundred Per Cent. Money, 1935.

RESERVE AGENT

Another term for Reserve Depository (q.v.). A National bank located in a central reserve city or reserve city, which, with the approval of the Comptroller of the Currency, or a state bank or trust company designated by a State Banking Department, may act as a depository in which state banks and trust companies may keep a certain portion of their legal reserve against deposits.

Prior to the establishment of the Federal Reserve System, National banks located in reserve cities were permitted to keep one-half of their legal reserve with reserve agents in central reserve cities and banks located in other cities were permitted to keep three-fifths of their legal reserve with reserve agents located in either central reserve cities or reserve cities.

(See Federal Reserve Agent.)

RESERVE BANK

Usually this term means a Federal Reserve bank. According to the Federal Reserve Act "the term 'reserve bank' shall be held to mean Federal Reserve bank." Prior to the Federal Reserve System, National banks located in central reserve and reserve cities were called reserve banks. (See Federal Reserve Bank, Federal Reserve System.)

RESERVE CITIES

The Federal Reserve Act confers upon the Board of Governors of the Federal Reserve System the power to classify or reclassify reserve and central reserve cities, or to terminate their designation as such, for the purpose of reserve requirements.

Effective March 1, 1948, the Board of Governors, acting pursuant to Sec. 11 (e) and other provisions of the Federal Reserve Act, established the following classification of central reserve and reserve cities:

(a) Central reserve cities: the cities of New York and Chicago.

(b) Reserve cities: (1) the city of Washington, D. C., and every city except New York and Chicago in which there is located a Federal Reserve Bank or branch of a Federal Reserve Bank;

(2) The following are also classified as reserve cities:

(A) Every city in which on the dates of official call reports of condition in the two years ending June 30, 1947, member banks exclusive of their office in other cities, held an aggregate amount of demand deposits owing to banks equal on the average to 1/3rd of 1% or more of the aggregate amount of demand deposits owing to banks by all member banks of the Federal Reserve System; and

(B) Every city in which on the dates of official call reports of condition in the two years ended June 30, 1947, member banks exclusive of their offices in other cities, held an aggregate amount of demand deposits owing to banks equal, on the average, to 1/4th of 1% or more of the aggregate amount of demand deposits owing to banks by all member banks of the Federal Reserve System, and also equal on the average to 33 1/3% or more of the aggregate amount of all demand deposits held by the member banks in such city.

On the basis of (A) and (B) above, the following cities, in addition to those classified as such under paragraph (b) above, are classified and continued as reserve cities:

Columbus, Ohio; Des Moines, Iowa; Milwaukee, Wisconsin; St. Paul, Minnesota; Lincoln, Nebraska; Tulsa, Oklahoma; Wichita, Kansas; Fort Worth, Texas; Cedar Rapids, Iowa; Sioux City, Iowa.

The following city is also added and classified as a reserve city: National City (National Stockyards), Illinois.

The designation of the following cities as reserve cities is terminated (unless continued in accordance with above provisions):

Toledo, Ohio	St. Joseph, Missouri
Dubuque, Iowa	Topeka, Jansas
Grand Rapids, Michigan	Galveston, Texas
Peoria, Illinois	Waco, Texas
Kansas City, Kansas	Ogden, Utah
Pueblo, Colorado	Spokane, Washington

The Board of Governors of the Federal Reserve System prior to March 1, 1948 also designated and continued as a reserve city any city then classified as a reserve city, although not within the scope of the above provisions, if a written request for the continuance of such city as a reserve city was received by the Federal Reserve Bank of the district in which the city is located on or before February 16, 1948 from every member bank which has its head office or a branch in such city, exclusive of any member bank in an outlying district of such city permitted by the Board of Governors to maintain reduced reserves, together with a certified copy of a resolution of the board of directors of such member bank duly authorizing such request.

Indicating the now flexible provisions for designation of reserve cities, effective as of March 1st of each third year after March 1, 1948, the Board of Governors: (a) will continue as reserve cities or designate as additional reserve cities all cities then falling within the scope of the above provisions and all cities when then meet the standard prescribed, based upon official call reports of condition in the 2-year period ended on June 30th of the year preceding such third year; and (b) will terminate the designation as reserve cities of all other cities, except that the Board of Governors will continue the designation as a reserve city any city when then has the designation of a reserve city and does not then fall within the scope of the above provisions, if a request for the continuance of such designation is made by every member bank in such city, and together with a certified copy of resolution of the bank's board of directors authorizing such request, is received by the Federal Reserve Bank of the district not later than the 15th day of February of such third year.

(See Central Reserve Cities, Reserve, Reserve Ratio.)

RESERVE DEPOSITORY

A bank designated and authorized to act as depository for a portion of the legal reserves against deposits which other banks are required by law to maintain.

Every member bank of the Federal Reserve System is required to establish and maintain reserve balances against demand and time deposits as required by the Federal Reserve Act, with the Federal Reserve Bank of its district.

Legal reserves against deposits of State banks are required by State laws to be kept in part on hand and part with designated reserve depositories. The New York State Banking Law defines "reserve depository" as a banking corporation designated by the Superintendent of

Banks as a depository for reserves on deposits. Sec. 106 of the Banking Law specifically provides that no bank or trust company shall deposit any of its funds with any other banking corporation or private banker unless such corporation or banker has been designated as a depository for the funds of the bank or trust company by a vote of the majority of the directors of the bank or trust company, exclusive of any director who is an officer, director, trustee or partner of the depository designated. In any case where a banking corporation or private banker is so designated, a bank or trust company shall not deposit therewith an amount in excess of 25% of the capital stock, surplus fund and undivided profits of such bank or trust company unless such other banking corporation or private banker is located within the State of New York, and has been approved by the Superintendent as a depository for the purpose of this section, in which case the amount so deposited may equal but shall not exceed 100% of the capital stock, surplus fund and undivided profits of such bank or trust company. These restrictions do not apply to deposits which any New York State bank or trust company shall maintain with a Federal Reserve Bank. (See Reserve.)

RESERVE FUND

An accounting term sometimes but incorrectly used as synonymous with the accounting term Reserve (q.v.), but which is an asset in the form of cash, securities, or other specific assets, which has been set aside for some particular purpose, and which has no accounting relation per se to the liability account, "Reserve". However, some accountants establish both the asset "Reserve Fund" for a particular purpose, and at the same time earmark Surplus by creating a "Reserve" for the same purpose. Once the "Reserve Fund" has been applied to the purpose intended, however, the "Reserve" on the liability side for the same purpose serves no useful function and should be closed out to general Reserves or Surplus.

Also an English accounting term equivalent to the term Earned Surplus (q.v.) in America. This account is created by retaining a portion of the earnings in the business, instead of disbursing them as dividends.

RESERVE RATIO

A short term for the full title "Federal Reserve ratio of reserves to deposit and Federal Reserve note liabilities." This ratio appears weekly in the published statement of each Federal Reserve bank and of the Federal Reserve System as a whole. This ratio was formerly regarded as an important barometer of credit conditions and money supply, but the Board of Governors of the Federal Reserve System points out that in general, Federal Reserve credit policy is determined on the basis of the broad needs of the credit and business situation and not on the basis of variations in the reserve ratio. The varying conditions in the different Federal Reserve districts are shown by variations in the ratio of the separate reserve banks, while the ratio for the Federal Reserve System shows the condition for the entire country.

Every week the Board of Governors of the Federal Reserve System announces through the press a statement of condition of all twelve Federal Reserve banks, showing their principal assets and liabilities, and also showing what is known as the reserve ratio or reserve percentage. The reserve percentage, or reserve ratio, is the ratio of total reserves to deposit and Federal Note liabilities combined. The legal reserves required for each Federal Reserve Bank are 35% in gold certificates or lawful money against deposits, and 40% in gold certificates against Federal Reserve Notes in actual circulation, provided that when the Federal Reserve Agent holds gold certificates as collateral for Federal Reserve Notes issued to the particular Federal Reserve Bank, such gold certificates shall be counted as part of the reserve which such bank is required to maintain against its Federal Reserve Notes in actual circulation.

The following is a tabulation of the annual highs and lows of the reserve ratio of the Federal Reserve System (twelve Federal Reserve banks combined) since 1920:

	High		Low	
1947	48.9%	Oct. 23	42.6%	Jan. 3
1946	44.5	Apr. 12	41.9	Jan. 2
1945	49.8	Jan. 18	41.3	Dec. 22
1944	64.2	Feb. 10	48.3	Dec. 23
1943	79.0	Feb. 3	61.8	Dec. 24
1942	91.1	Mar. 30	76.3	Dec. 31
1941	91.2	Mar. 26	88.9	July 3
1940	90.9	Dec. 11	86.9	Jan. 2
1939	86.9	Aug. 30	83.7	Jan. 4
1938	83.8	Dec. 29	80.0	Jan. 25
1937	80.5	Mar. 17	79.5	July 14
1936	79.5	Sept. 9	77.8	Jan. 8
1935	77.8	Dec. 11	70.8	Jan. 2
1934	70.8	Dec. 5	63.5	Jan. 17
1933	68.8	June 28	45.6	Mar. 8
1932	70.9	Mar. 30	56.2	July 20
1931	85.4	Mar. 25	59.9	Oct. 28
1930	83.7	June 25	72.9	Jan. 8
1929	75.9	May 22	61.9	Jan. 2
1928	75.1	Mar. 21	61.6	Dec. 26
1927	80.1	Feb. 25	66.8	Dec. 28
1926	76.3	July 28	68.9	Dec. 22
1925	78.8	Jan. 21	66.1	Dec. 23
1924	83.7	May 21	70.5	Dec. 24
1923	78.2	July 25	71.3	Jan. 8
1922	80.4	Aug. 9	71.1	Jan. 4
1921	73.1	Dec. 7	46.4	Jan. 7
1920	45.5	Dec. 17	42.4	May 14

Banking laws specify that minimum legal reserves shall be maintained, for the better protection of depositors. The amount of reserve required for a bank which is a member of the Federal Reserve System depends on the size of the community in which the bank is located and the nature of its deposits. On the average throughout the country the reserves required for member banks have averaged about 15 per cent. of demand and time deposits. Latest legislation specifying legal reserve requirements for member banks is provided in Sec. 2 of the Joint Resolution of Congress of August 16, 1948, which amends Sec. 19 of the Federal Reserve Act to authorize changes in heretofore maximum legal reserve requirements (see Reserve) for a temporary period expiring June 30, 1949, as follows:

"Notwithstanding any other provisions of law, the Board of Governors of the Federal Reserve System, in order to prevent injurious credit expansion, may by regulation change the requirements as to reserves to be maintained pursuant to this section against demand or time deposits or both (1) by member banks in central reserve cities, or (2) by member banks in reserve

cities, or (3) by member banks not in reserve or central reserve cities, or (4) by all member banks; but no such change shall have the effect of requiring any such member bank to maintain a reserve balance against its time deposits in an amount equal to more than 7 1/2 per centum thereof, or a reserve balance against its demand deposits in an amount equal to more than 30 per centum thereof if such bank is in a central reserve city, 24 per centum thereof if in a reserve city, or 18 per centum thereof if not in a reserve or central reserve city. No change in reserve requirements made under authority of this paragraph shall continue in effect after June 30, 1949."

Pursuant to this legislation, the Board of Governors on September 8, 1948 amended the Supplement to Regulation D so as to increase the reserve requirements of member banks as follows:

1. 7 1/2% of time deposits; plus--
2. 16% of net demand deposits if not in a reserve or central reserve city;
   22% of net demand deposits if in a reserve city, except as to any bank located in an outlying district of a reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of the Federal Reserve System, is permitted to maintain 16% reserves against net demand deposits;
   26% of net demand deposits if located in a central reserve city, except as to any bank located in an outlying district of a central reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of the Federal Reserve System, is permitted to maintain 16% or 22% reserves against net demand deposits.

These latest reserve requirements were effective as to banks in reserve and central reserve cities at the opening of business on Sept. 24, 1948, and as to other member banks, at the opening of business on Sept. 16, 1948.

In the same way, Federal Reserve Banks must keep in reserve a certain proportion of their funds, and because of the fact that the reserve banks carry reserves for other banks, the percentage is much higher—35 per cent. in gold certificates or lawful money of the amount of their deposits, and 40 per cent. in gold certificates of the amount of their Federal Reserve Notes. However, for purposes of convenience and ease of reference the published reserve percentage is a single figure. This figure is the proportion which the total reserves bear to the amount of both deposits and notes. Thus a 75 per cent. reserve ratio (or percentage) means that the reserve banks have reserves in gold certificates or lawful money which amount to three-quarters of the sum of their deposits and notes.

The reserve ratio of the reserve banks may therefore be affected by any one of three factors,—a change in the amount of cash reserves, a change in the amount of note issues, or a change in the amount of deposits. Changes in the cash reserves, however, affect the ratio more than do changes in either of the other two items. This may be illustrated best by an example. On June 30, 1948, the cash reserves of the reserve banks were $22,513,583,000. Deposits were $20,175,977,000, and notes in circulation $23,751,812,000. The reserve percentage is computed from the fraction

$$\frac{22{,}513{,}583{,}000}{23{,}751{,}812{,}000 \text{ plus } 20{,}175{,}977{,}000} \text{ or } \frac{22{,}513{,}583{,}000}{43{,}927{,}789{,}000},$$

which equals 51 per cent. It is clear, arithmetically, that an increase or decrease of $100,000,000 in cash reserves, shown above the line, affects the percentage more than a like change in deposits or notes, shown below the line.

Ordinarily the principal changes would take place in the figures below the line, namely in the reserve bank deposits and note issues. The way in which such changes would come about, and the reserve ratio be thereby affected may be illustrated by the following example: A merchant of Batavia, N. Y., finding his business growing, is in need of additional funds with which to increase his stock of goods. He goes to his bank and obtains a loan, part of which he may wish to receive in the form of a deposit credit against which he may draw checks, and part of which he may wish to receive in currency. If his bank's reserve is high, it may be able to supply him without borrowing.

But if business is exceptionally active and the bank has no excess reserves, the bank itself may have to borrow in order to accommodate the merchant and its other customers. It borrows perhaps $100,000 at the reserve bank, receiving in return Federal Reserve notes or a deposit on the books of the reserve bank which under the law serves as reserve against the increased deposits of its customers. The reserve bank does not pay out or part with any of the cash composing its reserve, but the aggregate of its deposits and notes is increased $100,000 and the reserve ratio is proportionately lowered.

Conversely, when business activity is diminishing, the Batavia merchant and many others like him, are paying off their loans at their banks and at the same time currency is being released from circulation and deposited in the banks. With these receipts the banks in turn reduce their borrowing at the reserve banks. The cash composing the reserves of the reserve banks is not increased, but their deposits and notes are decreased, and the reserve ratio is proportionately raised.

Thus if conditions were such that the gold reserve remained practically stationary, the reserve percentage would reflect directly the changing needs of business and agriculture. Its lowering would mean a growing volume of commercial activity, accompanied by an increased credit demand upon the banks and a gradual narrowing of the margin of available credit. Its rising, on the other hand, would mean a slackening pace of industry, an easing in the credit demand, and a replenishing of the credit reservoir. (See Federal Reserve Statement.)

RESERVE REQUIREMENTS

See Reserve.

RESIDUARY DEVISEE

A person to whom real property of an estate is devised in the residuary clause of a will after the specific devisees have received their shares. Real property is devised; personal property is bequeathed. (See Devise.)

RESIDUARY LEGATEE

A person named in the residuary clause of a will who

shares in the distribution of the personal property of the testator, after the estate debts and expenses have been paid, and the specific, demonstrative and general legacies have been distributed. (See Legacy.)

RESISTANCE POINTS

A term used by stock market operators to indicate the price level at which a stock in a declining market tends to stop; i. e., "resist" further selling. This is taken to mean, by speculators who operate on the basis of charts, that those familiar with the stock, e. g., insiders, regard the stock as intrinsically cheap at that price and are willing to support the market at that level by taking all that is offered. It also refers to the price level beyond which a stock refuses to rise in an advancing market; i. e., a resisting point. The price "resists" further gains because, it is reasoned that those most familiar with the conditions behind the stock believe that the price is higher than is warranted by underlying conditions. It is by studying these "resistance points" in the market for individual stocks that some operators and chartists obtain their "signals" for market operations.

RESPONDENTIA

An instrument by which the master of a ship pledges its cargo as security for money borrowed in order that necessary repairs may be made at a foreign port.

(See Bottomry Bond.)

REST

A title given to the surplus account which appears in the published statement of the Bank of England. Elsewhere in English bank accounting, this account is entitled, Reserve Fund, and corresponds to the combined surplus and undivided profits accounts in American bank accounting practice.

RESTRICTIVE INDORSEMENT

Any indorsement which results in the indorsee becoming an agent or trustee for the indorser. An example is: "Pay A for collection." Such an indorsement prohibits the further negotiation of the negotiable instrument.

RESUMPTION OF SPECIE PAYMENTS

See Specie Payments.

RETAIL TRADE

Retail stores are defined by the Census of Business as those in which over half ot the sales are at retail. Four or more stores which operate in the same general business and are centrally controlled are classified as a chain. Other retail stores are defined as independents or mail order houses. Total retail sales are further classified as to durable goods and non-durable goods.

Statistics on retail sales are compiled and published by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, and index numbers of sales and inventories of department stores are compiled and published by the Board of Governors of the Federal Reserve System.

Since 1929, all retail stores, as reported by the U. S. Department of Commerce, have had the following sales volume:

Year	Total Sales	Durable Goods	Non-Durable Goods
	(in millions)		
1929	$48,459	$14,180	$34,279
1930	41,989	10,269	31,720
1931	34,572	7,372	27,380
1932	25,013	4,034	20,979
1933	24,517	4,844	19,673
1934	28,743	5,959	22,784
1935	32,791	7,626	25,165
1936	38,338	9,863	28,475
1937	42,149	11,071	31,079
1938	38,053	8,591	29,462
1939	42,042	10,379	31,663
1940	46,388	12,418	33,970
1941	55,490	15,604	39,886
1942	57,522	9,846	47,706
1943	63,680	9,339	54,341
1944	69,484	9,967	59,517
1945	76,572	11,498	65,074
1946	100,255	20,756	79,499
1947	117,725	28,666	89,058

(See Chain Stores.)

RETIREMENT

The paying off of an obligation at maturity, or prior thereto. The term is practically synonymous with redemption and may be used in connection with bonds, notes, acceptances, or paper money (promises to pay) issued by the Government, or by Federal Reserve or National banks. When bonds are subject to redemption, optional retirement is provided. (See Optional Bonds). When paper money is retired, it is withdrawn from circulation and cancelled. (See Federal Reserve Notes.)

RETREAT

A stock market expression used by financial writers to indicate a general decline in security values.

RETURN

This term has two usages: (1) the current return or yield on bond or stock as found by dividing the price into the annual dividend or interest payment; and (2) a general term for an exhibit of banking statistics, such as a combined statement of assets and liabilities of a clearing house association.

In England, a bank statement of condition or balance sheet is called a bank return; for example, return of the Bank of England. (See Bank of England Statement, Yield.)

RETURN REMITTANCE

A check forwarded by a bank acting as collection agent or correspondent, in payment of the proceeds of check previously forwarded by, and collected for, an out-of-town bank with whom arrangements for collection have been established. The letter accompanying the return remittance lists the collected checks, and is known as a remittance letter. (See Remittance Account).

RETURNED ITEMS

Checks, or other demand or matured items which are returned by a drawee bank to the presenting bank be-

cause of certain technical irregularities or invalidities which, if accepted, might involve the drawee bank in a loss. They are returned so that the presenting bank may correct the defect, or take such other action as may be necessary. (See Irregularities.)

REVENUE

Funds raised by a government for public purposes, and consisting of taxes, including direct taxes and excises, licenses, fees, special assessments, fines, etc., income from publicly owned and operated projects or services, and miscellaneous receipts, such as proceeds of sale of publicly owned properties, interest on government funds, etc. Revenues are further classified as to Internal Revenue (q. v.), and Customs Duties or other foreign derived revenues.

Proceeds from loans or borrowing are not classified as revenue, as although they add to current receipts, they also give rise to concurrent borrowing liabilities.

In accounting of railroads and public utilities, gross receipts from services are termed Operating Revenues.

REVENUE ACT

Congress passes the laws to raise revenues for the administration of the Federal Government, the Constitution requiring that bills for raising revenue must originate in the House of Representatives. The Revenue Act, though usually modified and amended from year to year, is of continuing operation and force into a following year at the prevailing rates, until or unless amended. Since the income tax was introduced in 1913, these acts increased in content and complexity, and finally in 1939, the Internal Revenue Code was enacted to consolidate and codify all laws relating to internal revenue.

Since 1939, the Internal Revenue Code has been further amended by the Revenue Acts passed in almost every succeeding year, reflecting changes in exemptions and rates. Latest Act passed is the Revenue Act of 1948, which permits the splitting of income by a husband and wife if they file a joint return, and allows for the first time the important "marital deduction" in computation of estate and gift taxes.

(See Income Taxes.)

REVENUE BONDS

Bonds issued by municipalities with principal and interest payable from revenues or income from municipally-owned public works, such as water works, electric light and power plant, port authority, railroad, etc. Thus, revenue bonds are secured from the property and income of a city-owned enterprise. In some cases revenue bonds are additionally secured by the general taxing power of the issue. (See Tax-Anticipation Bonds.)

REVENUE EXPENDITURES

See Capital and Revenue Expenditures.

REVOCABLE CREDIT

A letter of credit which can be cancelled by the issuing bank without consulting the beneficiary. (See Letters of Credit.)

REVOLVING ASSETS

Same as Current Assets (q.v.).

REVOLVING CREDIT

See Letters of Credit.

RICH MAN'S PANIC

A name given particularly to the panic of 1903, but which might be applied to any period in which there is a sudden and violent decline in security prices, due to the out-pouring of new issues which have not been fully digested, rather than to fundamental economic causes. Thus, the panic of 1903 was one of "undigested securities," in which security prices dropped precipitately due to the conversion into cash of large holdings by wealthy and influential investors and speculators. Such a panic does not create widespread financial disarrangement nor does it mark the beginning of a period of serious depression, but concentrates itself on the stock and bond markets. It therefore primarily affects "rich men" rather than the public at large.

RIGGING (RIGGING THE MARKET)

An expression used to indicate the manipulation of security prices by professional operators to their advantage. Manipulative practices on stock and commodity exchanges are prohibited by the Securities Exchange Act of 1934 (q.v.), and Commodity Exchange Act (q.v.). The term is used more frequently on European exchanges than in this country. There it has reference to the practice of creating a false show of activity and strength by artificially forcing prices upward with the intention of inducing the public to buy. If the manipulatory tactics are successful, securities are unloaded upon the public at higher prices than those at which they are accumulated.

RIGHTS

A term to denote the privilege given to a stockholder to subscribe to additional stock of the same or another class or to bonds of the same company, or to convert bonds into stock, at a certain price. Usually the term refers to the privilege accorded a stockholder of subscribing for more stock of the class, at a price below the market, or on such favorable terms as to make the privilege valuable. When a corporation desires to increase its capital stock, it is customary or may be required by reason of stockholders' preemptive rights, to give its stockholders of record the preference of subscribing to the additional shares to be issued over the general public, and in amounts proportional to the number of shares already held.

The privilege attached to one share of stock held of subscribing to the new, regardless of the ratio which the original stock bears to the new, is called one right. The privilege must be exercised within a limited option period, and when the stock reaches the stockholders of record date or other "ex-rights" date, the original stock is said to be "ex-right", because only stockholders of record on the ex-rights date are entitled to receive the rights to subscribe.

Rights are assignable, and if the holder of stock with rights does not wish to exercise his rights to purchase new shares, he may sell and transfer them to another. Stock exchanges often list rights which may be attached to shares traded thereon.

The value of rights depends upon two variables: (1) the ratio of the number of new shares to be issued to those already outstanding, i. e., the number of old shares required to secure one new share, and (2) the excess of the market price of the outstanding shares over the subscription price of the new shares.

To illustrate how the value of rights is computed, the

following example is given. Suppose the subscription price of the new shares is 25; that the market price of the old shares is 33 1/2; and that 1 share of new stock may be subscribed for 4 shares of the old. After the new stock is issued there will be 5 shares outstanding for every 4 shares outstanding previous, i. e., the new capital stock (assuming there is only one class) will be 125 per cent. of the old. Four shares of the old stock will be worth 4 times 33 1/2, or $134. One share of the new stock costs only $25, which is the amount which will be added to the company's assets. Five shares made up of four of the old and one of the new, therefore, will be worth $134 plus $25 or $159. One share of stock after the 25 per cent. increase has been effected will be worth one-fifth of $159, or $31.80. The right to subscribe for a new share will be worth the difference between the market price of the old shares and the average value of the shares after the new stock has been sold, or $1.70 ($33.50 less $31.80).

The following is a briefer formula which gives the same result: Subtract the subscription price of the new shares from the market price of the old; then divide the difference by one plus the number of old shares required to secure one new share. Worked out, the computations would be as follows: $33.50 less $25 equals $8.50; $8.50 divided by 5 equals $1.70.

RING

In security manipulation before passage of the Securities Exchange Act of 1934 (q.v.), clique or informal pool composed of individuals who had a community of interests, and who co-operated in order to achieve a certain end, such as to raise or lower the price of a certain security. Unlike a pool, there was no written contract delegating management to one member and binding the individual members to share profits or losses. The members were free to manage their own commitments as they chose.

In commodity exchanges, the structure on the trading floor around which brokers and traders gather to trade in futures. On the grain exchanges, it is called the Pit (q.v.).

RISK

See Business Man's Risk, Business Risk, Credit Risk, Distribution of Risk, Diversification, Gambling, Insurance, Moral Risk, Property Risk, Speculation.

ROBERT MORRIS ASSOCIATES

An association of bank credit men, organized chiefly to conduct research work in bank credit. The publication of this organization is known as the Bulletin of the Robert Morris Associates (monthly).

The association is a corporation of the first class not for profit chartered by the Commonwealth of Pennsylvania, formally organized in 1919 after informal inception in 1915 by banking members of the National Association of Credit Men under the title Robert Morris Club. Membership is limited to National and State commercial banks, savings banks, trust companies, Federal Reserve Banks, and private banks or bankers engaged in a general banking business, discount or acceptance houses, commercial paper dealers, and American agencies of foreign banks doing a discount or deposit business in the United States.

ROLLOVER

A term used particularly in connection with financing of U. S. Government securities (Certificates of Indebtedness) in recent years, whereby a new offering is subscribed for in maturing obligations. Holders of the maturing obligations are afforded the privilege of subscribing to the new issue by turning in holdings of the maturing obligations in payment. Thus, the maturity "rolls over", and the operation is similar to a refunding. (See U. S. Government Securities.)

ROOM TRADER

A name sometimes given to a stock exchange member more usually known as a Floor Trader (q.v.), who does not maintain a commission house for the execution of customers' orders, but who trades solely for his own account. A room trader is usually a professional speculator who takes out an exchange membership in order to save the expense of paying commissions on his voluminous transactions, and for the privilege of trading on the floor of the exchange board room where he can take advantage of price fluctuations as they occur.

ROTATION

A term used by students of technical action of the stock market to describe one of the characteristics of a bull market. Not all stocks rise simultaneously or uniformly in an advance. The movement starts in groups previously deflated and working into a favorably industrial position. As these groups tire of rising they rest, and the advance is communicated to others. Then, as other groups improve their earnings position, they, in turn, participate. In a broad bull market there may be several distinct periods of rise in a group of stocks, or in individual stocks.

ROUND LOT

A stock exchange transaction involving a large number of shares in multiples of 100 shares, e. g., 500 shares, 1,000 shares, 2,000 shares, etc. The term is also applied to the unit of trading, which for active stocks is usually 100 shares. Unit of trading for inactive stocks is usually 10 shares, designated as "Ten Share Unit Stocks". Amounts less than the unit of trading are Odd Lots (q.v.).

ROUND TRANSACTION

A completed trading transaction; i. e., the sale of a security or commodity previously purchased, or a purchase to cover a previous short sale.

ROUND TURN

Same as Round Transaction (q.v.).

ROUTE ITEMS

A term sometimes used among bank employees of non-clearing house checks and other items which are collected by messenger. Banks in the larger cities map out certain routes or areas which are assigned to individual messengers. Each messenger collects the items drawn on banks or individuals located within the boundaries of his route, whence the origin of the term.

ROYAL EXCHANGE

A building in London where foreign exchange is wide-

ly dealt in, and where Lloyd's underwriters are located. It is not to be confused with the London Stock Exchange.

ROYALTY

A payment made to an inventor or to an author respectively by a manufacturer or publisher in return for the exclusive right to manufacture and sell the inventor's or author's product. The royalty is usually based on a certain percentage of the sales, or a specified return on each sale, of the patented article or copyrighted book, etc. The term also applies to a return on a concession, or to payments due to an owner or landlord by an operating company for minerals or ores taken from mines or quarries located on his property.

Oil royalty interests have been defined by the Securities and Exchange Commission in its Regulations B and B-T, conferring exemption under certain conditions to offerings of less than $100,000, as follows:

Landowners' royalty interests means fractional undivided interests in the royalty reserved by a landowner or fee owner upon the creation of an oil or gas lease.

Overriding royalty interests means fractional undivided interests or rights of participation in the oil or gas, or in the proceeds from the sale of the oil or gas, produced from a specified tract, which are limited in duration to the terms of an existing lease and which are not subject to any portion of the expense of development, operation or maintenance.

Working interests means fractional undivided interests or rights of participation in the oil or gas, or in the proceeds from the sale of oil or gas, produced from a specified tract, which are limited in duration to the terms of an existing lease and which are subject to any portion of the expense of development, operation or maintenance.

Oil or gas payments means fractional undivided interests or rights of participation in the oil or gas, or in the proceeds from the sale of oil or gas, produced from a specified tract, and which are limited to a maximum amount fixed in barrels of oil, cubic feet of gas, or dollars.

RUBBER

One of the essential industrial raw materials of the world, the value of which is greatly enhanced by manufacture into an almost infinite variety of finished articles. The development of rubber manufacture derived its original impetus from the discovery of the process of vulcanization by Charles Goodyear over a century ago. Prior to World War II, the United States presented the unique position of consuming about half of the world's production of natural crude rubber, but growing none itself and with foreign plantation holdings of leading American companies themselves subject to foreign production and price control. During World War II, however, the United States developed as a defense measure the new important synthetic rubber industry Present legislation, extending through June 30, 1950, calls for the maintenance in active operation or in stand-by status of synthetic rubber plants having an annual capacity of 600,000 tons of general purpose synthetic and 65,000 tons of special purpose synthetic. In addition, the reclaimed rubber industry in the United States has been steadily supplying 240,000 to 290,000 tons of reclaimed rubber in recent years.

Crude Rubber Production—Prior to 1900, almost all the crude rubber used commercially was supplied from the wild species of the jungle belt 15 degrees north and south of the equator, and mainly in Central America and Africa. Since 1876, however, when a number of seeds of the Hevea brasiliensis tree, whose sap is the source of crude rubber, were germinated in London and the saplings transplanted to Ceylon, production of plantation (estate) rubber, and from small native land holdings, has steadily increased. While the foundation of the present great rubber plantations of British India and the Dutch East Indies were laid by the transplantations from Ceylon, it was not until 1913 that plantation rubber exceeded wild rubber production. Plantation rubber output has increased markedly since 1910, and now represents nearly all of the world's output, whereas wild rubber gatherings, reaching a peak in 1912, have since declined, and very sharply since 1927. British producers (Malaya, Ceylon, India-Burma, Sarawak, and North Borneo) accounted in pre-World War II years for nearly half of world production, and Dutch producers, for over 40%. These two major producers, Great Britain and the Netherlands, dominated the International Rubber Regulation Committee, which following 1934 exercised control over crude rubber production (see Production Controls below).

Uses—In the earlier history of the industry, uses were chiefly centered around foot-wear, raincoats, stationers' rubber goods, mechanical goods, and (later) bicycle tires and casings. The industry was further accelerated with the advent of the automobile (about 1900), which developed the present large demand for tires and tubes. At present, despite the diversification developed in production applications, tires and related products still account for about 60% of dollar value of rubber products. The fact that the United States owns about three-quarters of the world registration of motor vehicles explains this country's consumption of approximately one-half the world's output of the raw material, and why rubber constitutes one of the most important by value (in some years the most important) commodity import.

Sharpest growth in sales of manufactured rubber products has been in mechanical rubber goods, which by pre-World War II had increased in importance from 10% of domestic sales in 1929 to over 21%. Since 1941 the proportion of mechanical rubber goods sales for industrial applications has undoubtedly increased further, stimulated by the development of synthetics which have characteristics particularly suitable for industrial uses. Since 1931, lactron, a spun rubber thread, and lastex, a two-way stretch textile, has been successfully introduced in the manufacture of apparel were flexibility is desired. Foam rubber has been another recent application having promising possibilities.

Production Controls—In spite of the large increase in demand, rubber production has periodically outrun consumption; in consequence of which controlling interests have from time to time promoted restriction agreements. Following earlier attempts to control production, which proved unsuccessful, the so-called Stevenson Plan of limiting production and exports was adopted by the British Government on November 1, 1922, but without the co-operation of Dutch interests, and continued in force until 1928. While the plan was successful in the beginning and resulted in a sharp increase in the price of rubber up to 1925 (when a maximum price of $1.21 was recorded), it later failed due chiefly to production in unrestricted areas, and to increased use of re-

claimed rubber. Reclaimed rubber normally accounted for about 20% of crude rubber consumption.

On June 9, and July 1, 1932, crude rubber declined to the lowest price in history at 2 5/8 cents per pound. Such a price was ruinous to all producers. Accordingly, after months of discussion and deliberation, in which both British and Dutch interests participated, regulations for production and export control were adopted and published on April 29, 1934, by leading territories in the Middle East, representing 90 per cent. of the world's rubber production. Thereupon, the government undertook to limit planting, production, stocks and exports of rubber, the export quotas to be fixed from time to time by the International Rubber Regulation Committee. Control of native rubber production was attempted by an export tax.

Briefly, the object of the scheme was as follows: to regulate the production and export of rubber in and from producing countries, with the object of reducing existing world stocks to a normal figure and of adjusting in an orderly manner supply to demand in order to maintain a fair and equitable price level, which would be reasonably remunerative to efficient producers. The scheme was very comprehensive in scope and applied to the following territories: British Malaya, Dutch East Indies, Ceylon, India, including Burma, French Indo-China, the state of North Borneo and Sarawak. These territories were allotted maximum exportable quotas for the five years 1934 through 1938, and the International Rubber Regulation Committee was to meet at periodic intervals to fix the percentage of the quotas that the territories would be allowed to export. With the price break of 1937-1938 and decline in consumption, this international regulatory measure broke down, and has not been revived since.

New York Market — The New York market for rubber futures is conducted on the Commodity Exchange, Inc. (q. v.), one of the world's most important markets for this commodity, and which, by cable arrangements, keeps in close contact with the London and Singapore markets.

The unit of trading is one contract calling for the delivery of ten tons, or 22,400 pounds, of crude rubber, and price fluctuations are in multiples of one one-hundredth of a cent per pound. The contract basis grade is No. 1 standard quality ribbed smoked sheets Hevea Plantation rubber conforming to the official Exchange rubber type and description. Other deliverable grades are: at 5/100ths of 1¢ per lb. premium, No. IX Superior Quality Ribbed Smoked Sheets (Exchange Rubber type and description); at discount of 50/100ths of 1¢ per lb., No. 2 Good Fair Average Quality Ribbed Smoked Sheets (Exchange Rubber type and description); and at discount of 1¢ per lb., No. 3 Fair Average Quality Ribbed Smoke Sheets (Exchange Rubber type and description).

Delivery is at seller's option at any time during the month specified in the contract in licensed warehouse or on dock in the port of New York. All deliveries must be certificated as to grade, packing and weight by the Inspection Bureau of the Exchange. Delivery must consist of only one of the deliverable grades in only one of the tenderable packages and must be in one location (one licensed warehouse or dock) but need not be made up of only one chop or mark.

Principal source of statistics relating to rubber in the United States is the Rubber Manufacturers Association. The accompanying tables indicate production and consumption in the United States and in the world in the past two decades.

(See Commodity Exchange, Inc.)

Table I.

Production and Consumption of Natural Crude Rubber
(in thousand long tons)

	World		United States
Year	Production	Consumption	Consumption
1947	1,226.4	1,112.0	562.7
1946	950.4	537.0	277.6
1945	268.6	372.0	105.4
1944	274.3	260.0	144.1
1943	251.7	462.0	317.6
1942	400.8	656.5	376.8
1941	1,527.8	1,200.0	775.0
1940	1,389.0	1,052.6	648.5
1939	1,001.9	1,078.7	592.0
1938	890.8	911.3	437.0
1937	1,133.1	1,083.2	543.6
1936	852.2	1,020.1	575.0
1935	863.0	937.0	491.5
1934	1,013.4	927.0	453.2
1933	845.3	818.4	401.1
1932	709.8	670.3	332.0
1931	797.4	668.7	350.0
1930	821.8	685.0	375.7

Table II.

Comparative Natural, Synthetic and Reclaimed Rubber Consumption in U. S.
(in thousand long tons)

Year	Natural Rubber	Synthetic Rubbers	Reclaimed Rubber
1947	562.7	559.6	288.7
1946	277.6	761.7	225.4
1945	105.4	693.6	241.0
1944	144.1	566.7	251.1
1943	317.6	170.9	291.8
1942	376.8	17.7	254.8
1941	775.0	0.6	251.2

Sources--Rubber Manufacturers Association.

RUBLE

The Russian international currency unit, also spelled rouble. (See Foreign Moneys—Table 2.)

RULE AGAINST PERPETUITIES

The rule against undue suspension of alienation of property, founded upon reasons of public policy. The rule has been made statutory in about 14 States and the District of Columbia. In New York State, Sec. 43 of the Real Property Law provides that successive estates for life cannot be limited, except to persons in being at the creation thereof; where a remainder is limited on more than two successive estates for life, all the life estates subsequent to those of the two persons first entitled thereto, become void, and on the death of those persons, the remainder takes effect in the same manner as if no other life estates had been created. (See Trusts.)

RUN ON A BANK

When there is a concerted movement of depositors to withdraw deposits from a bank, due to fear of its insolvency, especially in times of panic, or money or credit disturbance, is called a run. Since a bank's customary cash reserve is a small percentage of its deposits, a wholesale run might easily cause the bank to suspend cash payments, even though its assets were entirely sufficient to pay off all liabilities. If a bank is in a position to liquidate its quick assets and pay deposits promptly, confidence may be restored, and the run stopped. Runs on banks were common during the panics of 1837, 1857, 1873, 1893, 1900 and 1907. The most serious runs on banks occurred during the years 1932-1933, which finally culminated in State banking holidays and eventually the nation-wide bank holiday declared by the President. One of the primary purposes of the Federal Deposit Insurance System is to maintain the confidence of depositors in banks, the lack of which was chiefly responsible for bank runs in the past.

RUNNER

Another name given to a bank's or broker's messenger. (See Messenger.)

RUPEE

The international currency unit of Burma, Ceylon, India, Mauritius, Seychelles, Somaliland and Tibet. The Indian Rupee is the currency unit of Bahrein Island. (See Foreign Moneys--Tables 1 and 2.)

RUPIA

The international currency unit of Portuguese India, equivalent to 16 tangas or 192 reis internal currency. (See Foreign Moneys--Table 2.)

RURAL CREDITS

See Agricultural Credit, Farm Mortgages, Federal Farm Loan System.

RURAL CREDITS ACT

See Agricultural Credits Act, Farm Credit Administration, Federal Farm Loan Act, Intermediate Credit Banks.

RURAL ELECTRIFICATION ADMINISTRATION

Since 1939, the Rural Electrification Administration has been part of the organization of the Department of Agriculture, and since passage of the Agriculture Organic Act of 1944, former time restrictions on its program have been removed. It was originally created by Executive Order in 1935 as a temporary agency, but later under the Rural Electrification Act of 1936, was given a 10-year future.

As of March 31, 1948, the REA reported total assets of $817 million, largely consisting ($785 million) of loans outstanding. Self-liquidating amortized loans, up to a term of 35 years, are made at low 2% interest rates to cooperatives, public bodies and even private companies for the purpose of financing extension of central station electric service into rural areas. Sources of funds are appropriations authorized by Congress.

The REA program has grown to the point where the estimated proportion of farm electrification is 60%, compared with 10.9% when the program was initiated. (See Public Utility Industry.)

RYE

The fourth most active grain in futures trading, although the annual crop is the smallest of the grains in the United States. Approximately half of the rye crop in recent years has been used as feed. Only about 20% of the crop has been used for food, another 15% for distilled spirits, and the balance for seed. More than half of the crop is produced in the states of Minnesota, North and South Dakota, and Nebraska.

The 1947 crop of over 25 million bushels was sharply higher than the low 18.7 million bushel crop of 1946, but nevertheless was substantially below the average for the previous decade.

Futures trading in rye is conducted on the Chicago Board of Trade and Minneapolis Grain Exchange, both regulated commodity exchanges under the Commodity Exchange Administration. Contract unit of trading on these exchanges is 5,000 bushels, trading also being done in job lots of 1,000 bushels. Minimum price fluctuation, or "point", is 1/8¢ per bushel, or $6.25 per contract unit. Daily trading limit above or below previous close is 10¢, the maximum range being 20¢.

The following table indicates the fluctuation in annual crops and prices received by farmers for rye:

Year	Production (bushels, 000 omitted)	Average Price Received by Farmers
1947	25,405	(a)
1946	18,685	190.0¢
1945	23,952	135.0
1944	25,500	109.0
1943	30,452	98.1
1942	57,673	59.8
1941	45,364	53.9
1940	39,984	41.9
1939	38,562	43.9
1938	55,984	33.8
1937	48,862	68.6
1936	24,239	81.2
1935	56,938	39.8
1934	16,285	72.0
1933	20,573	62.7
1932	39,099	28.0
1931	32,777	34.1
1926-1930	40,928	75.3
1921-1925	63,746	74.9
1916-1920	39,714	148.0
1911-1915	65,481	74.7

(a) Average price received by farmers on the 15th of the month for July, 1946-July, 1947 was 214¢ per bushel, compared with 135¢ on the same basis for previous 12 months.

Source--Figures up to and including 1946, Statistical Abstract of the U. S.; 1947, U. S. Department of Agriculture.

(See Commodity Exchanges.)

SAFE DEPOSIT BOX

See Safe Deposit Company.

SAFE DEPOSIT COMPANY

A financial warehouse. A company organized to provide facilities for the systematic safe keeping of securities, contracts, wills, insurance policies, jewelry, plate and other valuable documents and property, either as a separate institution, or in connection with a bank or trust company. The premises are usually in the basement of a fireproof building. Extensive vaults must be maintained, proof against fire, water, burglars, and mob violence. The vault itself is usually constructed of armor steel heavily encased in brick or concrete with double doors which are equipped with complicated locks often equipped with a time lock and special emergency alarm apparatus. The combination locks on the outer and inner doors are usually subject to joint control and access requires at least two persons. Among the larger companies special watchmen are placed on duty day and night to furnish additional protection. Inside the vault are separate steel compartments of various sizes, each with a separate door and lock, to be rented to customers.

Safe deposit boxes vary in capacity and shape from a small drawer to a moderate sized safe, the rental charge being in proportion to space occupied. Access can be gained only by the renter in person, or by a duly authorized attorney. Each box is unlocked only through joint control. No renter can enter the vault without being accompanied by the vault attendant, who has a master key to each box. This must be unlocked by the vault attendant before it can be unlocked by the renter. Within the locked compartment drawer is a separate box, usually of steel, with a lock of its own. This can be withdrawn by the renter. Oftentimes private rooms are furnished so that the owners may clip the coupons, examine their valuables and otherwise administer their affairs in privacy. A strict guard is kept at all times.

The relationship between a safe deposit company and box renter is that of bailor and bailee. The safe deposit company is responsible for the safety of the renter's possessions. The renter is bound only to pay his rent and to submit to regulations necessary for the safety of his own property and that of his fellow renters. When a tenant dies, his box may be opened only by the legal representative of the estate on a certificate of the surrogate or probate judge which will assure the safe deposit company of the right of such representative to the control of the property of the deceased.

The records of a safe deposit company, while simple, must provide means of certain identification. Records must be kept containing signatures, addresses, rental terms and such information as number of box, number of key, and appointment of deputies. A visitor's register shows the hour of arrival and departure of each renter who visits his box. In New York State the forms of records are prescribed by the Superintendent of Banks and all safe deposit companies are subject to regulation by the State Banking Department.

Under Art. VIII of the New York State Banking Law (Secs. 315-332), five or more persons may form a corporation to be known as a safe deposit company. Capital stock shall not be less than $100,000 nor more than $2,000,000 if the place of business is to be a city with population of 100,000 or more; and $10,000 nor more than $2,000,000 elsewhere in the State.

In addition to the powers conferred by the General and Stock Corporation laws, every safe deposit company shall have the powers to:

1. Receive as depositary for hire or as bailee for safekeeping and storage, money or any valuable personal property; and to guarantee the safety of any property so deposited with it;

2. To let vaults, safes and other receptacles upon premises occupied by such safe deposit company.

Any safe deposit company having a capital of $100,000 or more may be permitted to open and maintain branch offices in the city or village where the principal office is located. Any safe deposit company having a capital of $100,000 or more, the majority of whose stock is owned by any other banking institution or a National bank may be permitted to maintain a branch office at a location at which such bank is maintaining a duly authorized office.

No safe deposit company shall:

1. Lend money or make any advance on any property left in its possession or belonging to others.

2. Open or maintain any branch offices except as authorized.

Stockholders of safe deposit companies in New York State formerly had "double liability", but such double liability ceased July 1, 1937 as to all outstanding stock provided the required six months published prior notice was given as required. Assessment liability continues as to restoring any impairment of capital.

Safe deposit companies shall have not less than five nor more than 13 directors. On or before February 1st of each year, every safe deposit company shall submit a verified written report to the Superintendent of Banks as of January 1st preceding.

Special remedies available to safe deposit companies in enforcing the liability of depositors are outlined in detail in the New York law, and may be summarized as follows:

1. Warehousemen's lien on property deposited.

2. Sale of contents of the safe or box for non-payment of rental. If unpaid for two years after mailing of notice and 30 days' further notice is given, the contents are transferred to a general safe or box for a period of not less than 2 years, after which the safe deposit company upon another 30 days notice by mail, may sell the contents at public auction held on another 10 days notice. Proceeds shall go to reimburse the safe deposit company, and any excess shall be turned over to the State Comptroller pursuant to the Abandoned Property Law.

If the contents are merely private papers, these shall not be sold, but kept for a period of 10 years before destruction.

3. Sale shall be deemed satisfaction of the lien.

4. Collection of principal, interest or dividends on securities found in a safe or box opened for non-payment of rental may be made and charges satisfied therefrom.

Safe deposit companies may give access to boxes let to executors, administrators or trustees, or guardians or committees: (1) by one or more of the persons acting as executors or administrators; (2) by any one or more of the persons acting as trustees, guardians or commit-

tee, when authorized in writing by the other persons so acting.

The contract of some safe deposit companies is quite voluminous, and seeks to cover every possible contingency, with a view of preventing claims. It is desirable that these contracts be as simple as possible, indicating the date of rental, the rental charge, the acknowledgment of the receipt of the two keys to the safe, a description of the depositor, whether one or more persons or a corporation are the renters, whether a deputy is to be appointed, and in those states where there is no law covering the opening of safes when the rent is unpaid, some provision to cover this point.

Where the safe is rented to but one person, the depositary usually has less trouble than when rented to two or more. When a depositor dies, the transfer tax laws tie up the safe until the executor or administrator is appointed. Where the safe is held by two or more, the death of one may delay necessary access to the survivors and may require proof for the tax authorities as to the ownership of the contents. When renting to one depositor a deputy may be appointed to have access for a depositor, but his authority ceases with the death of his principal. When a box is rented to a corporation, there should be a resolution of the board of directors of the corporation filed, indicating who is to have authority to go to the safe. When a safe is rented to a trustee, the title of the trust should be known, and a copy of the trust deed filed. Safes should not be rented to a trustee or an agent without the depository knowing the conditions of the trust or agency. Safes should not be rented to minors, though a minor may act as deputy.

Rules and Regulations.—The following are the rules and regulations of the safe deposit department of a New York bank:

1. Access to Safes may be had from 9 A. M. to 5 P. M. of each business day.

2. Safes must not be left unlocked at any time nor shall safe holders entrust their keys to any person not properly authorized.

3. Boxes should not be examined in the vault. Rooms are provided for that purpose.

4. If a key to a safe is lost the Bank must be notified without delay and the remaining key surrendered in order that the lock may be changed. If both keys are lost the Bank must be reimbursed for the expense of opening the safe and installing a new lock and key. Keys not returned must be paid for.

5. The Bank must be notified promptly of any change of address of the safe holder or his duly authorized deputy.

6. In consideration of the Bank letting the safe to more than one person, it shall be held by them as joint tenants only, access to said safe to be had by either of them or his or their duly authorized deputies or legal representatives without notice to the other or others, or his or their legal representatives, in case of death, insolvency or other disability. Upon the death of any tenant, whether space is rented to one or more tenants, the Bank may deny access to the leased space to all parties interested therein until the proper tax authority of the State of New York has been identified and an opportunity given for a representative of said tax authority to be present at the opening of said safe or box, and all claims for taxes upon any property in said safe or box against the Bank shall have been released and proper written evidence thereof received by the Bank. In case of the death of one joint tenant, the Bank reserves the right to deny, in its discretion, access to the survivors except upon notice to the legal representatives of the deceased joint tenant. It shall not be inferred, nevertheless, that the Bank has possession and control of the contents of said safe or box, or any right of access thereto, it being agreed that the tenant and his duly appointed deputy or legal representatives, have at all times exclusive possession and control of the contents of said safe or box. The Bank shall exercise ordinary diligence in order that unauthorized persons may not be allowed access, and no unauthorized access shall be inferred from mere proof of partial or total loss of property.

7. The safe holder or any one or more of several joint holders may appoint a deputy in manner required by the Bank, who shall have access to the safe hereby leased, with power to surrender it, and no person other than such safe holder or holders and/or his or their duly appointed deputy or deputies, as appears by the records of the Bank, shall be allowed access to such safe. In consideration of the Bank permitting access to a safe by a deputy, the safe holder agrees that the Bank shall not thereby incur any liability to him or to his estate unless the Bank shall have received actual notice of revocation of the deputy's authority by death or otherwise, and further agrees to indemnify the Bank against any unauthorized or wrongful act of the person appointed deputy.

8. In case the Bank is served with any legal process which purports to affect the property in, or alleged to be in, a safe deposit box, the Bank may, without incurring any liability to the parties entitled to access, suspend the right of access to said safe or box until it is advised by counsel of its interests. The Bank, in addition to these rights and immunities herein reserved, shall have all the rights and immunities, insofar as they are not inconsistent with its legal status, given to safe deposit companies by the Laws of the State of New York.

9. It is understood and agreed that safes are rented to depositors of the Bank only and for the sole purpose of depositing therein securities and valuable papers, but beyond this access to a safe cannot be restricted as to purpose. A power of attorney, qualified in any manner, will not be honored.

10. Safe rentals are due and payable annually in advance. The Bank has the option to consider that a safe is not surrendered until the keys have been returned and the Bank is notified of the surrender in writing under signature of the safe holder, or his duly appointed deputy.

11. The use of the safe is in every instance granted by the Bank and accepted by the person using the same upon the express understanding and agreement that the Bank may terminate such use and require the vacation and surrender of the safe and of the keys thereof at any time upon repayment or tender of repayment of the pro rata proportion for the unexpired time of the amount paid for the use of the safe. This lease is not assignable or transferable without the written consent of the Bank.

12. A resolution of the Board of Directors or other governing body is required as authority for access to safes leased by corporations or similar institutions. Such resolution must grant access to individuals by title of office, and when filed with the Bank shall be binding upon the corporation or other institution, until with-

drawn, and a duly attested resolution of the Board substituted therefor.

13. The safe holder agrees to such reasonable Rules and Regulations as may be adopted hereafter.

While there is no specific provision in the National Bank Act or Federal Reserve Act empowering National banks to maintain safe deposit boxes, the Comptroller of the Currency has ruled that the directors of a National bank may, in their discretion, invest a moderate sum in the construction of safe deposit vaults for the use of customers. National banks have the specific power to hold securities in custody for customers.

In carrying on a safe deposit business, however, National banks shall not invest in the capital stock of a corporation organized under the law of any State to conduct a safe deposit business in an amount in excess of 15% of the capital stock of the National bank actually paid in and unimpaired and 15% of its unimpaired surplus. Under Sec. 23A of the Federal Reserve Act, while safe deposit affilitates are exempt from that section's limitations on relations with affiliates, member banks are nevertheless subject to other provisions of the Act and the Revised Statutes applicable to loans by such banks and investments by such banks in stocks, bonds, debentures or other such obligations. (See Limitations on Bank Loans, Limitations on Investments.)

In most states, banks and trust companies have power to make limited investments in the stocks of safe deposit companies.

History—The modern safe deposit box is a comparatively recent American invention. Although places for safe-keeping have been in existence for centuries, and banks used their strong vaults for the safe-keeping of securities and other personal valuables of their customers, the novel feature of a safe deposit box is that it gives each individual independent control of his private safe and contents without knowledge of the value of the contents to others. This feature required the ingenious invention of the safe deposit lock with its two keys; one the guard key held by the vault custodian; the second the customer's private access key fitting the customer's own safe-box and giving him its exclusive control. Thus, safe deposit companies, or vault systems operated as bank subsidiaries, developed as a result of this invention.

The first safe deposit vault in the world was organized and opened for business in New York City by Francis H. Jenks in June, 1865, with the establishment of the Safe Deposit Company of New York. The second safe deposit vault was opened in Philadelphia on November 26, 1866, by the Fidelity Trust Company (now Fidelity-Philadelphia Company). The third vault was opened in Boston on January 1, 1868, under the name of Union Safe Deposit Vaults. Other sections of the country followed slowly at first, but increased more rapidly after 1890. Safe Deposit Associations have been organized in many of the states.

(See Custodianships.)

SAFETY-FUND BANKS

In 1829 New York State adopted the safety-fund system for the insurance of bank deposits and note issues. The plan provided for the annual payment of one-half per cent. of its capital by each bank into a fund held in trust by the State Comptroller. In practice, the fund was used to redeem the notes, rather than the deposits, of failed banks, since it was insufficient to pay both. The safety-fund banks were granted special charters and since a new constitution passed in 1846 prohibited special charter banks, the system was abandoned with the expiration of the safety-fund bank charters. This system was the forerunner of required reserves against deposits which started with the National Bank Act, and of the later tendency toward compulsory guaranty of bank deposits by state legislation.

(See Guaranty of Bank Deposits.)

SAFETY OF PRINCIPAL

The prime essential of a good investment. (See Investment.)

SAG

An expression denoting a tendency to slight price declines on the stock and commodity exchanges. Price declines in a sagging market are less severe than in a weak market.

SAKELLERIDES

A type of Egyptian cotton. (See Cotton.)

SAN FRANCISCO STOCK EXCHANGE

One of the principal stock exchanges of the United States (ranking fifth among Registered Stock Exchanges in volume for the year ended June 30, 1947) and ranking as the leading securities market of the Pacific Coast. While its unorganized beginnings date back to the late 1860s, and an informal market was theretofore, recognized, it was not until September 18, 1882, when a meeting of nineteen brokers was held that a charter was drafted and a formal organization known as the Stock and Bond Exchange was established.

Membership and History.—At the time of organization the number of memberships in the Stock and Bond Exchange was limited to 25. Subsequently the membership limit has been increased, and on October 2, 1928, the limit was raised to 75, which is the present limit. A single membership has commanded a price as high as $225,000.

Since its organization in 1882, the name of this exchange has undergone several changes. The first meeting fixed the name as the Stock and Bond Exchange, which was used until 1912, when it was changed to the San Francisco Stock and Bond Exchange. In December, 1927, the present name, San Francisco Stock Exchange, was adopted. This latter change was accomplished by the purchase of the properties of the local Mining Exchange, including the rights to the name: San Francisco Stock Exchange.

Since its organization, the San Francisco Stock Exchange has been located within a radius of two blocks in the Montgomery Street financial district. The organization meeting was held in the old Fireman's Fund Insurance Building at 403 California Street. The first meeting of the Exchange was held at 312 California Street. In October, 1882, the Exchange leased Room 22 in the Merchants Exchange Building at 429 California Street, and later occupied additional space at the same location. In 1905, the Exchange moved to a more extensive ground floor space in the Merchants Exchange Building, and on April 18, 1906, the fire and earthquake caused the Exchange to close temporarily.

On January 7, 1918, the San Francisco Stock and Bond Exchange Building at 341 Montgomery Street was oc-

cupied. This building housed the Stock Exchange until 1928, when, to meet the requirements of increased trading, the Stock Exchange purchased the United States Sub-Treasury Building at the corner of Pine and Sansome Streets. The building program included the complete remodeling of the Sub-Treasury Building and the construction of a twelve-story office building immediately adjacent, the whole to be operated as one building. The new trading room, 68 feet by 122 feet, occupies the entire area of the former Sub-Treasury Building, and is, equipped with the most modern facilities for the efficient transaction of business. The new building houses all departments of the Exchange, including the Clearing House and the Stock Exchange Institute.

Objects.—The objects and purposes of the San Francisco Stock Exchange, as set forth in its constitution, are:

(1) To conduct a market for the purchase and sale of Government and corporate securities;

(2) To develop and maintain just and equitable principles of trade and business;

(3) To promote and enforce high standards of commercial honor and integrity; and

(4) To furnish quarters and suitable facilities for the convenient transaction of business.

Sales volume on the San Francisco Stock Exchange for the year ended June 30, 1947 had an aggregate value of $177 million in combined stock and bond sales, largely ($175 million) in stocks. Trading hours are 7 a.m. to 2:30 p.m. Monday through Friday, and 7 a.m. to 11 a.m. on Saturday (local time), and during Daylight Saving Time in the East, the Exchange opens at 6 a.m. Thus, the San Francisco Stock Exchange has two and a half hours of additional trading after the close on the New York Stock Exchange on weekdays and two hours of additional trading on Saturday. Among the stocks traded in are various active issues listed on the New York Stock Exchange.

(See Stock Exchanges.)

SATANG

A minor currency unit of Siam, 100 satang being equivalent to one tical, which is the international currency unit.

SATURATION

The point at which the offerings of new securities are greater than the demand without substantial concessions in price. This term is used among investment bankers to indicate that new investment securities have for the time being, absorbed the available supply of capital awaiting investment. Investment bankers and syndicate managers detect the saturation point whenever attractive offerings cannot be sold within the syndicate period. Thus, when securities become a drug on the market, the saturation point is reached.

The term may also be used of commodities.

SATURATION POINT

See Saturation.

SAVINGS ACCOUNTS

According to the regulations of the Board of Governors of the Federal Reserve System, "The term 'savings accounts' shall be held to include those accounts of the bank in respect to which, by its printed regulations, accepted by the depositor at the time the account is opened,—(a) the pass book, certificate, or other similar form of receipt must be presented to the bank whenever a deposit or withdrawal is made, and (b) the depositor may at any time be required by the bank to give notice of an intended withdrawal not less than 30 days before a withdrawal is made."

National banks, state banks and trust companies are permitted to receive time deposits and to pay interest thereon. In some states, New York for example, state banks and trust companies are prohibited from the use of the term "savings" in connection with time deposits, the term being restricted in its application to deposits in savings banks only. Such state banks and trust companies may solicit savings only by the use of other terms such as, "special interest," "compound interest," "Christmas Club," or "thrift" accounts. The banking laws of the states, being not controlling as to instrumentalities of the Federal Government, may not prohibit National banks from advertising and soliciting savings accounts and employing the term "savings," when so doing, in the opinion of the counsel of the Board of Governors of the Federal Reserve System. The savings (time) deposits of National banks cannot be invested in the same manner as the deposits of savings banks, but only as prescribed by the Revised Statutes and the Federal Reserve Act. The rate of interest which National banks may pay upon time deposits or upon savings deposits shall not exceed the maximum rate authorized by law to be paid upon such deposits by State banks or trust companies organized under the laws of the State in which such National bank is located. Sec. 19 of the Federal Reserve Act empowers the Board of Governors to limit the rate of interest which member banks may pay on time deposits and savings deposits.

SAVINGS AND LOAN ASSOCIATION

Under the Home Owners Loan Act (q.v.) of 1933, provision was made for chartering of Federal Savings and Loan Associations, as compared with only State-chartered building and loan associations prior thereto. The Federal Savings and Loan Associations are under the supervision of the Federal Home Loan Bank Board, a constituent agency under the Housing and Home Finance Agency (q.v.), and must become members of the Federal Savings and Loan Insurance Corporation (q.v.), which insures individual accounts up to $5,000. As of June 30, 1947, there were 1,476 Federal Savings and Loan Associations. Operating methods and procedures are similar to those of the Building and Loan Associations (q.v.).

SAVINGS AND LOAN INSURANCE CORPORATION

See Federal Savings and Loan Insurance Corporation.

SAVINGS ASSOCIATION

See Savings and Loan Association.

SAVINGS BANK INVESTMENTS

Bonds which are eligible for investment by savings banks; a term used to indicate that a security is high-grade, since the laws relating to investments for savings banks are stringent among most states.

(See Legal Investments for Savings Banks.)

SAVINGS BANK RULES

See under Savings Banks.

SAVINGS BANKS

Banking institutions organized especially to encourage thrift among persons of small means by paying interest on savings deposited therein. Originally savings banks were regarded as semi-philanthropic institutions to provide machinery for collecting the savings of the poor, and to invest such savings in high grade investments, to the end that the accrued interest might be returned periodically to the depositors. While modern savings banks cannot be regarded in this light, one feature has always remained dominant, i. e., strict supervision of the investment of deposits as a means of protecting a class of depositors who can ill afford to lose their savings, but who, on the other hand, are generally incapable of making a wise selection of a bank.

Savings bank investments are therefore restricted by the laws of the state in which the bank is located. Generally speaking, investments are limited to (1) mortgage loans, (2) bonds of the higher investment grades, and (3) bankers' acceptances. (See Legal Investments for Savings Banks.)

The idea of a savings bank is said to have originated with Daniel Defoe, the English author, who, in 1697, suggested the organization of "Friendly Societies for Provident Habits in General." The first Friendly Society, however, was not organized until 1765, and development was slow. The name savings bank was not applied until 1810, when Reverend Henry Duncan of Ruthwell Village, Dumfrieshire, Scotland, established a small bank for his parishioners, receiving about $750 in the first year.

The first mutual savings bank established in the United States was in 1816; in fact, two were organized in that year which are still operating. The Seamen's Bank for Savings (New York City) was chartered in 1829, and the Bowery Savings Bank in New York City (the largest) was opened in 1834.

As to organization, savings banks are divided into two classes, mutual (non-stock), and stock, Mutual savings banks are organized without stock, are managed by a board of trustees which is usually a self-perpetuating body, and earnings are distributed among the depositors as dividends upon their deposits, and usually limited to 5 per cent. as a maximum. Surplus earnings are carried to the guaranty fund, and the expenses of organization are met out of an expense fund provided by the original organizers. Stock savings banks, on the other hand, are managed by a board of directors elected by the stockholders. Interest is paid to depositors at a fixed or contingent rate, and earnings above expenses and interest charges are distributed to the stockholders. Mutual savings banks predominate in the Eastern States, while the latter are the prevailing type elsewhere. In New York and New Jersey, only mutual savings banks are now permitted.

The banking law of New York State has defined a (mutual) savings bank as "a corporation authorized by the laws of this state only to receive money on deposit in such sums, to invest the same in such securities, obligations and property, and to declare, credit and pay from its earnings such dividends, as may be prescribed by law." Savings banking, however, is not confined to savings banks. In many towns, the volume of business does not warrant the establishment of more than one banking house, e. g., a National bank, state bank, or trust company. These institutions are permitted to organize "savings," "special interest," or "thrift" departments which answer the same purpose and are operated in much the same manner as savings banks.

Below is given a table showing total of savings deposits in all mutual savings banks, from 1939 to 1948:

Date	Number of Banks	(millions)
Dec. 30, 1939	551	$10,521
Dec. 31, 1940	551	10,665
Dec. 31, 1941	548	10,527
Dec. 31, 1942	546	10,662
Dec. 31, 1943	545	11,730
Dec. 30, 1944	543	13,366
Dec. 31, 1945	542	15,371
Dec. 31, 1946	541	16,583
June 30, 1947	533	17,428
Dec. 31, 1947	533	17,745
June 30, 1948	532	18,190

As of June 30, 1948, the 532 mutual savings banks of the country, had $18,190 million of deposits, of which the hundred largest banks accounted for $13,033 million. The five largest mutual savings banks on June 30, 1948 were: Bowery Savings, New York City; Philadelphia Savings Fund Society; Emigrant Industrial Savings, New York City; Dime Savings, Brooklyn; and Williamsburg Savings Bank, Brooklyn.

Savings deposits are time deposits, and the right to require notice of intention of withdrawal is granted to savings banks, varying from 10 days to 90 days in the separate states. Under ordinary conditions, however, this is rarely exercised.

A savings account is evidenced by a pass book, containing the contract between the bank and the depositor. It must be presented with each deposit and withdrawal, and to receive interest credits. It therefore shows the correct balance due to the depositor at all times (ignoring accrued interest), thereby differing from a commercial bank pass book, which is merely a memorandum of deposits, does not show the balance of the account, and is not a contract.

Savings banks are not required to keep a reserve.

The following is a set of rules and regulations of a New York City savings bank, which may be regarded as typical of all savings banks:

1. This bank will be open daily (Saturdays, Sundays and holidays excepted) for the reception of deposits and payment of drafts, from 9 a. m. to 3 p. m., also Monday evenings from 5 to 7 o'clock.

2. Depositors, at the time of making their first deposit, will be required to subscribe their names in a book kept by the bank for that purpose, agreeing to be governed by the by-laws and regulations of the institution, as they then or thereafter may exist.

3. No account will be opened with less than one dollar and thereafter deposits of one dollar and upwards to the extent allowed by law, will be received, and all receipts and payments shall be in coin, or in bankable funds.

4. All deposits and drafts must be entered in the pass book of the depositor at the time of the transaction. Money delivered to any one presenting the pass book at the bank, and entered therein, shall be deemed a good and valid payment of such money to the depositor. And no person shall have the right to demand any part of his principal or interest without producing the original book.

5. When any deposit shall be made by or in the name of any minor, the same shall be held for the exclusive right and benefit of such minor, and free from the control or lien of all other persons, except creditors, and shall be paid, together with the dividends thereon, to the person in whose name the deposit shall have been made, and the receipt or acquittance of such minor shall be a valid and sufficient release and discharge to the bank for such deposit or any part thereof.

6. When any deposit shall be made by any person in trust for another, and no other or further notice of the existence and terms of a legal and valid trust shall have been given in writing to the bank, in the event of the death of the trustee, the deposit or any part thereof, together with the dividends thereon, may be paid to the person for whom the deposit was made.

7. When a deposit shall be made by any person in the names of such depositor and another person and in form to be paid to either or the survivor of them, such deposit and any additions thereto made by either of such persons after the making thereof, shall become the property of such persons as joint tenants, and the same together with all dividends thereon shall be held for the exclusive use of such persons and may be paid to either during the life-time of both or to the survivor after the death of one of them, and such payment and the receipt or acquittance of the one to whom such payment is made shall be a valid and sufficient release and discharge to the bank for all payments made on account of such deposit prior to the receipt by the bank of notice in writing not to pay such deposit in accordance with the terms thereof.

8. Money standing in the same of a person, deceased, can be drawn only by his or her representative, legally appointed.

9. No money shall be withdrawn as a matter of right, without sixty days' previous notice to the bank in writing, of the intention to withdraw it; as a matter of indulgence, however, the officers of the bank may allow moneys to be withdrawn without such notice, on any day for the reception and payment of deposits, without waiving thereby the right of the bank to such notice and time of payment.

10. The board of trustees may discontinue interest on account of depositors, to which no deposit nor draft thereon has been made for twenty successive years.

11. The board of trustees shall by resolution order dividends to be credited to depositors on the first day of January and July in each and every year, payable to them on or after the twentieth day of said month, at such rates in conformity with law as the earnings of the bank may justify, on all sums of five dollars and upwards.

Deposits made on or before the tenth business day of January and remaining in the bank on the first day of April shall be entitled to three months' interest.

Deposits made on or before the third business day of April and remaining in the bank on the first day of July shall be entitled to three months' interest.

Deposits made on or before the tenth business day of January and remaining in the bank on the first day of July shall be entitled to six months' interest.

Deposits made on or before the tenth business day of July and remaining in the bank on the first day of October shall be entitled to three months' interest.

Deposits made on or before the tenth business day of July and remaining in the bank on the first day of January shall be entitled to six months' interest.

Deposits made on or before the third business day of October and remaining in the bank on the first day of January shall be entitled to three months' interest.

Accounts closed between quarterly periods shall be paid interest to the end of the previous quarter at the rate of the last dividend declared.

No interest will be allowed on the fractional parts of a dollar. Interest not withdrawn will be treated as a deposit.

12. The bank may refuse the deposit or close the account of any individual whenever it may be deemed expedient.

13. The board of trustees are at liberty to return the amount of all or any part of the deposits, on giving one month's previous notice of their intention to do so; all notices relating to deposits or depositors, published daily for one week, by order of the board of trustees, in one or more of the public newspapers, printed in the City of New York, shall be deemed and taken for all purposes as actual notice to each depositor.

The following information with regard to savings accounts is issued by another New York City savings bank:

Personal accounts may be opened by any person fourteen or more years of age.

Joint accounts may be opened by any two persons. These accounts may be drawn against by either party and after the death of one the balance is payable to the the survivor.

Voluntary and revocable trust accounts may be opened in the name of a person in trust for another.

Accounts may be opened by corporations, partnerships, societies, lodges and the legal representatives of estates.

An account may be opened with a deposit of $1 to $7,500.

Checks will be received for deposit, and should be drawn to the order of, or endorsed to the (Savings Bank). Checks accepted on deposit without collection charge.

No payments will be made without the depositor's pass book. If drafts are presented, they must be signed by the depositor personally, and if made payable to the order of any person other than the depositor such person must be identified to the satisfaction of the bank.

When drafts are drawn against deposits made in trust, the word "Trustee" must always be added to the signature.

Interest will be allowed from date of deposit on funds left undisturbed to the end of the quarterly period.

Interest dividends, compounded quarterly, are paid on all sums of $5 to $7,500 and upon the excess of $7,500, when such excess is accrued interest.

Interest dividends will be declared quarterly, payable on or after the 15th day of January, April, July and October, but no interest will be paid on any sum withdrawn previously to January 1st, April 1st, July 1st or October 1st, for the period which may have elapsed since the last dividend.

Banking by Mail: For the convenience of depositors, complete banking services are available by mail.

Coin Banks: Coin banks are available on loan for home saving.

Christmas and Special Purpose Clubs: Membership in Christmas and Special Purpose Clubs is available to those especially interested in accumulating funds in this way. Interest of —% per annum is paid on the

average balance of Completed Clubs. Folder giving full particulars sent on application.

Loans on Pass Books as Collateral: Depositors may borrow money by depositing their pass books as security for the loans.

Other miscellaneous services provided include: Group Savings and Payroll Savings Plans; service for the sale and redemption of U. S. Savings Bonds; Safekeeping Service for U. S. Savings Bonds and Armed Forces Terminal Leave Bonds free of charge; Savings Banks Money Orders (sold in amounts up to and including $100 at a nominal charge of 10¢ each); sale of American Express Company Travelers' Cheques; sale of Foreign Drafts; Safe Deposit Boxes; and Savings Bank Life Insurance.

Below is a financial statement of a large New York City savings bank.

STATEMENT

June 30, 1948

SAVINGS BONDS

See Postal Savings Bonds, United States Savings Bonds.

SAVINGS DEPOSITS

See Savings Accounts, Savings Banks.

SCALE BUYING

See Buying on a Scale.

SCALING

A method of trading in securities or commodities in which orders to buy are placed at regular intervals downward from the prevailing market price, and to sell at regular intervals upward from the prevailing market price. (See Buying on a Scale.)

SCALPER

A speculator who sells at every opportunity of making a fractional, or one or two point profit. (See Scalping.)

SCALPING

An expression indicating the realization of a small trading profit of a fraction or a point or two, especially when turns are made in quick succession. Scalping means to take advantage of any small gain.

SCANDINAVIAN MONETARY UNION

See Scandinavian Union.

SCANDINAVIAN UNION

A monetary union formed by Norway, Sweden and Denmark in 1873, at which the single gold standard, and the same monetary unit was adopted, viz., the krone. In 1905, Norway dissolved its political union with Sweden and elected its own king. (See Latin Union.)

SCHEDULE SHOWING WHEN PROCEEDS OF ITEMS WILL BECOME AVAILABLE

The availability schedule showing the time basis for crediting items put through a Federal Reserve Bank is published by each Federal Reserve Bank. The following is the schedule of the Federal Reserve Bank, New York, as revised in 1946, but eliminating reference to Saturdays because of year-round Saturday closings:

IMMEDIATE CREDIT:

*Immediate credit will be given for the following items when received within the applicable closing time:

*When received in time for presentation through clearing houses or special collection arrangements on day of receipt--

Items drawn on or payable at:
New York Clearing House Association banks;
Certain other New York City banks;
Northern New Jersey Clearing House Association banks.

*When received by 10 a.m. if separately sorted and listed--

Checks and warrants on Treasurer of the States, Washington, D. C.

*When received by 3 p.m.--

Checks on Federal Reserve Bank of New York (including Buffalo branch);
Officers' checks of other Federal Reserve Banks;
Federal Reserve Exchange Drafts.

DEFERRED CREDIT:

*Credit for other items payable in New York City,

when received within the applicable closing time, will be given two business days after receipt.

*Credit for other items payable outside of New York City, when received within the applicable closing time, will be given as specified below.

CLOSING TIME FOR DEFERRED CREDIT ITEMS:

Payable in Second Federal Reserve District:
1:30 p.m.
Items $500 and over, 2:30 p.m.

Payable in other Federal Reserve Districts:
12:30 p.m.
Items $500 and over, 2:30 p.m.

Federal Reserve Bank or Branch Cities:

*One Calendar Day after Receipt--
Items payable in:

Baltimore	Philadelphia
Boston	Pittsburgh
Buffalo	Richmond
Cleveland	

*Two Calendar Days after Receipt--
Items payable in:

Atlanta	Kansas City, Mo.
Birmingham	Louisville
Charlotte	Memphis
Chicago	Minneapolis
Cincinnati	Nashville
Detroit	Omaha
Jacksonville	St. Louis
Kansas City, Kans.	St. Paul

*Three Calendar Days after Receipt--
Items payable in:

Dallas	New Orleans
Denver	Oklahoma City
El Paso	Portland, Ore.
Helena	Salt Lake City
Houston	San Antonio
Little Rock	San Francisco
Los Angeles	Seattle

Localities Outside of Federal Reserve Bank or Branch Cities:

*Two Business Days after Receipt--
Items payable in:

Conn.	(1)Md.	(1)Pa.
Dela.	(1)Mass.	R. I.
D. C.	N. H.	Vt.
Me.	(2)N. J.	(1)Va.
	(1)N. Y.	

*Three Business Days after Receipt--
Items payable in:

(1)Ala.	(1)Ky.	(1)Ohio
Ariz.	(1)La.	(1)Okla.
(1)Ark.	(1)Mich.	(1)Ore.
(1)Calif.	(1)Minn.	S. C.
(1)Colo.	Miss.	S. D.
(1)Fla.	(1)Mo.	(1)Tenn.
(1)Ga.	(1)Mont.	(1)Texas
Idaho	(1)Neb.	(1)Utah
(1)Ill.	Nev.	(1)Wash.
Ind.	N. M.	W. Va.
Iowa	(1)N. C.	Wisc.
(1)Kansas	N. D.	Wyo.

This time schedule does not apply to drafts received from member or non-member clearing banks drawn by them on their commercial bank correspondents. Credit will be given for such drafts based on actual transit time, whether received at head office in New York City or Buffalo branch, or sent for their account direct to the Federal Reserve Bank in the district where such draft is payable.

Notes:

*Subject also to requirements as to sorting (listing separately). Credit for items not received within the applicable closing time as herein indicated for such items will be deferred for one additional day. When items for which there are different closing times are not separately sorted and listed, credit for all such items may be deferred for the longest time for which credit may be deferred for any of such items as herein provided. When the day on which credit would otherwise be given is a Sunday or a holiday (Saturdays also in view of year-round Saturday closings) for the Federal Reserve Bank of New York, credit will be given on the following business day. When delays in the collection of items occur or are anticipated because of holidays or interruptions or delays in transit, or other causes, credit may be deferred beyond the times indicated in the schedule with or without notice.

(1) Except items payable in Federal Reserve Bank or branch cities.

(2) Except items drawn on or payable at Northern New Jersey Clearing House Association banks.

In accounting for items cleared through the Federal Reserve Bank, the sending bank, at the time the Items are sorted and listed for delivery to the Federal Reserve Bank, charges an account called the Federal Reserve Bank Deferred Account. As the credits become available according to the Availability Schedule as above, the bank transfers the matured credits to its Federal Reserve Bank reserve account. The Federal Reserve Bank maintains similar accounts, Uncollected Items, and Deferred Availability Items, and will credit the member bank's reserve account or non-member bank's deposit account as the items are actually available. Daily statements are sent by the Federal Reserve Bank to the member banks and clearing non-member banks, so that the latter banks may reconcile any items that because of delays or otherwise might not have actually become available according to the Schedule.

(See Federal Reserve Check Collection System, Float.)

SCHILLING

The international currency unit of Austria. (See Foreign Money--Table 2.)

SCHOOL BONDS

A sub-classification of municipal bonds issued for the purpose of raising funds for the construction and equipment of public schools. (See Municipal Bonds.)

SCHOOL DISTRICT BONDS

Bonds issued by a school district (organized to manage and control the schools of a certain section and having taxing power) for building public schools.

SCHOOL SAVINGS BANKS

Savings banks introduced and adopted by many public schools for the purpose of inculcating habits of thrift among school children. The idea was originally conceived by J. H. Thiry who established the first savings bank system in the schools of Long Island City in 1885, having imported the idea from Belgium. Savings banks, throughout the United States, by receiving authority

from the local board of education and enlisting the co-operation of the teaching staff, have organized many permanent school savings banks departments, or junior departments.

Different plans of collecting and administering savings have been used. In some cases, the money is collected periodically by the teachers, turned over to the principal, who places it in the savings bank in the name of each depositor. Special pass books and other special forms are provided for this purpose.

Another method is to issue and sell stamps which are pasted in a book and are evidence of deposits. In other cases, the pupils make their deposits over the window, but this method requires the moral support of the teachers.

Although the school savings project in the United States had its birth in New York, the Board of Education did not develop the idea intensively until 1916 when the centennial of the establishment of the institution in Baltimore which was the first adult savings bank was celebrated.

This plan was built upon two principles: first, consistent and effective training in thrift, second, a system for the operation of the bank which would allow a large proportion of pupil participation and thereby give a practical education in ordinary business operations.

SCRAP

Waste, dismantled, and salvaged iron and steel products. Scrap is a basic raw material, since open hearth steel makers average about half scrap and half pig iron in their hearth mixtures. Electric furnaces also operate on scrap. The scrap industry, formerly chaotic, was organized by the Institute of Scrap Iron and Steel in 1928 in a businesslike manner. The industry has developed chiefly since World War I, when the demand for steel and the need for economy in its use were emphasized.

Chief sources of scrap, in addition to the steel mills themselves, are the railroads, automobile manufacturers and wreckers, shipbuilders, machine shops, etc. Left over or disused metal from these sources is collected by dealers in all parts of the country, deposited in central yards, and sorted and classified for distribution. The dealers buy from the collector for cash, but sell to the mills usually on two or three months' credit. The scrap yards, of which there are about 3,000 in the country, have been developed to a high degree of efficiency. Some have a capacity of 50,000 tons storage, with railroad sidings to accommodate 200 or 300 freight cars at a time. The metal is sorted by machinery, loaded and unloaded by electric magnets and locomotive cranes—all of which represent a relatively large investment.

One of the fundamental factors in the scrap industry is that, except for small losses due to oxidation and corrosion, reclaimed and remelted steel and iron do not deteriorate in quality. Very definite savings are effected by the use of scrap in steel manufacture. The amount of labor required to handle the slag is materially reduced, the iron loss is small and the returns in ingots is greater with less fuel consumed. Furthermore, while the gap between pig iron prices and scrap prices has been steadily narrowing in recent years the latter are still generally lower (although in times of shortage scrap has been known to be at a premium relative to pig iron). Since 1940, the price of scrap has approximately doubled, reflecting the shortage of scrap in collecting yards, and latest remedial measures include arrangements to import German scrap to alleviate the scrap shortage. Use of scrap also effects a conservation of national resources. Every ton of scrap iron and steel used in steel manufacture displaces approximately five tons of iron ore, coal, limestone and other raw materials.

(See Steel.)

SCRIP

A temporary certificate issued for exchange at a later date for money, a permanent certificate, or for whatever the scrip entitles the holder. The term is frequently given to fractional shares of stock issued during a reorganization, stock conversion, or to represent dividends not paid in cash, but deferred to a later definite or uncertain date. Scrip certificates representing fractional shares may be combined and exchanged for whole shares. In still another and probably in the original sense, this term is less frequently used to denote paper currency of fractional denominations, current during the Civil War, and known as shinplasters.

Finally, the term has been used synonymously (but incorrectly) with emergency currency, such as Clearing House Loan Certificates (q.v.).

SCRIP CERTIFICATE

A fractional share of stock. Dividends are not paid on scrip. (See Scrip.)

SCRIP DIVIDEND

A type of dividend payable in short-term promissory paper, called "scrip", in order to conserve cash at the particular dividend period. Scrip dividends are relatively rare, as most corporations prefer to defer or omit dividends entirely, if cash position does not justify payment, or to declare dividends in stock. (See Scrip, Stock Dividend.)

SEALED BID

See Award.

SEASONAL VARIATION

A statistical term, referring to the more or less regular swings of almost any series of economic data, which repeat themselves year after year, and are attributable to the influence of the changing seasons. For example, bank debits in December are normally larger than the average month of the year; egg prices in January are almost without exception higher than in May; railroad car loadings reach their annual peaks in the fall. As generally applied, the term is a misnomer, a more appropriate designation being "monthly variation," inasmuch as most series of economic statistics are reported and analyzed on a monthly basis rather than four times a year to correspond with the seasons.

The phrase "adjusted for seasonal variation" (or "adjusted for normal seasonal variation") means that, in the data so described, allowance has been made for the usual or average month-to-month change and the resulting figures are free from the normal seasonal influence. Thus, if the usual November to December trend in say car loadings, due solely to seasonal factors, is a downward change of 10 per cent., an actual decline of only five per cent. in any December would be re-

vealed as an increase of roughly five per cent., after allowance for seasonal variation.

In statistical practice, an "index of seasonal variation is usually computed for each series of data. This is stated in terms of the percentage which each of the 12 months is of the average for the year. To adjust a series for seasonal variation, the process would be merely to divide successive monthly prices by the corresponding index of seasonal variation. There are many methods of computing indexes of seasonal variation for use in adjusting historical data, one of the best known being the "link-relative method" developed by Warren M. Persons. As in the case of adjusting for Secular Trend (q.v.) the purpose is to reveal cyclical movements in business data, to aid in interpreting business cycles, transition from depression to prosperity and vice versa, etc.

Appended herewith is a table showing the normal seasonal variations for each week in the year of the business series indicated, as used in computing the New York Times Weekly Business Index. Each figure is a percentage of 100, the average for 52 weeks being 100. In the first week of January, for example, lumber production is expected to be only 78.7 per cent. of the average production for 52 weeks.

New York Times Weekly Index of Business Activity

Indices of Seasonal Variations for 1948

Week Ended	Total Loadings	Misc. Loadings	Power	Paper-board	Lumber
Jan. 3	91.1	83.6	103.6	93.0	78.7

Source--New York Times.

SEASONED SECURITIES

Securities of recognized merit and of long standing, issued by corporations engaged in the production of basic staples, whose officers are skilled in operating and financial management, whose properties and net assets leave a safe equity for securities and whose earnings have been sufficiently stable to insure interest payments and dividend disbursements over a long period of time. The chief significance of this term is to indicate that such securities are subject to smaller price fluctuation range than others, and are consequently more satisfactory for investment and collateral purposes.

SEAT

A term which is a survival of the days when each broker was assigned a seat in the board room of a stock exchange. Although no actual seats are provided now-a-days for member brokers, a membership is still referred to as a "seat." The cost of "seats" varies with the demand and supply, and the activity of the market.

For price range of seats or memberships on the New York Stock Exchange, see under New York Stock Exchange.

SEATTLE STOCK EXCHANGE

An outgrowth of the former Seattle Bond and Stock Exchange organized in 1927 by the principal banks and investment banking interests in the Pacific Northwest. The new exchange floors were opened in May, 1930 with new rules and regulations adopted on March 5, 1929. Members numbered 80 on February 28, 1930. Listings were confined to securities of the Northwest. With passage of the Securities Exchange Act of 1934, requiring registration of national securities exchanges, the Seattle Stock Exchange first applied for and was granted temporary exemption and subsequently voluntarily suspended. Thus, the stock exchange currently registered in the Pacific Northwest is the Standard Stock Exchange of Spokane, Washington (see Stock Exchanges).

SECOND BANK OF THE UNITED STATES

See Bank of the United States.

SECOND-CLASS PAPER

Notes, trade acceptances and bills of exchange which are obligations of names not as well known as those classified as first class, and which are not entitled to the highest credit rating. The term is not derogatory and does not imply that the risk in purchasing this paper is unduly high, but only that the standing of the maker is somewhat inferior to that classified as first class. Paper may also fall into a third or lower class.

SECOND LIBERTY LOAN ACT

One of the World War I financing acts, approved September 24, 1917. Sec. 8 of the Second Liberty Bond Act grants authority to the Secretary of the Treasury to make deposits in such incorporated banks and trust companies as he may designate, of proceeds arising from the sale of Government securities and arising from the payment of income and excess profits taxes, in Government depositories and "war-loan accounts." Notwithstanding the further provision of this section that no reserves are required against such Government deposits, which was also provided by the First Liberty Bond Act (approved April 24, 1917), and the Third Liberty Bond Act (approved April 4, 1918), Sec. 19 of the Federal Reserve Act specifically contravenes these three war financing acts in requiring reserves against such Government deposits.

(See Government Deposits.)

SECOND MORTGAGE

A mortgage placed upon real property which is already encumbered with a first mortgage. An owner of a piece of real estate appraised at $50,000, and who has borrowed $25,000 by placing a first mortgage on it, may wish to borrow an additional $5,000 by giving a second mortgage as security, making the total indebtedness equal to $30,000. In case of failure to pay either the principal or interest, the holder of either the first or second mortgage is entitled to foreclose his mortgage in order to satisfy his claim. In case of foreclosure by the first mortgage holder and sale of the property, the holder of the second mortgage is not entitled to receive anything until the first mortgage holder has been paid in full. Since the protection offered to a second mortgage holder is less than for a first mortgage holder, lending on a second mortgage is attended with greater risk than lending on a first mortgage. The degree of risk on a second mortgage depends upon the margin between the appraised value and the total claims against the property. To compensate for the greater risk in second mortgage loans, a higher interest rate is charged.

National banks are not permitted to make second mortgage loans. State banks and trust companies in some States are permitted to do so, but with certain restrictions. In most states savings banks are prohibited from making second mortgage loans. (See Mortgage, Mortgage Loans, Second Mortgage Bonds.)

SECOND MORTGAGE BONDS

Bonds secured by a mortgage upon property which is already encumbered with an issue of first mortgage bonds. Second mortgage bonds occur most frequently among railroad and public utility issues and constitute a second lien upon the property specified in the mortgage, and the earnings of the company. Consolidated mortgage bonds, general mortgage bonds, first and consolidated mortgage bonds, first and refunding mortgage bonds, etc., are usually bonds in which a part of the security consists of a second mortgage.

(See Second Mortgage.)

SECOND OF EXCHANGE

See First of Exchange.

SECOND PREFERRED STOCK

See Preferred Stock.

SECOND TELLER

Another name for Receiving Teller (q.v.).

SECONDARY DISTRIBUTION

The sale to the public of all or part of an issue of securities which was previously the subject of primary distribution by a selling group. The secondary selling group takes over the issue from the initial selling group, usually at cost, and with a new group of houses in the syndicate, attempts to effect complete distribution.

"Secondary offerings" also refer to special offerings of fixed blocks of stocks listed on the New York Stock Exchange at fixed prices, subject to close regulation by the Exchange and the Securities and Exchange Commission, in the course of which stabilization of the price of the security may be engaged in to assure the success of the offering. Rules 490-497 of the New York Stock Exchange, and Rule X-10B-2 of the Securities and Exchange Commission, govern such offerings in detail. The Exchange states that it is not the purpose of its rules allowing special offerings to supersede the auction market or supplant approved secondary distributions, but to provide means for the handling of blocks of listed securities through the facilities of the Exchange where such blocks cannot be readily absorbed in the regular market within a reasonable time and at a reasonable price. (See Syndicate.)

SECONDARY LIABILITY

Contingent or indirect liability. (See Contingent Liabilities.)

SECONDARY RESERVE

Those assets of a bank, other than cash, which are immediately convertible into cash without sacrifice of the principal amount invested. Call loans, short-term Government and Municipal securities, bankers acceptances, prime name commercial paper, balances due from banks, exchanges for clearing house, demand loans, and time loans eligible for rediscount are immediately available assets. Since convertibility can be obtained on short notice, these assets constitute a secondary reserve for use in case of emergency. Under Sec. 10 (a) and 10 (b) of the Federal Reserve Act, Federal Reserve Banks may make advances to any member bank or groups of five or more member banks on acceptable assets or security satisfactory to the Federal Reserve Bank, thus increasing the availability of funds to a member bank in times of emergency. Corporate bonds were advocated for the secondary reserve in the late '20s, but the collapse of bond values in the period 1929-1932 proved the limitations of corporate bonds for such purposes.

SECRETARY OF THE TREASURY

One of the cabinet officers. The Secretary of the Treasury has general supervision, management, and control of the Treasury Department and of the bureaus under that department, which include The Mint, the Comptroller of the Currency, the Bureau of Engraving and Printing, the Fiscal Service (Bureau of Accounts and the Treasurer of the United States), the Commissioner of Internal Revenue, and the Director of Tax Research. Some of his specific powers are: (1) to keep the various forms of currency of the United States on a parity with one another; (2) to direct the engraving of plates and dies for Federal Reserve notes; (3) to approve the appointment of National bank examiners by the Comptroller of the Currency; (4) to direct the deposit of Government funds; (5) to direct the issue, redemption, and retirement of Government obligations, and to determine rates of interest on such obligations; (6) to approve form of circulating notes of Federal Reserve banks; (7) to confer with Congress and the Director of the Budget on matters pertaining to taxes and expenditures.

Under the monetary legislation passed by Congress in 1933 and subsequent years, the Secretary of the Treasury and the President were delegated many powers over gold, silver and monetary matters. The Secretary of the Treasury continues to have active buying and selling functions in connection with the silver buying program (see Silver, Silver Purchase Act of 1934). Policies of the Treasury on interest rates and terms of new Government securities, in conjunction with the Board of Governors of the Federal Reserve System, are also major determinants in the course of money rates. The Secretary of the Treasury is also chairman of the National Advisory Council on International Monetary and Financial Problems (q.v.), the policy-making body recommending policies to the President to guide representatives of the United States on the International Monetary Fund (q.v.) and International Bank for Reconstruction and Development (q.v.).

SECULAR TREND

Long-time, or normal trend. A statistical term denoting the smooth, regular, long-term movement of a series of data arranged in chronological order. Thus, the sales volume of a business taken over a period of years will usually show a fairly regular growth. The same is true of population, production of basic minerals, number of automobile registrations, etc. In some instances, this rate of growth or secular trend may be negative (declining), as in the case of interest rates in the United States over the last half century, or the production of lumber which has been trending slightly downward for many years. However, most series of data have upward secular trends, and the rate of growth is usually spoken of as so many pounds, tons, yards, bushels, etc. per year. Computation of this annual increment (or decrement) is fundamental in analysis of business cycles and in business forecasting. For example, once having established the secular trend of electric power output over a period of years, by projecting into the future at the same rate of growth, the trend value for some later date can be estimated. This trend value is taken to be "normal" for that time; in other words, it is considered the level that would have been recorded for any given series if all cyclical, seasonal and random forces could be eliminated, leaving only the effect of normal growth. The concept of a normal value for any series at a given time is useful primarily as a base or reference point in judging the effects of other economic elements than the growth factor. The phrase "corrected for secular trend", frequently encountered in connection with business statistics, means that the data presented have been adjusted to allow for computed long-term growth or secular trend.

SECURED BILLS

Documentary bills of exchange; bills of exchange which are accompanied by a bill of lading giving title to the merchandise specified therein. The term is also applied to notes, acceptances or bills of exchange which are secured by bonds, stocks, warehouse receipts, short-term paper, or other security.

SECURED CREDITOR

A creditor who holds some form of collateral or legal right to claim certain assets of the person, firm, or corporation to which a loan or advance has been made, or to whom goods have been sold. Thus, a mortgagee, mortgage bond holder, or bank which lends against any kind of collateral, at least equal in value to the face of the loan, is a secured creditor.

A general depositor in a bank is an unsecured creditor, except in the case of the Government, or civil division thereof (state, county, city) which require a depository collateral for such deposits.

(See Liabilities.)

SECURITIES

A general term applied to that class of investments represented by engraved, printed, or written documents evidencing ownership or creditorship in a corporation or other property. The term therefore includes bonds, stocks, mortgages, coupons, scrip, etc., of every kind.

As defined by the Securities Exchange Act of 1934, the term security "means any note, stock, treasury stock, bond, debenture, certificate of interest or participation in any profit-sharing agreement or in any oil, or other mineral royalty or lease, any collateral-trust certificate, pre-organization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit, for a security, or in general, any instrument commonly known as a "security"; or any certificate of interest or participation in, temporary or interim certificate for, receipt for, or warrant or right to subscribe to or purchase, any of the foregoing; but shall not include currency or any note, draft, bill of exchange, or banker's acceptance which has a maturity at the time of issuance of not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited."

Securities furnish one of the most important bases of bank credit.

SECURITIES ACT OF 1933

An act, approved May 27, 1933, and subsequently amended, which among other things:

(1) Required filing originally with the Federal Trade Commission and later with the Securities and Exchange Commission (which was organized July 2, 1934 pursuant to the Securities Exchange Act of 1934) and for transmission to prospective investors the fullest possible information concerning new security issues sold in interstate commerce or through the mails;

(2) Provided for the filing with the commission of sworn statements including, among other things, all commission or discounts paid or to be paid, directly or indirectly, by the issuer to the underwriter, a full description of all factors surrounding the physical issuance of the securities, names of directors and officers of the issuing company, names of holders of 10 per cent. or more of prior securities issued by the company, a detailed description of the business and financial condition of the company and the salaries of its officers;

(3) Provided for the lapse of twenty days after the filing of the sworn statement, before the projected security could be sold or even promoted; and

(4) Carried penalties for violation of the act.

The Securities Act of 1933 covers two fields of regulation. First, it regulates public offerings of new securities for the purpose of making available to prospective investors such information as they may reasonably require to enable them to act intelligently. For this purpose it creates two new instruments, one designated a "registration statement" and the other a "prospectus." The former is a compendium of information, which must be filed in Washington, relating to the issuer of the security and the flotation of the issue. The latter is a less detailed summary which must be furnished to each purchaser of any part of the issue. Truthfulness in the registration statement and the prospectus is enforced by civil liability and criminal penalty. The second field of regulation of the Securities Act of 1933 covers the sale of all securities whether new or old, through improper or fraudulent means. The purpose is to prevent such sales not only by civil liability and criminal penalty, but also by official investigation and injunction.

Bibliography

Lasser, J. K., and Gerardi, J. A.: Federal Securities Act Procedure, 1934.

SECURITIES AND EXCHANGE COMMISSION

A commission created by the Securities Exchange Act of 1934 (q.v.) to regulate national (stock) exchanges, to carry out the provisions of this act and to take over from the Federal Trade Commission the administration of the Securities Act of 1933. In addition to these acts, the Commission administers the Trust Indebture Act of 1939; Public Utility Holding Company Act of 1935; Investment Company Act of 1940; the Investment Advisers Act of 1940; and also participates in corporate reorganizations under Chapter X of the National Bankruptcy Act by advising with respect to feasibility and fairness of reorganization plans.

The Commission's functions are quasi-judicial in nature. Members are appointed by the President, with the advice and consent of the Senate, and number five, not more than three of whom may be members of the same political party, and one of whom is elected Chairman annually. Term of office is five years.

SECURITIES COMPANY

Holding company. A company organized to hold the shares of its subsidiary companies. (See Holding Company.) The term also sometimes applies to an investment house or company which deals in securities at retail. Among banks, the Security Affiliate (q.v.) prior to the Banking Act of 1933 engaged in underwriting and dealing in securities without restriction. The Banking Act of 1933 required the "divorcement" of such security affiliates one year after passage of the Act on June 16, 1933.

SECURITIES EXCHANGE ACT OF 1934

An act, passed June 1, 1934, and approved on June 6, 1934, which, among other things:

(1) Provided for the regulation of securities exchanges and over-the-counter markets operating in interstate and foreign commerce and through the mails and the prevention of inequitable and unfair practices on such exchanges and markets;

(2) Granted far-reaching control over the exchanges to the Federal Government and undertook to curb excessive speculation and unethical practices and protect investors;

(3) Established a bi-partisan Securities and Exchange Commission of five members, appointed by the President with Senate consent, to administer the act and also to take over from the Federal Trade Commission the administration of the Securities Act of 1933;

(4) Required the licensing of all stock exchanges and the registration of all listed securities with the new commission, the registration statement to contain ten categories of facts, set out in the act, and any further financial statements which the commission might deem necessary. Corporations with registered securities to be required in addition to file periodical reports certified by independent public accountants;

(5) Defined the functions of dealers, brokers and specialists, banned manipulative practices to establish artificial prices for securities, and provided penalties of $10,000 or two years' imprisonment, or both, for those willfully and knowingly violating its provisions or any rule or regulation made under this act;

(6) The maximum penalty where an exchange is the violator is $500,000.

(7) Provided for the regulation of margins and broker's credit by the commission and the Board of Governors of the Federal Reserve System, and that the Board of Governors should prescribe rules and regulations with respect to the amount of credit that may be initially extended and subsequently maintained on any security (other than an exempted security) registered on a national securities exchange;

(8) Stipulated that for the initial extension of credit such rules and regulations should be based upon the following standard: An amount not greater than whichever is the higher of—(1) 55 per centum of the current market price of the security, or (2) 100 per centum of the lowest market price of the security during the preceding thirty-six calendar months, but not more than 75 per centum of the current market price;

(9) Empowered the Board of Governors of the Federal Reserve System to raise or lower the margin requirements for the initial extension or maintenance of

credit when it deemed such action necessary;
(10) Granted to any person aggrieved by an order of the new commission the right of court review in the Circuit Court of Appeals of the United States;
(11) Carried several modifying amendments to the Securities Act of 1933.

SECURITIES LEDGER

A ledger in which transactions in bonds or other securities are recorded. Accounts are classified alphabetically, according to the name of the security. The information which a typical securities ledger contains is shown by the headings of the columns in the form below:

DR.	CR.
Date of purchase.	Date of sale.
Descriptive details.	Descriptive details.
Par value.	Par value.
Unit purchasing price.	Proceeds of sale.
Commission.	Commission.
Total cost.	Interest accrued.
Accrued interest paid.	General ledger account Cr.
Balance.	Interest credited.
(a) Par	Profit or loss.
(b) Money	Disposition.
Trading value.	Remarks.
Book value.	
Remarks.	

SECURITIES REGULATIONS

See Comptroller's Regulation, Investment Securities Regulations, Legal Investments for Savings Banks, Legal Investments for Trust Funds, Life Insurance Company Investments.

SECURITY

A pledge of property or of good faith for the payment of a debt.

There are two classes of security (1) collateral or property security, and (2) personal security. By collateral security is meant any property, negotiable security, or documentary evidence of a claim against, or ownership in property, conveying title to the holder as a pledge for the repayment of money lent, or as guarantee for the performance of a contract.

By personal security is meant the guaranty of the payment of money by one person for another, whose credit standing is not sufficient to borrow on his single name. In personal security there is no pledge of property, but simply the signature (indorsement, guaranty, or surety) of some person having financial responsibility. Personal security is only valuable, therefore, where the moral risk is high. (See Guaranty, Surety.)

While the various banking laws permit banks to make loans without security with certain restrictions, in practice few commercial loans are unsecured. All other loans are usually secured by collateral which, at prevailing market prices, has a value in excess of the amount of the loan. Loans by banks on listed securities are subject to the margin requirements required by Regulation U of the Board of Governors of the Federal Reserve System, namely 75% effective from February 1, 1947 (for the period January 21, 1946 to January 31, 1947, margin required was 100%). Mortgage loans secured by real estate extended by National banks may not exceed 50% of the appraised value, for a term of five years, although 10-year mortgage loans, on a basis of 60% of appraised value, are also permitted if amortized at least 40% by maturity.

The most usual types of security for bank loans are bonds, stocks, notes, trade acceptances, bank acceptances, bills of lading, warehouse receipts, certificates of deposit, mortgages on real estate, chattel mortgages, savings banks' passbooks, assigned book accounts, assigned syndicate agreements, and trust receipts (See Hypothecate, Rehypothecate, Securities.)

SECURITY AFFILIATE

The term applied to the affiliated securities companies of commercial banks which prior to the Banking Act of 1933, engaged in a general securities business, including underwriting, purchasing and selling of securities, both as dealers and brokers.

Forerunner of the security affiliates was the First Security Co., organized by the First National Bank of the City of New York in 1908, when it was found that nothing in the National banking laws prohibited the formation and operation of such affiliates. Greatest popularity of security affiliates developed in the 1920s, when leading banks organized such companies in order to participate in the then highly profitable securities business. The depositors of the bank were generally utilized as a primary line of customers by the security affiliate.

With collapse of the security markets following 1929, many of the security affiliates became a drain on their parent banks, and in some cases, such as that of the Bank of United States (q.v.) (New York), which closed its doors in December, 1930, proved fatal. Accordingly, the Banking Act of 1933, passed June 16, 1933, required that within one year after passage of the Act, security affiliates shall be divorced from banks. It had been the general practice to have each share of bank stock carry with it a proportionate interest in the security affiliate by trusteeing the security affiliate's stock for the benefit of the bank stockholders.

SECURITY ANALYSIS

By security analysis is meant a dissection of the affairs of individual companies—nature of the business, position in the industry, quality, demand for, and diversity of products, capability of management, financial condition, capital structure, record of past earnings in relation to return on sales and investment, current and prospective earnings, stability of earnings, book value, yield, price-earnings relation, and developments within the company and industry. (See Investment Speculation.)

Jordan, D. F.: Jordan on Investments (rev. ed.), 1941.
Prime, J. H.: Investment Analysis, 1946.

SECURITY LOANS

Loans secured by securities collateral. Loans by banks on listed securities for the purpose of carrying securities are subject to regulation by Regulation U of the Board of Governors of the Federal Reserve System, which requires the same margin requirements as for brokers' loans to customers under Regulation T (currently, 75% margin, effective since February 1, 1947).

In the period January 21, 1946 to January 31, 1947, 100% margin was required.

Because of such high margin requirements, and lessened speculative interest in security markets, security loans have not been in recent years the problem they were in 1928 and 1929 in siphoning off bank credit into speculative channels. Effective power to curb the volume of security loans is vested in the Board of Governors of the Federal Reserve System through Sec. 11 (m) of the Federal Reserve Act, which provides that upon the affirmative vote of not less than 6 of its members, the Board of Governors shall have power to fix from time to time for each Federal Reserve District the percentage of individual bank capital and surplus which may be represented by loans secured by stock or bond collateral made by a member bank within the district. No such loan shall be made by any such bank to any person in an amount in excess of 10% of the unimpaired capital and surplus of the bank. Also, brokers' loans by other than banking lenders have been practically eliminated by the Banking Act of 1933 and the Securities Exchange Act of 1934.

(See Brokers' Loans.)

SEIGNIORAGE

Technically, the charge made by a government for minting standard bullion, but popularly this term means the profit made by the Government in coining subsidiary (i.e., non-standard) coins and is represented by the difference between the bullion or metal price and the nominal statutory value of the coin. At times the United States Government has been able to purchase the weight of silver in a dollar for as low as 24 1/4 cents. Since silver is not entitled to free coinage, but is coined for Government account only, the Government makes a profit of the difference. This profit is seigniorage, and is accounted in the Treasury statements as a miscellaneous receipt. The profit made in coining nickel and bronze coins is also included in seigniorage receipts. The term is a survival of the middle ages when kings (seigneurs) made a charge for minting coins.

Among the leading commercial nations no seigniorage charge was made in the coinage of gold coins when such gold coinage was permitted. Seigniorage should be distinguished from Brassage (q.v.). (See Coinage, Mint.)

SELF-CHECK

A check deposited for credit or presented for payment at the bank on which it is drawn, i. e., a home debit. When deposited for credit, a self-check involves a credit to the last indorser's account and a debit to the drawer's account. Obviously, a self-check does not pass through the clearing house.

SELF-LIQUIDATING LOAN

A short term commercial loan, so-called because automatically discharged through the proceeds of sale of the merchandise which it finances.

(See Eligible Paper).

SELLER'S OPTION

See Methods of Trading.

SELLER'S 30

When the seller contracts to deliver the securities sold thirty days after the date of sale. The purchaser pays on delivery and for accrued interest on bonds beginning with the date of delivery. (See Methods of Trading.)

SELLING AGAINST THE BOX

A term applied to selling stocks owned without relinquishing ownership of the certificate deposited in a safe deposit box. That is, an owner of stocks may sell stock that he owns without delivering the certificates to the broker. Thus, he is technically "short" in his brokerage account, through in reality he is not. Such a sale offers a method of protecting assets in a declining market. After sales have been consummated, the stocks may be repurchased, presumably at a profit, and the original position is maintained. If the price rises, the owner may deliver his stocks from his strong box. Another advantage of selling against the box is that the source of the liquidation is not disclosed, since the original owner's name appears on the transfer books.

SELLING CLIMAX

A phrase used by stock market technical students to indicate the end of a wave of heavy short selling and necessitous liquidation of impaired margin accounts. Such a situation tends to build up a climax, i. e., a termination of the sharp selling movement rather quickly, as a result of which the market is placed in a position to respond to an automatic rally. A selling climax terminates a period of heavy selling with rapid price declines. A market may decline slowly over a period of time, as a result of important liquidation, however, without developing a selling climax.

SELLING FLAT

See Flat.

SELLING ON A SCALE

See Buying on a Scale, Scaling.

SELLING ON BALANCE

See Buying on Balance.

SELLING ORDER

See Orders.

SELLING OUT

An expression to denote the exercise of the legal right accorded a broker to close out an account of a customer who fails to furnish additional margin when demanded, or of a bank to close out a broker's loan, for the same reason. An account or loan is sold out in a declining market in order to protect the lender from loss which might accrue due to the decline in the value of the collateral below the face of the loan. Loans are usually sold out at or near the Exhaust Price (q.v.). However, most brokers advise customers to maintain more than adequate credit balances, and usually notify customers informally of the necessity for increasing credit balances lest the account become a restricted account under Regulation T (see Margin Buying).

SELLING SHORT

See Short Sale.

SELLING STOP ORDER

See Stop Order.

SEMI-ANNUAL INTEREST

Interest which is payable twice a year. The interest upon the majority of bonds and mortgages is payable semi-annually. The heaviest interest dates are January 1st and July 1st. Interest dates occur most frequently on the 1st and 15th of the month. (See Quarterly Disbursements.)

SEMI-MUNICIPAL BONDS

Bonds which are not necessarily the obligation of all the tax payers of the issuing municipality, but which are obligations of such tax payers as secure the benefit of the improvements constructed from the proceeds; thus, district drainage, irrigation or reclamation bonds, levee district bonds, and sometimes street-paving bonds belong to this class. In purchasing municipal bonds investors should inquire whether they are obligations of all the tax payers of the issuing civil division, or only a part of them. Semi-municipal bonds are not entitled to quite as high a rating as Municipal Bonds (q.v.).

SEN

A bronze coin of Japan, equivalent to 1/100th of a yen. Following World War II, and with the military government of Japan by the American military government, foreign exchange transactions and foreign trade are conducted under regulation.

SENIOR BONDS

Bonds which have a claim upon the assets and earnings of a corporation prior to other bonds. For example, first mortgage bonds are senior to second mortgage bonds, and all mortgage bonds are senior to the debentures of the same corporation. The term senior is used as an antonym of junior, and indicates in a general way, that the securities have first claim upon assets and earnings.

When a corporation is capitalized by means of stocks or bonds, the bonds are the senior obligations; when capitalized without bonds, the preferred stock is referred to as the senior issue and the common stock as the junior issue.

SENIOR ISSUE

See Senior Bonds.

SENIOR LIEN

See Lien.

SENIOR STOCK

See Senior Bonds.

SERIAL BONDS

A term which refers to a classification of bonds according to method of retirement without reissue. A single issue of bonds may be retired in their entirety on a single maturity date, or in installments. Serial bonds are those which are retired by the latter method, a certain portion maturing at different dates related by regular intervals. For example, a $500,000 issue of bonds dated July 1, 1940, may be retired in installments, the first $100,000 to mature July 1, 1945, and an installment of $100,000 each subsequent five years thereafter.

Serial bonds are issued where there is no intention of refunding and have a purpose similar to that of sinking fund bonds, i. e., systematic provision for cancelling debt. While the entire issue of serial bonds bears the same rate, the yield upon the various installments is made to differ by sale at varying prices, depending upon the term. The advantage of serial bonds from the standpoint of the issuer is that when interest rates are high, short term bonds are preferred and since the term of serial bonds is usually short—at least for the earlier installments—they command a better market than long term bonds of the sinking fund variety. Contrasted with the sinking fund method of providing systematic cancellation, serial bonds shorten the term over which the money is borrowed and prevent mismanagement of the sinking fund. Serial bond issues are largely confined to Municipals (q.v.).

SET (OF BILLS)

See First of Exchange.

SET OF EXCHANGE

See Bills in a Set, First of Exchange.

SETTLED PRODUCTION

A term which refers to the steady or even rate of flow of an oil well, indicative of large reserve supplies.

SETTLEMENT

This term has three applications.

(1) In general, the striking of a balance between two or more parties having mutual dealings with one another and the payment of the debit balance by the debtor (debtors) to the creditor (creditors).

(2) The striking of balances among members of a clearing house association. (See Clearing House.)

(3) The process by which purchases and sales of securities among brokers are determined and the balances paid off at the stock exchange clearing house; or by which inter-broker, non-clearing house securities transactions or produce exchange transactions are paid off. (See Methods of Trading, New York Stock Exchange Clearing House, Settlement Days.)

SETTLEMENT CLERK

In banking practice, the name given to the clerk who receives packages of checks delivered from each presenting bank and determines the total amount of checks so presented at the clearing house each day. He is the representative of the bank at the clearing house and reports to the clearing house manager the total of checks presented by and against his bank, leading to the determination of the debit or credit balance. (See Clearing House.)

SETTLEMENT DAYS

On the London Stock Exchange settlements of security transactions are regularly made twice a month, one about the middle, and the second at the end of the month. Transactions "for cash" are settled by immediate payment, regardless of the regular settling day.

Each settlement requires three days; the first is known as contango day (also continuation, carrying over, or making-up day); the second is name or ticket day; the third, pay day, i. e., settling day proper. All transactions, except for cash, occurring between settlement days must be settled at the next settlement period, i.e.,

paid for and delivered in accordance with the brokers' contracts.

The advantage of the periodic settlement as compared with the daily settlements made in America, is the saving of time to brokers in making deliveries and payments.

SETTLOR

Another name for a trustor, donor, or creator. One who creates a voluntary trust; i. e., one who "settles" an income, or other benefit, on a beneficiary. (See Living Trust, Trusts.)

SEWER BONDS

A sub-classification of municipal bonds, according to purpose. Municipal or semi-municipal bonds, the proceeds of which are used in the construction of sewers. (See Municipal Bonds.)

SHADE

An expression which denotes a slight concession in prices.

SHADING

See Shade.

SHAHI

A minor coin of Iran, equivalent formerly to 1/20th of a silver kran, the former international currency unit. Present international currency unit is the rial, consisting of 100 dinars.

SHAKING OUT

An expression to denote the process of elimination of speculators with thin margins or inadequate capital from the market, caused by a decline in securities or commodities which stimulates short selling and touching off of Stop Loss Orders (q.v.) on the way down, thus further adding to the supply. At the conclusion of a "shake-out", stocks are said to pass into stronger hands, capable of maintaining positions. With the high margin requirements for listed securities of recent years (75% from July 5, 1945 to January 20, 1946; 100% from January 21, 1946 to January 31, 1947; and 75% since February 1, 1947), shoestring margin buying has been at a minimum in view of the cash resources required. (See Margin Buying.)

SHARE

In the United States this term is synonymous with stock, or share of stock, but is much less common in occurrence. In England and Canada the term share is used almost exclusively as the equivalent for the American stock, and the term stock is reserved to denote Government bonds.

SHARE CAPITAL

That part of the capital of a corporation which is represented by its outstanding shares of stock as distinguished from its bonds and floating debt. The latter may be called "Loan Capital."

SHAREHOLDER

See Stockholder.

SHARE-TENANT

A farmer who owns no land, but who produces crops on a share basis, i. e., percentage of the crop, on another's land. The share-tenant thus exchanges his labor for a share (frequently one-half to two-thirds) of the product raised on the landowner's land.

The Bankhead-Jones Farm Tenant Act of 1937, as amended by the Farmers Home Administration Act of 1946, provides a farm ownership loan program whereby 40-year loans not exceeding $12,000 are made available to tenants, sharecroppers, farm laborers and veterans. (See Farmers Home Administration.)

SHARES WITHOUT PAR VALUE

See Without Par Value.

SHEARED

See Fleece.

SHELTERING TRUSTS

A title sometimes appropriately given to a trust created to provide an income for the support of a wife, or support and education of children, and at the same time "shelter" them from the dangers of their own inexperience, the cupidity of security salesmen, and the errors of incompetent advisers. Also known as Spendthrift Trusts. (See Living Trust, Trusts.)

SHERMAN ANTI-TRUST ACT

An act passed on July 2, 1890 the object of which was to prevent restraint or monopoly of interstate commerce, by trusts or other means. Excepting the Interstate Commerce Act of 1887, it was the first Federal law laying restrictions on certain forms of corporate organization. The law stated: "Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several states, or with foreign nations, is hereby declared to be illegal." The courts interpreted the law with a "rule of reason", and required the dissolution of large business organizations whether in the trust form, holding company or other form, only when an absence of competition was proved. Accordingly, in 1914 the Clayton Anti-Trust Act and the Federal Trade Commission Act were passed to make anti-trust legislation more effective, the first by penalizing practices which had the effect of restraining competition or tending to foster monopolistic practices, and the second, by penalizing unfair methods of competition or trade practices. (See Clayton Act, Federal Trade Commission.)

SHERMAN NOTES

Same as Treasury Notes of 1890, (q. v.).

SHERMAN SILVER-PURCHASE ACT

An act passed July 14, 1890, as a substitute for the Bland-Allison Act repealed on the same day. This act directed the Secretary of the Treasury to purchase monthly 4,500,000 ounces of fine silver at the market price, payment to be made in treasury notes. These notes were legal tender and made redeemable in gold or silver coin by the Secretary of the Treasury at the discretion of the holder. On account of the piling up of over-valued silver dollars in the Treasury as a result of the Bland-Allison Act and the Sherman Silver-Purchase Act, together with a decline in the gold reserve through gold exports at this time, and the fact that banks called for redemption of the Treasury Notes in gold, a strain was put upon public confidence as to the ability of the Government to meet its paper currency in

gold. Combined with these circumstances, a panic occurred in the London silver market in 1893 which brought the market ratio between silver and gold to about 31 to 1 as compared with a mint ratio of 15.988+ to 1. At current market prices the silver dollar was then worth about 50 cents in gold. Due to the continued demands made upon the Treasury for redemption of Treasury Notes of 1890 and greenbacks in gold, it became evident that the continued purchase of silver, leading to an increased circulation of over-valued silver dollars, would soon seriously embarrass the Treasury Department. Accordingly Congress repealed the purchasing clause of this act on Nov. 1, 1893.

SHIFTING LOANS

An expression used in the financial district to indicate the process of seeking other lending banks for accommodation, when banks call upon broker-borrowers to pay up their loans. (See Call Money Market.)

SHILLING

A silver English coin, popularly known as a "bob", equal to 1/20 of the pound and to 12 pence, and equivalent to about 20 cents in United States money.

(See English Money Table, Foreign Moneys—table 2.)

SHINPLASTERS

A popular name given to fractional paper currency issued during the Civil War. The term was also applied to similar currency issued because of a shortage of metallic money after the War of 1812.

SHIPPER'S LOAD AND COUNT

A clause sometimes used in a bill of lading for the purpose of limiting the carrier's liability. (See Bill of Lading.)

SHIPPING DOCUMENTS

A general term given to the papers which may accompany a domestic or foreign bill of exchange. A bill of exchange supported by shipping papers is known as a documentary bill. In domestic transactions the minimum shipping documents consist of the bill of lading and seller's invoice. In foreign bills of exchange the minimum documents consist of the ocean bill of lading, marine insurance certificate, and seller's invoice.

Other documents which may accompany a foreign bill of exchange, and which vary according to the agreement between buyer and seller, the laws of the nations concerned, etc. are:

Consular invoice.
Certificate of analysis.
Certificate of inspection and weight.
Certificate of origin.
Warehouse receipt.
Dock receipt.
War risk insurance certificate.

SHOESTRING MARGIN

A thin, inadequate margin. Speculators with small, precarious margins are said to be "trading on a shoestring."

SHORT

See Short Sale.

SHORT ACCOUNT

The aggregate of securities which have been sold short, i. e., for the account of short sellers. The size of the short account is sometimes referred to by financial reviewers as bearing upon the technical position of the market.

For tabulation of the aggregate Short Account, see Short Sale.

SHORT BILL

Bills of exchange drawn by banks or commercial interests, but usually documentary and payable from 1 to 30 days after presentation, as distinguished from long bills which are those payable 90 or more days after sight. Some authors give 60 days as the dividing line between long and short bills. (See Foreign Bills of Exchange.)

SHORT COVERING

The purchase of stock (or commodities) by a short seller to close or complete the transaction. Since every short sale involves borrowing, a purchase must be made in order to fulfill the contract and permit the return of the borrowed stock (or commodity contract). (See Short Sale.)

SHORT INTEREST

The aggregate of securities (or commodities) which have been sold short and not yet "covered"; practically the same as Short Account (q. v.).

For tabulation of the Short Interest in recent years, see Short Sale.

SHORT OF THE MARKET

One is said to be short of the market when he has sold securities (or commodities) short and has not yet covered. (See Short Sale.)

SHORT RATE

A term used in connection with fire insurance premiums indicating a rate based on a period less than one year. Insurance rates are based on a year period and the short rate is more than proportional to the yearly rate.

SHORT SALE

The sale of a security or commodity not owned or not in one's possession. Ordinarily an offer to sell presumes ownership by the seller of the thing to be sold. In a short sale, however, selling precedes buying, the ordinary process being reversed. The short seller is a Bear (q.v.) who believes that a security (or commodity), or the entire market is due for a decline. He therefore sells in anticipation of a decline in values, with the expectation of buying (covering) when the price has fallen.

The phrase "short selling" is, strictly speaking, a misnomer. The man who makes a short sale does not sell your stock, or my stock, or anybody's stock, he does not actually sell any stock. What he does is to make a contract to deliver a specified quantity of stock at some future date. In order to carry out that contract he must at some time buy the quantity of stock he has agreed to deliver. It is more convenient, because briefer, to say "Jones sold 100 Steel short" than to say "Jones contracted to deliver 100 shares of Steel at 2.15 p.m. two days later."

There are two legally recognized forms of short selling on the exchanges—first, selling for future delivery, and second, selling for immediate delivery. Selling for

future delivery is the prevailing form on the commodity exchanges. It is called "trading in futures." Selling for immediate delivery is the prevailing form on the stock exchanges.

Short selling is not peculiar to the stock or commodity markets. Contracts for buildings, bridges, roads, in which the price is named in advance of the letting of the contract is a short sale. The contractor sells a completed product before construction begins. Like stock and commodities speculation, such a short sale is possible and profitable only because the contractor has special knowledge of the different elements of cost and can estimate cost of materials and labor required to achieve the results specified in the contract, with a small percentage of error.

In a short sale of securities, the speculator puts up margin just as in the case of a margin purchase, to the same extent (75% effective February 1, 1947). When the order is executed, since he does not possess the stock sold, it must be borrowed. The short seller is not entitled to interest upon proceeds of sale of securities sold short and must pay the Federal taxes necessary to be paid in borrowing the stock by the broker; any interest charge arising from the premium at which the stock might have to be borrowed; commission and taxes for selling; and any dividends payable on the stock during the duration of the short transaction. When the short seller "covers", commission is also charged on the purchase. Interest is not charged in short-selling transactions. The premiums charged might recur from time to time, depending on the life of the short transaction.

There have been several attempts to prevent short selling by legislation, on the grounds of illegality. In 1830 a law was passed preventing short sales, but it was repealed in 1858. Short selling, moreover, has been upheld in the courts, and the stock exchange bases its stand as to the legality of short selling on several decisions. In Bibb vs. Allen (149 U. S., 481) the Supreme Court of the United States said: "It is held settled that contracts for the future delivery of merchandise or perishable property are not void whether such property is in existence in the hands of the seller or to be subsequently acquired." In the case of Hurd vs. Taylor (181. N. Y., 231) the Court of Appeals of New York said: "The purchase of stocks through a broker, though the party ordering such purchase does not intend to hold the stocks as an investment, but expects the broker to carry them for him, with the design on the part of the purchaser to sell the stocks when their market value has enhanced, is, however speculative, entirely legal. Equally so is a 'short' sale where the seller has not the stock he assumes to sell, but borrows it and expects to replace it when the market value has declined." In the case of Irwin vs. Williar (110 U. S., 499) the U. S. Supreme Court said in part: "A person may make a contract for the sale of personal property which the vendor does not own or possess, but expects to obtain by purchase or otherwise, which is binding if an actual transfer of property is contemplated." The Stock Exchange rules upholding short selling were sustained by the New York Supreme Court in the case of Cohen vs. Budd (52 Misc., 217), which held that "stock exchanges have the power to enact such rules for the government of their affairs as are necessary to carry out their purpose when not contrary to the law of the land."

Short selling has been challenged on the grounds that it is uneconomic and unethical, that it is sheer gambling and an unfair attempt to depress the value of other persons' holdings. Most economists and business leaders believe that short selling has a legitimate function. Its legitimacy is unquestioned in the case of building contracts where the price is stated before construction begins. In the commodity and security markets it acts as a check on undue optimism, thereby counteracting the tendency to excessive speculation in a bull market, and correspondingly supplies a sustaining force in a heavily declining market. It thus prevents extremes of advance, and decline.

Short selling is usually participated in only by professionals, but it is erroneous to believe that short selling is more profitable than buying for the long account. There are dangers in short selling that do not exist in the purchase of real securities. In case of a shortage in the floating supply of securities which can be borrowed, a premium may be exacted by the lenders from the borrowers. This always causes a rise in the security lending at a premium. Where a stock is closely held, it is not impossible for the shorts to sell more stock than is available. In this case, a corner exists so that the owners of stock can charge the short sellers any price when they cover their contracts. There is theoretically no limit, moreover, to the amount which one may lose upon a short sale, provided he furnished sufficient margin, inasmuch as there is no theoretical limit to the price to which a stock may rise.

In discussing the economic value of short covering, J. E. Meeker says: "Particularly in times when panic is threatening does the 'short interest'—i. e., the speculators who have sold short and who are waiting to purchase and cover—perform a valuable service to investors by supporting the falling market with their buying orders and thus helping to hold prices up even in the face of disaster. For at such times the investor and margin purchaser become extremely timid and thus the previous short seller, who is under compulsion to purchase and cover his sales, alone enables the investor who must liquidate to sell his securities."

Statistics on short sales.—Beginning with May 25, 1931, the New York Stock Exchange published the size of the outstanding short interest either weekly, monthly (or daily) as described below. That is, the number of shares sold short by customers of all members of the exchange (not including sales against stock owned but not held by brokers) are reported.

Weekly figures showing number of shares in the total short interest were released by the New York Stock Exchange, compiled from information secured from its members, once each week from May 25, 1931, until September 21 of the same year, when daily reports were required. Starting September 19, 1932, daily reports were discontinued and weekly reports resumed. As of June 5, 1933, weekly reports on the total short interest were discontinued and thereafter monthly reports were required starting June 30, 1933.

The following is a record of the number of shares constituting the total short interest by months (month-end figure), from June, 1933, to October, 1936.

Recapitulation

High	(May 25, 1931)	5,589,700
Low	(Dec. 31, 1941)	349,154

As of February 18, 1932, New York Stock Exchange required its members to obtain consent of its customers, by signing a special form, in order to gain authority to deliver stock held in a customer's account against a short sale. By this regulation the use of a customer's stock for lending purposes, became dependent upon the customer's wishes and no authority to lend a customer's stock obtained without the specified written consent of the owner. The Securities Exchange Act of 1934 gives authority to the Securities and Exchange Commission to prescribe rules for short sales. Rule X-10A-1, 2 of the Commission regulates short sales and requirements for covering purchases.

Whitney, R., and Perkins, W. R.: Short Selling, For and Against, 1932.

SHORT SIDE

Those who have sold short and whose interest it is to work for a decline in prices. Same as Short Account (q. v.).

SHORT STOCK

Stock which has been sold short. (See Short Sale.)

SHORT-TERM NOTES

A relative term, usually applied to notes running for three to six months, which are the maximum maturities specified for rediscount of eligible paper under Secs. 13 and 13a of the Federal Reserve Act, subject to specified exceptions. (See Eligible Paper.)

SHORTS

A term applying to speculators who have sold short. (See Short Sale.)

SICK MARKET

An expression describing the condition of the stock market following a period of speculative activity in which prices have fallen and traders are discouraged. A condition of uncertainty and hesitancy prevails, and traders are casting about for news susceptible to favorable or unfavorable interpretation so that commitments may be made accordingly.

SIGHT BILL OF EXCHANGE

A bill of exchange payable on presentation to the drawee. (See Bill of Exchange.)

SIGHT BILLS

Bills payable on presentation; a term synonymous with demand bills and presentation bills. (See Bill of Exchange.)

SIGHT CREDIT

A short title for the full title "Sight Letter of Credit," a letter of credit which specifies the drawing of a sight draft thereunder. (See Letters of Credit.)

SIGHT DRAFT

A draft payable upon presentation. (See Draft.)

SIGHT RATE

The rate of exchange applicable to a demand draft or check; it is synonymous with Check Rate (q. v.).

SIGHTING A BILL

When a bill is payable at sight or so many days after sight, it is presented for payment or acceptance to the drawee in order to bring it under his sight. A sight bill should be presented as soon after receipt as possible.

SIGN IN BLANK

A non-technical term sometimes used to indicate to indorse in blank. A blank indorsement is an unqualified indorsement of a negotiable instrument, but because such indorsement makes the instrument a bearer instrument, negotiation of the instrument may be effected by delivery only, so that the warranties specified in Sec. 65, Uniform Negotiable Instruments Law (Sec. 115, New York Negotiable Instruments Law), extend in favor of no holder other than the immediate transferee.
(See Indorsement.)

SIGNATURE CARD

See Signature Department, Signatures.

SIGNATURE DEPARTMENT

Among larger banks a separate department is created, the function of which is to verify signatures on all home debit checks before they are charged to the depositors' (drawers') accounts. Since a bank is responsible for paying checks signed by a forged or unauthorized name, the verification of the genuineness of signatures is important. The verification of signatures depends upon keeping an up-to-date signature card file containing all signatures with which the bank comes in contact, and the employment of clerks who can memorize the signatures of the customers in order to discriminate between a genuine signature and a fictitious, forged, or otherwise unauthorized one, without constant comparison with the signature card.

The signatures of principals of each account are secured on a signature card for future use when the account is opened. Some banks procure specimen signatures on three different cards to be used in the paying teller's and new business departments, and at the check desk. Other banks make photographic copies of signature cards, thus obviating the necessity of requesting customers to sign more than one.

In partnership accounts the signatures of all partners are required. In corporation accounts the signature of each official authorized to sign, either as full authority or for counter signature, or Per Procuration (q.v.), is obtained. The signatory power of each official is also indicated. Thus a bank official may be authorized to certify a check but not to sign a cashier's check. To authenticate the signatures of officials, a copy of the resolution of the board of directors empowering such officials to sign is also procured. Changes in authority to sign must be followed up and signature cards revised accordingly. The signature clerk must see that the signature is not only genuine, but in case of an official signing for a corporation, that he has power to sign and that the power to sign is still in force.

Banks usually place the following additional information on the signature card: (1) occupation or business; (2) address; (3) date of opening the account; (4) introduced by. (See Signatures.)

SIGNATURES

A bank is required to know the signatures of all its customers and is responsible if it pays a check on which the drawer's signature has been forged. For this reason it is essential that the signature upon each check be verified before it is paid and charged to the customer's account. The method of verification is explained under Signature Department (q. v.).

When checks are presented to the paying teller the signature of which he does not recognize (as in the case of a new account), he must consult the signature file, which should be readily accessible. If the drawer's signature differs from the usual one so as to raise the question of its genuineness, it is referred to an officer. In England it is a customary practice when the signature differs and it is difficult to communicate with the depositor, to return the check with the explanation, "signature differs."

Signatures may be representative of different types of accounts, e. g.:

(1) Individuals.

(2) Joint—Where two or more persons have a joint interest in the account.

(3) Co-partnership—Where two or more persons can sign checks binding a firm.

(4) Corporation—Where certain officials are authorized to sign by a resolution of the board of directors, which the bank should have on file.

(5) Power of attorney—Where an agent may be appointed to sign for another person. In this case a copy of the power of attorney, setting forth the agent's authority, should be on file.

(6) Agent, manager, treasurer, special, etc. A person or corporation may have several special accounts for various purposes. The person authorized to sign checks for withdrawals from such an account, does not need to reveal the principal.

(7) Administrator, executor, trustee, sinking fund agent, etc. When signing in a fiduciary capacity, proper authorization to act in such capacity must be on file.

SIGNING BY MARK

See Mark Signature.

SILK EXCHANGE

See Commodity Exchange, Inc.

SILVER

One of the metals having semi-precious status, of

only moderate industrial use but of more extensive use in manufactures and the arts. In ancient and medieval times, silver shared with gold in importance as an exchange medium and store of value; indeed, in certain periods, silver was the exclusive monetary medium. In modern times, however, China and India have been the principal countries using silver as a basis for their monetary system, although it is employed by virtually every country for subsidiary coinage.

As in the case of gold, silver must be viewed both as a commodity metal and as a monetary metal. Prior to World War II, consumption of silver was principally for monetary purposes, but in subsequent years the principal consumption of silver has been for industry and the arts, because of the increased use of paper currency and trend towards increased use of copper and nickel in subsidiary coinage. In manufactures, silver's chief usages are for silverware (tableware, plate, etc.), ornaments and jewelry, and in photography (films), chemistry, metallurgy (special alloys for brazing and soldering), dental products, and medicine.

Production and Stocks.—Silver in the United States occurs in nature almost entirely in association with other metals, and chiefly with lead, copper, zinc and gold. Only small quantities of primary silver ores exist in the United States, the principal producer of primary silver being Mexico. On this account, the production of silver in the United States is stimulated or depressed as determined by the relative activity in copper-lead-zinc mining. In the decade ending with 1930, the United States produced approximately one-fourth; Mexico, two-fifths; and the continent of North America, about three-quarters of the world's silver supply. The chief demand originated from China and India, and the price was determined in London, where settlements of Oriental trade balances were arranged. The North American continent still produces three-quarters of the world output, but in recent years, declines in production in the United States have been compensated by gains in output in Canada, Mexico and South America. Moreover, under this country's silver buying policy, as set forth in the Silver Purchase Act of 1934, demand for silver by the United States for monetary purposes has absorbed the entire domestic supply and impinged additionally on foreign stocks. Mexico leads the world in the production of silver, followed by the United States, Canada, Peru, Australia, Bolivia, Russia and Burma. Japan and Germany have also been important sources.

In ordinary years, China and India alone have absorbed from 60 to 75 per cent. of the world's annual production. The savings of the masses of both these peoples are in the form of silver, and the amount absorbed each year depends on their prosperity. No accurate figures are available on world stocks of silver, but it is believed that these two countries hold over 10,000,000,000 ounces, not only the greatest portion of the world's stocks, but about two-thirds of the amount mined in the world in the past three centuries. The largest single monetary stocks are the monetary stocks of the United States Government which as of July 31, 1948 reports silver coin and bullion outstanding of $3,405 million, and has been a buyer of newly mined silver at prices which have afforded at times substantial premiums since initial legislation passed in 1933.

Prices.—Until 1870, the price of silver was fairly stable. The coinage ratio with gold, i. e., about 16 to 1, was a reflection, over the years, of its average commercial ratio. Since 1870, largely due to demonetization of silver by European countries and by the United States, the price of silver has tended to fall in relation to gold, reaching an extreme market ratio in terms of gold of about 83 to 1 in the years 1932 and 1933. From $1.339 an ounce in 1866, silver prices trended downward to 50.7 cents an ounce in 1915. The World War brought an advance to $1.125 in 1919, but a record low price of 24 1/4 cents an ounce was established on December 29, 1932.

Among more important factors affecting silver prices are the following: The production of new silver; the return of old silver from debased or demonetized coins or from manufacturers and the arts; the sale of silver from hoards, inspired largely by the price; and the demand for silver from the two largest users, China and India, as affected by their crop conditions, internal political and social unrest, famine, public finances, and demand for hoarding.

International Control Agreement.—In an effort to cancel the deflationary effect of declining silver prices and to restore in part the use of silver as money, the United States succeeded in the adoption on July 22, 1933, at the London Economic Conference, of a four-year silver control agreement, signed by the representatives of eight nations: United States, Mexico, Canada, Australia and Peru as producers; and India, China and Spain as holders of silver. The resolution provided generally that said governments would abandon the policy and practice of debasing or demonetizing their silver coins; that paper currency of small denomination would be replaced by silver coinage, in so far as practicable; and that legislation detrimental to silver would not be enacted. The specific main points of the agreement were as follows:

1. The limitation of Indian Government sales to 140,000,000 ounces for a four-year period commencing January 1, 1934, with a maximum of 50,000,000 ounces in any one year;
2. Similar restrictions upon sales by the Spanish Government; the total being 20,000,000 ounces, and the yearly maximum 7,000,000 ounces;
3. A prohibition against any sales of demonetized coins by the Chinese Government during the four-year period; and
4. An undertaking by the Governments of the signatory producing countries to purchase or otherwise withdraw from the market, the mine production of such countries to an aggregate amount of 35,000,000 ounces annually for a four-year period; such aggregate amount to be apportioned between the five countries approximately as follows: United States 24,420,000 ounces, Mexico 7,160,000 ounces, Canada 1,670,000 ounces, Peru 1,100,000 ounces, and Australia 650,000.

U. S. Legislation.—Modern legislation on silver in the United States may be summarized as follows:

(1) Proclamation of March 6, 1933.
Closed all banking institutions in the United States for a period of four days. Forbade banks during this period from paying out, exporting or earmarking any gold or silver coin, bullion or currency, or dealing in foreign exchange. Proclaimed a suspension of the gold standard.

(2) Proclamation of March 9, 1933.
Extended the above "holiday" indefinitely.

(3) Emergency Banking Act, March 9, 1933.
Approved and confirmed previous action by the President. Specifically authorized the President,

in emergency, to regulate or prohibit foreign exchange transactions and the export, hoarding, melting, or earmarking of gold or silver coin, bullion or currency. Empowered the Secretary of the Treasury to require all persons to deliver to him all gold coin, bullion or certificates, in exchange for an equivalent amount of any other form of lawful money. Authorized the Comptroller of the Currency to appoint conservators, with power to operate banks on a restricted basis, in charge of weak National banks. National banks might strengthen capital structures by sale of Preferred stock to the Reconstruction Finance Corp. or others. Greatly liberalized note issue power of the Federal Reserve Banks.

(4) Executive Order of March 10, 1933.

Authorized reopening of sound banks on unrestricted basis on March 13, 1933 (about 2/3rds of National banks resumed by the end of March, 1933). Forbade all persons to export gold coin, bullion or certificates except under Treasury license. Prohibited banks from paying out gold or gold certificates, except as authorized by the Secretary of the Treasury, or to allow withdrawal of any currency for hoarding. Forbade any banking institution to engage in foreign exchange, except for normal and legitimate business requirements, traveling and personal requirements, and to fulfill contracts entered into prior to March 6, 1933.

(5) Executive Order of April 5, 1933.

Nationalized gold—all persons were required to deliver to a Federal Reserve Bank or agent all gold coin, bullion or certificates held by them, and receive in exchange other lawful money.

(6) Executive Order of April 20, 1933.

Confirmed the gold embargo (Proclamation of March 6, 1933, and Executive Order of March 10, 1933). Confirmed and strengthened foreign exchange restrictions in Order of March 10, 1933—authorized Secretary of the Treasury to regulate by license or otherwise any transactions in foreign exchange, transfers from domestic banks to foreign branches, and export of currency by any person. Restricted discretionary power of the Secretary of the Treasury to license gold exports, such license, with certain exceptions, to be subject to approval by the President.

(7) Thomas Amendment to Emergency Farm Mortgage Act, May 12, 1933.

Conferred following powers upon the President, to be invoked by proclamation: to change the weight of the gold dollar by not more than 50%; to change the weight of the silver dollar and provide for unlimited coinage of silver as well as gold at a fixed mint ratio; to arrange for the Federal Reserve Banks to purchase and hold for an agreed period, up to $3 billion of Government securities, in addition to current holdings; to direct the Secretary of the Treasury to issue $3 billion in U. S. Notes (Greenbacks), subject to limitations that they should be used only in retiring public debt, and shall be retired at the rate of 4% per year; to accept up to $200 million of silver, at price of not over 50¢ an ounce, in payment of debts of foreign governments to the U. S., silver certificates in amount equal to such debt payments to be issued and kept in circulation. Empowered Board of Governors of the Federal Reserve System, upon affirmative vote of not less than 5 members and approval of the President, to declare that an emergency exists by reason of credit expansion, and during such emergency, to increase or decrease legal reserve requirements of member banks. Provided that the gold dollar shall be the standard unit of value, and that all other forms of money shall be kept by the Secretary of the Treasury at a parity with it. Made all forms of lawful money full legal tender.

(8) Joint Resolution of Congress, June 5, 1933.

Declared against public policy every provision giving obligee right to require payment in gold or a particular coin or currency of the U. S. Forbade use of gold clause in the future. Provided that every obligation theretofore or thereafter incurred, whether or not containing a gold clause, shall be discharged upon payment dollar for dollar in any legal tender. Amended the Thomas Amendment's reference to legal tender.

(9) Proclamation of December 21, 1933.

Directed the Mints to receive any silver produced after that date domestically, and that one-half of such silver be coined into standard silver dollars, remainder to be kept in bullion until Dec. 31, 1937. Directed that payment for silver received be in silver dollars at 64 1/2¢ per ounce.

(10) Gold Reserve Act of 1934, January 30, 1934.

Sections relating to silver amended the Inflation Act: (a) President's power to change weights of silver and gold dollar and provide for unlimited coinage of both at fixed mint ratio, was limited to period of two years beginning January 30, 1944, subject to extension of one year by proclamation; (b) Stipulated limits on reduction in weight of gold dollar by not more than 50% and not less than 40%; (c) Authorized President to: Issue silver certificates for any silver bullion brought to the Mints. Issue silver certificates against any silver held by the Treasury not held for redemption of silver certificates. Coin standard silver dollars or subsidiary currency for the redemption of such silver certificates. Prescribe different terms, conditions, charges, etc. for foreign produced silver. Reduce weight of subsidiary coins to keep on parity with any alteration in silver or gold dollar.

(11) Proclamation of January 31, 1934.

Reduced weight of gold dollar from 25.8 grains, .9 fine to 15 5/21 grains, .9 fine, or to 59.06% of previous gold content. No change in silver dollar.

(12) Silver Purchase Act of 1934, June 19, 1934.

Declared it to be the policy of the United States that 1/4th of monetary value of stocks of gold and silver shall ultimately be silver. Authorized and directed Secretary of the Treasury to purchase silver at home and abroad until such ratio is reached, but: (1) no silver is to be bought for more thatn $1.29 per fine ounce (statutory monetary value); (2) Not more than 50¢ an ounce to be paid for silver situated in continental U. S. May 1, 1934. Authorized Secretary of the Treasury to issue silver certificates in amount not less than cost of silver purchased. Such certificates shall be placed in actual circulation. All silver certificates declared to be full legal tender, and redeem-

able at Treasury in standard silver dollars. Authorized Secretary of the Treasury to coin silver dollars for such redemption. Authorized Secretary of the Treasury to sell at home or abroad (with approval of the President) any silver acquired under the Act not necessary for security of silver certificates--(1) whenever the market price of silver exceeded monetary value ($1.29 an ounce); (2) whenever monetary value of silver stock was more than 25% of combined stocks of gold and silver.

Empowered Secretary of the Treasury, with approval of the President, to regulate by license, etc. acquisition, import, export, shipments of silver. Authorized President, at his discretion, to require the delivery of all silver to Mints and pay a fair market price

(13) Order of June 28, 1934 of Secretary of the Treasury.

Required licenses for export of silver; certain exceptions.

(14) Proclamation and Executive Order of August 9, 1934.

Nationalized silver. Required that all silver in continental U. S. be delivered to the Mints; that this silver be coined or held as bullion for later coinage; the silver to be paid for, in any lawful money, at 50.01¢ per fine ounce. Terms of Proclamation of Dec. 21, 1933 not disturbed except that—(1) any silver not delivered under that Proclamation if processed to more than .8 fine after August 9, 1934 to be paid for at 50.01¢ per ounce; (2) any silver imported after August 9, 1934 to be under Treasury regulation under Silver Purchase Act.

(15) Act of July 6, 1939.

Authorized purchase of silver from domestic ores at 71.11¢ per fine ounce. This was also the domestic selling price for new metal used in industry and for Treasury unpledged silver sold under the Act from July, 1943 through 1946.

(16) Act of July 31, 1946.

Provided that domestic silver mined after July 1, 1946 and tendered to the Mints within a year after the ore was mined, would be received for coinage by the Mints with a seigniorage deduction of 30%.

Accordingly, the Treasury's purchase price for newly mined domestic silver is now 90.5¢ per fine ounce.

This Act also authorized the sale by the Treasury of any silver held or owned by the United States under such terms as the Secretary of the Treasury shall deem advisable, but at not less than 90.5¢ per fine ounce.

Under this authority, the Treasury currently sells silver at 91¢ per fine ounce.

As the result of all this legislation, the United States Treasury has made the following purchases of domestic and foreign silver since 1933:

Silver Purchases by U. S. Treasury
(in millions of fine ozs.)

Year	Domestic Silver	Foreign Silver
1933	2.4	21.4
1934	22.1	173.2
1935	38.2	494.6
1936	61.2	273.0
1937	70.9	241.8
1938	61.9	355.6
1939	60.7	282.6
1940	68.4	140.7
1941	70.5	73.1
1942	47.9	15.0
1943	5.6	0.3
1944	0.1	0.3
1945	0.9	0.3
1946	4.5	0.4

Under the Proclamation and executive Order of August 9, 1934, a total of 112,850,000 ounces of silver from private stocks were obtained. At the close of 1947, free silver totaled 186.5 million ounces, total Treasury holdings being reported at 2,748 million ounces. As of December 31, 1947 the ratio of monetary silver stock to monetary gold stock was approximately 14%, as compared with the 25% objective of the Silver Purchase Act, and compared with 19.1% ratio at the close of 1938.

During this "modern era" of silver since 1933, world production, United States production, consumption of new silver for the arts and industry and for coinage, and average open market prices for silver in the New York market, have compared as follows:

-----in millions of fine ounces-----

Year	Production World	Production United States	Consumption in U.S. Industry (New)	Consumption in U.S. Coinage	*Average New York Prices
1933	169.7	23.3	10.8	0.6	34.7¢
1934	186.5	32.7	11.5	16.2	48.0
1935	214.5	45.6	5.3	22.8	64.3
1936	254.6	63.4	19.1	25.1	45.1
1937	277.7	71.4	27.7	15.9	44.8
1938	267.7	61.7	20.2	6.5	43.2
1939	266.9	64.3	44.6	20.2	39.1
1940	275.4	70.6	44.5	21.2	34.8
1941	261.6	67.2	72.4	55.1	34.8
1942	250.0	54.1	101.4	78.8	38.3
1943	217.1	41.5	129.9	98.5	44.8
1944	186.2	34.5	120.1	75.4	44.8
1945	157.3	29.0	126.3	67.0	51.9
1946	129.0	22.9	87.0	44.1	80.2
1947	E200.0	34.2	E85.0	E23.0	71.8

*Silver .999 fine. E--Estimated.

Markets.--The principal international markets for silver are in London, Shanghai, Bombay, Hong Kong, and New York. Although the United States is a large user of silver, it has not had a market for silver comparing in size with that of the London or principal Oriental markets. A market for silver futures was maintained on the Commodity Exchange, Inc. in New York until the nationalization of silver on August 9, 1934. A New York market for bar silver, .999 fine, continues to be maintained by bullion brokers, subject to prevailing laws and regulations on silver. In most

recent years, the New York market has assumed importance as foreign holders of silver, interested in building up dollar balances in the United States, have been active sellers.

For major legislation in the fight by silver proponents to restore coinage of silver in the United States following the "Crime of 1873", which dropped standard silver dollars from coinage, see Bland-Allison Act and Sherman Silver Purchase Act.

See Market Ratio, Monetary Stock (Circulation), Silver Certificates, Silver Coinage, Silver Dollar.

SILVER BULLION

Standard silver bars (.999 fine), which are good delivery for bullion trading in the New York market, contain about 1,000 troy ounces, or approximately 70 pounds avoirdupois. Silver issue bars manufactured by the Mint contain approximately 389 fine ounces of silver. In addition, the Assay Office in New York manufactures silver ingots for coinage in the Philadelphia Mint containing approximately 35 ounces of fine silver each.

(See Silver.)

SILVER CERTIFICATES

Silver certificates are issued in denominations as follows: $1, $2, $5, $10, $20, $50, $100, $500 and $1,000. This issue is engraved with green backs, being stamped with a blue seal on the obverse side. They are, in effect, warehouse receipts certifying that one dollar in silver has been deposited in the United States Treasury for each dollar represented by the certificate, payable to the bearer on demand. They circulate in lieu of an equivalent amount of actual silver in which metal they are redeemable, and therefore, are collateraled by a 100 per cent. silver reserve in silver, in bullion and standard silver dollars. They are now legal tender for all debts, public and private, by virtue of the Thomas Amendment to the AAA Farm Relief and Inflation Act (May 12, 1933), and the Gold Repeal Joint Resolution of June 5, 1933. They may be held by Federal Reserve and National banks as lawful reserve. Silver certificates are the second largest type of paper currency outstanding, next to Federal Reserve Notes. They were first issued in 1878. (See Monetary Stock (Circulation)).

SILVER COINAGE

At present silver coinage in the United States is restricted to standard silver dollars, and three subsidiary silver coins, the 50 cent, 25 cent, and 10 cent piece, all of which are coined on Government account only. Under the Act of April 2, 1792, establishing the first monetary system of the United States, both gold and silver were standard moneys and freely coined at the ratio of 1:15. The double standard was abolished by the Act of February 12, 1873, whereby silver became demonetized.

Under the Thomas Amendment to the AAA Farm Relief and Inflation Act of May 12, 1933 (see Silver), the President was authorized by proclamation to provide for coinage of the silver dollar at a weight .9 fine bearing a definite fixed ratio to the weight of the gold dollar. Weight of the silver dollar has been continued at 412.5 grains of silver, .9 fine, and the weight of the fractional silver coins has also been continued unchanged. The silver dollar has been legal tender since initial coinage in 1792 except for the period 1873-1878 (see Bland-Allison Act, Crime of 1873, Sherman Silver Purchase Act).

(See Dime, Half Dollar, Quarter, Silver, Silver Dollar.)

SILVER DOLLAR

This coin has an anomalous position in the United States monetary system. It is coined only on Government account, is short in value and is in reality a form of token money. Nevertheless it is legal tender at its nominal value for all debts and dues, public and private, without regard to amount. Silver dollars are not redeemable in gold—the standard money—although by the Gold Standard Act of 1900, and reaffirmed by the Federal Reserve Act of 1913, the different kinds of money in circulation are required to be kept on a parity with gold by the Treasurer of the United States.

The silver dollar contains 412.50 grains of standard silver (0.900 fine), and is composed of 371.25 grains of pure silver, and 41.25 grains of copper alloy. The coinage ratio between gold and silver is 15.988+, and at the current prices of silver, the Government makes a considerable profit in silver coinage, which is Seigniorage (q. v.), a miscellaneous revenue of the Treasury.

The statutory coining value in standard silver dollars of an ounce of silver (.9 fine) is $1.2929+, so that the coining value of an ounce of standard silver is $1.1636+. Since standard silver bullion in the New York market and London market is quoted by the fine ounce, the bullion value of the silver dollar at any given time may be determined by dividing the coining value per ounce by the commercial price per ounce. The table appended herewith shows these values from 1890 to 1946, and the ratio of price of silver to gold for the same period.

Year	Bullion Value of Silver Dollar (a)	Average Commercial Ratio of Price of Silver to Gold
1890	$0.80927	19.75
1895	0.50587	31.60
1900	0.47958	33.33

(a) Average market quotation divided by statutory price.
Source--Annual Report of Director of the Mint.

SILVER FUTURES

Trading in silver futures was conducted on the Commodity Exchange, Inc., until suspended on August 9, 1934, in view of the Presidential Proclamation nationalizing silver and the supplementing order of the Secretary of the Treasury by which existing silver stocks in the United States, other than by special license, were condemned for purchase by the Treasury at 50.01 cents per ounce.

SILVER PURCHASE ACT OF 1934

An act, approved June 19, 1934, which, among other things:

(1) Declared it to be the policy of the United States that the proportion of silver to gold in the monetary stocks of the United States should be increased, with the ultimate objective of having and maintaining one-fourth of the monetary value of such stocks in silver;

(2) Authorized and directed the Secretary of the Treasury, whenever the proportion of silver in the stocks of gold and silver of the United States is less than one-fourth of the monetary value of such stocks, to purchase silver, at home or abroad, for present or future delivery, at such rates and times and upon such terms as he may deem reasonable and most advantageous to the United States; but provided that no purchase of silver should be made at a price in excess of its monetary value, and that no purchase of silver situated in the United States on May 1, 1934, should be made at a price in excess of 50 cents a fine ounce;

(3) Authorized the Secretary of the Treasury, with approval of the President, to sell any silver acquired under the terms of the act, at such rates and times and upon such conditions as he deemed reasonable and advantageous, whenever the market price of silver exceeded its monetary value or the monetary value of the stocks of silver is greater than 25 per cent. of the monetary value of the stocks of gold and silver;

(4) Authorized and directed the Secretary of the Treasury to issue and place "in actual circulation" silver certificates in such denominations as he might prescribe;

(5) Provided that the Treasury should maintain as security for all silver certificates heretofore and hereafter issued, and at the time outstanding, an amount of silver bullion and standard silver dollars equal to the face value of the silver certificates;

(6) Stipulated that all silver certificates should be legal tender for all debts, public and private, public charges, taxes, duties and dues, and should be redeemable on demand at the Treasury in standard silver dollars;

(7) Vested in the Secretary of the Treasury, with approval of the President, the power to investigate, regulate and prohibit, by license or otherwise, the acquisition, importation, exportation or transportation of silver, "and of contracts and other arrangements made with respect thereto," and to require reports as to the facts involved, whenever necessary to effectuate the policy of the law; violations to be punishable by maximum fine of $10,000 or not over ten years imprisonment, or both;

(8) Authorized the President, by Executive order, to require the delivery to require the delivery to the mints of "any or all" silver by whomever owned or possessed, this silver to be coined into silver dollars or otherwise added to the monetary stocks as the President may determine; and, provided that there should be returned therefor in standard silver dollars, or any other coin or currency of the United States, the monetary value of the silver so delivered less deductions for seigniorage, brassage, coinage or other mint charges;

(9) Provided that silver withheld in violation of this provision be forfeited to the government and, in addition, persons failing to comply with the provision be subject to a penalty equal to twice the monetary value of the silver withheld; and

(10) Amended the stamp-tax provisions of existing law to provide a transfer tax on silver bullion equal to 50 per cent. of the difference between the price for which any interest in silver is to be transferred and the cost of the bullion, plus allowed expenses.

SILVER STANDARD COUNTRIES

See Silver.

SIMPLE ARBITRATION OF EXCHANGE

See Arbitration of Exchange.

SINGLE-NAME PAPER

Notes which are the obligations of one party only, i.e., the maker. It is also known as straight paper.

Single name paper "represents loans to an individual, firm or corporation on their own note of hand without

any other responsibility than that of the general credit of the maker. Although two or more names may appear on a note either as makers or indorsers, it it still single name paper, if the names represent identical interests. Sometimes the members of a firm will indorse their firm notes personally, but unless they are possessed of considerable outside means entirely apart from their business, such indorsements merely strengthen the moral risk, and the instrument is still single name paper. Again, a firm may have a subsidiary organization trading under a separate name, but with identical interests, so that although both names appear on the note—one as maker and the other as indorser—the obligation is still essentially single name paper. Failure to guard against this contingency has caused many bank losses, since a single failure may affect several allied companies'' (Wolfe, O. H.: Practical Banking).

A large proportion of the commercial paper sold through the medium of note brokers is single name paper. (See Commercial Paper.)

SINGLE OPTION

A put or a call. (See Call, Put.)

SINGLE STANDARD

A monetary system in which one metal, e. g., gold or silver, is made the basis of the standard money and coins manufactured from all other metals are subsidiary. (See Gold Standard, Standard Money, Standard of Value.)

SINKING FUND

A fund created by setting aside out of earnings at stated intervals sufficient to provide for the payment of all, or part, of a long term debt, such as an issue of bonds, or of a senior stock, such as preferred stock. The creation of a sinking fund is a method of amortization or extinguishment of a debt not yet matured, and is as binding upon the debtor organization (obligor) as any other provision of the contract.

A sinking fund is usually placed in the hands of a sinking fund trustee named under the terms of a mortgage deed. It may be invested in three ways: (1) deposited in a bank to bear interest; (2) in bonds of other organizations; and (3) in bonds of the issuing organization. Due to the opportunity for mismanagement of sinking fund investments, it is usually considered safer to apply sinking fund payments to the purchase of the company's own bonds being amortized, thus extinguishing the very debt for which the sinking fund was created.

There are three ways in which a sinking fund may be invested in a company's own bonds: (1) purchasing and keeping alive parts of other issues; (2) purchasing and keeping alive parts of the issue being amortized; (3) purchasing and cancelling parts of the issue being amortized. The latter method is usually considered the best. It not only decreases fixed charges, but it increases the equity of the owners and strengthens the security of the bondholders. It also prevents mismanagement of the sinking fund and tends to stabilize the price by making a market for the bonds.

The purchase of the bonds being amortized may be accomplished by open market transactions, or else the mortgage deed may provide for the purchase on certain interest dates of a certain number of bonds to be called by lot, usually at a premium. In the latter case, notice is given by the sinking fund agent that in accordance with the provisions of the mortgage and deed of trust it has designated by lot, for redemption on a certain date out of moneys paid to the trustee by the issuing company, a certain sum of money for the redemption of bonds bearing the numbers stated in the notice.

SINKING FUND ASSETS

The name given to an account which represents cash or securities in which the sinking fund is invested. From an accounting and credit standpoint, these assets should be considered as applicable to the reduction of the relative liabilities. (See Sinking Fund.)

SINKING FUND BONDS

Bonds issued under a sinking fund agreement which requires the debtor organization (obligor) to set aside periodically out of earnings a sum which, with interest, will be sufficient to redeem the issue in whole or part at maturity. The purpose of sinking fund bonds is to give assurance to investors that systematic provision is to be made for the repayment of the loan and sinking fund payments become obligatory as part of the contract. Sinking fund payments are usually made to a trust company or sinking fund trustee and are just as binding upon the issuer as interest payments, e. g., failure to make sinking fund payments entitles the bond holders to the same legal rights as default in payment of interest.

Sinking fund bonds occur among both civil and corprate issues, but are more common among the latter. Sinking fund bonds are essential for protection of the investor in the case of extractive industries, such as coal mining, oil, and the like, since the assets are of a wasting character. Among railroad and public utility corporations where the fixed assets must be kept intact in order that operations may continue, sinking fund bonds are nevertheless quite common.

Among civil issues, the serial method of debt repayment has tended in recent years to replace the sinking fund method. (See Sinking Fund.)

SINKING FUND REDEMPTION NOTICE

A notice published in accordance with the requirements of the bond indenture notifying holders of bonds that are callable for redemption before maturity, that certain bonds have been drawn by lot for current sinking fund redemption on specified date, and should be presented for payment, as interest will cease after the redemption date.

The following is a current example of a Sinking Fund Redemption Notice, or ''Notice of Redemption''.

To the Holders of Chicago & Western Indiana Railroad Company First & Refunding Mortgage 4 1/4%, Series D, Sinking Fund Bonds, due September 1, 1962:

NOTICE IS HEREBY GIVEN that pursuant to the provisions of the First & Refunding Mortgage of Chicago & Western Indiana Railroad Company dated September 2, 1912, and Indentures supplemental thereto, to the Trustee, $429,000 principal amount of Chicago & Western Indiana Railroad Company First & Refunding Mortgage 4 1/4%, Series D, Sinking Fund Bonds due September 1, 1962, bearing the following serial numbers prefixed by the letter M, have been drawn by lot by said Trustee for acquisition for the sinking fund on September 1, 1948: (Numbers follow).

Accordingly, on September 1, 1948, the bonds so

designated for acquisition will be redeemed and the principal amount thereof plus accrued interest to said date will become due and payable at the principal office of the Trustee, and on and after said date will be paid at said office upon presentation and surrender of said bonds accompanied by all coupons appertaining thereto maturing on and after September 1, 1948, although coupons due September 1, 1948 may either be attached to said bonds for payment or, if detached from such bonds by the holder thereof, may be presented for payment in the usual manner. Holders of said bonds called for redemption as aforesaid will not be entitled to interest thereon after September 1, 1948.

(See Sinking Fund Bonds.)

SIXPENCE

An English silver coin, equivalent to about 10 cents in United States money. (See English Money Table, Foreign Moneys—England.)

SIXTEEN TO ONE

The popular title to the issue raised in the campaign of 1896 between Bryan and McKinley, having reference to the coinage ratio between silver and gold. Bryan advocated the re-establishment of Bimetallism (q. v.) on this basis. The coinage ratio between silver and gold of 16 to 1 was established by Act of Congress in 1837, although the exact ratio was 15.988 plus. (See Free Coinage.)

SKYROCKETING

An expression to denote the rapid rise of a stock, or of the entire market, over a wide range in a short time. Such a rise is brought about by speculative enthusiasm generated by particularly favorable news.

SLAUGHTER

An expression to denote the sale of securities at prices far lower than warranted by intrinsic values.

SLIPPING

An expression to denote a declining trendency of stock market prices.

SLOW ASSETS

Same as fixed, permanent, or capital assets. (See Fixed Assets.)

Slow or doubtful loans are a classification in examination of a bank's loans, for which reserves or outright charge-off should be provided. (See Examination Procedure.)

SLUGGISH

An expression to denote a state of inactivity in a market, i. e., a small number of transactions and slight price changes.

SLUMP

This term has two applications:

(1) An expression to denote the continued decline in prices in a market, especially when due to unfavorable trade reports.

(2) A term to describe a falling off in the volume of business in a trade or industry, or throughout the entire business structure.

SMALL-LOAN BUSINESS

Making small loans is not only the oldest form of financial transaction, but is one which involves, in the aggregate, large sums of money. But its organization under established standards is a comparatively recent development. Largely through the efforts of the Russell Sage Foundation and its model law, the business of lending small amounts for short periods has been taken away from "loan sharks" in 40 states and is being performed by legitimate small-loan dealers under strict state supervision and control. Small loans are described by law in these states as loans of $300 or less and are usually known as consumer or "remedial" loans.

The extent of the consumer demand for small loans is indicated by the table appended herewith, showing that in 1947 the volume of loans made by personal loan companies, credit unions, industrial banking companies and commercial banks reached a record high of $5,179 million, with loans outstanding at the close of 1947 at a record high of $2,635 million.

Maximum term for repayment of instalment loans is fixed by State law or regulation. Prior to World War II, loans in most States were repayable within 20 months, through monthly instalments, except for loans over $300. With issuance of Regulation W of the Board of Governors of the Federal Reserve System, in September, 1941 instalment loans had to be repaid within 18 months. In 1942, this was shortened to 15 months, and later to 12 months. In October, 1945, term was lengthened to 18 months, but in 1946 again reduced to 15 months. When Regulation W was terminated in November, 1947 by Congress, small loan companies restored maximum maturities of 20 months, except for loans of larger amounts. With restoration of Regulation W in 1948, maximum terms under the Regulation are 15 months for loans of less than $1,000 and 18 months for loans in excess of that amount.

SMASH

An expression to denote an abrupt and violent decline in prices of securities or commodities creating a condition bordering on panic; a stronger expression than Break (q. v.).

SOCIAL CREDIT

A term used by a school of "New Economics" in offering a program in solution of the economic paradox of "penury amidst plenty." The plan would disturb the existing institutions of private capitalism, i. e., private property and individual initiative only to a minimum extent. Its proponents, led by Major C. H. Douglas, a British engineer, who has written extensively on the subject, claim that under a modern production system goods of every description can be turned out at a continously decreasing amount of human energy and labor. The technological genius of every country is working toward the replacement of labor by machines, and mercantile institutions are endeavoring to put the world out of work—thus creating a miscalled unemployment problem. To a considerable degree this is blamed on banking and credit systems, the following situations being the roots of the difficulty:

(1) Wages and dividends will not purchase total production—which difficulty is cumulative.

(2) The only source of buying power likely to make up this difference are loans and export credits.

(3) All industrial nations are competing for export credits—making for fierce competition and sometimes war.

(4) The main distribution of purchasing power is through wages and salaries to individuals. At the same time the preponderating factor in production is improving processes and utilizing solar energy (such as coal, oil, steam, etc.)

(5) This latter tends to displace wage payments and, in consequence, distribution of products to individuals. At the same time the credit factor must increase in importance, and dominates production.

(6) Said production is, therefore, of a character demanded by this in control of credit, and is capital production.

(7) Therefore, the fundamental derivation of credit is from a community of individuals, and, since individuals are ceasing in part to benefit by the use thereof, it is breaking down.

To remedy the faulty system of distribution of purchasing power, the proponents of the Social Credit doctrine, propose:

(1) The establishment of a "National Credit Account," which is in the nature of a vast revolving fund, from which,

(2) "National Dividends" shall be paid periodically to all adult inhabitants of this country. There may be some exceptions of too properous individuals, but nearly every adult person is to receive quarterly or half-yearly in cash or in credit at some bank his dividend in money provided by the national Government from this proposed fund.

(3) "The National Discount" and "The Just Price." The National Discount is to be determined by analyses and syntheses made by statisticians of the Federal Government. These studies will pertain to actual "consumption" by the nation as a whole during a stated period—three months or six months—and, likewise, to estimated "production" of goods and services nationally during the same period. From the ratio of the grand totals of such consumption and production statistics, "national discount" is to be determined. When so determined by the Federal statisticians, the President, or other designated authority, shall promulgate an edict declaring the percentage of "discount" for the next quarter or half-year—25 per cent. perhaps, or 35 per cent., or more, or less, or nothing, or less than nothing (an assessment instead of a discount). This discount is to apply throughout the nation on all retail purchases during the period in question. Retailers are to allow to all purchasers the declared discount from regular selling prices, which is in the nature of a subsidy, or gift, to every purchaser whoever he or she may be. This discount will establish "the just price." The necessity for such a "just price" being based upon much involved reasoning, calculation and illustration by the new economists.

(4) These proposals cover the control of credit—issuance and recall of bank loans which are to be removed from the banks by another presidential edict. These powers are to be bestowed upon a council or board in Washington. This body shall be made analogous to the Supreme Court and shall determine the "going rates" for loans, the rates for "National Dividends," etc. The present banks are to continue operations, if they desire to do so, but shall not make loans in excess of their capital and surplus. They may not build up vast "bank-deposit accounts," which "social credit" designates "money," based upon loans to customers.

SOCIAL INSURANCE

A name given to state-controlled insurance against the risks and hazards of a complex civilization, including, in its more comprehensive aspects, coverage for individual unemployment, sickness, industrial accident, permanent invalidity, old age, maternity and widowhood. In many European countries, social insurance is regarded as a normal function of the Government, but the development has been slow and experimental. Some of these schemes are voluntary and contributory (on the part of the insured) in whole or part; others are com-

pulsory. The trend in recent years is toward compulsion.

In 1889, Germany launched the first comprehensive social insurance program for any important country. Great Britain, in 1909, made its beginnings in this field which have been subjected to constant revision. In the United States, the trend towards the various forms of social insurance has been rapid since 1911, when workmen's compensation acts first appeared.

Social insurance may be non-contributory, in which case the State bears the whole of the cost; or it may be contributory, in which case the employer or the employed person, or both, pay into a fund. To the accumulated contributory fund the State may or may not add a subsidy out of public money raised by taxation. Plans may be compulsory of voluntary, either as a whole or in part. Whether compulsory or voluntary, the State exercises supervision and may contribute subsidies. In most plans of social insurance there is an income and property limit. Only those persons are eligible whose resources are within the limit and certain benefits—for instance, pensions—may be graded inversely to those resources.

Social insurance falls into four broad categories: First, accident, including workmen's compensation; second, sickness, including maternity; third, old age, including invalidity or physical incapacity to earn a living; and fourth, unemployment.

(See Social Security Act, Unemployment Insurance.)

SOCIAL SECURITY ACT

An act approved August 14, 1935, containing eleven titles and covering as of 1946 about 49,500,000 individuals against the "major hazards of our economic mechanism." Persons excluded, however, are those employed in agricultural labor; domestic service in private homes; casual employment not in the course of the employer's trade or business; service on foreign vessels and certain small fishing vessels; service for Federal, State or local governments and certain of their instrumentalities; employment by religious, charitable, educational, and scientific organizations not organized or conducted for profit; service for a foreign government and its instrumentalities; certain part-time or itinerant employment providing only nominal wages; self-employment; certain family employment; services by newsboys under 18; and railroad employment, which is covered separately by the Railroad Retirement Act. All other workers are included regardless of salary or wage, except that taxes are computed on that part of a salary or wage not exceeding $3000 per annum.

The act created a Social Security Board of three members to administer not only the pension part but all of the other features such as Federal Old Age Benefits, Grants to States for Old-Age Assistance, Unemployment Insurance, Dependent Children, Maternal and Child Health Services, Crippled Children, Child Welfare Services, Rehabilitation of Disabled, Public Health Work, and Aid of the Blind. Of these, only Old Age and Survivors Insurance are administered directly by the Federal Government. In reorganization of 1946, the Social Security Board was succeeded by the Social Security Administration, now one of the four constituents of the Federal Security Agency.

Old-Age Assistance.—The act authorized an appropriation of $49,750,000 for the fiscal year ended June 30, 1936, and so much as may be needed thereafter, to assist the States in caring for the aged, persons over 65 years of age. Grants under amendment of Oct. 1, 1946 to continue in effect until June 30, 1950 are 2/3rds of the first $15 and 1/2 of the remainder up to $45.

Contributory Old-Age Pensions.—The act provides a long-range old-age pension system, to be financed by an income tax on employes and a payroll tax on employers, starting in each case at 1 per cent. in 1937 and rising under an amendment passed in 1947 to 1.5% in 1950 and 2% in 1952.

Under the operation of the system each qualified worker who retires at the age of 65 years, but not prior to January 1, 1942, will receive a monthly pension until his death. The rate of payment will vary from $10 to $85 a month, 80% of the worker's average monthly wage, or twice the amount of his monthly retirement benefit, whichever is the least. Lump sum settlements are to be made to estates and qualified beneficiaries who die before reaching the age of 65.

Unemployment Insurance.—The act provides a Federal-State system of unemployment compensation, based upon a payroll-excise tax upon employers. It provides that on and after January 1, 1936, employers of eight or more persons, or less if determined by the states, will be assessed excise taxes on their payrolls, of 1 per cent. in 1936, 2 per cent. in 1937, 3 per cent. in 1938 and 1939, and under amendment in 1940, reduced to 2.7%, with further reduction effected through rate credits. All moneys collected are deposited with the Secretary of the Treasury in the Unemployment Insurance Fund, from which requisitions are made by the States for payment of benefits.

The funds so collected are to be paid to employes in periods of unemployment, according to laws and rules adopted by the states.

The act allows the states to set up laws suited to their own requirements, allows a credit up to 90 per cent. to employers on account of taxes paid into strictly state unemployment funds and grants Federal subsidy, ($57.6 million for the 1946-1947 fiscal year) to assist the states in administering their laws.

Aid to Dependent Children.—Authorizes $24,750,000 for the fiscal year ended June 30, 1936, and such amounts as may be needed in future years, to assist the states in providing aid to dependent children. Under legislation effective Oct. 1, 1946, continuing through June 30, 1950, Federal grants are 2/3rds of the first $9 of average monthly payment per child, plus 1/2 of the remainder up to $24 for the first child and $15 for the second and subsequent children. Grants also provide for half of the administrative expenses of the States.

Aid to Mothers and Children.—Authorized annual appropriations to aid the states in promoting the health of mothers and children, "especially in rural areas and in areas suffering from severe economic distress." Under 1946 amendment, Federal grants to the States for this purpose total $11 million a year, of which half must be matched by the States. Each State receives $35,000 of its matching contribution plus additional aid proportioned to number of its live births.

Medical Care of Crippled Children.—Authorizes annual grants for assistance in the states in providing surgical, corrective and other services and facilities for crippled children. Under amendment of 1946, Federal grants to the States for this purpose total $7.5 million, of which half must be matched by the States. Each State receives $30,000 of the amount matched,

plus additional aid in proportion to its number of children under 21 years of age.

Aid to the Blind.—Authorizes aid to the states in pensioning the needy blind. Under 1946 amendment, Federal portion of aid to the needy aged and needy blind is 2/3rds of the first $15 of average monthly payment, plus 1/2 of the remainder up to $45.

In addition, the Act authorized approprations to aid State public welfare agencies in aiding homeless, dependent and neglected children; in maintaining public health services; and in rehabilitation of the disabled. During World War II, Federal grants were also made for emergency maternity and infant care for wives and infants of enlisted men in the armed forces.

Summary.—As of June 30, 1947, the Old Age and Survivors Insurance Trust Fund reported total assets of $8,798 million. Contributions during the 1946-1947 fiscal year totaled $1,459 million. Since inception, a total of $1,595 million has been certified for payments, including $434.8 million in the 1946-1947 fiscal year.

SOCIALISM

According to Norman Thomas, "In its broadest sense, Socialism (evolutionary Socialism) is the doctrine that land, natural resources, and the principal means of production and distribution should be socially owned and democractically managed so that production should be for public use rather than private profit..." The doctrines of socialism are chiefly academic and are offered in criticism of private capitalism. As a plan of action, evolutionary socialism, of which there are many variants, has never materialized as such as compared with the militantly revolutionary Communism. The Union of Socialist Soviet Republics (Soviet Russia) represents the nearest approach to an embodiment of Marxian Socialism.

Morris Hillquit in "Socialism" stated; "The Socialist programme advocates a reorganization of the existing industrial system on the basis of collective or national ownership of the social tools. It demands that the control of the machinery of wealth creation be taken from the individual capitalist and placed in the hands of the nation, to be organized and operated for the benefit of the whole people." In "Present Day Socialism" by Morris Hillquit, it is also stated: "The cardinal demand of Socialism is the abolition of private ownership in the vital sources of wealth production."

All socialism, whether moderate (Fabian), State, or extreme (Russian), is based on the work of Karl Marx, the German economist, who is considered the founder of scientific socialism through his works, the Communist Manifesto and Das Kapital.

SOFT

An expression applied to a stock, or to the entire stock market, when prices have a declining tendency.

SOFT MONEY

Paper money as distinguished from metallic or hard money.

SOFT SPOT

A stock exchange expression applying to any single stock which stands out prominently in the day's quotations because of its weakness, when the rest of the list maintains its strength.

SOIL EROSION AND DOMESTIC ALLOTMENT ACT

See under Agricultural Adjustment Act.

SOL

The international currency unit of Peru. (See Foreign Moneys—Tables 1 and 2.)

SOLA, SOLA BILL

A foreign check or bill of exchange consisting of one document as distinguished from a check or bill drawn in a set, i. e., in duplicate or triplicate. Foreign checks and bills of exchange are normally issued in duplicate and transmitted on separate steamers. A sola check or bill is not of usual occurrence. Such a check or bill would be phrased, "Pay this Sola Bill of Exchange to the order of," or the word "Sole" would be printed in large type across the face. (See First of Exchange.)

SOLE, SOLE OF EXCHANGE, SOLUS

Other terms used synonymously with Sola or Sola Bill (q. v.).

SOLVENCY

The normal condition of a business—when assets exceed liabilities (not including net worth) and liabilities are met as they mature. (See Business Solvency, Financial Solvency.)

SOVEREIGN

(1) In law, the supreme authority of a government. In the United States, there are 49 sovereigns--the Federal Government, with authority derived from the U. S. Constitution and the people, and the 48 States. A sovereign may not be sued without its consent.

(2) In the currency system of Great Britain, the gold sovereign has the value of one pound, but is not in circulation. (See English Money Table, Foreign Moneys, Tables 1 and 2.)

SPECIAL AGENT

See Agent.

SPECIAL ASSESSMENT BONDS

Bonds issued by municipalities for obtaining funds to finance improvements, the benefits of which are purely local in character, such as parks, drainage ditches, sewers, side-walks, etc. While these bonds are obligations of a municipality or district, the principal and interest are payable by levying a special tax upon the property benefited, and not by the municipality as a whole; thus, bonds issued for the construction of a drainage sewer may be repaid by levying taxes upon the property benefited by such drainage. Usually the locality benefited organizes itself into a district which exists solely for the purpose of financing the proposed improvement and which alone bears the cost. As investments, special assessment bonds lie midway between municipal bonds and promises to pay by private obligors. (See Semi-Municipal Bonds.)

SPECIAL DEPOSITS

See Deposits.

SPECIAL INDORSEMENT

An unqualified indorsement of a negotiable instrument, whereby the indorser makes all the warranties specified in Sec. 66, Uniform Negotiable Instruments Law (Sec. 116, New York Negotiable Instruments Law).

A special indorsement specifies the person to whom, or to whose order, the instrument is to be payable; and the indorsement of such indorsee is necessary to the further negotiation of the instrument. (Sec. 34, Uniform Negotiable Instruments Law; Sec. 64, New York Negotiable Instruments Law.) An example of a special indorsement is: "Pay to the order of A. B. See. (Signed) John Doe." (See Indorsement.)

SPECIALISTS

A name given to a class of stock exchange members—usually floor or room traders—who specialize in a single stock or group of stocks belonging to the same industry. These members become expert in the knowledge of such stocks, and since they are usually on the floor, they derive considerable business from other brokers who place orders with them. They remain at one post and execute orders for other member brokers in stocks listed at that post.

Under rules of the New York Stock Exchange, four classes of specialists have been established: (1) regular specialists, (2) relief specialists, (3) associate specialists, and (4) temporary specialists. No member is allowed to act in the first three capacities unless he is registered with the Exchange, and a Floor Official must authorize a temporary specialist to act as such. The function of the regular specialist, who acts regularly as such, includes in addition to the effective execution of commission orders entrusted to him, the maintenance in so far as reasonably practicable, of a fair and orderly market on the Exchange in the stocks in which he is so acting. Relief specialists take over the "book" of the regular specialist in the latter's absence. Associate specialists assist the regular specialist in handling the "book" but does not solicit orders or assist in the maintenance or stabilization of the market by purchases or sales for his own account. Associate specialists cannot handle the "book" or make any bid or offer unless either the regular specialist or a relief specialist is present. Temporary specialists are appointed by a Floor Official in the event of an emergency or when the volume of business necessitates such help.

The specialist maintains a listing of orders in his stocks in his "book", a record of orders not executable at the time of their receipt. The specialist also deals for his own account at prices at which he has no public orders, thus narrowing the spread between the public bid and asked prices. In some instances, the specialist in an effort to maintain closer markets in his stocks than are provided by public bids and offers, may make both the bid and offer for his own account. Orders in the specialist's book, however, have equal standing with those with a floor broker, as each sale in a stock establishes a new "auction" market in which all orders of the same size have equal rights to the next transaction.

No specialist shall directly or indirectly disclose to any persons, other than a Floor Official or other Exchange official, any information in regard to the orders entrusted to him as a specialist.

Because the specialist trades both as broker and dealer, there is an inherent conflict of interest which the Securities and Exchange Commission has made the subject of intensive study. The New York Stock Exchange rules follow the recommendation of the Commission in providing that the specialist engage in trading for his own account to a reasonable degree under circumstances when lack of price continuity or disparity between supply and demand exists and is reasonably to be anticipated.

Securities and Exchange Commission: Report on the Feasibility and Advisability of the Complete Segregation of the Functions of Dealer and Broker, 1936.

SPECIALTIES

A stock market expression to denote those "special situations" which attract speculative interest. A special situation is a security in which some development peculiar to itself promises profit, regardless of the general market trend. Such situations arise in connection with reorganization, recapitalization, clearance of dividend arrears, special distributions, "break-up" in the case of public utility holding company systems in accordance with the integration provisions of the Public Utility Holding Company Act, etc.

The term is also applied often to secondarily important issues from a speculative standpoint which become particularly attractive for trading purposes.

SPECIE

A general term to denote metallic money—gold or silver coin—as distinguished from paper money and credit instruments (checks, notes, and the like). The term is also sometimes applied to gold and silver bullion. Since January 31, 1934, gold coin is no longer coined or in circulation in the United States.

SPECIE PAYMENTS

Payment in coin and sometimes in bullion, as distinguished from payment in paper money which may be convertible or inconvertible, i. e., not redeemable in coin. Practically all of the banks in the United States suspended specie payments on their notes during the panics of 1814, 1837 and 1857. The greenbacks issued by the United States Government during the war failed to specify a method or time of redemption. Since they are not supported by an adequate metallic reserve and were merely government promises to pay, they greatly depreciated in value. The Specie Resumption Act of 1875, however, provided that the Secretary of the Treasury should, "on and after January 1, 1879, redeem in gold coin the United States legal tender notes outstanding, on their presentation for redemption at the office of the Assistant Treasurer of the United States in the City of New York, in sums of not less than $50." Even before this date, and ever since, United States Notes (Greenbacks) have been maintained on a parity with gold. The Thomas Amendment to the AAA Farm Relief and Inflation Act (May 12, 1933) and the Gold Repeal Joint Resolution of June 5, 1933 made United States Notes

full legal tender for all purposes. (See United States Notes.)

SPECIE POINT

See Gold Points.

SPECIE RESUMPTION ACT

See Specie Payments.

SPECIFIC LEGACY

See Legacy.

SPECIFICATIONS

A term used among foreign exchange clerks to denote the terms applicable to bills of exchange drawn under letters of credit. Letters of credit specify in minute detail the terms which must be followed in drawing bills thereunder, e. g., amount, nature of shipment, terms of draft, expiry date, currency, documents to accompany bill, etc.

SPECULATION

From the Latin speculari, meaning to see, spy out, observe. By derivation, speculation means theorizing or forming conjectures; intuition, vision and reasoning taking the form of systematic analysis; attentive consideration.

This term is used in both a broad and narrow sense. In its broadest sense, speculation is risk-taking, i. e., taking money risks with a prospect of gain, but with a chance of loss. The degree of risk in speculation depends upon how accurately the elements entering into the risk can be scientifically (statistically) calculated, and future developments based upon such calculations can be forecast. Speculation is a necessary, inseparable, integral, non-insurable, and unescapable element in business, and ownership of property, i. e., all business by its inherent nature is a continuous speculation, since many elements cannot be exactly forecast. The term is sometimes specially applied to speculation in which a person engages outside of his usual business undertaking, or else to undertakings which are extraordinarily hazardous. Speculation which is inherent in business may be known as primary speculation since it cannot be avoided. When speculation is incidental to the main business undertaken, for example, stock market operations, it may be called secondary or incidental speculation. An unknown writer says: "All business is uncertain—all business is speculation; the term 'speculation,' however, is commonly restricted to business of exceptional uncertainty. The uninitiated believe that chance is so large a part of speculation that it is subject to no rules, is governed by no laws; this is a serious error."

From a broad economic standpoint, therefore, speculation is a necessary business function in which the speculator (the business man) hazards his money for the sake of profit. Profit is the reward for taking the risk of uncertain future developments, which are uninsurable. When speculative risks are borne by the professional class who are in a position to calculate the uncertain elements within reasonable limits of error, and who can protect themselves against disastrous losses by an understanding of speculative principles (technique of the market, business barometers, hedging, options, etc.), society gains because the cost of taking these risks is thereby reduced.

In a narrower sense, the term applies to what has been previously defined as incidental speculation. H. S. Martin (New York Stock Exchange) says: "Speculation is also called by the name of the article speculated in, such as a business speculation, real estate speculation, cotton, grain, wool, sugar, stock, coffee, produce, or other speculation. When speculation in any one of these commodities is engaged in, a highly specialized type of professional speculation is developed and in modern business organizations professional speculators trading in these commodities are numerous."

Attempting to defend speculation, a stock exchange broker has pointed out:

"The success of every undertaking, whether in business, finance or social life, is dependent upon the reflex action of speculation, and life itself is the greatest speculation of all. If we know speculation for what it really is, we shall recognize it as one of the most valuable words in the language, for it holds out not only untold vision and unlimited possibilities, but it carries us mentally beyond the circumscribed horizon of daily activities into that utopia of today which inevitably becomes the reality of tomorrow. History is full of speculators. We owe our country itself to one of the greatest of them all—Columbus. History further tells us that the crown jewels were, in this instance, used as collateral, although the renewal rate seems lost in the mist of the ages. The Father of our Country, George Washington, one of the most successful speculators of his day, found honor and prestige in its use; and our own Lindbergh, the super-speculator of all, who hopped off alone across an unsympathetic Atlantic with an idea and a sandwich, carried the future of aviation through the mirage of doubt into the reality of success. Remember that almost everything starts as a speculation. An investment is nothing but a speculation successfully confirmed, and as long as men live and brains function, speculation must be our moving force."

Differentiated from Gambling.—Due to the losses arising in speculative commitments, especially by the uninitiated who engage in secondary speculation without a knowledge of its principles, speculation is sometimes confused with gambling. Strictly, however, gambling is based on pure chance without the use of intelligence or foresight; no result is accomplished and what one man gains another man loses. Gambling involves an unnecessary, artificial, avoidable, or "synthetic" risk, such as wagering money on some future, fortuitous event, without any necessary relation to the acquisition or disposal of property.

Speculation differs from gambling in that it implies taking risks which are subject to analysis, interpretation, and measurement, and thus become amenable to scientific forecast. Necessary speculation is a productive economic function since it must be borne by business men as a class in overcoming the uncertainties of the future, especially with reference to price changes. A person who speculates in business or in stock or commodity transactions without being fortified by knowledge, judgment and experience, however, is akin to a gambler because he "goes it blindly."

Differentiated from Investment.—Speculation and investment are also often confused. The line of demarcation between these two terms is difficult to draw since

they are customarily used in a loose rather than a technical sense.

In brokerage circles it is commonly assumed that a security purchased with the intention of holding it permanently is an investment, whereas one purchased with the intention of selling it as soon as a favorable opportunity occurs is a speculation. It is also generally supposed that securities purchased on margin represent speculative commitments as contradistinguished from securities purchased outright which represent investments. These are loose popular acceptances of the terms, and are not scientifically accurate.

Technically, the distinction between investment and speculation rests upon the degree of safety of the capital sum committed. In an investment, the relation between the original money outlay and the final return is certain and stipulated in a contract, e. g., the secured bond of a responsible debtor. The owner of a bond possesses an enforceable contract with assets often placed as security in which the debtor promises to pay a stipulated sum of money at a certain rate of interest on a definite maturity date. A contractual relationship exists between the bondholder and debtor in which the present and future terms of the debt are fully set forth. In speculation, however, the relation between the original outlay and final return is uncertain, e. g., a business, shares of stock, farm, oil lease, foreign exchange, patent, merchandise bought for resale, etc. A share of stock is a speculation because it is not a contract to pay a definite sum, and has no maturity. Its value may rise; or it may fall and even become worthless. This technical concept of speculation is ably defined by A. C. Whitaker (Foreign Exchange) thus: "The assumption of risk involved in the making of an outlay in money (or money's worth), or the committing of one's self to make such an outlay in the future (whether the commitment be absolute or conditional), for a return in money, or its worth, in any instance where the relation or proportion between the outlay and return is uncertain. Outlay may be certain and return uncertain, or reversely, or both may be uncertain."

Because of high margin requirements and lessened public participation, the stock market in most recent years at times has been marked by less speculative interest than in commodity markets, but both stock markets and commodity markets have their established speculative clientele. To speak in Wall Street terms, speculation is engaged in by four classes: professional speculators (usually members of the exchange), amateur speculators, investors, and the public. Some of the factors which a successful stock speculator must give attention to, are: (1) relationship of current prices of individual stocks to their fluctuating range; (2) relationship of current prices to market averages; (3) relationship of the time of commitments to the stage in the business cycle; (4) general business conditions as shown by business barometers; (5) particular conditions in the corporations in whose securities commitments have been made; (6) money rates and credit conditions; and (7) technical position of the market.

For further information upon the principles of stock trading, see Business Barometers, Business Cycle, Business Forecasting Services, Fluctuating Principle, Fundamental Conditions, Industrial Stocks, Investment, Gambling, Market Average, Market Sentiment, Mining Securities, Security Analysis, Speculative Cycle, Wall Street.

SPECULATIVE CYCLE

A period of rising security prices followed by a period of falling prices and definitely related to the Business Cycle (q.v.). A wave covering a number of years in which security prices pass through a peak and valley, i. e., a successive major upward and downward swing. A speculative cycle is popularly described as possessing three stages. After a bear market and prices have reached bottom there is a period of accumulation during which prices of stocks move forward very gradually. This is the first stage. The second stage is that in which the leading barometers indicate a return to normal conditions, ultimately leading to prosperity. This is called the period of advance, and is characterized by active bidding up of security prices. The third and last stage is that of distribution. During this stage business is at boom proportions, but credit becomes tight and interest rates rise. Insiders, ex-

perienced speculators, and large financial interests sell their stocks while prosperity is at its height and prices are still high, knowing that the period of prosperity must finally collapse and give way to depression.

Stock movements may be classified as (1) primary or cyclical—the major trend movements occupying a period of years and comprehending a complete cycle including a bull and a bear market; (2) secondary—the minor or intermediate swings of weeks' or months' duration in which reactions in a bull market and rallies in a bear market are distinguishable; and (3) tertiary—the superficial daily ripples ruffling the surface of the secondary waves as the secondary waves are superimposed on the primary tides. The primary movements have their source in economic fundamentals, the secondary movements are chiefly technical but economic in part, while the tertiary movements are almost wholly technical. It is with the secondary and tertiary movements that the student of technical action is mainly concerned.

The high and low points of the speculative cycles in the United States 1903 to 1932 are given in the following table:

Low	High
October 1903	February 1906
November 1907	September 1909
August 1910	October 1912
January 1915	December 1916
December 1917	November 1919
August 1921	February 1926
March 1926	September 1929
July 1932	

From 1887 to 1929, market peaks were reached in the following years: 1887, 1890, 1893, 1895, 1899, 1902, 1905-1906, 1912, 1916, 1919, 1923, 1926 and 1929. Bottoms were reached in the following years: 1884, 1887, 1890-1891, 1893, 1896, 1900, 1903, 1907, 1910, 1914, 1917, 1920, 1923, 1926 and 1932. From bottom to peak as above, the following lapses of time in years, respectively: 3, 3, 2 1/2, 2, 3, 2 1/2, 2 1/2, 2, 2, 2, 2, 2, 3 and 3. The average period from bottom to peaks has been 2 1/2 years. From bottom to bottom we find lapses of time in years, respectively as follows: 3, 3 1/2, 2 1/2, 3, 4, 3, 3 1/2, 4, 3, 3, 3, 3, 3, and 6. The average time has been 3 1/4 years. From peak to peak: 3, 3, 2 1/2, 4, 3, 3 1/2, 3 1/2, 3, 4, 3, 3 1/2, 3 1/2, and 3. The average has been 3 1/4 years. (See Business Cycle, Business Forecasting Services, Swings.)

SPECULATIVE INVESTMENTS

Securities which are not entitled to an investment rating because of unstable characteristics either as to earning power, equity position, or outlook. In an upswing of the speculative cycle, however, speculative securities command major attention and interest for traders interested in short term price appreciation, as at such times speculative developments are favorable for such securities. (See Speculation.)

SPECULATOR

A person who engages in the practice of risk-taking. One who hazards his money, effort and time in the taking of risks of speculation, for the purpose of gain. (See Speculation.)

SPLIT

The execution of an order in two or more parts at different prices, e. g., an order to sell, 2,000 shares might be executed on two different days in lots of 1,000 shares at different prices, due to the inability of finding a market at suitable prices on one day.

(See Split-Up.)

SPLIT OPENING

A term used among stock exchange brokers to denote a rather wide difference in the price of a stock occurring immediately at the opening. This sometimes happens when important news concerning a stock is released over night. For example, U. S. Steel might have an excited opening and sales at different parts of the trading post might occur simultaneously at different prices, say 83 to 84. If 5,000 shares were sold at the opening gong at from 83 to 84, the ticker would report 50X 83-84. An odd lot order would be based on the average price, say 83 5/8.

SPLIT ORDER

See Split.

SPLIT PROOF SYSTEM

Same as Block System (q. v.).

SPLIT QUOTATIONS

Those quotations in variations of less than the standard variations fixed for securities traded in on the New York Stock Exchange. Such split variations may be fixed by the Exchange for bids and offers in specific issues or classes of securities.

The standard variations in bids and offers are as follows: (1) In stocks above $1 per share, not less than 1/8th of $1 per share; (2) In stocks below $1 but above 1/2 of $1 per share, not less than 1/16th of $1 per share; (3) In stocks below 1/2 of $1 per share, not less than 1/32nd of $1 per share; in corporate bonds, not less than 1/8 of 1% of the principal amount; in bonds of the United States, Puerto Rico, the Philippine Islands, the States, Territories and Municipalities of the United States, and securities guaranteed by the U. S. Government as to principal and interest, not less than 1/32nd of 1% of principal amount. Bonds which have been redeemed or repaid in part are designated as "part-redeemed" bonds, and bids and offers are on the basis of a percentage of the original principal amount. (See Bid and Asked Quotations, Bids and Offers, Methods of Trading.)

SPLIT-UP

Increasing the number of shares of a corporation by some round-number multiple; dividing each existing share of a corporation into a number of new shares of reduced par or stated value. For example, a corporation with 100,000 shares of common capital stock of $100 par value each might be split up into 400,000 shares of $25 par value each. This would be a 4 to 1 split-up. Or, if the stock was no par value, the stated value per share of the new shares would be reduced on the books to 25 per cent. of the former figure. A stock split-up, like a non-taxable stock dividend, does not imply any actual distribution to stockholders. It is essentially a bookkeeping transaction, and the stockholders' equity in the assets and earnings of the corporation remain as before. The additional shares received in a

stock split-up are in no event to be considered as income.

The chief purpose of a stock split-up is to reduce the market value of a stock to make possible a wider ownership. A stock selling at $200 per share finds a more limited market than one selling at $50 a share. To achieve a broader distribution of its shares, and greater stability in its quotations, the directors of a corporation are justified in ordering a split-up, since it brings this corollary advantage. The importance of a stock split-up is usually over-emphasized by speculators, although frequently it is true that the total market value of the shares after a split-up is greater than before the split-up. Normally, the dividend after a split-up is reduced in proportion to the split-up.

A stock split-up differs in a number of respects from a stock dividend. As heretofore explained, a stock split-up is an actual division of each existing share into a number of parts, each of which is thereafter considered to be a full share. Such a division involves an actual reduction of the par value or stated value of the stock. From an accounting standpoint a stock split-up affects the capital account only. On the other hand, a stock dividend involves a capitalization of earned surplus and a maintenance of the old par or stated value.

Thus, if a company has 100,000 shares of $100 par stock and declares a two-for-one split-up, the capital account thereafter shows 200,000 shares of $50 par stock. But if a 100 per cent. stock dividend is declared instead, the 200,000 shares would remain at $100 par each, and it would be necessary to transfer $10,000,000 or $100 for each of the new 100,000 shares, from the surplus to the capital account.

If, however, this surplus of $10,000,000 also existed in the case of the split-up the position of the investor, as regards earnings and asset value per share, would be the same in both cases, since his new stock in either case reflects the earning power and asset value of the surplus whether or not the latter is capitalized. Thus, the difference between a split-up and a stock dividend, from this standpoint, is largely a matter of accounting. In the case of a stock dividend, the old dividend rate is usually maintained, whereas in a split-up, the dividend rate is usually reduced in proportion. (See Stock Dividend.)

SPONSORSHIP

A term used in speculation to denote the banking house, or otherwise, which has an interest in the price at which a particular issue sells. This interest may be the company's banker, the original underwriters, etc. Speculators speak of a stock as having good or bad sponsorship in accordance with its market behavior.

Few listed stocks are so friendless as to be without a godfather. Virtually every important issue is sponsored by a group (investment banking house, investment company, brokers or dealers) interested in the stock, etc. Sponsorship varies in financial power, but is designed to protect the stock against neglect or inactivity of the stock in order to maintain a price in consonance with its warranted value. The sponsors are in close touch with the company's progress and normally are assisted in their efforts by cooperation of the issuer in policies and publicity.

Active sponsorship thus gives rise to support points on declines and resistance points on advances. The sponsors have in mind a minimum price at which their stock should sell under a given set of market conditions, and are prepared to purchase at such a price should it drop thereto. The support points are usually provisional, since market conditions may become unfavorable, and it is a fundamental rule of finance not to peg a price, regardless of the resources of the supporters, when conditions become adverse. Should large quantities of the stock come on the market, the original support level is dropped to a lower point, and under circumstances of serious financial stress, as in a major decline, support may be entirely abondoned.

SPOT

An adjective which is used in connection with foreign exchange, and commodities, e. g., grains, cotton, sugar, coffee, etc., indicating trading for immediate, as distinguished from future, delivery. In grain trading, the "spot" price is called the cash price. Most commodity exchanges maintain spot markets in addition to futures trading. (See Futures.)

SPOT CASH

Immediate cash available or given for a purchase involving immediate delivery.

SPOT PRICE

Cash price; a price quoted for commodities, including foreign exchange, which are ready for immediate delivery for cash, as distinguished from the price quoted for futures, i. e., commodities for future delivery.

SPOT SALE

A sale in which cash is paid for immediate delivery, as distinguished from a future sale.

SPOTTED

An expression used to describe stock market prices when a certain few securities advance or decline, although the majority show no definite trend, but rather remain stationary. The securities which are conspicuous for resisting the trend, or which show a counter movement are called market spots.

(See Hard Spot, Soft Spot.)

SPOTTY

See Spotted.

SPREAD

This term has two meanings:

(1) The difference between the bid and asked price of a security. This may be "narrow" or "wide," depending upon the supply and demand of the particular issue and the activity of its market.

(2) A combination of a put and a call, by which the purchaser has the privilege of "putting" at one price, or "calling" at another price a certain security or commodity stated in the contract, within the contract period. A Straddle (q.v.) is similar to a spread except that the put and call prices are the same.

SPREADING (SPREADER)

As applied to grain, spreading is arbitraging in an attempt to secure a profit by closing of the spread, or price difference, existing (1) between the future deliveries of the same grain (or other commodity), as, for example, October and May wheat; (2) between the

same grain in different markets, as, for example, wheat in Winnipeg and Chicago; and (3) between two grains, e. g., corn and wheat, in the same market. Spreading may also be defined as consisting of the purchase of a futures contract for a certain amount of a particular cereal in a certain position, and the simultaneous sale of an identical amount of that or some other cereal in the same or another position.

In the case of position spreading, a certain grain future is bought in one market and sold in another. For example, May wheat is bought in Winnipeg and sold in Chicago simultaneously and in equal amounts. The purpose of this operation is to realize a profit; and the impelling motive is the belief that wheat is relatively cheaper in Winnipeg and dearer in Chicago than it should be, due to conditions which the spreader believes temporary.

In addition to the spreads mentioned above, there is more or less constant spreading going on among Minneapolis, Kansas City, Duluth and Chicago all the time. Minneapolis represents a spring wheat market and naturally reflects the supply-and-demand situation in spring wheat territory. Should there be an acute shortage in the spring wheat crop it is logical to expect that Minneapolis futures will command a premium over Chicago.

The second class of arbitraging relates to the time element rather than to position, or inter-market, operations. The relation between nearby and deferred futures within the same market is a most important one, and attracts many spreaders who do not care to risk the hazards of inter-market commitments. Broadly speaking, the existence of liberal stocks of grain in terminal markets, particularly when the grades are applicable to delivery on futures contracts, results in carrying charges. By that is meant a premium for deferred months over nearby.

In summarizing the functions of the spreader and the economic reasons for his existence, it is apparent that his operations serve the purpose of eliminating, or at least modifying, the tendency toward run-away movements of any particular positions, out of line with commercial surroundings. This prevents the development of uncommercial situations, eliminates criticisms of manipulation and makes it possible to carry on merchandising operations smoothly and economically.

SPURT

An expression used to denote a sudden and appreciable advance in stock or commodity market prices achieved by a series of fractional movements rather than by jumps of a point or more.

SQUEEZE

An expression used to refer to the condition when short sellers are forced to cover their contracts at a loss, due to rising prices, fearing that prices will mount higher.

A money squeeze refers to a temporary shortage in the supply of loanable funds accompanied by difficulty in borrowing and marking up of interest rates.

STABILIZATION FUND

A fund of $2,000,000,000 created under Section 10 of the Gold Reserve Act of 1934 (q.v.), and appropriated out of the profits from devaluation of the dollar which was formally proclaimed by Executive order on January 31, 1934 (as authorized by law). At this time the gold dollar was devalued from 25.8 grains nine-tenths fine to 15 5/21 grains nine-tenths fine. By this action, the Government achieved an initial profit from its gold holdings of $2,808,512,060, but this was later increased as gold was turned back to the Treasury from private hoard. The fund was to be deposited with the Treasurer of the United States and to be under "exclusive control of the Secretary of the Treasury, with the approval of the President whose decisions shall be final and not to be subject to review by any other officer of the United States."

The stabilization fund was not actually set up on the Treasury books until April 30, 1934. This was done by a simple bookkeeping entry by which $2,000,000,000 was transferred from the account of "Gold in General Fund" to "Exchange Stabilization Fund (Special A/C No. 1). The fund was split into two portions, the inactive portion of $1.8 billion being reported in the total monetary gold stock of the country. The purposes of this fund are: (1) to stabilize the exchange value of the dollar; (2) to deal in gold, foreign exchange, and securities; and (3) to invest and reinvest in direct obligations of the United States. Any earnings and interest accruals from the operations of the fund are to be added to and to become available for the purposes of the fund.

With passage of the Bretton Woods Agreements Act in 1945, adopting the International Monetary Fund and the International Bank for Reconstruction and Development, the Act directed the Secretary of the Treasury to use the inactive portion of the Stabilization Fund, $1.8 billion, to pay part of the subscription of the United States to the Fund.

Reports on operations of the active portion of the Stabilization Fund have been from inception irregular and on a delayed basis, because of the nature of operations.

STABILIZED DOLLAR

A name given to a theoretical dollar having constant purchasing power by Professor Irving Fisher of Yale University in his book entitled "Stabilizing the Dollar." The theory of the stabilized or compensated dollar is to convert the present gold standard into a true commodity standard, i. e., to standardize the dollar as a unit of purchasing power. Instead of a gold dollar having a constant weight and varying purchasing power, there would be a gold dollar of constant purchasing power and varying weight.

The proposed method by which this plan would become effective is to increase the weight of the gold dollar to compensate for its depreciation in purchasing power. The degree of change in purchasing power would be ascertained by a reference to carefully prepared Index Numbers (q. v.). Under this plan gold coins would be relegated to the status of token coins which would entitle the holder to a varying quantity of gold bullion. Appraisals of changes in the value of money would be made by reference to index numbers quarterly or annually.

The chief criticisms directed against the stabilized dollar plan are: (1) The increase in gold is only one of the causes of higher prices; (2) the plan would destroy the function of price since price fluctuations are guides to production and consumption; (3) it would not prevent sharp fluctuations from week to week which are more dangerous than a general trend upward or downward

since in the latter the general scale is maintained; and (4) difficulty of administration. (See Money.)

Bibliography

Fisher, I., and Cohrssen, H. R. L.: Stable Money, 1934.
Owen, R. L.: Stabilized Dollars, 1936.

STAGNATION

An expression describing the condition on a stock exchange, or in general business, when volume is small and trading inactive.

STALE CHECK

A check must be presented for payment within a reasonable time after its issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay (Sec. 186, Uniform Negotiable Instruments Law, Sec. 322, New York Negotiable Instruments Law). Banks usually refuse to honor checks more than six months old, as stale checks, although the term "reasonable time" is subject to construction. In ordinary business practice, checks should be presented promptly upon receipt for collection, as otherwise delay may entail the presumption of irregularity. (See Check)

STAMP TAX

Revenue taxes are levied on foreign bills of exchange by most countries. The rate on checks is usually nominal and the rate on sight bills is always lower than on time bills.

Transfer of title to certificates of stock is taxed by the Federal Government and the States. The duty of affixing stock transfer stamps is imposed on the seller by the New York State Tax Law (Secs. 270-281a). If the stock transfer stamps are not affixed, the certificate cannot be used in evidence in any action arising out of the transfer (except action by the State to enforce the tax liability); and if the seller has breached any of the warranties given under the Uniform Stock Transfer Act, the buyer who has not paid the seller in full, may nevertheless under the Tax Law sue the seller for breach of warranty. (See Stock Transfer Tax.)

STAMPED SECURITY

A bond or stock which has been stamped at some time subsequent to the original issuing date to show some change in its status—a new condition to which it is subject, or privilege to which it is entitled. It implies an addendum to the original agreement for the purpose of reinforcing the security or otherwise. Extended Bonds (q. v.) are very often stamped.

Sometimes the term is used to apply to securities which are subject to a stamp tax and on which such tax has been paid.

STANDARD BULLION

Gold or silver bullion having precisely the same composition as gold or silver coins, i. e., bullion ready for coinage without refining. Standard bullion consists of 900 parts of pure gold or silver and 100 parts of copper alloy, i. e., gold or silver nine-tenths fine. Until 1933, the statutory value of an ounce of coinage gold was $20.67134+; of standard gold $18.60465. By Presidential decree, and under the Gold Reserve Act of 1934, the statutory value of an ounce of pure gold became $35. The statutory coinage value of an ounce of silver is $1.2929+; of standard silver, $1.1636. (See Coinage, Mint, Price of Gold.)

STANDARD MONEY

The money selected by a government to serve as the basis of its currency system. Standard money has three fundamental characteristics: (1) freely coined by the Government mint for private citizens without limitation as to quantity; (2) full and unqualified legal tender value in payment of all debts; (3) full bullion value, i. e., the metal or bullion value is identical with the coin value (except in countries which charge seigniorage). Gold is the standard money of the leading commercial nations, although silver is still used by China, India, and a few other countries.

Under bimetallism, the coins manufactured from two metals circulate concurrently as standard money, usually gold and silver. Bimetallism has been abondoned by all the countries which have tried the experiment. (See Bimetallism, Gold Standard, Monetary Unit, Standard of Value.)

STANDARD & POOR'S CORPORATION

The largest statistical service organization in the United States on securities, representing a merger of the Standard Statistics Company and Poor's Publishing Company. The many services provided are summarized in Manuals (q.v.).

STANDARD OF VALUE

One of the functions of money is to serve as a standard of value, i. e., a common denominator, or yardstick for determining the amount of another commodity which may be commanded in exchange. For instance, when a bushel of wheat sells for $1, it exchanges for 15 5/21 grains of gold nine-tenths fine. To serve as a good standard of value, a metal must not only have intrinsic value in itself, but stability of value in order to prevent undue fluctuations in the price level. Gold answers these requirements probably better than any other commodity, although not perfectly, since it is a commodity of universal acceptability and normally its fluctuation in value is slight. (See Gold Standard, Monetary Unit, Standard Money.)

STANDARD OF WEIGHT AND FINENESS

See Present Standard of Weight and Fineness.

STANDARD STOCKS

Tested or seasoned stocks; stocks of well-known companies having large assets, demonstrated earning power, a long dividend record, and a skillful and conservative management. The term has reference to stocks, the values of which, though influenced by current earnings, are relatively stable, being subject to only moderate fluctuations.

STANDARDS YEARBOOK

See National Bureau of Standards.

STANDSTILL CREDITS

The term applied to the short term bank credits tied up in German paper under the "Standstill Agreements" effected by Germany with banking creditors in the United States, England and other countries following the collapse of German credit beginning in 1930. These

foreign banking investors had been attracted to the German short term paper by the relatively high interest rates. Under the Standstill Agreements, principal payments and lowered interest rates were provided for, but despite such collections over extended periods, most American banks found such German credits an additional source of charge-offs.

STATE BANK

A bank operating under a charter granted by one of the states, as distinguished from trust companies and savings banks, which though organized under state laws, conduct a different type of business, and from National banks which operate under charters issued by the Comptroller of the Currency. State banks, like National banks, are organized primarily for conducting a general banking business and together constitute the class of banks generally known as commercial. The state banking laws are modeled after the National Bank Act and grant approximately the same powers, but the regulations, generally speaking, are not quite so stringent. In order to exhibit the relative advantages of state and National banks, the following comparisons are offered:

(1) No National bank can be organized with less than $50,000 capital. In some states, a state bank can be organized with a capital of $10,000, thus making it possible for a small town to secure banking facilities when conditions would not justify a National bank.

(2) State banks are not permitted to issue circulating notes without the payment of a 10 per cent. tax, which is prohibitive.

(3) Restrictions upon loans are less rigid in the case of state banks; some state banks may loan more than 10 per cent. of their capital and surplus to one customer, and almost without exception are permitted to loan a higher percentage upon the appraised value of real estate than are National banks. Banks of some States are permitted to make second mortgages, while National banks are not.

(4) Both are subject to examination; National banks by the Comptroller of the Currency, and state banks by the State Banking Department (q.v.).

(5) National banks are required to join the Federal Reserve System, where reserves must be kept without earning interest. They must also accept checks drawn upon them and received from out of town points, at par. Entry of state banks into the Federal Reserve System is optional. If not members, they are not required to accept checks drawn upon them at par.

As of June 30, 1948, there were 7,794 State non-member banks, including 532 mutual savings banks, as compared with 6,925 member banks.

STATE BANK EXAMINERS

See Bank Examiners.

STATE BANKING DEPARTMENT

Each state has created a department, usually known as the State Banking Department, charged with the execution of the laws relating to the various types of banking institutions located in and chartered by the state. In most states, including New York, the chief officer of this department, usually appointed by the governor, is called the Superintendent of Banks. In other states he is known by various titles, e. g., "Commissioner of Banking" (Massachusetts), "Auditor" (Illinois), "Commissioner of Banking and Insurance" (New Jersey).

The superintendent or head of the banking department is under bond and is authorized to appoint such deputies, examiners and clerks as may be necessary to carry out the duties imposed upon him. The principal duties of the department are: (1) to examine all banks chartered by the state as often as required by law (usually twice a year); (2) to pass upon applications for charters from petitioning organizers; (3) to terminate, liquidate and distribute the assets of any bank which may become bankrupt, as prescribed by law. The expenses of the department are usually defrayed by assessments upon the banking institutions examined.

STATE BONDS

A sub-classification of civil bonds; bonds which are the obligations of a State, as distinguished fron bonds of the Federal Government, and bonds of such political subdivisions as cities, counties, districts, etc. In most States, voluntary restrictions and limitations upon borrowing have been written into the State Constitutions. Some of these restrictions may require approval by referendum of the people for large issues. State bonds, like Federal Government bonds, may be paid out of the general revenues, and it is not necessary to levy a special tax for their payment.

Like the Federal Government, however, a State, being a sovereign power, cannot be sued by an individual or private corporation against its consent. Theoretically, therefore, a State may repudiate its debts, and an investor has no means of enforcing payment. In early periods of our history some of the States repudiated their bonds and for this reason State bonds are to some extent still in disrepute. (See Repudiation.) In recent years, however, the investment value of State bonds has become generally admitted—even the bonds of those States formerly guilty of repudiation.

Several means have been adopted by a number of the States to strengthen their credit and develop a better market for their issues. One means is to place a provision in the bond contract which makes them suable in case of default. Wherever the State Constitution provides this sanction, the uncertainty of the ultimate payment of State bonds is removed.

Another means of enforcing payment is through a contractual provision to levy certain taxes for the payment of the principal and interest on the bonds. Since the Federal Constitution prohibits a State from passing legislation impairing the obligation of a contract, and a debt constitutes a contract, a State official—comptroller for instance—may be sued to enforce the levying of a tax to raise funds for the payment of the debt.

The tendency of public expenditures is in the direction of increase of city rather than of State. The amount of of State bonds outstanding is therefore relatively small in comparison with Federal Government and municipal issues. In most cases, a debt limit is provided.

By a Supreme Court decision, State bonds are exempt from Federal taxes. They are also usually exempt from State and local taxes to holders within the State of issue.

STATE COMPTROLLER

An officer of a state whose purpose it is to supervise and control its fiscal operations. In connection with the banking system, it is usually his function to approve the bond of the Superintendent of Banks and to designate depositaries for trust funds and moneys paid into court.

STATED VALUE

The value at which the total common stock, and sometimes both preferred and common stock capitalizations are carried on the books of a corporation, wherever such stock is issued without a nominal or par value.

Under Sec. 12 of the New York Stock Corporation Law, which authorizes the issuance of no par value stock, the certificate of incorporation shall include either one of the following statements. (1) "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus .....dollars (the blank space being filled in with some number representing one dollar or more) in respect to every issued share without par value, plus such amounts as, from time to time, by resolution the board of directors, may be transferred thereto." (2) "The capital of the corporation shall be at least equal to the sum of the aggregate par value of all issued shares having par value, plus the aggregate amount of consideration received by the corporation for the issuance of shares without par value, plus such amounts, as from time to time, by resolution of the board of directors, may be transferred thereto." Thus, under either statement, the board of directors has the power to fixed the Stated Value of the no par value stock for capital account purposes. Under Sec. 36 of the Stock Corporation Law, which authorize capital changes, new shares of any class, with or without par value, or reclassification of existing classes, with or without par value, may be issued. (See No Par Value Stock, Without Par Value.)

STATEMENT

This term has two applications:

(1) A statement of condition, or balance sheet. (See Balance Sheet, Bank Statement.)

(2) See Statement of Account.

STATEMENT ANALYSIS

A term used by bank credit men in reference to that part of the process of measuring a credit risk which is determinable through an analytical study of its balance sheets, and in particular comparative balance sheets taken over a period of years. In modern scientific credit granting, a prospective commercial borrower is required to submit his financial statements in order that the business and property risks can be measured, i. e., to determine whether the property values therein indicated and the profits which such property yield, form an adequate basis for securing the proposed loan.

When statements are received by a bank, they are first placed in analysis form on "statement comparison sheets." By comparing one period with another the rate of growth or retrogression, and changes in separate assets, liabilities, and equities, can be shown. Actual conclusions are arrived at after a thorough study of the separate items on the statement, and a scrutiny of the various balance sheet tests, e. g., current ratio, ratio of current assets to total liabilities, merchandise turnover, account turnover, etc. (See Account Turnover, Current Ratio, Merchandise Turnover, Ratio of Current Assets to Total Liabilities, Ratio of Debt to Net Worth, Ratio of Fixed Assets to Net Worth, Ratio of Merchandise to Receivables, Ratio of Net Profits to Net Worth.)

STATEMENT COMPARISONS

See Statement Analysis.

STATEMENT DEPARTMENT

The department of a bank or other financial institution that has charge of the preparation and forwarding of customers' statements of account. In modern banking, statements of account are rendered in two ways, balancing pass books or by the statement system, but the latter is nowadays practically universal. Statements are duplicates of the ledger accounts except that all entries are shown in detail.

In many banks, statements are prepared on billing machines (combination typewriters and adding machines), which are provided with counters or registers that automatically record and print additions and subtractions with resulting balances. The debits are posted to the statements in complete detail, each separate check drawn by the depositor and each charge ticket or other posting medium being listed thereon. Likewise, each credit whether posted from a deposit slip, letter, credit ticket, or other posting medium, is listed.

The statement department may be considered a part of the individual bookkeeping department. Wherever separate clerks operate the ledgers and statements, it is necessary that they verify their work frequently, and always before statements are forwarded to customers. (See Statement of Account, Voucher Department.)

STATEMENT OF ACCOUNT

A continuous daily posted record, showing in detail all debits and credits, and balance as of the close of the period, usually one month, rendered by a commercial bank, broker, or other business, to its customers. These accounts give dates and descriptions, and permit the customer to verify the bank's record with his own. If differences occur, they can then be investigated by reporting back through the reconcilement blank usually enclosed with the statement. (See Reconcilement of Accounts.)

STATE STREET

The street in Boston where most of the financial institutions are located, and by extension, a popular name for financial Boston.

STATISTICAL DEPARTMENT

In a bank, the statistical department usually known as the Analysis Department (q. v.), analyzes accounts to determine whether or not they are profitable, or the extent to which they are profitable.

In an investment or brokerage house, a statistical department is maintained as a service department in aid of salesmen and customers. It is this department that studies and prepares the statistical data that is furnished with prospectuses, bond and stock circulars, and other advertising material. The work of this department oftentimes embraces a wide field of investigation with a view of assisting the house and its clients to make intelligent decisions in their investment selections. (See BankCost-Accounting.)

STATISTICAL SERVICES

See Bond Ratings, Business Forecasting Services, Manuals, Mercantile Agencies, Moody's Investors Service, Standard & Poor's Corp.

STATISTICS

Mathematical methods as applied to business and the social sciences. (See Bank Cost-Accounting, Budget,

Business Barometers, Index-Numbers, National Budget.)

STATUTE OF LIMITATIONS

In all jurisdictions, as an incident of the right to sue on a cause of action, there is specified usually a statute of limitations on the action, either substantively, as an integral part of the cause of action itself, or adjectively, as merely procedural. The statute of limitations specifies the time within which the action may be brought or during which the right must be enforced, or otherwise the cause of action or right is barred from legal enforcement.

The various statutes of limitations vary among the 49 sovereign jurisdictions of the United States (Federal Government and the 48 States), as well as among the various types of actions. The following table summarizes the statutes of limitations among the various States for actions on promissory notes, open accounts and ordinary contracts:

State	Promissory Notes Years	Open Accounts Years	Ordinary Contracts Years
Alabama	6	3	6
Arizona	6a	3	3 Oral; 6 Written
Arkansas	5	3	3 Oral; 5 Written
California	4b	4	2 Oral; 4 Written(c)
Colorado	6	6	6
Connecticut	6d	6	3 Oral; 6 Written
Delaware	6	3	3
District of Columbia	3	3	3
Florida	5	3	3 Oral; 5 Written
Georgia	6	4	4 Oral; 6 Written
Idaho	5	4	4 Oral; 5 Written
Illinois	10	5	5 Oral; 10 Written
Indiana	10	6	6 Oral; 10 Written
Iowa	10	5	5 Oral; 10 Written
Kansas	5	3	3 Oral; 5 Written
Kentucky	15e	5f	5 Oral; 15 Written
Louisiana	5	3	10
Maine	6	6	6
Maryland	3	3	3
Massachusetts	6g	6	6
Michigan	6	6	6
Minnesota	6	6	6
Mississippi	6	3	3 Oral; 6 Written
Missouri	10	5	5

West Virginia	10	5	5 Oral; 10 Written
Wisconsin	6	6	6
Wyoming	10	8k	8 Oral; 10 Written

Notes:
a--4 years on promissory notes executed outside the State.
b--On corporation notes.
c--Also on book account or stated account.
d--17 years on non-negotiable promissory notes.
e--5 years if note is "placed on the footing of a bill of exchange."
f--On merchant's account, 5 years from Jan. 1st next succeeding the dates of time of delivery of the articles charged in the account.
g--20 years for bills, notes or other evidence of indebtedness issued by a bank, and promissory notes with attesting witnesses as against original payee or his Executor or Administrator.
h--20 years on contracts affecting real property.
i--15 years on written contracts.
j--14 years if note is witnessed.
k--5 years on foreign claim arising before debtor acquired residence in State.

Bibliography

National Association of Credit Men: Credit Manual of Commercial Laws, 1948.

STEADY

A stock market expression to denote that prices generally, or for a certain group of stocks, are firm and show little fluctuation.

STEAGALL COMMODITIES

In price support operations under the parity program for agricultural commodities, the so-called Steagall commodities are those added by the Steagall Act to the program: hogs, eggs, chickens (certain exceptions), milk, butter-fat, flaxseed, soybeans and peanuts for oil, potatoes and cured sweet potatoes, American-Egyptian cotton, turkeys, dry peas and edible beans of specified varieties. The six basic commodities for price support under the parity program are: cotton, wheat, corn, tobacco, rice and peanuts (used as nuts). (See Basic Commodities, Parity Index, Parity Price.)

STEAMER DATE

A term used among foreign exchange dealers to denote the time of departure of the next steamer carrying mail to the foreign port in question. The steamer date is important in calculating the probable time required for transmitting a foreign check, bill of exchange, or letter of credit, to a given point abroad. Market bills (large bankers' bills dealt in between banks) are usually payable to the seller on the steamer date.

STEEL

The most important of commercial metals, and one of the most important basic industries of the United States and other leading industrial nations. To development of the "heavy" steel industry may be credited the expansion in capital goods and manufacturing capacity, growth of cities, and development of the railroads which characterized the country's economic expansion following the turn of the century. Later, with development of the automobile, household appliance, and the "tin" can industries, sheet, strip and other "light" steels assumed importance. Most recently, with the development of numerous alloy steels, the "age of alloy steels" is opening up.

Basic raw materials of the steel industry are pig iron and scrap. A ratio of about half and half pig from scrap is used in making open hearth steel, which is the bulk of low cost "heavy" steel produced. Pig iron is produced in blast furnaces, requiring a ratio for every 1,000 tons of pig iron, of about 1,740 tons of iron ore, 740 tons of coke, and 350 tons of limestone. Steel in turn is produced by four principal methods: (1) Open hearth process, which accounts for over 90% of steel tonnage produced, chiefly in plates, structural shapes, rails, girders, etc., although some "low" alloy steels are also produced by this process, which purifies the mixture by oxidation. (2) Bessemer process, an old time process, in which impurities in the pig iron are removed by a blast of air, and carbon and manganese are added. (3) Crucible steel, producing fine steels for such uses as watch springs, knives, razors, etc. (4) Electric furnace steels, producing alloy steels in which close control over quality and composition is necessary.

Steel capacity and production since 1929 have compared as follows:

Year	*Capacity as of Jan. 1	Operating Rate (%)	*Production Open Hearth	Bessemer	Crucible and Electric
1948	94.2				
1947	91.4	92.9	76.8	4.2	3.7
1946	91.9	72.5	60.7	3.3	2.6
1945	95.5	83.5	71.9	4.3	3.5
1944	93.7	95.5	80.4	5.0	4.2
1943	90.3	98.1	78.6	5.6	4.6
1942	88.6	96.8	76.5	5.6	3.9
1941	84.2	97.3	74.4	5.6	2.9
1940	81.6	82.1	61.6	5.6	1.7
1939	81.8	64.5	48.4	3.4	1.0
1938	80.2	39.6	29.1	2.1	0.6
1937	78.1	72.5	51.8	3.9	0.9
1936	78.2	68.4	48.8	3.9	0.9
1935	78.5	48.7	34.4	3.2	0.6
1934	78.1	37.4	26.4	2.4	0.4
1933	78.6	33.1	22.8	2.7	0.5
1932	78.8	19.5	13.3	1.7	0.3
1931	77.3	37.6	25.2	3.4	0.5
1930	72.9	62.5	39.3	5.6	0.7
1929	71.4	88.5	54.2	7.9	1.1

*In million net tons.
Source--American Iron & Steel Institute.

The following figures, compiled by the Iron Age, show the distribution of consumption of steel output by industries in recent years:

	(in million net tons) 1947	1939	1929
Agriculture	2.4	1.4	3.1
Automobiles	10.2	5.9	7.4
Construction and Maintenance	10.1	6.1	8.6
Containers	5.6	2.9	1.9
Machinery and Tools	5.8	1.5	2.0
Oil, Gas, Water and Mining	3.7	1.8	4.1
Pressing and Stamping	3.8	1.8	...
Railroads	6.0	3.3	8.2
Shipbuilding	0.4	0.5	0.3
Exports	4.6	2.8	2.5
All Other	10.3	10.9	7.9
Total	62.8	39.1	45.9

(See Scrap, Steel the Barometer of Trade.)

STEEL ALLOYS

Substances, mostly other metals, used in combination with iron to produce the desired type of finished steel. The older types of alloys were carbon and manganese, while among the newer alloys are nickel, tungsten, vanadium, cobalt, chromium, molybdenum, aluminum, columbium, tungium, and zirconium. Steel alloys are selected to serve specific purposes, as for example, to attain increased strength, hardness, and resistance to fatigue, shock, abrasion, heat, rust, corrosion, and stain.

Steel itself is an alloy, being produced from iron and proportions of carbon and sometimes managanese. The "alloy steels", however, are generally referred to as those employing the other alloys listed above. The alloy steels are becoming increasingly important, and now account for about one ton out of every six tons of steel produced. Although "low" alloy steels have been made in the past in open hearths, the modern "high"

alloy steels, requiring close control over composition, are made in electric furnaces, which now produce over one third of total alloy steel production. Alloy steels are regarded as possessing great possibilities for expansion in demand and production that will open up a new ''alloy steel age''. (See Steel.)

STEEL THE BAROMETER OF TRADE

In business circles, the conditions in the iron and steel industries—the great basic industries—are regarded as indicative of the conditions which other industries are likely to experience and therefore reflect general business conditions. ''As steel goes, so goes the country'' is a truism accepted as axiomatic among bankers, business men and analysts. The United States Steel Corporation, for example, alone has about one-third of the steel industry's total capacity, and issues quarterly earnings and weekly operating rate statistics; and industry statistics are also available weekly on production and operating rates through the American Iron & Steel Institute. This makes it possible to ascertain with greater accuracy than in most types of business the state of activity. The high point of activity of these industries is usually regarded as marking the height of an inflation period, and the bottom, the end of the period of depression, or the revival starting-point. It is well known among economists and business analysts, for instance, through a study of trade cycles, that the iron and steel industries are the last to become deflated in a period of liquidation. Correspondingly, they are the last to revive, or ''turn the corner.'' Due to the growth in size and diversity of industry considered as a totality in the last two decades, the steel industry is probably not entitled to the barometric value it once had.

In speculative circles, the common stock of the United States Steel is regarded as a leader, and is one of the most actively traded stocks on the New York Stock Exchange. Representing the leading basic industry and reflecting its prosperity and earnings, it is only logical that if conditions within this industry reflect general business conditions, other stocks should tend to move more or less in sympathy with it.

(See Business Barometers, Steel.)

STERLING

A common term for British money of whatever denomination, and whether gold, silver, or bank notes. The British refer to their money as ''pounds'' or ''sterling,'' or to pounds as ''pounds sterling.'' By extension this term has assumed a metaphorical meaning indicative of purity or high quality, e. g., ''sterling silver,'' ''sterling character,'' and the like. (See Pound, Pound Sterling.)

STERLING AREA

Under the system of British Exchange Control, the sterling area refers to the entire British Commonwealth (excluding Canada and Newfoundland) plus Iraq, Transjordan, Iceland, and the Faroe Islands, in which control of sterling settlements is practiced, either directly by the British Exchange Control, or by central banks or other banks of those countries, in consultation with British Exchange Control. (See International Monetary Fund.)

STERLING BILLS

Bills of exchange payable in British currency, i. e., pounds sterling.

STERLING BONDS

Bonds, the principal and interest of which, are payable in British currency; i. e., pounds sterling.

STERLING CREDITS

Letters of credit, the specifications for which call for drawing bills of exchange payable in pounds sterling.

STERLING EXCHANGE

Exchange, i. e., checks and bills drawn against bank balances on points in Great Britain. Since London is the banking center of Britain, and the principal banks maintain head offices there, sterling exchange almost invariably affects balances in London banks. Sterling exchange is therefore practically synonymous with London exchange.

STIFFENED

A stock market expression to denote that prices have hardened i. e., slightly advanced.

STIVER

A nickel coin of the Netherlands, equivalent to 1/20th of a guilder. (See Foreign Moneys--Table 2.)

STOCK

This term has three meanings:

(1) In the United States this term is used synonymously with Capital Stock (q.v.) and with Share (q.v.). See Assented Securities, Authorized Capital Stock, Common Stock, Fully-Paid Stock, Guaranteed Stocks, Industrial Stocks, Inscribed Stock, Mining Securities, Non-Assessable Stock, Preferred Stock, Public Utility Stocks, Railroad Stocks, Treasury Stock, Unvalued Shares, Watered Stock.

(2) In Great Britain, this term is generally synonymous with debenture bonds, whether issued by a corporation (company), or the Government, or civil division thereof. For instance, Government and municipal loans are referred to as Government or corporation (meaning municipal in England) stock. Company stock is held and transferred in any multiples of one pound and sometimes less, while shares are for fixed denominations.

(3) In business usage, the term means goods, merchandise, or finished product; thus, stock of goods. (See Merchandise Turnover.)

STOCK ALLOTMENT WARRANT

See Subscription Warrant.

STOCK ASSESSMENT

See Assessment.

STOCK BILLS

Bills of exchange drawn against and accompanied by stocks or investment securities which are deliverable upon payment of such bills. Shipping securities ''draft attached'' is a customary method of delivery to out-of-town points, in transactions between dealers in securities.

STOCK BROKER

See Broker.

STOCK CERTIFICATE

A receipt or certificate of ownership, signifying that the person whose name is written thereon is the owner of a certain portion of the capital stock of the designated corporation. The stock certificate is "representative" of the intangible personal property right involved, the stockholder's ownership in the corporation. The extent of ownership is indicated by the ratio of the number of shares held to the total number of shares outstanding; thus, if one owns ten shares in a corporation having an outstanding capital stock of $1,000,000 ($100 par value), he owns 1/1000 of the undivided assets. Stock certificates are printed, lithographed, or engraved forms. To guard against fraudulent and forged securities, the principal stock exchanges of the world require securities dealt thereon to be engraved. With this precaution, it is possible for a stock exchange to guarantee the physical genuineness of its securities.

Stock certificates may be divided into two types; simple certificates which contain a plain statement of ownership, and certificates which contain a digest of the terms governing the stock. The following are the essentials of a stock certificate:

1. Number of certificate.
2. Number of shares owned.
3. Par value (or without par).
4. Name of issuing corporation.
5. State of incorporation.
6. Total authorized capital stock.
7. Whether common or preferred.
8. Body.
   - (a) May be simple certificate.
     - (1) To whom issued (name of stockholder).
     - (2) Number of shares issued to the owner.
     - (3) How transferable.
   - (b) May contain agreement.
     - (1) To whom issued (name of stockholder).
     - (2) Number of shares owned.
     - (3) Whether fully paid and unassessable.
     - (4) Voting power.
     - (5) If preferred whether cumulative or non-cumulative.
     - (6) If preferred, what dividend rate.
     - (7) How transferable.
     - (8) Disposition of assets in event of dissolution.
     - (9) Signatures of two officers.
     - (10) Corporate seal.
     - (11) Registrar.
     - (12) Transfer agent.
     - (13) (On reverse side blank form of assignment.)

(See Capital Stock, Common Stock, Preferred Stock, Stockholder.)

STOCK CLEARING CORPORATION

See New York Stock Exchange Clearing House.

STOCK DIVIDEND

A dividend paid to stockholders in shares of stock of the issuing corporation. Such shares are issued to stockholders of record out of the unissued stock of the corporation, or in case all the stock has been issued, the charter is amended so as to authorize additional capital stock. For example, suppose a company with a single class of capital stock of $1,000,000 issued and outstanding ($2,000,000 authorized) and a surplus (accumulated out of earnings) of $500,000, finds that its earnings have averaged 12 per cent. on the outstanding stock for a period of ten years and that current dividends at 6 per cent. can in all probability be maintained on an additional issue of $200,000. In such a situation, a stock dividend of 20 per cent. may be declared without violating the rules of conservative corporation finance. If a 20 per cent. stock dividend is declared, the disbursement will entitle each present stockholder to receive one additional share for every five shares held. A stock dividend involves no payment of cash, but it is frequently advantageous because the psychology of the market is such that the market value of six shares after the stock dividend has been declared, will probably be greater than five shares previous to the dividend announcement. More persons are able to buy a greater number of shares by reason of the lower price. Furthermore, while the stock dividend involves no cash, it confers upon the stockholders the right to increased dividends, provided the same rate is maintained.

From an accounting standpoint, the stock dividend in the above example merely involves a transfer of $200,000 from the surplus account to the capital stock account. The net worth of the corporation is in nowise changed and in this sense a stock dividend is in reality no dividend at all, since the stockholder's equity in the assets of the corporation is no greater than before. There is only a presumption that the stockholder will receive increased dividends.

The new shares issued upon the disbursement of a stock dividend are fully paid, since they are charged against accumulated undivided profits previously earned, and retained by reinvesting them in the business. When the directors declare a stock dividend it is popularly referred to as "cutting a melon."

In the past, a few corporations have issued small periodic stock dividends (sometimes as frequently as quarterly) in lieu of, or supplementary to,regular cash dividends. This practice has been defended on the ground that the cash was needed for reinvestment in the business. There can be no serious objection so long as the value at which the stock is issued is charged to current earnings, and not against previously Earned Surplus. Otherwise, stockholders might be misled as to the true value of such dividends.

From a tax standpoint, whether or not a stock dividend is taxable depends on two factors:

1. If the nature of the stockholders' interest in the corporation after receipt of the dividend is different in kind or nature, it is a taxable dividend.
2. But if there is merely a reshuffling of evidence of ownership, without any actual severance of income available to the stockholders or change in prior ownership, there is no income, and hence the stock dividend is non-taxable.

Accordingly, Split-ups (q.v.) and stock dividends in the same class of stock held by the stockholder result in the stockholder's owning the same proportionate interest in the company's assets as before the distribution, and hence are non-taxable. But a distribution which changes the proportionate interest, such as a dividend in common stock issued to holders of preferred stock, is taxable. Taxable also are dividends in stocks owned in other corporations, since these are obviously dividends paid in property owned by the corporation.

(See Dividend, Split-Up.)

STOCK EXCHANGE ABBREVIATIONS

See New York Stock Exchange Abbreviations.

STOCK EXCHANGE BANKS

Most banks and trust companies in the Wall Street district habitually lend a part of their credit resources to brokers, syndicates, and investment houses, for financing security transactions, investment purchases, and margin trading. The term "brokers' bank" is thus particularly applied to those institutions which tend to specialize in such accounts, such as the Continental Bank & Trust Company of New York for many years up to 1929.

STOCK EXCHANGE BROKER

See Broker.

STOCK EXCHANGE COLLATERAL

See Collateral.

STOCK EXCHANGE HOLIDAYS

See Bank Holidays.

STOCK EXCHANGE LOANS

Loans made to brokers, syndicates and investment houses with securities traded on the New York Stock Exchange as collateral.

(See Brokers' Loans, Call Loan, Call Money Market.)

STOCK EXCHANGE SEAT

See New York Stock Exchange.

STOCK EXCHANGES

Organized markets for the purpose of trading in stocks and bonds. A stock exchange is part of the machinery of credit and banking and has a four-fold function: (1) to provide for the transfer of securities, making it possible for owners to sell securities after they are once acquired; (2) to bring actual and market values into coincidence; (3) to furnish a barometer of business conditions, since quoted prices represent the composite judgment of the entire business world; (4) to aid in the promotion of new enterprises.

According to the Securities Exchange Act of 1934, "the term 'exchange' means any organization, association, or group of persons, whether incorporated or unincorporated, which constitutes, maintains, or provides a market place or facilities for bringing together purchasers and sellers of securities or for otherwise performing with respect to securities the functions commonly performed by a stock exchange as that term is generally understood, and includes the market place and the market facilities maintained by such exchange."

Section 31 of this act states: "Every national securities exchange shall pay to the Commission on or before March 15 of each calendar year a registration fee for the privilege of doing business as a national securities exchange during the preceding calendar year or any part thereof. Such fee shall be in an amount equal to one five-hundredths of 1 per centum of the aggregate dollar amount of the sale of securities transacted on such national securities exchange during the preceding calendar year and subsequent to its registration as a national securities exchange."

Exchanges may be incorporated, or voluntary associations. In America, the stock exchanges are voluntary associations. Each exchange has its own list of securities, which may include in the case of regional stock exchanges, securities primarily listed on the major exchanges. Such national issues are termed "dual listings" on regional exchanges, the aggregate trading volume of which on all regional exchanges sometimes compares with the volume of such issues on the New York Stock Exchange itself. The regional stock exchange particularly performs the function of developing markets for local issues of suitable qualifications. Such qualifications have been stated by the Chicago Stock Exchange as follows: (1) at least 150,000 and preferably 200,000 shares publicly held; (2) a minimum of 750 stockholders and preferably over 1,000; (3) a share price of under $25 and preferably under $20; and (4) a low par value, preferably $1 to $10, for tax reasons.

Registered Exchanges.—There are 19 national securities exchanges which are registered with the Securities and Exchange Commission. These registered exchanges transacted a total value of $14,790,928,000 in transactions for the year ended June 30, 1947. Registered exchanges and their respective total market value of transactions for the year ended June 30, 1947 follow:

Exchange	*Total Market Value of Transactions
Baltimore Stock Exchange	$ 5,314
Boston Stock Exchange	197,161
Chicago Board of Trade	66
Chicago Stock Exchange	225,448
Cincinnati Stock Exchange	11,561
Cleveland Stock Exchange	19,477
Detroit Stock Exchange	46,368
Los Angeles Stock Exchange	104,406
New Orleans Stock Exchange	2,206
New York Curb Exchange	1,327,979
New York Stock Exchange	12,520,077
Philadelphia Stock Exchange	117,887
Pittsburgh Stock Exchange	19,515
St. Louis Stock Exchange	8,183
Salt Lake Stock Exchange	3,428
San Francisco Mining Exchange	1,326
San Francisco Stock Exchange	177,028
Standard Stock Exchange, Spokane	1,574
Washington Stock Exchange	1,924

*000 omitted.

In addition to the registered exchanges, there are 5 national securities exchange which have been exempted by the Securities and Exchange Commission from registration. These exempted exchanges, and their respective total market value of transactions for the year ended June 30, 1947, follow:

Exchange	*Total Market Value of Transactions
Colorado Springs Stock Exchange	$ 274
Honolulu Stock Exchange	6,161
Minneapolis-St. Paul Stock Exchange	3,932
Richmond Stock Exchange	672
Wheeling Stock Exchange	398
Total Volume	$ 11,437

*000 omitted.

Under Sec. 5 of the Securities Exchange Act of 1934, it shall be unlawful for any broker, dealer, or exchange, directly or indirectly, to make use of the mails or any means or instrumentality of interstate commerce for the purpose of using any facility of an exchange within

or subject to the jurisdiction of the United States to effect any transaction in a security, or to report any such transaction, unless such exchange:

(1) Is registered as a national securities exchange, or

(2) Is exempted from such registration upon application by the exchange because, in the opinion of the Commission, by reason of the limited volume of transactions effected on such exchange, it is not practicable and not necessary or appropriate in the public interest or for the protection of investors to require such registration.

Foreign Exchanges.—Leading stock exchanges in Canada include: Montreal Curb Market, Montreal Stock Exchange (q.v.), Toronto Stock Exchange (q.v.), and Vancouver Stock Exchange. Stock exchanges are to be found in principal cities of Europe (see Bourse, London Stock Exchange, Paris Bourse).

STOCK JOBBER

London Stock Exchange members are of two classes, brokers and jobbers. Each class performs a distinct function, and by the rules of the exchange one is prohibited from performing the role of the other. A broker deals with the public, executing buying and selling orders for it, but the jobber may not. The business of the latter is to act as intermediary between brokers having securities to sell and those having securities to buy. The broker receives a commision from his customer, but the jobber's compensation consists of the difference between his buying and selling price. (See London Stock Exchange.)

STOCK MARKET

See London Stock Exchange, New York Curb Exchange, New York Stock Exchange, Paris Bourse, Stock Exchanges.

STOCK POWER

An instrument which effects the sale, assignment and transfer of stock to a designated person, and appoints a designated person attorney to transfer the stock on the books of the corporation. Stock certificates usually contain a stock power in blank on their reverse side. The following form is the assignment separate from the certificate which is approved by the New York Stock Exchange:

For value received ..... hereby sell, assign and transfer unto .....
.....( ) Shares of the .....
Capital Stock of the .....
standing in .....name on the books
of said .....
represented by Certificate No. .....
herewith and do hereby irrevocably constitute and
appoint .....attorney to
transfer the said stock on the books of the within named
Company with full Power of Substitution in the premises.

.....

Date .....

(See Good Delivery.)

STOCK PRICE AVERAGES

Arithmetic or weighted averages, or index numbers, of selected groups of stocks, designed to afford single figure tabloidal indication of market levels and trends that may be easily charted or cited. The smaller the list of stocks used in the average or index number, the less representative of the market as a whole it is liable to be because of the constantly shifting leadership of the market. Thus, an average based on a group of high quality, seasoned industrials is liable at stages of speculative interest in medium and lower grade issues to fail to reflect advances in the latter groups. Accordingly, the larger the number of issues constituting the average, the more diversified representation it is likely to have, and therefore the more likely it is to be representative of the broad market trend.

Stock price averages are prepared by a number of financial news publishers and statistical organizations. Among the daily averages currently published are:

Dow Jones Averages (q. v.):

High, low and close on 30 Industrials, 20 Rails, 15 Utilities, and combined 65 stocks.

N. Y. Herald-Tribune:

High, low and close for 70 Industrials (9 sub-groups), 30 Rails (2 sub-groups), and 100 combined stocks.

N. Y. Times:

High, low and close for 25 Industrials, 25 Rails, and 50 combined stocks.

Standard & Poor's Corp.:

Index numbers (1926 equals 100), of 50 Industrials, 20 Rails, 20 Utilities, and 90 combined stocks.

Weekly averages currently published include:

Standard & Poor's Corp.:

Weekly index numbers (1935-1939 equals 100), of 72 sub-groups, as follows: Industrials (63 sub-groups), Rails, Utilities (3 sub-groups), and a composite index of all classifications (total of 416 stocks, consisting of 55 Industrial groups totaling 365 stocks; 20 Rails; and 3 utility groups totaling 31 stocks).

Weekly index numbers of capital goods, consumers goods, high grade common stocks, low-priced common stocks, banks, fire insurance, casualty insurance, and investment company stocks.

Barron's:

50-stock average.

Group stock averages (31 industry groups).

20 Most Active Stocks; 20 Low Priced Stocks.

Yields on Dow-Jones Averages (30 Industrials, 20 Rails, 15 Utilities).

Average of 20 Metal Stocks.

Moody's:

Weekly average yields on Preferred Stocks: 10 High Grade Industrials, 10 Medium Grade Industrials, 10 High Grade Public Utility Preferreds, and 10 Medium Grade Public Utility Preferreds.

Among the monthly averages currently published are:

New York Stock Exchange:

Total value of listed stocks and listed bonds.

Barron's:

Total Value Stock Indexes (all common stocks, Industrials, Rails and Utilities).

Standard & Poor's Corp.:

Monthly average of the Standard & Poor's Weekly Stock Price Indexes.

Moody's:

Monthly average yields on 200 stocks, 125 Industrials, 25 Rails, 25 Utilities, 15 Bank, 10 Insurance, and 12 "Blue Chip" stocks.

Monthly average dividend rates on 600 stocks, 492

Industrials, 36 Rails, 30 Utilities, 21 Bank, 21 Insurance, and 12 "Blue Chip" stocks.

(See Dow Jones Averages, Index Numbers, Market Averages.)

STOCK PURCHASE WARRANT

A privilege sometimes carried by bonds or preferred stocks, but more often separately outstanding, which entitles the owner to the right to purchase a certain number of the shares of the common stock of the corporation within a limited period. Such warrants state on their face the terms under which the right to buy stock may be exercised.

The issue of bonds with stock purchase warrants attached has gained more prominence with industrial companies. Like convertible bonds, their advantage to the issuers is that of finding a market for capital more easily than with stocks alone, and borrowing at a lower rate. Similarly, the advantage to the buyer is that a contractual obligation is purchased along with the right to participate in the possible future increased prosperity of the company. Many bonds of this nature are debenture bonds with sinking fund provisions, but others are junior mortgage issues. Another advantage of these bonds from the standpoint of the issuer is that, like convertible bonds, if the warrants are exercised, an improvement in the capital structure follows. It is also a means of securing future capital on a favorable basis. Normally, the stock purchase warrants are not valuable at the time of issue of the bonds, and usually the price at which the stock is purchasable increases with the lapse of time, with the warrant expiring on the maturity date if not before. If redeemable, the bonds usually carry the stock purchase privilege up to within thirty days of the redemption date.

Warrants serve a definite and useful purpose in corporation finance under certain circumstances. In theory, the use of warrants generally implies a willingness on the part of the stockholders of a business to share future increases in profits, if any, with those who furnish additional capital in the form of senior securities in return for a willingness on the part of the latter to accept a lower rate of fixed income than would otherwise be necessary.

The use of warrants is particularly well adapted to two types of situations: first, those in which the company is unwilling or unable to pay the rate of interest or dividends that would be necessary on ordinary issues of bonds or preferred stocks: and, second, in the case of untried or unseasoned ventures, the senior securities of which investors are loath to buy unless some speculative privilege attached thereto offers a profit possibility in the event of successful operations.

From the standpoint of the common stockholders, as owners of the business, the granting of such warrants to others may be fully justified by the necessity or desirability of raising additional capital on a favorable immediate basis.

(See Rights, Subscription Warrants.)

STOCK QUOTATIONS

See Quotations, Quotation Ticker.

STOCK REGISTRAR

A trust company, bank, or individual, authorized to act in a fiduciary capacity, which has been appointed by a corporation to certify that the number of its shares issued does not exceed the authorized amount, and to check the work of the transfer agent. The rules of the New York Stock Exchange require that corporations whose stocks are listed thereon maintain separate registrars and transfer agents. The relation between a corporation and its registrar is fixed by contract. In the absence of any law fixing this liability, this contract defines the liabilities of the registrar.

The work of the registrar in the case of a new corporation, or when additional stock is issued, is to compare the number of shares represented by the certificates with the number authorized, and if there are no irregularities, to register the certificates in its own records and sign its name to each stock certificate. In the case of outstanding shares, it is the registrar's duty to make certain that each new certificate issued by the transfer agent (which may be the corporation itself) is accompanied by a genuine certificate representing the same number of shares to be cancelled. In other words, the registrar must see that there is a cancellation for each issuance, placing a "Canceled" stamp on old certificates and validating new certificates by means of its signature.

STOCK SPLIT-UP

See Split-Up.

STOCK SYMBOLS

See New York Stock Exchange Abbreviations.

STOCK TRANSFER AGENT

See Stock Transfers.

STOCK TRANSFER JOURNAL

A book in which transfers of stock of a corporation are authorized and recorded. It is practically a duplicate of the assignment appearing on the reverse of the stock certificate.

STOCK TRANSFERS

Stock certificates are personal property and ownership may pass from one person to another by assignment. In case of sale, however, the purchaser is not recognized as the legal stockholder until a transfer has been effected upon the books of the corporation. This involves the cancellation of the old certificate and the issuance of a new one. It is the duty of the transfer agent, whether an officer or clerk of the corporation itself, or an outside individual, bank, or trust company, to see that the act of transfer is properly executed. When shares of stock are sold it is necessary for the seller, whose name is written on the face of the certificate, or for an authorized representative of such person, to assign the certificate. In all stock transfers through the New York Stock Exchange a stock exchange member must guarantee the signature of the person making the assignment, i. e., the seller, who is also known as the transferor.

In making transfers, it is first necessary to determine whether the stock transfer books are open. Transfer books are usually closed for a short period in order to determine the list of stockholders entitled to receive dividends, rights, etc. Suppose "A" has sold "B" a certain number of shares of stock. "A" being the transferor must assign the certificate to "B", the transferee. "A" may assign in blank (on the reverse of the certificate), or he may appoint an attorney to con-

duct the transfer for him. In the latter case, the person so appointed must sign a power of substitution.

The assignment must be dated and witnessed and the signature of the assignor (transferor) guaranteed by a New York Stock Exchange member, or a New York bank. The name of the transferee is then filled in in the blank space on the assignment, and the certificate is taken to the transfer agent. (A list of the transfer agents for all the stocks listed on the New York Stock Exchange is provided for the use of clerks by New York bankers and brokers.)

Transfer in which the estate of a deceased person is involved:

When a stock certificate stands in the name of "A," a deceased person, it may be assigned by the executor or administrator of his estate. It is usually the best policy for the representative of the estate to submit the certificate to the transfer agent, with request for information as to what papers are necessary to effect the transfer. If the decedent is a testator, the following papers are usually required: (1) certified copy of the will; (2) certificate of appointment of the executor dated within six months of the date of the presentation of the certificate for transfer; (3) waiver. The requirement depends upon the state in which the transfer is effected, the state of incorporation of the corporation whose stock is transfered, and the state in which the decedent died. If the decedent died intestate, the following papers are usually supplied: (1) certififed copy of the appointment of the administrator; (2) waiver.

Transfer in which a guardian or trustee is involved:

The procedure differs among the various states, as well as among transfer agents, but usually when a certificate is being transferred from one person to an individual or institution acting as trustee or guardian, it is not necessary to submit any documents whatever. If, however, the stock is transferred out of trusteeship or guardianship, it is invariably necessary to furnish properly authenticated papers showing the appointment of the trustee or guardian.

Transfers involving no change of ownership:

If Mary Smith marries and becomes Mary Smith Jones, a transfer is necessary, even though it involves no change of ownership. In such a case, the certificate should be indorsed, "Mary Smith Jones, formerly Mary Smith." Sometimes the transfer agent requires such a signature to be guaranteed, in order to hold him harmless against any loss or damage which may arise by reason of the transferor's action in making the desired change. If this should prove necessary, the following form will suffice:

"We hereby certify that Mary Smith and Mary Smith Jones are one and the same person, Mary Smith having become Mary Smith Jones by marriage and that no change of ownership is involved in this transaction. We guarantee to hold you harmless from any loss or damage which may arise by reason of making the transfer as requested."

.....

N. Y. Stock Exchange Member.

Another case in which a transfer involves no change of ownership is that of legal change of name. In such case it is necessary to submit to the transfer agent a certified copy of the document certifying such change of name.

Transfer of stock standing in the name of a corporation:

In order to transfer stock standing in the name of a corporation, it is necessary that the certificates be assigned by a duly authorized officer of such corporation. Such authorization consists of a resolution of the board of directors granting signatory powers to the signing officer. The resolution must also bear the seal of the corporation. Some transfer agents will accept a general resolution; others require a specific resolution, i. e., authorizing each transaction. (See Assignment in Blank, Stock Certificate, Stock Registrar.)

The obligation of the transfer agent to its principal is a matter upon which, because of varying conditions, there is certain to be a difference of opinion. Certainly he must use proper precaution not to jeopardize the interests of his principal, and protect both the old and new stockholder, the former by seeing that the stock is transferred only upon a properly executed assignment, and the latter by seeing that the wording of the new certificate correctly describes its ownership.

The Uniform Stock Transfer Act has been adopted by many States, including New York, which added the Act to its Personal Property Law in 1913. The Act standardized procedure and legal incidents of transfer of stock.

(See Good Delivery.)

STOCK TRANSFER TAX

An excise tax imposed by the Federal Government and by States on the transfer of stock.

The Federal stock transfer tax is graduated as follows:

For $100 par value or no par value stock: 5¢ for each share if selling price is under $20 per share; 6¢ if selling price is $20 or over.

For other par values: to determine the tax, first the total par value of the shares sold is computed by multiplying par value per share by the number of shares, next by dividing par value by 100 to determine the number of $100 units involved, treating any fractional remainder as an additional full unit of $100. The rates of tax are then applied and are the same: 5¢ for each unit of $100 if selling price is under $20 per share; 6¢ for each unit of $100 if selling price is $20 or more per share.

The Federal Government also imposes a tax on stocks loaned at the rate of 5¢ for each $100 of par value loaned regardless of market value. There is no tax on the return of borrowed stock. The Federal Government also imposes a bond transfer tax of 5¢ per $100 of principal amount.

New York State first began to levy taxes on stock transfers in 1905. Present rates, effective July 1, 1945, are as follows:

On shares selling under $5 per share, 1¢; on shares selling at $5 and under $10 per share, 2¢; on shares selling at $10 and under $20 per share, 3¢; and on shares selling at $20 per share and over, 4¢. There is a 2¢ tax per share upon all deliveries or transfers of shares or certificates of stock except in cases where the shares or certificates are sold, when the above rates apply.

On the New York Stock Exchange, the seller pays the New York State and Federal transfer taxes. On Odd Lots, Federal tax is charged on Odd Lots, whether

bought or sold, and State transfer tax is charged on stocks sold.

STOCK TRUST CERTIFICATE

A certificate, also known as trust certificate, issued in exchange for the stock of competitive corporations entering a "trust" or combination, turned over to a group of trustees, who direct the affairs of the combination. Such trusts were prohibited by the Sherman Anti-Trust Act of 1890 (q. v.). Usually only shares representing the controlling interest in the competing corporations were exchanged for the stock trust certificates, which retained all of the rights of the original stock, and were deposited with the trustees. (See Trust.)

STOCK TURNOVER

See Merchandise Turnover.

STOCK WATERING

See Watered Stock.

STOCKHOLDER

The legal owner of one or more shares of stock in a corporation. At law, the owner of a stock certificate is the person whose name appears on its face and is registered in the books of the company, although the certificate may have been assigned in blank and sold to another person who has not yet transferred the stock into his name and in whom the equitable title is vested.

The ownership of stock entitles the stockholder to four rights: (1) Proportionate ownership in the undivided assets of the corporation (see Stock Certificate); (2) right to dividends when earned, and declared by the board of directors; (3) right of proportionate control through voting power (unless specifically disallowed by the articles of incorporation or by-laws), and to receive notice of elections and meetings where voting power may be exercised; (4) right to subscribe to additional stock before offerings are made to the general public, (pre-emptive right), unless such pre-emptive right is specifically negated by the articles of incorporation, or do not apply in specified instances, such as stock issued to effect a merger or consolidation, in reorganization, or to satisfy conversion or option rights outstanding. (See Preferred Stock, Stock, Stockholders of Record.)

STOCKHOLDERS' MEETING

There are four kinds of stockholders' meetings of corporations under New York State laws:

1. Annual meeting, for the purpose of electing directors. At least one-fourth of the board of directors must be elected. Sec. 55 of the Stock Corporation Law requires that such meeting shall be held at least once a year. Directors shall be elected by a plurality of the votes cast of a quorum.

2. Special meeting of stockholders for specific corporate purpose, such as to mortgage assets. The by-laws may provide for any length of notice for special meetings.

3. Meeting to oust hold-over directors, a special kind of meeting authorized to stockholders under Sec. 22 of the General Corporation Law.

4. Extraordinary meeting authorized under Sec. 52 of the Stock Corporation Law. A corporation which has been unable to obtain the necessary ratio of approval for some corporate change, such as the 2/3rds approval necessary for change in capitalization, because of stockholder indifference to sending in proxies, may make application to the Supreme Court for permission to call an extraordinary meeting, at which any stockholders represented in person or by proxy would constitute a quorum.

At the regular annual meetings, annual financial reports of the corporation are presented to stockholders customarily, and questions on operations and finances of the corporation are answered by the management. Usually, the president of the corporation or chairman of the board of directors presides as chairman of the meeting, but stockholders present have the right to elect such chairman of the meeting, although usually electing such a senior officer or director.

STOCKHOLDERS OF RECORD

The legal stockholders; stockholders whose names are registered in the stock registry and recorded in the stock ledger of a corporation. A stock certificate may be assigned in blank and held by another person, or lost, or stolen, but the privileges and rights to dividends, etc., still belong to the stockholder of record. (See Stock Certificate, Books Closed.)

STOP LOSS ORDER

An order given to a broker by a customer usually in order to protect a profit created by an advance, or to limit a loss in case of a sudden decline. In the case of a short seller, a stop loss order is employed to protect profits created by a decline and to limit losses in case of an advance. The following illustration indicates the use of a stop loss order by a speculator who has purchased stock in anticipation of a rise.

Suppose United States Steel is purchased at 85. While the speculator anticipates that the market will rise, he does not wish to take a large loss should his judgment prove wrong. He may therefore enter a stop loss order to sell at 80. This would not be touched in case of a small dip in prices, but in case the market develops a declining tendency, the stock might drop to a point where the order would go into effect. The broker is not bound to sell the stock at the exact stop loss order price. There may be other orders to sell the stock at 80 ahead of any given order, or else there may be no bids at that price, so the stock must be offered down until a purchaser is obtained. This means that in reality a stop loss order when touched off becomes a market order and is executed at the best price obtainable at the time the market reaches the vicinity of 80.

The market is sometimes honeycombed with stop loss orders, and in the event of a steady decline, such decline touches off such stop loss orders which thereby add to the supply of stock on the downside.

STOP ORDER

See Stop Loss Order.

STOP ORDERS ON PASS BOOKS

When a savings bank pass book is lost, a stop order should be issued by the depositor upon his bank. This consists of a written notice addressed to the bank, stating that passbook No. ..... belonging to ....has been lost, and a request to stop payment, signed by the depositor. The savings bank will then attach a slip to the depositor's ledger card with the words, "Do not pay." This will serve to remind

the teller to allow no withdrawals, should the passbook be fraudulently presented.

STOP PAYMENT

A depositor has the legal right to stop payment on checks which he has previously drawn. This right places an obligation upon banks which must be met by maintenance of careful records and exacting and scrupulous observance of stop payment orders by paying-tellers and check-desk clerks. In order to make a bank liable, a stop payment order must be presented in writing and reach the bank on which the stopped check is drawn before it is presented. A telegraphic request to stop payment is legally enforceable, but an oral or telephone one is not. Banks usually endeavor to stop payment on oral or telephonic instructions, but are not always able to do so. A satisfactory form of stop payment order is as follows:

Date .....

Kindly stop payment upon a check drawn by .....
..... to .....
(us or me) (name of payee)
dated .....
The number of the check is .....

Very truly yours,

.....
(name of drawer)

It will be noticed that the stop payment order gives four facts—the number, date, amount and payee of the check. Paying-tellers and check-desk clerks usually keep a list of the stop payment orders continually before them. This list is usually arranged in alphabetical order, according to the names of the drawers who have issued stop payment orders. The paying teller should keep in mind all stop payment orders and in cases of doubt the list should be scrutinized before a check is cashed.

Foreign banks issue checks in original and duplicate, or, as is sometimes designated, first and second of exchange. Duplicates are not paid until it is determined by inspecting the statement of account or canceled checks to see whether the original has been paid. At the time a duplicate check is paid, a stop payment order is automatically placed against the original. Since the possible previous payment of the original is always verified, when a duplicate is presented for payment, it is not necessary to place a stop against a duplicate at the time the original is paid. On the other hand, when the original is presented, provided there is no stop payment against it, it is paid without verifying the payment of the duplicate through the statement or voucher records.

Acknowledgment of a stop payment order should be made by a form letter to read as follows:

"We are in receipt of your letter of ..... requesting us to stop payment of your draft No..... dated ....., for $_____, to the order of ....., and the matter will have our careful attention. The draft does not appear to have been paid since date of issue."

Acknowledgments are also made of cancellations of stop payment orders. This typical form letter reads:

"We are in receipt of your letter of the ..... and in accordance with your instructions we have removed the stop payment order which we had placed against your draft No..... dated....., in favor of ..... for $_____"

Stop payment sheets should be duplicated for use at the check desk so that checks coming in through the clearing house upon which stop payment orders have been placed, may be stopped and returned to the presenting bank.

The principal reasons for stopping payment are, cancellation of purchase orders, to prevent cashing of a lost check by a dishonest person who may have come into illegal possession of it, and to prevent the payment of an original check when the duplicate has already been paid. (See Check.)

STOPPED STOCK

A sale effected pursuant to an agreement entered into on the floor of an exchange whereby one member, usually the specialist in such stock, guarantees to purchase or sell to another a stated amount of the stock either at the price of the next sale or at a specified price when the stock sells at such price. An agreement by a member to "stop" securities at a specified price constitutes a guarantee of the purchase or sale by him of the securities at that price or its equivalent. Members and member firms should report to their customers that securities have been "stopped" with another member only if the "stop" is unconditional and the other member has definitely agreed thereto.

Orders to buy and sell each individual stock are normally paired off or stopped at the opening of the Exchange in equal amounts. Any excess of orders to buy or to sell are executed, thereby establishing the price of the stopped stock. Stopped stock may be printed on the ticker if no other shares are offered or bid at that price.

A Stop Order (see Stop Loss Order) to buy becomes a market order when a transaction in the security occurs at or above the "stop" price. A Stop Order to sell becomes a market order when a transaction in the security occurs at or below the "stop" price.

STOP TRANSFER ORDER

When a stock certificate has been lost or stolen, the owner has the right to issue a stop transfer order to the transfer agent to prevent transfer in the name of a wrongful party. Transfer may also be stopped by a court order.

Transfer agents before accepting stock certificates for transfer must ascertain whether stop orders have been issued against them. It is customary to defer issuance of new certificates in place of lost or stolen certificates one year after notice is given, and then only upon filing a bond of indemnity, usually for a sum equal to double the value of the stock involved.

STOTINKA

A minor currency unit of Bulgaria, 100 stotinki being equivalent to one lev (q.v.). (See Foreign Moneys—table 2.)

STOTINKI

The plural of Stotinka (q. v.).

STRADDLE

A combination of a put and a call which grants to the holder the right to require the maker within a specified

time to purchase and/or sell a specified security at a stipulated price. The price stipulated in a straddle is almost invariably the market price prevailing at the time the straddle is executed.

See Spread.

STRADDLE THE MARKET

An expression to denote the situation existing when a speculator is short of one or more stocks and long of another or others. Straddling the market is a form of hedging, or insurance, for protecting commitments in stocks when the future course of prices is uncertain. By being short of one stock and long on another, should the next general movement of prices be down, the sum lost through the decline in value of long stocks will be approximately offset by a profit in short stocks.

STRAIGHT LOAN

See Straight Paper.

STRAIGHT PAPER

A general term for all classes of unsecured notes, acceptances, and bills of exchange. A straight loan is one without collateral security. (See Single-Name Paper.)

STREET

A popular name for the New York financial district. (See Wall Street.)

STREET BROKER

A broker, not a member of any stock exchange, who buys and sells unlisted securities for his clients. Such brokers also act as dealers for own account in buying or selling unlisted securities. Member firms also often maintain unlisted trading departments. A market for inactive, unlisted securities is often difficult to locate, and such a broker is especially useful to those who employ his services for this purpose—banks, investment houses, security dealers, and other brokers, as well as individual investors and traders. Street brokers' commissions are self-regulated through the National Association of Securities Dealers, Inc. (q.v.), one of whose Rules of Fair Practice provides: "..... if a member buys for his own account from his customer, or sells for his own account to his customer, he shall buy or sell at a price which is fair, taking into consideration all relevant circumstances, including market conditions with respect to such security at the time of the transaction, the expense involved, and the fact that he is entitled to a profit; and if he acts as agent for his customer.....he shall not charge his customer more than a fair commission or service charge..."

(See Over-the-Counter Market.)

STREET CERTIFICATE

A stock exchange broker's name for stock certificates which have been transferred in blank and on that account are negotiable by delivery without further indorsement or transfer upon the books of the company. A street certificate must be indorsed in blank by the registered owner and guaranteed by a responsible broker. It then may be bought, sold and transferred any number of times without being transferred on the books of the company. Street certificates are the customary form of stock certificates serving as collateral to margin accounts. In trading on margin, these certificates are adequate, but when the stock is purchased outright, or taken up by a margin purchaser, the street certiticate must be taken to the company's transfer office and a new certificate issued in the name of the purchaser. Should the new certificate, after being registered in the name of the owner on the books of the company, be sold, indorsed in blank by its registered owner and properly guaranteed, it would again become a street certificate.

STREET IMPROVEMENT BONDS

A sub-classification of municipal or special assessment bonds issued for the purpose of paving or repairing streets. Usually these bonds are special assessment bonds, i. e., the obligation of the taxpayers whose property is benefited, and not of the entire municipality. (See Semi-Municipal Bonds, Special Assessment Bonds.)

STREET LOAN

Another term for Call Loan (q. v.).

STREET RAILWAY BONDS

A class of public utility bonds, usually secured by street railway property. Street railways are natural monopolies and share with other public utilities the general principle that being monopolies affected with a public interest, their rates should be regulated. There are two methods by which the rates charged by street railways are limited: (1) where the rates are specified, and the rate regulating powers vested in the municipality by the franchise contract, and (2) where rates are regulated by a public service commission. From the investor's point of view, the latter type is more satisfactory. The modern tendency of public services commissions is to adjust the street railway fares to permit a fair return upon the capital invested in the property, and the recent attitude of public service commissions has been one of protecting the interests of the investor through the allowance of fare increases.

Generally speaking, street railway bonds are a good investment if secured by property, which at replacement value, does not exceed the bond issue and where rate regulation is left to the public service commission. In recent years street railways have encountered competition from municipally owned or licensed bus lines, but have themselves converted to an increasing extent to motor buses or trolley buses, thus increasing efficiency of operation and service. (See Public Utility Bonds.)

STRINGENCY

A term used in conjunction with money and credit conditions to indicate that credit is tight and borrowers are experiencing difficulty in procuring funds. During a money stringency, money rates, especially in the call loan market, are high, and banks and business houses exercise caution and discretion in granting credit. If the stringency is severe, credit can be obtained only by the highest class risks who can furnish the most conservative collateral. A money stringency is one of the characteristics of a period of expansion, inflation and speculation, reaching its highest expression at a time of crisis or panic, when it becomes the chief characteristic. Before the Federal Reserve System, which introduced elastic currency and perfected elastic bank credit, a money stringency was occasion for considerable

alarm, usually precipitating a break in the security markets.

STRONG

An expression to denote that market prices have a rising tendency. A market, or a single security or commodity, is said to be strong when there is a price advance.

STUB

In general, a counterfoil or part of a bond set of printed, blank forms, e. g., checks, stock certificates, receipts and the like, the latter being detachable from the stub by tearing at the perforation. The stub is a memorandum containing essentially the same information as the form which is detached, and is retained as a part of the permanent records of a business.

For check stubs see Check Book.

SUB-COMPANY

See Subsidiary Company.

SUBJECT BID

A bid for a security usually in connection with inactive stocks in over-counter markets or smaller stock exchanges, which is tentative or temporary, rather than firm. The occasion for a subject bid arises in those cases where trading has been infrequent and in which a wide spread presumably exists between any actual bid and actual offer. One who places a subject bid is, in effect, endeavoring to locate a corresponding offer but does not obligate himself to buy except on further negotiation or confirmation. Thus, a subject bid is not a dependable one that can be used as a certain basis for a trade. It is a trial or locating bid, subject to confirmation, change, or possible cancellation.

SUBJECT OFFER

A tentative offer to sell an inactive stock in an effort to locate a bid. It is not necessarily a firm, final or actual offer. For fuller explanation, see under Subject Bid.

SUBJECT TO CALL

See Callable Bonds, Optional Bonds.

SUBJECT TO CHECK

A term used in conjunction with that type of bank account or deposits which the depositor retains the right to withdraw immediately and without notice to the bank, by means of check. All commercial checking accounts are subject to check, i. e., payable on demand. Practically all the deposits of a commercial bank are demand deposits, i. e., subject to check. (See Demand Deposits.)

SUBJECT TO PRIOR SALE

See Prior Sale.

SUBJECT TO REDEMPTION

See Callable Bonds.

SUBJECT TO SALE

See Prior Sale.

SUBROGATED NOTE

See Subrogation.

SUBROGATION

The substitution of another person in the place of the creditor. The person so substituted succeeds to all the rights of the original creditor, all debts owing to the creditor becoming payable to the substituted person. A subrogated note is one in which the person to whom it is payable has substituted another person as successor to his rights therein.

Under Federal Deposit Insurance, the Federal Deposit Insurance Corporation (q.v.), in the case of a closed National bank or District of Columbia bank, shall upon the payment of depositor of his insured deposit be subrogated to all rights of the depositor against the closed bank to the extent of such payment. In the case of any other closed insured bank, the Corporation shall not make any payment to any depositor until the right to be subrogated to the rights of such depositor on the same basis shall have been recognized either by express provision of State law, by allowance of claims, by assignment of claims, or any other effective method. Such subrogation shall include the right on the part of the Corporation to receive the same dividends from the proceeds of the assets of the closed bank and recoveries as would have been payable to the depositor on a claim for the insured deposit, such depositor retaining his claim for any uninsured portion of his deposit.

SUBSCRIBER

One who subscribes for a certain number of shares of stock, or a certain amount (par value) of bonds, either by entering his name on a subscription list (blank), or by some other agreement to purchase. (See Subscription.)

SUBSCRIPTION

An offer to purchase stocks or bonds given to a corporation, or its authorized trustee or representative, by a subscriber. A subscription is not binding upon a subscriber until accepted. It is merely an offer to purchase and can be revoked by the subscriber until accepted. Acceptance in the case of subscription before incorporation is made when the corporation comes into existence and makes an act of acceptance by a duly authorized officer, express or implied. Acceptance in the case of subscription after incorporation is simple, as the corporation is already in existence and merely accepts, thus giving rise to contract.

In order to have the status of a continuing offer, a subscription before incorporation must contain an agreement to form the corporation and take specified number of shares therein, as a mere agreement to subscribe to shares of stock in a corporation to be formed in the future is just an agreement to agree, there being no corporation in existence.

An acceptance of a subscription is subject to allotment. This provision protects the corporation against suit in case of over-subscription, which necessitates a pro rata reduction of subscriptions for amounts in excess of a certain minimum. (See Prior Sale.)

SUBSCRIPTION WARRANT

An instrument entitling the stockholders of record to "rights," or subscription privileges; a certificate issued by a corporation specifying the amount of stock and terms and conditions under which each stockholder is entitled to subscribe to new shares which the corpo-

ration is about to issue. Subscription warrants are legal evidence of the ownership to subscription rights and are assignable. (See Rights.)

SUBSIDIARY COINAGE

Coins manufactured from metals other than the standard. In the United States, the subsidiary coinage consists of silver, nickel, and copper coins. (See Minor Coins, Subsidiary Silver Coins, Token Money.)

SUBSIDIARY COMPANY

A company, usually a corporation, controlled by another corporation through partial or complete stock ownership, interlocking directorates, lease, or otherwise. Many large corporations control a number of subsidiary companies. The advantage of such control is to secure greater integration, e. g., a continued source of supply of raw material, or market outlet for the finished product. Thus, many automobile manufactories and oil refineries establish subsidiary distributing agencies; many steel corporations own subsidiary ore and coal properties. Against the advantages of maintaining subsidiary companies, however, was the basic disadvantage in specific instances of increased taxation, which in the past led parent companies to reduce the number of subsidiaries. Sec. 141 of the Internal Revenue Code, however, was extensively amended by the Revenue Act of 1942 to permit affiliated groups of corporations the privilege of making consolidated income tax returns (and excess profits tax returns) beginning with the taxable years after December 31, 1941, in lieu of making separate returns.

SUBSIDIARY SILVER COINS

The 50 cent, 25 cent, and 10 cent pieces. These coins contain only 385.8 grains, .9 fine (347.22 grains of pure silver) to the silver dollar, while the silver dollar itself contains 412.5 grains, .9 fine (371.25 grains of pure silver). Subsidiary silver coins were all made legal tender by the Thomas Amendment to the AAA Farm Relief and Inflation Act of May 12, 1933 and the Gold Repeal Joint Resolution of June 5, 1933. Subsidiary silver coins are a form of Token Money (q.v.).

SUBSIDY

Government financial assistance given to important public enterprises—railroads, steamship operators, air lines or airplane manufacturers, beet sugar and other agricultural industries—operating under private management, in order to encourage such industries which otherwise would be undeveloped or inadequately developed.

Subsidies may take the form of outright operating grants, or indirect assistance in the form of preferential rates or tariffs.

SUBSTITUTIONS

See Substitutions in Collateral.

SUBSTITUTIONS IN COLLATERAL

The relinquishment of certain collateral pledged to secure a loan and deposit of other collateral of equivalent value in its stead. Substitutions are an essential part of the machinery of handling brokers' loans. They are also necessary wherever short-term paper is pledged as collateral against long-term notes, in rediscounted notes securing Federal Reserve Notes (q.v.), and in the collateral supporting Collateral Trust Bonds (q. v.).

Call loans and brokers' time loans are always secured by stock exchange collateral, i. e., stocks and bonds which are constantly being traded in. A broker obtains a loan from a bank by pleding this collateral, which has been purchased for the accounts of customers operating on margins. While these securities are owned by the brokers' customers, they are held by the brokers as security against the debit balances which they advance. Suppose a broker's customer orders the sale of some of the stock which the broker has rehypothecated with a bank. In order to make delivery the broker must obtain physical possession of these shares previously pledged to secure his bank loan. It is therefore necessary to procure them at the bank where they are deposited as collateral. In the meantime, however, the broker has purchased stock for other accounts, and these he can offer in exchange for the stocks that have been sold but are deposited at the bank. Accordingly, a messenger is sent to the broker's bank with the securities to be substituted and with a request phrased as follows:

SUBSTITUTION REQUEST

....., 19 ...

Please deliver the following securities from our loan number ....., dated .....

.....

We hand you in exchange:

.....

.....

.....

(Signature)

Substitution forms are signed by a member of the brokerage house who is authorized to sign, or by an authorized attorney.

Substitution clerks who examine collateral substituted for collateral to be released observe the following points: (1) that the signature on the substitution request is authorized and genuine; (2) that the character of the substituted collateral is acceptable, i. e., approximately equivalent to the character of the collateral being released; (3) that the new collateral is negotiable; and (4) that the market value of the substituted collateral is approximately equal to the value of the collateral to be released.

Since rediscounted commercial paper of not more than 3 months duration (6 months for agricultural paper) forms a portion of the collateral supporting Federal Reserve notes, it is necessary that the constant stream of maturing notes be released from the custody of the Federal Reserve agent at each Federal Reserve bank (who has charge of this collateral and whose duty it is to supervise substitutions), and that newly rediscounted paper be substituted.

Substitution of collateral in real estate mortgage bonds or in collateral trust bonds is permissible only on previously agreed upon terms specified in the indenture, and customarily care is chargeable under the indenture to the trustee that the character and value of the new collateral is as good as the released collateral.

SUB-TREASURY

One of the branch offices of the United States Treasury performing Government fiscal operations of the

same character as the United States Treasury, and under the supervision of assistant treasurers. By an act of Congress, dated May 29, 1920, the operation of the sub-treasuries as a part of the fiscal system was required to terminate on June 30, 1921. Sub-treasuries were located in New York City, Baltimore, Boston, Chicago, Cincinnati, New Orleans, Philadelphia, St. Louis and San Francisco. By the act above referred to, these nine sub-treasuries were closed and their functions taken over by the various Federal Reserve banks, which carry on the fiscal operations in the same manner as previously. (See United States Treasury.)

SUCRE

The international currency unit of Ecuador. See Foreign Moneys—Tables 1 and 2.)

SUGAR

History.—Sugar cane has been grown since very early times. The art of boiling sugar was known in India before the seventh century, and in Egypt probably earlier. When sugar was introduced in medieval times by travelers from the East, it was a a rare and valuable delicacy known as "Indian Salt," the word "sugar" being of modern origin.

Portuguese and Spanish explorers of the 15th century carried the cultivation of cane to the new world, and early in the sixteenth century it had spread over large portions of the West Indies and South America. During the next two centuries great wealth was derived from its cultivation, manufacture and export, especially in Brazil and Haiti.

In 1747 the existence of sugar was discovered in beet and other fleshy roots which grow in temperate regions, but little practical use was made of this knowledge until the Napoleonic Wars cut off the supply of sugar from the West Indies. Then production of beet sugar was undertaken and flourished under the personal encouragement of Napoleon, but it was not, however, until after 1830 that it was established on a firm footing. From then on the industry has advanced until now nearly one-half of the world's sugar supply is derived from beets.

Growth and Manufacture.—Sugar cane requires at least a twelve months' growing season, and an absence of frost in the ground. The sugar beet can be matured in half that time, and as it is raised from seed each year, the frost does not affect it. The cultivation of cane is therefore confined to tropical or semi-tropical localities while beets can be grown in the temperate zones. Both can be produced in this country, the former largely in Louisiana, and Florida, while the latter is chiefly grown in Colorado, Michigan, Utah, California and in some of the Middle Western states.

In the manufacture of sugar the juice is extracted from the cane, usually by crushing, and is then clarified by the addition of lime, boiled in vacuum pans which keep the boiling point low, and crystallized in centrifugal machines. This raw sugar is a light brown color and is shipped in bags to the refineries, where the sugar is washed and much the same process repeated, by being additionally filtered through animal charcoal known as bone-black, to remove any coloring matter.

The refinery, with all its elaborate machinery, is necessary for the production of the white refined sugar that is so universally used, but all this is done to remove only about 3 per cent. of impurities, as the raw sugar is about 96 per cent. pure when it goes into the refinery. Sugar is produced from beets by a process very similar to that of cane sugar.

The difference between the price paid for raw sugar and the price at which the refined sugar is sold is called the "spread" and amounts to a very small fraction of the final cost of the sugar, yet the volume handled is so large that this small "spread", besides paying the cost of refining, means a large aggregate profit.

Production.—Since sugar began to come into common use, the increase in the world's supply has been rapid and the growth and expansion of sugar refining has been one of the most striking developments of modern industry. In 1840 the total sugar production was but 1,150,000 tons; by 1870 the amount had increased to 2,416,000 tons; for 1919-20, 15,495,000 tons; for 1933-34, 25,709,000 tons; and for the 1946-47 crop year, 31,231,000 tons.

The principal cane sugar producing countries in the world for the 1946-1947 crop year were: Cuba, British India, United States (combined with Puerto Rico and Hawaii), Philippines, and Java. Europe is the chief producer of beet sugar (normally Germany and Czechoslovakia are principal producing countries), followed by the United States. The United States ranks as the principal consuming country, followed by British India, the United Kingdom, and normally, Germany.

In the United States, consumption is regulated by the quota provisions of the Sugar Act of 1948, which restores quotas suspended in 1939 and 1942. Normal annual consumption is set by the Secretary of Agriculture, who in turn divides the market among various producing countries according to ratios fixed by the law. Of normal annual United States consumption of about 7,000,000 tons, the quota distribution would be approximately as follows: American cane and beet (about 3/4ths beet), 30%; Cuba, 32%; Puerto Rico and Hawaii, 25%; Philippines, 13%; and other foreign countries other than Cuba, less than 1%. The Sugar Act of 1948, which is to continue effective for five years, unless suspended by proclamation, also continues the excise tax of 53 1/2¢ per cwt. on refined and 50¢ per cwt. on raw sugar paid by refiners and beet sugar processors, about 80% of which proceeds are in turn paid out to producers in the continental United States, Hawaii, Puerto Rico and the Virgin Islands for compliance with production allotment programs and other conditions. Besides the quota system, sugar in the United States is protected by tariffs, the import duty for Cuban raws being 50¢ and Cuban refined sugar, 53¢; and for other foreign country raws, 68.75¢ and refined sugars, 72.875¢ per hundred pounds.

(See New York Coffee & Sugar Exchange.)

SUGAR EXCHANGE

See New York Coffee and Sugar Exchange.

SUPERINTENDENT OF BANKS

See State Banking Department.

SUPERPOWER

A name given to the generating facilities of an interconnected electric power system, i. e., the tying up of a number of electric power generating plants into a single system. This is the physical or engineering side of the

consolidation of electric power companies on a financial basis through the holding company or other device.

Superpower or "giant power" is an evolution of electric interconnection and interchange of power generating and distributing facilities that has come about in the electric power industry similar to the trend toward combination and large scale production and distribution in manufacture, transportation, etc. Two definite and extensive economies are made possible by superpower. The first, and most obvious, is the reduction in the investment needed for spare equipment. If ten stations are tied together, instead of requiring ten spare generators, the interconnected system can be adequately protected in providing for sudden increases in load or breakdowns with one or two emergency generators. The second economy is in decreased costs of operation. The aggregate peak load of an interconnected system will probably be something like 40,000 kilowatts smaller than the sum of the individual peak loads of the plants operated independently, and yet the total kilowatt hour output is the same in both cases. It follows, therefore, that in the interconnected system the average load is a much higher percentage of the maximum load than if the systems were operated independently. This higher average use of facilities means a great saving in power generating cost. By contractual arrangement it is the custom to carry the continuous loads as much as practicable upon the plants with the lowest operating cost.

SUPPORT

A term to denote the active sponsorship of a single security, or a groups of securities by a syndicate, dealer group, individual speculators, or other special interests, to prevent further decline. Support usually is furnished to give a security, or the entire market, an appearance of strength for the purpose of arresting a downward movement and inspiring confidence, rather than with the intention of making immediate profits. Active support, however, in the face of declining market trend is rare, as best results for the stock supported are possible when general market conditions are not adverse.

SUPPORTING ORDERS

Buying orders lodged with brokers for the purpose of furnishing Support (q. v.).

SURETY

This term has two applications:

(1) A guarantor; a person or company which agrees to answer for the debt or performance of another in case of default.

(2) Suretyship; a guaranty or security for protecting a person against loss in case of default in the payment of a debt, or performance of a contract; an instrument or undertaking, ordinarily called a surety bond, given as evidence of the guaranty by which the surety becomes bound as the principal or original debtor is bound. (See Surety Company.)

SURETY BOND

See Surety Company.

SURETY COMPANY

A company which guarantees the acts of others, i. e., acts as surety for a valuable consideration. One of the principal types of guarantees undertaken by a surety company is the insurance of the faithful conduct of employees handling money or valuable papers guaranteeing any losses which may result from dishonesty. This is known as fidelity insurance. A surety company undertaking this class of risk, keeps in touch with the history of employees and refuses to insure those who have police records. They attempt to secure conviction of defaulters and by refusing to renew a surety bond when the insured has been guilty of misconduct, these companies tend to reduce dishonesty, defalcation, and embezzlement.

Originally surety contracts or guarantees were personal, i. e., one person guaranteed the faithful performance of another. Such personal suretyships were frequently abused and rarely compensated. About 1876 the idea of corporate suretyship was put into operation in this country and a company undertook to assume, for a premium, all the responsibilities of acting as surety. In 1881, when Elihu Root, then counsel of the American Surety Company, presented to the New York Legislature the application of the company to do business, there were very few laws governing the methods by which a corporation might issue surety bonds and undertakings.

A corporate surety bond is a three-party instrument, consisting of the principal, the obligee or assured and the surety. The principal is the individual firm or corporation on whose behalf the surety is issued. The obligee or assured is the individual, firm or corporation in whose favor the suretyship is issued. The surety is the company issuing the guaranty.

The laws of today require a great many different bonds covering every phase of human relationship from the licence of a peddler, extending through all kinds of court action, to the guarantee of the honesty and faithful performance of duties of public officials, guardians, trustees and executors, to the guarantee of the fidelity of employees and to the guarantee of performance of contracts.

The surety company by rigidly adhering to its underwriting standards created by years of experience and only issuing suretyship for responsible applicants is thus acting as a safeguard for all citizens and taxpayers. Under varying conditions and in the different States and municipalities it has been possible for surety companies to build up a broad experience which has been of inestimable assistance to legislatures in safeguarding funds.

SURETYSHIP

See Surety Company.

SURPLUS

This term may apply to (1) the proportion of profits of a business for the current accounting period in excess of all costs, expenses, interest charges and dividend payments, i. e., amount available for carrying forward into the next accounting period, i. e., net profit, or, (2) the accumulated or undivided profits of past periods left invested in the business, i. e., the earned surplus. The first application, however, is not strict accounting terminology. The term surplus should not be used synonymously with net profits, but rather should designate undivided profits of a corporation; profits which have not been distributed in dividends to stockholders. The surplus, which in some cases exceeds capital stock, should be added to the latter, to-

gether with any unallocated equity reserves, in order to determine net worth. (See Capital and Surplus.)

SURPLUS RESERVE

The amount of a bank's reserve (held in a Federal Reserve bank in the case of a member bank, and in its own vault or legal depositaries if a non-member bank) in excess of the legal reserve requirement. Also more commonly known as Excess Reserves (q.v.). The term also applies to the surplus reserves of all the banks in a given clearing house association.

In accounting, the term is applied to that type of equity reserve which represents an earmarked portion of surplus, and is not definitely allocated for any purpose. (See Reserve.)

SURRENDER VALUE

A term used in connection with insurance policies to denote the cash sum which the insurance company agrees to pay the holder who exercises the option of surrender. The surrender value increases in proportion to the number of premiums paid and growth of the policy reserve. The loan and surrender value of a policy are usually coincident.

SURROGATE COURT

The name given in some states to the court, usually of county jurisdiction, having jurisdiction over probate of wills, administration of intestacies, supervision over executors and administrators, guardianships, etc. It is known in other states as Probate Court, or Orphan's Court. (See Probate.)

SUSPENSION

This term has three meanings:

(1) The termination of a business due to insolvency or bankruptcy.

(2) The temporary closing of a bank which, though in a solvent condition, desires to liquidate a part of its assets in order to be in shape to meet the demands of its creditors. (See Failures.)

(3) Members of a stock exchange may be suspended, i. e., prohibited from exercising their rights as members for a stated period (as distinguished from expulsion) for violating certain rules of the exchange. On the New York Stock Exchange, members may be suspended, not only for specific violations of rules, but for certain acts not expressly defined. The rules of the New York Stock Exchange provide for suspension in the following cases: (1) "Conduct or proceeding inconsistent with just and equitable principles of trade;" (2) where failure "has been caused by recklessness or unbusinesslike dealings;" and (3) whenever a member has been "adjudged guilty of any act which may be determined by said (governing) committee to be detrimental to the interest or welfare of the exchange."

SUSPENSION OF GOLD PAYMENTS

See Gold Repeal Joint Resolution, Gold Reserve Act of 1934, Gold Standard.

SUSPENSION OF SPECIE PAYMENTS

See Specie Payments.

SWEATING

A term applied to a method of reducing the weight of coins by rubbing them together in a box or bag for the purpose of obtaining gold or silver dust resulting from the friction.

SWEETENING A LOAN

A Wall Street expression meaning to place additional securities on deposit to margin a loan after security values have declined, in order to keep the margin intact, or to strengthen the margin. (See Margin Call.)

SWINDLING

A term to denote the selling of doubtful or worthless securities through misrepresentation. It may be accomplished through advertisements that offer securities of high yield, or promise exorbitant profits, or circulars distributed gratis written deceptively and with an ulterior purpose, rather than giving bona fide disinterested analyses.

Another form of swindling consists in switching low grade securities of doubtful or no value, for high grade securities of unquestionable merit. (See Blue Sky Laws, Bunco, False Statement Acts.)

SWINGS

A term used to denote the periodic movements upward and downward in (1) business activity, (2) commodity prices, (3) security prices, or (4) money rates. C. H. Dow in his book entitled "Theory of Stock Speculation," classifies swings as primary, secondary, and tertiary. Primary swings are broad movements lasting over a period of years, and may be identified with the business cycle, i. e., a primary upward and downward swing constitutes a complete cycle. Primary swings are caused by rhythmic changes in fundamental economic conditions. Secondary swings are the short-term movements covering a number of weeks or a few months, and have their causation in current trade reports, etc. Tertiary swings are the imponderable fluctuations that occur daily and even hourly in the various markets, and have their causation in such factors, as market sentiment, technical position, speculative psychology, etc.

It is on the theory of primary swings that most statistical organizations and forecasting services base their ability to predict future trends. Few persons, other than professional speculators who are well versed in trade conditions and market technique, can uniformly succeed in forecasting secondary swings. Tertiary swings are practically unamenable to forecast. (See Business Cycle, Business Forecasting Services, Speculative Cycle.)

SWITCH

See Switching.

SWITCHING

This term has two meanings:

(1) When a speculator in grain, cotton, or sugar futures transfers his contract to mature in some future month, the process is called switching.

(2) The process of transferring one's interest to another security, i. e., liquidating one's holdings in one security for the purpose of placing proceeds in another because its prospects appear to be more attractive, to increase one's income, or to strengthen one's position.

SYMBOLS

See New York Stock Exchange Abbreviations.

SYNDICATE

A group of investment banking houses, or broker-dealer firms, which organize to underwrite an issue of bonds, notes, or stock from a corporation or governmentality; a group of security underwriters as distinguished from a single underwriter. Banks are now restricted in their underwriting activities to Government and Municipal securities.

The function of a syndicate is to furnish new or additional capital through the purchase at wholesale of the capital issues of the organization requiring to be financed, and the sale of these securities to the investing public through participating members. The term may therefore apply to the original syndicate which buys the securities, known as the "underlying syndicate", purchase group or syndicate on original terms, or to the investment banking houses, dealers and brokers which distribute them to the public, known as the "distributing syndicate" or selling group.

When bonds or stocks are issued by a corporation or Government, it can choose one of two ways of marketing them. They can be sold "over the counter," i. e., the issuing organization can find its own market if it can, or they may be sold directly on a wholesale basis to an underwriting organization. Competitive bidding is now required for public utility issues and railroad issues. On account of the specialized marketing facilities of the large investment banking houses, marketing through such houses is usually chosen. Some one firm may act as the sole underwriter, or else an underwriting syndicate may be formed consisting of a group of firms. The latter practice is customary because it permits a distribution of risk among the members of the underlying syndicate, and enables the participating members (of the distributing syndicate) to offer a well diversified list of securities to their customers.

Each member of the underlying syndicate contributes a certain part of the required capital, and becomes obligated to dispose of an agreed upon part of the issue. The active management of the syndicate rests with one of the member houses, known as the "syndicate manager," whose duty it is to see that the terms of the syndicate agreement are carried out, to handle the accounts, prepare the Registration Statement and Prospectus if required under the Securities Act of 1933, and to take initial custody of the securities.

The securities purchased by the underlying syndicate are sold to the public through enlisting the services of dealers, brokerage and investment houses throughout the country with whom the members of the underlying syndicate have affiliations. Members of the underlying syndicate are primarily wholesalers, while members of the distributing syndicate are retailers.

The following example will serve to illustrate the typical method employed in syndicate organizations (the size of the underwriting spread illustrated has not been representative in recent years, but will suffice for the example). Suppose that a corporation wishes to float a $50,000,000 bond issue, and that the underlying syndicate agrees to underwrite the entire block at 95, remitting to the corporation within the agreed time the proceeds, or $47,500,000. The underlying syndicate will then organize a distributing syndicate, consisting of dealers, and brokers, investment houses, throughout the country, who are invited to enter the distributing syndicate as participating members by agreeing to purchase a block, say at the price of 98, or three points advance over the cost to the underlying syndicate. Members of the underlying syndicate will also have the privilege of subscribing to the bonds at the price they are offered to the public, less a selling commission of say 2 per cent. At the same time the syndicate managers will set the offering price by amendment to the Registration Statement and Prospectus, if such are required, for offering of these bonds to the public, say at par and accrued interest.

The underlying syndicate members usually apportion or allot the entire issue, except such amounts as they subscribe for themselves (to be sold to their own customers), among the various participants in the distributing syndicate in proportion to their financial and sales ability to absorb them as determined by past experience. The participating members' profits consist of the difference between the public offering price and the price at which they are purchased from the underlying syndicate, and they become bound to pay for the amount of their allotment regardless of whether they are sold or not within the syndicate period. Oftentimes, however, the syndicate period is extended if selling conditions are difficult. The underlying syndicate's profit consists of the difference between the purchase price and that at which they are sold to the participating members. In the above example, the profit (assuming the bonds are entirely sold) would be $1,500,000, less the expenses of the syndicate and the syndicate managers' commission. Each member of the underlying syndicate shares in the profits or losses in accordance with the ratio that its participation bears to the total amount of the issue. If the underlying syndicate is not successful in selling all the bonds to the members of the distributing syndicate or through its own distributing channels, then the unsold portion will be allocated to the members of the underlying syndicate pro rata with their participation at the price of 98.

Some syndicate agreements contain a so-called "selling-out clause," which provides that to the extent that an underlying syndicate member subscribes for bonds, its liability to the syndicate is decreased. Thus, if a member subscribed for bonds to the amount of this participation, it is relieved from liability of having to take up any of the unsold bonds. (See Underwriting.)

Asch, J. T.: A Guide to Syndicate Procedure, 1946.
Clark, R. W.: Fundamentals of Investment Banking, 1946.

SYNDICATE AGREEMENT

See Syndicate.

SYNDICATE LOANS

Loans made by a bank to an underwriting syndicate to aid in the purchase of securities from an issuing organization. State banks and trust companies in New York State (Sec. 103, subsection 3) may not lend to underwriting syndicates if (1) there has not been 25 per cent. of the amount of the issue paid in by the syndicate, (2) the terms of the proposed loan or any renewal thereof exceed one year, (3) the amount exceeds 25 per cent. of the lending institution's capital and surplus, or (4) the lending institution itself is liable directly, contingently

or indirectly for the repayment of any part of the proposed loan. (See Syndicate.)

SYNDICATE MANAGERS

See Syndicate.

SYNDICATE MEMBERS

See Syndicate.

SYNDICATE OFFERINGS

Securities offered for sale by an investment house which have been received as an allotment from an underlying syndicate; investment offerings of a syndicate. (See Syndicate.)

SYNDICATE ON ORIGINAL TERMS

See Syndicate.

TAEL

A Chinese money of account, equivalent to the value of the weight of a tael (varying from 1 to 2 1/2 ounces avoirdupois) of silver. The international currency unit of China is the national dollar (see Foreign Moneys--table 2).

TAKE A FLIER

See Flier.

TAKE UP

This term has two meanings:

(1) A brokerage term to denote the act of paying upon delivery for the purchase of, or subscription for, bonds or stocks; payment made in order to get possession of securities previously contracted for.

(2) To retire or pay off, as a note, acceptance, or bond.

TALARI

The local name for the dollar of Ethiopia. The dollar is the international currency unit, with a par value of 40.25¢ relative to the U. S. dollar. (See Foreign Moneys--tables 1 and 2.)

TALE

Contracts involving the payment of metallic money might call for payment "by tale," meaning by count, as distinguished from weight. If payment were made in gold coin, for instance, the total sum "by tale" would disregard abrasion, whereas the sum by weight would denote actual value. A given sum computed "by tale" would give a smaller value than if computed by weight.

The Joint Resolution of Congress of June 5, 1933 provides that every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby, is declared to be against public policy.

TALLERO

A money of Eritrea. The international currency unit is the shilling. (See Foreign Moneys, table 2.)

TALON

A term used in England, France and Germany, to indicate the last portion of bond, certificate, or rente, remaining after the coupons have been detached. Sometimes it takes the form of a special coupon. When the talon is presented to the proper office of the Government, the holder is entitled to receive a new certificate or rente with its full quota of coupons for the next period. French rentes are usually issued with coupons attached for 5 or 10 year periods. (See Rentes.)

TANGIBLE ASSETS

Physical or material assets, e. g., real estate, buildings, machinery, inventories, and cash, as distinguished from intangible assets, e. g., good will, patents, trademarks, and the like.

TAPE

A narrow ribbon of paper used in quotation tickers on on which prices transmitted by telegraph from market headquarters are printed by an electrically operated instrument. (See Quotation Ticker, Ticker.)

TAPE ABBREVIATIONS

See New York Stock Exchange Abbreviations, Ticker Abbreviations.

TAPE PRICES

Prices as indicated on the ticker tape. These are printed on the tape in ticker abbreviations, or ticker symbols. (See Quotation Ticker, Ticker.)

TARE

Unproductive weight; weight of the container, package, crate, or vehicle in which goods are loaded for shipment or carriage, as distinguished from the gross weight and net weight. Thus, in a barrel of oil which weighs 400 lbs., the barrel 40 lbs. and the oil 360 lbs., 400 lbs. represents the gross weight, 360 lbs. the net weight, and 40 lbs. the tare.

TARIFF

This term has three applications:

(1) In general, a schedule of charges for services or merchandise. This general use of the term, however, is tending to disappear in favor of specific applications.

(2) A freight or passenger tariff. Railroads and other transportation agencies post a schedule of rates or charges for carrying various classes of merchandise or passengers. Railroads are required to post their tariffs. In order to ascertain the charge for carrying freight from one point to another, it is necessary to determine first the classification and then ascertain the tariff on goods within that classification.

(3) The law under which duties on imports are imposed. The United States has imposed duties on imports under various tariff acts since 1789. The purpose of a tariff is in part to raise revenues for the national government, but other reasons are also assigned, e. g., protection of home industry, protection of the domestic wage level, and to secure a wider diversification of industry. Until 1900, about one-half of the expenses of the national government were defrayed from collection of customs duties.

The following offers an outline of the considerations involved in any study of the tariff and tariff-making:

Principles.

1. Say's Law.
   a. Exports and imports must pay for each other in long run.
   b. Not equivalent as between two countries; trade is triangular or polyangular.
2. Comparative Costs.
   a. Pays to trade under 3 sets of conditions.
      (1) Not when each country is equally efficient.
      (2) When one country is more efficient absolutely.
      (3) When one country is less efficient absolutely.
      (4) When one country is relatively more efficient.

Invisible Imports.
1. Tourists' expenditures.
2. Immigrants' Remittances.
3. Interest Payments on Foreign Loans.
4. Ocean Freight Charges.
5. Marine Insurance Costs.

Balance of Trade Paid for by
1. Gold.
2. Credits (short or long-term).
3. Invisibles.

Tariff a Complicated Problem.
1. Types of Industry Wanted—Diversification.
2. To Remove Foreign Competition—Dumping.
3. Raising Revenues.
4. Strategic Advantages of Diversity—War.
5. Economic Self-Sufficiency. Curtails foreign trade.
   (a) Nationalism (Isolationism).
   (b) Self-Containment.
   (c) Autarchy (extreme nationalistic self-sufficiency).
6. Keeping Industries in Business.
   (a) Parallel with preferential freight rates.
   (b) Form of indirect subsidy.

Related to Other Trade Barriers.
1. Restriction of Immigration.
2. Restriction of Foreign Loans.
3. Merchant Marine and Ship Subsidies.
4. Quotas, Licenses, Cartels, Exchange controls.

Importance Usually Emphasized.
1. Some Foreign Trade Non-Essential.
2. Varies with Combined World Domestic Trade—Price Level.
3. Country Can Adjust Itself to Any Tariff Schedule.
4. Frequent Changes Are Bad--Dislocations.
5. Tariff - Raising Leads to Retaliation.

Domestic and Foreign Trade.
1. Proportions. Compare U. S. and England—U. S. has balance of exports, England balance of imports.
2. Relatively numerous countries in Europe, each with tariff barriers.
3. Only 3 countries on North American continent.
4. Anything that expands domestic trade is good. Foreign trade should be controlled by same principles.
   Yet foreign trade is considered apart.

Tariff and Free Trade.
1. Theory of Free Trade—Geographic division of labor. (Compare interstate trade).
   (a) Natural aptitude.
   (b) Internationalism—war prevention.
2. England's free trade position (1832-1932).

The following is a brief outline of U. S. tariff history:

Tariff Act of 1789.—This was the first act which carried a duty of 5 per cent. on most imports.

Tariff Act of 1816.—Duty on cotton and woolen goods established at 25 per cent. for three years, after which it became 20 per cent.

Tariff Act of 1824.—Duty on cotton and woolen goods established at 33 1/3 per cent. Duties increased on iron, wool, hemp, and bagging.

Tariff Act of 1828.—Duty increased on pig-iron, bar iron, hemp, wool, and flax.

Tariff Act of 1832.—Woolens subjected to a simple ad valorem duty of 50 per cent.

Tariff Act of 1833.—So-called "compromise tariff." General reduction of duties with principle of gradual decreases, until "a general level of 20 per cent. should be reached."

Tariff Act of 1842.—A protective tariff, with higher rates.

Tariff Act of 1846.—Known as the Walker tariff; rates reduced.

Tariff Act of 1857.—Duties decreased.

Tariff Act of 1861 (March 2).—Known as the Morrill tariff; duties increased on wool and iron.

Tariff Act of 1863 (March 3).—Certain duties increased.

Tariff Act of 1864 (June 30).—Certain duties increased.

Tariff Act of 1870 (July 14).—Certain duties reduced.

Tariff Act of 1872 (May 1).—Average duties decreased about 10 per cent.; tea and coffee put on free list.

Tariff Act of 1875 (March 3).—Reductions repealed.

Tariff Act of 1883 (March 3).—Duty on combing wool reduced; taxes on matches, bank checks and savings bank deposits abolished.

Tariff Act of 1890 (Oct.1).—Known as McKinley tariff; rates generally raised. Sugar on free list.

Tariff Act of 1894 (Aug. 28).—Known as Wilson tariff. Rates lowered.

Tariff Act of 1897 (July 24).—Known as Dingley tariff. Rates generally raised; in some cases to extreme levels. Sugar duty made specific.

Tariff Act of 1909.—Known as Payne-Aldrich tariff. Rates slightly lower. Contained 121 pages; mentions 3,500 articles, 360 duty-free.

Tariff Act of 1913.—Known as Underwood tariff. Rates lowered.

Tariff Act of 1922.—Known as Fordney-McCumber tariff. Rates increased.

Tariff Act of 1930.—Known as Hawley-Smoot tariff. Rates increased.

Trade Agreements Act of 1934.—Ushered in reciprocal trade agreements program. Extended in 1937, 1940, 1943 and 1945.

(See Balance of Trade, Foreign Trade, Invisible Imports, Reciprocal Tariff.)

TARIFF ACT OF 1930

Also known as the Smoot-Hawley Tariff and approved June 17, 1930. The rates of this tariff increased as a whole over the Fordney-McCumber Tariff Act of 1922, which was considered as a highly protective tariff. Unlike preceding tariffs, however, it contained a provision for flexibility or changes in rates if approved by the President. The act empowered the Tariff Commission to recommend increases or decreases to the President, which would become effective if signed, provided, however, that no increase exceeded 50 per cent. The commission could make investigations in the costs of production of any domestic article for the purpose of making such suggestions: First, upon the request of the President; Second, upon resolution of either or both

houses of Congress; Third, upon its own motion; or Fourth, in the judgment of the commission, if there were sufficient reason, upon application of any interested party.

The Smoot-Hawley Tariff was amended on June 12, 1934 by the Trade Agreements Act of 1934, delegating power to the President to raise or lower existing duties by as much as 50%. Under this legislation, the era of high protective tariff policy was replaced by the reciprocal trade agreements program, and a large number of such agreements were signed with such unilateral action including "most favored nation" treaties which assured each of the signing nations of preferential treatment.

(See Tariff.)

TARIFF COMMISSION

A non-partisan, independent commission, created under an Act approved September 8, 1916, consisting of six members appointed by the President, two of whom are designed as chairman and vice-chairman, respectively. Its functions are investigative and advisory, it being the duty of the commission to furnish data on the effect of reciprocal trade agreements in this country and abroad, to make reports, and to suggest changes in tariff rates. These investigative and advisory duties have been increased under the Trade Agreements Act of 1934 and subsequent extensions of the Act, as well as the Presidential Executive Order of February 25, 1947, which direct the Tariff Commission to play an essential role in fact-finding, "policing" trade agreements against trade discrimination, and reporting annually to the President and the Congress on the trade agreements program.

TAX-ANTICIPATION BONDS

Bonds issued temporarily by a municipality or other civil division in order to provide funds for current expenditures until taxes or other income due, can be collected. Tax-anticipation bonds are usually in the form of short term notes and are payable on the next tax date. They are also known as tax-relief or tax-arrearage bonds, and sometimes miscalled Revenue Bonds (q. v.).

TAX ARREARAGE BONDS

See Tax-Anticipation Bonds.

TAX-EXEMPT BONDS

As the result of passage of act of Congress on March 1, 1941 terminating the issuance of tax-exempt securities, and retirements of previously exempt issues, the only fully tax-exempt U. S. Government securities currently outstanding are the Panama Canal 3s of 1961 and Postal Savings bonds. Even such exemption, however, does not extend to Federal or State estate, inheritance, and gift taxes.

U. S. Government securities which are partially tax-exempt are those exempt from all taxation except estate or inheritance taxes, surtaxes on income, and excess profits or war-profits taxes if any. The only Government securities currently outstanding that are partially tax-exempt are Treasury bonds and U. S. Savings bonds issued prior to March 1, 1941, as well as Federal Housing Administration debentures issued pursuant to contracts originating prior to March 1, 1941. The exemption on the U. S. Savings bonds is as to interest on principal amount up to $5,000, and consists of exemption from the surtaxes on income, excess profits taxes and war-profits taxes, if any.

Accordingly, the bulk of Government securities now outstanding consist of fully taxable issues, whose income is subject to all Federal taxes. Such issues are also subject to estate, inheritance, gift, or other excise taxes, both Federal and State. However, they are exempt from taxation on principal or interest by States or local taxing authorities, or by U. S. possessions. Included in fully taxable issues are: Treasury bills; certificates of indebtedness; Treasury notes; Treasury savings notes; depository bonds; Federal Land Bank bonds; Federal Intermediate Credit Bank debentures; Federal Home Loan Bank bonds; Commodity Credit Corporation demand obligations; Treasury bonds and U. S. Savings bonds issued on and after March 1, 1941; and Federal Housing Administration debentures issued pursuant to contracts originating on or after March 1, 1941.

The largest field of tax-exempt obligations, therefore, is now in State and Municipal issues, which are exempt from Federal income taxes as well as taxes by the home State or political subdivision. Even in this field, however, tax exemption is a relative term, as such issues are subject to Federal estate and gift taxes, as well as income, inheritance and property taxes of other States.

TAX-FREE BONDS

Same as Tax-Exempt Bonds (q. v.).

TAX-FREE COVENANT

The Federal income tax law of 1913 contained a provision which required the normal tax on bonds which were subject to tax to be withheld at the source, and also required that ownership certificates accompany all coupons detached from corporation bonds at the time of their presentation. This proved an annoyance to investors and hurt the sale of corporation bonds. Accordingly, issuers of corporate obligations, floated their bonds with "tax-free covenants," whereby the obligor (issuer) agreed to pay any income which the law required the corporation to withhold from the interest paid to the bond owners.

The Revenue Act of 1918, however, raised the normal income tax rate above 2% and discontinued collection of the tax from the obligors, instituting instead the present practice of collection of the tax from the bondholders. Nevertheless, the new tax law made provision for withholding or payment of income tax of 2%, the former income tax rate, so that a holder of tax-free covenant bonds, under which the obligor usually assumed tax of 2%, was relieved from income tax to this extent.

With passage of the Revenue Act of 1934, the requirement of withholding Federal income tax up to 2% on tax-free covenant bonds was restricted to bonds issued prior to January 1, 1934. Whether or not bonds issued on or after January 1, 1934 carry the tax-free covenant, the obligor is now not required to withhold Federal income tax in any amount, so that holders are required to pay the full Federal income tax, as to such bonds.

Fundamentally, the purpose of the tax-free covenant was to shift the burden of the tax to the obligor, and at the time it was introduced, the assumption of tax, usually "up to 2%." no doubt was an inducement to investors in view of the low income tax rates then prevailing. In subsequent years, however with the steady rise in in-

come tax rates, the advantage to the bondholder of such 2% tax-free covenants became of minor significance.

TAX RELIEF BONDS

See Tax-Anticipation Bonds.

TAXES

Compulsory payments imposed by a sovereign for public purposes. Taxes may be classified as (1) direct taxes, those imposed upon the individual directly, such as poll tax, a per capita tax. Under the U. S. Constitution, direct taxes shall be apportioned among the several States; (2) indirect taxes, those imposed upon a privilege or right which a person exercises, such as the right to transmit or right to receive estate property (estate and inheritance taxes), or the right to make gifts of property (gift taxes). The U. S. Constitution also provides that duties, imposts and excises imposed by the Federal Government shall be uniform throughout the country.

Taxes may also be classified as (1) regressive (those graduated so as to impose highest rates on lowest incomes or property values); (2) proportional (those imposing the same proportional taxes on all incomes or property values, whether large or small); and (3) progressive (those graduated so as to impose highest rates on highest incomes or property values). In the United States, progressive income taxation is the prevailing type in both Federal and State taxation, based on ability to pay.

Income taxes imposed by the Federal Government were held by the U. S. Supreme Court to be direct taxes, and were it not for the 16th Amendment, would have to be apportioned in accordance with the U. S. Constitution. There was no such requirement of apportionment as to State income taxes, unless imposed by the particular State's constitution, and such State constitutions as had that requirements were similarly amended (31 States plus the District of Columbia impose income taxes). Income taxes on individuals and corporations are most important in Federal revenues, followed by consumption excises, and estate and gift taxes.

Business excises (licenses, gasoline taxes), and income taxes are the most important types of State taxes, followed by property taxes and inheritance taxes. Property taxes are the major source of local (municipal) taxes, but excises (sales taxes) are being increasingly resorted to as a source of municipal revenues.

(See Estate Taxes, Excess Profits Tax, Excise Tax, Gift Taxes, Income Taxes, Inheritance Tax, Internal Revenue, National Bank Taxes, Revenue Act, Stock Transfer Tax, Tariff, Tax Exempt Bonds, Tax-Free Covenant, Taxes on Investments.)

TAXES ON INVESTMENTS

With the increased importance of securities as a form of taxable property, and with increased rates of taxation, taxes on investments have become a major factor in the selection and turnover of securities, especially for investors who are subject to the higher tax brackets. The problem of legitimate reduction of taxes by investors is one concerned with location of the taxpayer, location of his investments, and type of investments held.

Taxes on investments in the United States include: Federal income taxes, State income taxes, Federal estate and gift taxes, State estate taxes, property taxes, and security transfer taxes. Income taxes are imposed upon the return from investments in interest and dividends, as well as upon capital gains or losses from sale. Estate, gift and property taxes are imposed upon principal valuation of the securities. Transfer taxes are excises imposed at specified rates.

Some of the factors which investors may consider in legitimately reducing the load of taxation are.

1. Strategic use of the capital gains and losses provisions. By control over the holding period, and timely realization of capital gains or losses, it may be possible for investors to reduce their income taxes.

2. Resort to tax-exempt securities. This generally is feasible for the wealthier investors in high tax brackets, and for institutional investors.

3. Location of securities in States having preferential taxation. This particularly applies in the case of creation of trusts and in estate taxation.

(See Taxes, Tax-Exempt Bonds.)

TAXES ON STOCK TRANSFERS

See Stock Transfer Tax.

TECHNICAL POSITION

A term used among stock speculators to indicate the situation, circumstances, set of conditions, influences, or forces operating within the market itself, as distinguished from purely external or extrinsic factors which favor a price movement upward or downward. From the standpoint of the bulls, the technical position is said to be good when the forces or influences in the market are favorable to an advance in prices, and bad when favorable to a decline. It is well known in speculative circles that successful speculation depends upon a knowlegde of the technical position of the market, as well as the outside influences or Fundamental Conditions (q. v.), e. g., political events, trade reports, earnings statements, money rates and general business conditions. The chief elements affecting the technical position are: (1) whether the market is overbought or oversold; (2) the extent of the short interest; (3) whether stocks are widely distributed, or centered in the hands of a few; (4) the extent of public participation; (5) activity; (6) the attitude of big operators; (7) the quantity of stop loss orders present above or below the current level of quotations; (8) the sensitiveness of speculators to bad news; (9) the extent to which the market has advanced or declined without reaction or rally; (10) the extent to which pyramiding is evident; and (11) whether margins are thin or heavy.

Short-swing operators take advantage of their knowledge of the technical position and place their orders accordingly.

TECHNOCRACY

A derived term meaning rule by technologists. Representing a body of thought, technocracy is an interpretation of technology—an attempt to recreate a system or social mechanism, based on a scientific use of technological forces. It claims that the social problem of production and distribution on the North American continent is a technological one, and hence would discard all orthodox or traditional approaches to management of society, i. e., political and economic, and substitute a system in which the productive capacity of the physical equipment of the continent would be utilized at a full balanced load. Thus, Technocracy is non-political, non-democratic and non-philosophical, contending that

the modern complexity of industrial-economic-social-political problems cannot be solved by political and legalistic minds.

Technocracy had its inception in an organization known as the Technical Alliance of North America, which began functioning in 1919 in New York City. This group included Thorstein Veblen, Bassett Jones, Richard Tolman, Frederick L. Ackerman, Stuart Chase, and Howard Scott, who acted as chief engineer of the Technical Alliance.

The primary aim of this group was to ascertain the possibility of applying the achievements of science to social and industrial affairs. With this in mind the Alliance proceeded to make a survey of the energy and natural resources of the North American Continent—all that territory included between the Panama Canal and the North Pole, studying the industrial evolution that had taken place therein. This survey showed graphically the operating characteristics of the present industrial system with its alleged waste and leakage, and worked out a tentative design of a complete co-ordinated system of production and distribution. The chief objective was to provide a better standard of living for the people living in North America with the least possible waste of non-renewable resources.

The chief conclusions of Technocracy are: (1) That there exists on the North American Continent a potential condition of plenty such as is to be found nowhere else in the world: marvelous natural resources, an abundance of raw materials, huge productive machinery adequate for turning out vast quantities of goods, a body of trained technicians and skilled workers,—the finest in the world,—capable of operating this productive machinery in the most efficient manner. (2) The second conclusion of Technocracy is that the price system can no longer function adequately as a method of production and distribution of goods. That the invention of power machinery has made it possible to produce goods in abundance with a relatively small amount of human labor. That as machines displace men, however, purchasing power is destroyed, for, if people cannot work for wages and salaries, they cannot buy goods.

TELEGRAPHIC TRANSFERS

The transfer of money to a distant point for immediate use through the agency of a telegraph or cable company. A charge is made both for the transfer and telegram. The remitter may waive identification of the payee to the company's cashier at the distant office. (See Cable Transfer, Money Transfer.)

TELEPHONE SECURITIES

Securities (bonds, debentures, preferred stock and common stock) of companies in the telephone industry, the largest of the public communications industries, which include the telephone industry, the wire-telegraph industry (land lines and ocean cable), and the radiotelegraphic industry.

The telephone industry alone ranks as the third largest public utility industry in the United States, ranking after the electric and transportation industries, with total plant investment of approximately $7 billion, of which the Bell System (American Telephone & Telegraph Co.) alone accounts for over $6 billion. Total revenues of the industry are over $2.2 billion annually, of which the Bell System accounts for about $2 billion. The Bell System operates about 80% of the telephones in the United States. There are, nevertheless, about 6,000 independent telephone companies in the United States, the largest being the General Telephone Corp. system, which operates about 1 million telephones, compared with the Bell System's 28.5 million telephones.

Because of the essential nature of the telephone to modern business and living, the telephone industry enjoys great stability in operations. Earnings, however, are affected by fluctuations of the business cycle, and since rates are fixed by public regulation, rise in operating costs necessitates rate relief in order to maintain earnings margins and afford a fair rate of return on operating property. Growth in operating revenues, reflecting expansion in number of telephones installed, has been very substantial, but considerable further growth is reflected in current (1948) long term expansion programs. Operating revenues of the industry have grown from $82 million in 1902 to $665 million in 1922, $1 billion in 1927, and $2.2 billion in 1946, but substantial further expansion, particularly in residential telephone service, is budgeted by the Bell System and independents for the future.

Public regulation of the telephone industry is conducted by the Public Service Commissions of the various States for intrastate operations, and by the Federal Communications Commission for interstate activities, the latter agency having taken over Federal regulation from the Interstate Commerce Commission under the Federal Communications Act of 1934.

Capitalization of the industry at the close of 1946 was about 45% in debt and 55% in stock, and as an objective, the American Telephone & Telegraph Co. itself, through the medium of convertible debentures, hopes to achieve a ratio of 1/3rd in funded debt and 2/3rds in stock.

Because of the stability of operations, regularity of dividends (the American Telephone & Telegraph Co. as a policy has maintained unchanged its $9 dividend rate on its stock through good and lean years), and growth possibilities, telephone securities enjoy generally high investment regard.

In the wire-telegraph industry, the Western Union Telegraph Co. in 1943 became the sole company in the field when it merged the Postal Telegraph Co. Increased use of air mail and of the telephone for long distance calls have reduced telegraph business over the long term.

TELEREGISTER

An electrically manipulated board for posting stock quotations as they are made, and controlled from a central office. The boards, which may be installed in the board rooms of brokers' offices, are rented, as a service, from the Western Union Telegraph Company

TELLER

A general term applied to a bank employee who in one capacity or another transacts business with customers "over the window." The paying and receiving tellers are the most familiar examples. In large banks there

are also, the mail teller, note teller, collection teller, coupon teller, etc. (See Collection Teller, Coupon Teller, Paying Teller, Note Teller, Receiving Teller.)

TEMPORARY BONDS

Bonds issued as temporary certificates for permanent or definitive bonds, and which differ from temporary receipts in that they contain the same complete recitals that appear on the permanent forms, and are not merely acknowledgments of payment and promises to delivery. The term also denotes bonds or certificates issued for temporary financing purposes, thus, receivers' certificates are temporary certificates.

TEMPORARY CERTIFICATES

See Temporary Bonds.

TEMPORARY RECEIPTS

Corporations floating a new bond; note, or stock issue, frequently desire to obtain possession of the new funds as soon as possible and before permanent, engraved certificates can be prepared for delivery. To provide for this contingency, temporary printed or lithographed receipts are issued to purchasers upon payment. These receipts are acknowledgments of payment and promises to deliver permanent or definite bonds (or stocks). They are held by the purchasers until the issuing corporation announces that definitive forms are ready for substitution upon surrender of the temporary receipts.

TEN PER CENT. RULE

This term has two meanings:

(1) See Twenty Per Cent. Rule.

(2) A term which refers to the provision in the National bank laws, which prohibits a National bank from lending, except under certain conditions, more than 10 per cent. of its capital and surplus to one person, firm, or corporation. (See Limitations on Bank Loans.)

TEN POINT MARGIN

Margin, i. e., a partial payment, equal to $10 a share for each share purchased. The partial payment of $1,000 on the purchase of 100 shares, whether the price per share is $25 or $90, is a ten point margin. Before margin requirements became subject to regulation in 1934, a ten point margin was usually the smallest margin which a broker would accept for medium priced stocks. Present margin requirements, effective February 1, 1947, are uniformly 75% both under Regulation T (for extensions of credit by brokers and dealers on listed securities, and for short sales) and under Regulation U (for loans by banks on stocks). From January 21, 1946 to January 31, 1947, margin requirements were 100%. (See Margin Buying.)

TENANCY BY THE ENTIRETY

In law, the particular type of tenancy created in real estate granted or devised to husband and wife, where no express words indicate the creation of a different estate. Each has the right to an undivided half in the real estate subject to the tenancy, and in the event of death of either, the right of survivorship enables the survivor to take the whole. During life, neither husband nor wife may convey his or her interest so as to cut off the right of survivorship. However, the interest of either party may be mortgaged, but in the event of foreclosure, the purchaser at foreclosure sale merely becomes a tenant in common with the other party subject to the latter's right of survivorship.

Tenants by the entirety may terminate the tenancy by a joint deed of both husband and wife conveying the real estate. The tenancy may also be terminated by an absolute divorce, upon which the parties merely become tenants in common. A voluntary partition as between the husband and wife may also terminate the tenancy by the entirety. (See Joint Tenancy, Tenancy in Common).

TENANT

Generally, a person who is entitled to a terminable interest in the possession, enjoyment, or occupation of an estate, such as for life, for years, from year to year, at will, or by sufferance.

In the landlord-tenant relationship, the tenant is one who, not being the owner, occupies real property under consent of the owner and in subordination to the owner's title, but is entitled to exclusive possession, use and enjoyment, usually in consideration of payment of rent as specified in the Lease (q.v.).

Classified according to the number and relationship of of owners, estates are in Severalty, in Joint Tenancy (q.v.), Tenancy in Common (q.v.), and Tenancy by the Entirety (q.v.).

TENANCY IN COMMON

In law, the type of tenancy or estate created when real or personal property is granted, devised or bequeathed to two or more persons, in the absence of express words creating a Joint Tenancy (q.v.). If the persons are husband and wife, and the property is real estate, a Tenancy by the Entirety (q.v.) will automatically arise, unless there are express words creating a Joint Tenancy or Tenancy in Common.

A tenant in common holds and may convey, mortgage, devise or bequeath his undivided interest in the property, real or personal. There is no right of survivorship, as in the case of Joint Tenancy or Tenancy by the Entirety, so that death of a tenant in common does not vest his interest in the surviving tenants. In the event of conveyance, purchaser at foreclosure of mortgage, devisee or legatee, or distributee in case of intestacy, become tenants in common with the other original tenants in common. Most customary method of termination of tenancy in common is by partition, voluntary or by action to compel partition. Also, conveyance by tenants in common of their interests to a single tenant in common will terminate the tenancy in common by merger. A tenant in common is liable to other co-tenants for waste, and canot purchase an outstanding claim to the exclusion of his co-tenants, or create an easement binding the real property against himself or his co-tenants.

TENDER

This term has three meanings:

(1) Same as Bid. (See Bid Price).

(2) See Legal Tender.

(3) In law, the act of offering unconditionally to a claimant or creditor, in satisfaction of the claim, the sum of money or property considered to be due and owing.

TENNESSEE VALLEY AUTHORITY

The largest Federal power agency, originally created by the Tennessee Valley Authority Act of May 18, 1933, to take over the Muscle Shoals Dam (Wilson Dam), and execute the provisions of the Act (q.v.) with respect to flood control, development of water power, and reforestation. Construction of the Muscle Shoals Dam and its power plant in 1916 has been held by the U. S. Supreme Court valid under legislation constitutional under the war and commerce powers of Congress, for the purposes of national defense and the improvement of navigation. In the exercise of these functions, the incidental development and sale of power have also been held constitutional.

Accordingly, the Authority embarked on a vast construction program, whereby it has built 16 major dams in the Tennessee River watershed, and has in addition, acquired five other dams and controls the flow at five additional dams owned by the Aluminum Company of America. Total installed capacity of owned power plants as of April, 1948 aggregated 2,259,800 k.w., compared with total Federally owned installed capacity of electric generating plants of about 5,000,000 k.w. Present extension or construction of plants will bring the TVA's installed capacity to over 3,000,000 k.w.

In selling this power, the Authority is directed by its originating Act to give preference to states, counties and municipalities, and cooperative organizations not organized for profit, and to construct transmission lines within reasonable limits to reach potential power users of this type. Basic policy is that the sytem shall be considered primarily a benefit to the people of the Tennessee Valley by making available an abundance of cheap power particularly to domestic and rural consumers. Power not entirely contracted for these purposes may be sold to private distributors where such distributors agree to resell the power at rates fixed as reasonable by the board of directors of the Authority. As of April 30, 1948, the Authority included as customers 92 municipalities, 48 cooperatives, and 3 privately-owned utility companies, as well as supplying directly one rural area, and interchanging power with 18 privately-owned utility companies. Power is also sold wholesale to a number of large industrial users, such as the Aluminum Company of America, Monsanto Chemical Co., Victor Chemical Works, Reynolds Metals Co., etc.

Accurate and complete accounts are required to be kept, and a financial statement and complete report submitted to the Congress and the President in December of each year covering the preceding fiscal year. The Comptroller General of the U. S. is empowered to audit the books. Net proceeds from sale of power and other revenues are to be paid to the U. S. Treasury after suitable provision in the opinion of the board of directors for operating and capital needs. From June 11, 1933 through June 30, 1947, operating revenues were $260 million, of which $232 million were earned in the seven years preceding. Accounts are kept on an accrual basis, and properties carried at cost, with suitable provision for depreciation and amortization. Statement as of June 30, 1947 reported total assets of $805.7 million, of which $741 million was the value of fixed assets. In addition to borrowing powers, the Authority has received since organization total appropriations of $736.2 million from Congress. It pays no Federal taxes as a Federal agency, but amendment of the Act in 1940 provided for more equitable distribution and increase in payments to States and counties in lieu of taxes.

The Authority is composed of three directors, appointed by the President by and with consent of the Senate for terms of 9 years each, expirations of terms rotating every 3 years. One of the directors is designated as Chairman.

(See Public Utilities.)

TENNESSEE VALLEY AUTHORITY ACT

An act, approved May 18, 1933, which, among other things:

(1) Created the Tennessee Valley Authority to maintain and operate properties owned by the United States near Muscle Shoals, Alabama, in the interest of national defense and for the agricultural and industrial development of the Tennessee Valley and to improve navigation in the Tennessee River and control the flood waters of the Mississippi and Tennessee Rivers;

(2) Authorized the TVA to acquire real estate and build dams, powerhouses, reservoirs, transmission lines and power projects; unite power installations into one or more transmission line systems, contract with commercial producers for fertilizers, manufacture experimental fertilizers, make and sell explosives to the government at cost, produce, sell and distribute power; lease nitrate plant No. 2 for private manufacture of fertilizer; sell $50,000,000 of 3 1/2 per cent. fifty-year bonds to finance improvements and, with Presidential approval, to complete dam No. 2 and the steam plant at the No. 2 nitrate plant at Muscle Shoals; and

(3) Ordered the construction of the Cove Creek Dam across the Clinch River in Tennessee, with a power transmission line from Muscle Shoals.

TERM

The period or duration of a contract, estate, note, acceptance, time draft, bill of exchange, or bond.

(See Maturity.)

TERM LOANS

The term applies to intermediate credit of a capital nature extended by commercial banks and the larger life insurance companies to corporations unable or unwilling to run the risks of capital market underwriting for new capital for such purposes as increase in working capital, purchase of equipment or other fixed assets, and other capital purposes. Commercial banks in particular began to extend such loans in the last decade as an adjustment to changed credit conditions, in which the demand for traditional short-term commercial loans has declined.

Term loans are characterized by regular annual amortization of a fixed principal amount, followed by a large "balloon" final maturity, usually in the tenth year Interest rates are graduated according to the serial maturities, and on the average for the 10-year full term compare with capital market flotations of similar maturity. In addition to periodic amortization, the term loan agreement usually contains a number of protective provisions, such as maintenance of a minimum working capital or current ratio; restrictions on dividends to earnings realized subsequent to the loan and if the minimum working capital requirements are satisfied; restrictions on further borrowing, short term or long term; restrictions on pledging or mortgaging of assets,

or assumption of contingent liabilities; provisions for continuity of management; submission of budgets and financial statements, audited and unaudited; in the event of acts of default, acceleration of all remaining maturities, etc.

Since term loans are an investment banking type of credit, they are usually suitable only for the larger commercial banks, with diversified loans, and are confined to a suitable proportion of the volume of loans. The change in emphasis in examination procedure to importance of ultimate payment rather than the slowness of payment, and the change in the Federal Reserve Act (Sec. 10B) permitting Federal Reserve Banks to make advances on "satisfactory collateral" of member banks if such need arose, have led to a larger volume of term loans by the more aggressive commercial banks. (See Loans.)

TERMINABLE ANNUITY

See Annuity.

TERMINABLE BONDS

Bonds which have a fixed compulsory maturity, as distinguished from indeterminate or perpetual bonds. (See Indeterminate Bonds, Perpetual Bonds.)

TERMINAL BONDS

Bonds which are obligations of a terminal company, which in turn may be owned by, or the property of which may be leased to, one railroad or a number of railroads jointly, usually the latter. Proper terminal facilities are of utmost importance to railroads, and upon these facilities depend the volume, dispatch and cost with which traffic is handled. Terminal costs are usually large and many railroads co-operate in the use of terminal facilities, as evidenced by the frequency of union stations and joint freight terminals. The formation of a terminal company, the property of which (yards, buildings, tracks, etc.) can be mortgaged to secure additional capital, accounts for the origin of this class of bonds.

The revenue accruing to a terminal company is derived from charges to the railroad companies using the facilities, apportioned on the basis of traffic.

Terminal bonds are frequently guaranteed by the railroads sharing the company's facilities. When terminal bonds are secured by valuable property located at important railroad centres, or shipping points, with earnings in excess of interest charges, or are guaranteed by railroads of high credit standing, they constitute a high grade investment.

TERMS OF SALE

This term has two meanings:

(1) The price basis asked for something offered for sale.

(2) The conditions, other than price, under which goods are sold, and usually the conditions under which payment is to be made, particularly time of payment at the price named and discounts offered for payment before the date of stipulated payment becomes due. Goods sold at wholesale, and many retail accounts, are arranged on a credit basis, with payment expected on certain dates after sale. Wherever goods are sold on credit, there is a definite understanding as to the time of payment. This statement of understanding is familiarly known as "terms of sale," or might also be known as the terms of credit, since it refers to the time that the credit is allowed.

In retail trade, terms are net without discount. That is, no discount is allowed from the price quoted at the time of the sale, but payment is expected in accordance with the terms of sale. In wholesale trade, however, the price quoted is on the basis of payment within ten days, thirty days, sixty days, etc., and a discount is allowed if payment is made before. For example, the terms of sale for fresh meats are usually on a weekly basis, while groceries are generally sold on terms of 1 per cent. discount if paid in ten days, or thirty days for payment are allowed if no discount is to be taken. Terms of sale in the grocery trade are quoted 1 per cent, ten days, net thirty days, meaning that the buyer has the option of paying the full amount of the bill in thirty days, or of paying cash less 1 per cent. in ten days. The latter is a cash discount transaction.

The terms of sale are influenced by the rate of turnover in the trade as well as by the system of marketing. Where the turnover is rapid, as in the case of meats and groceries, the terms of sale are short, but in dry goods they are longer, and in furniture still longer. In dry goods, the usual terms are 2 per cent. ten days, net sixty days extra (due in seventy days). (See Auction.)

TERRITORIAL BONDS

See Insular Bonds.

TESTAMENT

A term in former use now largely supplanted by the term Will (q. v.).

TESTATOR

One who makes a Will (q. v.).

TESTATRIX

Feminine form of Testator (q. v.); a woman who makes a will.

TEST NUMBER

In order to insure the authenticity of cable transfers, banks and foreign exchange, dealers prefix or append a code number or word to the message as a proof of its validity. This test number usually changes with each message, and since the formula for computing or decoding a test number is kept under lock and key and subject only to official supervision, it authenticates a message just as an officer's signature validates a bank draft. An example of a typical test word formula is: "Add together the day of the month upon which the message is sent, the number corresponding to the day of the week (accompanying table), and the month (same table), and the numbers for the amount in thousands, hundreds and units (same table). Then add your private number which is _____."

In order to further safeguard the private number, it is usually fixed after the formula has been made, or it may be cabled separately. Although the above mentioned formula numbers are permanent, or are changed at infrequent intervals, the test number usually varies with each cable. It is more difficult to solve a test number without the formula than to forge a signature. (Wolfe, O. H.: Practical Banking).

TEST WORD

See Test Number.

TEXTILES

During the past two decades, development of the textile industry in the United States has been featured by the rapid development of the rayon industry, both absolutely and in proportion to total textile consumption.

Since 1926, the aggregate and relative consumption of textile fibers in the United States has compared as follows:

(millions of pounds)

	1926	Per Cent.	1936	Per Cent.	1947	Per Cent.
Cotton	3,214.8	87.3	3,470.2	81.5	4,710.7	73.6
Wool (Scoured)	342.7	9.3	406.1	9.5	698.0	10.9
Rayon	60.6	1.6	322.6	7.6	987.9	15.4
Silk	65.9	1.8	57.8	1.4	2.5	0.1
Total	3,684.0	100.0	4,256.7	100.0	6,399.1	100.0

Source--Rayon Organon.

(See Cotton, Wool.)

THALER

A silver coin of Germany, formerly current, worth three marks. (See Mark, Reichsmark.)

THIN MARGIN

A small margin; a "shoestring" margin; a margin which gives the owner only a small equity in his purchase.

A narrow or insufficient margin which leaves the speculator's account in an exposed and precarious condition in case of a declining market. Brokers customarily do not carry stocks on margin for customers unless there is ample margin, and will not continue carrying the stocks until the margin is exhausted.

THIRD MORTGAGE

A mortgage placed upon property which is already encumbered with a first and second mortgage. For instance, a piece of real estate appraised at $50,000 may be encumbered with a first mortgage of $20,000 and a second mortgage of $10,000. If the owner wishes to raise an additional $5,000 by using the property as security, a third mortgage will be created, making a total mortgage indebtedness of $35,000. In case of foreclosure, a third mortgage would not be paid until both the first and second mortgages have been fully satisfied.

In practice, third mortgages are rare, since it is difficult to find a lender on this class of security, although where the sum of the first and second mortgages constitutes a debt of less than one-half of the appraised value of the property, there is nothing intrinsically unsound in lending a small amount on a third mortgage. To avoid the stigma of borrowing on a third mortgage, the property owner in the above example would likely, if he desired to raised additional money, pay off the first and second mortgage loans and issue a single first mortgage for $35,000.

(See Mortgage, Second Mortgage.)

THIRD MORTGAGE BONDS

Bonds secured by a mortgage upon property already encumbered with an issue of first or second mortgage bonds. Such bonds represent a third lien upon the assets and earnings of the issuing corporation. Third mortgage bonds are rare, but among certain railroads, general or consolidated mortgage issues, part of the property falling under such general or consolidated mortgages is oftentimes already encumbered with a first and second mortgage.

(See Third Mortgage.)

THIRD OF EXCHANGE

See First of Exchange.

THIRD TELLER

Another name for Mail Teller (q.v.).

THOMAS AMENDMENT

The popular name for Title III of the AAA Farm Relief and Inflation Act, approved May 12, 1933. It was the first of major legislation on gold and silver, and was the antecedent of the Joint Resolution of June 5, 1933 (q.v.); the Gold Reserve Act of 1934 (q.v.); and the Silver Purchase Act of 1934 (q.v.).

For a summary of the major provisions of the Thomas Amendment, see Silver (under U. S. Legislation).

THREADNEEDLE STREET

The street in London in which several banking institutions, including the Bank of England, are located,and by extension, one of the popular names for the London banking district. Lombard Street is another street in London around which financial activities are centered, and is a more popular designation for the financial district than Threadneedle Street. It corresponds to our use of Wall Street as a popular designation for financial New York. (See Lombard Street.)

THREE-NAME PAPER

Notes, bills of exchange, bank and trade acceptances—usually some form of commercial paper—with three signatures, (either as makers or indorsers) responsible for payment, and representing separate interests, e.g., a note signed by two makers and having one indorsement, or an acceptance with the name of the drawer, acceptor and one indorser. (See Single-Name Paper.)

THRIFT DEPARTMENT

A name sometimes given to what in reality is a savings department operated in connection with state banks and trust companies in those states, e. g., New York, where the banking laws prohibit the use of the term "savings" when advertising or soliciting such accounts. State banks and trust companies, as well as National banks, may accept time deposits and since savings deposits are a type of time deposits, there is nothing to prevent these banks from soliciting time deposit accounts, if the use of the term "savings" is avoided. The purpose of this law, where enacted, is to restrict the use of the term "savings" to savings banks exclusively. To comply with the law, therefore, accounts for this department are solicited under the name of "thrift" accounts, "special interest" accounts, "compound interest" accounts, or "time deposit" accounts. (See Savings Accounts.)

THRIFT SOCIETY

A term usually applied to an association of employees in a business institution for the purpose of promoting habits of thrift among them by receiving savings from its members and investing them more profitably than would be possible in a savings bank. Frequently the company supervises the investment of the thrift fund and guarantees payment of the principal and interest at a certain rate.

TICAL

The international current unit of Siam (Thailand), equivalent to 100 satang. (See Foreign Moneys--table 2.)

TICKER

The popular name given to an electrical typewriter, introduced in 1867 for the purpose of transmitting market quotations, and operated from the board room of a stock or other exchange. Quotations are printed on a narrow ribbon of paper known as tape, and are transmitted by telegraph to instruments rented to subscribers throughout the entire United States.

The New York Stock Exchange maintains two ticker services, one for stocks and one for bonds. The stock ticker is operated by an electrical collator which is so constructed that it automatically receives and distributes the quotations from the sending operators located on the floor or board room of the exchange. The floor operators sit at typewriter keyboards and receive slips containing records of transactions—giving number of shares and prices—from floor runners. Actually no typing is done, the record appearing in the form of perforations on a tape, which is fed from the machine to an electrical transmitter. It is this perforated tape passing through the transmitter that telegraphs the quotations to the collator. The collator is a switching device which automatically receives from one operator and cuts out the others. When quotations from one operator are fed into the collator, the switch automatically cuts him out and begins to receive from another who has quotations to communicate. All operators can thus work simultaneously and at full capacity although the line to the collator is open to only one at a time.

In 1930, a new high-speed ticker was introduced. The difference between the new ticker and the predecessor device was that the former ticker stopped for selection of characters when it printed a character; the new ticker does not so stop. The function is in two parts: it selects the character on the type wheel and then prints it. The new ticker will print and select at the same time. It will shove up its functions until they overlap. The old ticker got its name from its ticking. It ticked and printed. The new ticker prints with every tick; prints ten characters a second, one every tenth of a second or 600 per minute. This means two stock market transactions every second. The new ticker comprises an electric motor—one-seventeenth horsepower and especially built—operated from local electric light supply. This speed is controlled by an adjustable governor. This motor drives two shafts, a selecting shaft and printing shaft. The selecting shaft selects the character to be printed; the printing shaft prints it. The characters to be printed are determined by the conjoint action of the selecting shaft and a controlling magnet operated by a transmitter at the Stock Exchange.

Through permutation control, a technical term meaning control of the printer instrument in brokers' offices, it is possible to bring about various combinations of the use of a small number of units to control a large number of conditions. The transmitter makes the type wheels of all the printers in all the offices rotate in unison with its own direction. The transmitter does this by operating a polarity reverser. A polarity reverser reverses the direction of the flow of current on a circuit. It alternately runs up hill and down hill. A perforated tape permutation set up in the control apparatus stops the transmitter and causes the character corresponding to the permutation selection to be printed. A number of men operate keyboards like typewriter keyboards. As they punch the keys, they perforate the tape and the tape is passed through boxes that have teeth that make contacts through the holes in the tape or fail to make contacts where there are no holes, thus resulting in the desired characters in the transmission.

There is a surplus of tape when the transmission fails to keep up with the market. The operators of the machines always keep up with the market. Their surplus of tape is stowed in baskets. They can go away from their machines, on the heaviest days, and coming back find tape of their punching still waiting to run out. The failure of the ticker to keep up with the market has never been a human problem, but rather a mechanical problem. The problem has been to make a machine that would take the perforated tape fast enough and not how to make the operators punch faster.

Formerly, the ticker was faster than the single operator; now permutation control makes possible the employment of many operators. There are operators always punching tape between ten in the morning and three in the afternoon and they are relieved from time to time. They punch a number of transactions on their tape and then punch a release key which releases the system to the next position. The permutation keys are used to print characters; there is one that is punched to disconnect, and when this one is struck it opens the system to another operator. This transfer to another operator is not noticeable on the tape except to the trained observer, being a part of automatic control.

More than 9,000 of the new tickers were installed throughout United States and Canada in the 15 months prior to September 2, 1930, and put in operation for the first time on that day. Of these, about 2,800 were operated by the New York Quotation Company, a subsidiary of New York Stock Exchange, and about 6,200 by Western Union Telegraph Company. The former serves firm members and their branches and the latter nonmembers.

In 1925, a projection device was introduced by which stock exchange quotations are projected on a screen from the tape as they are printed. The quotations move along as printed and about six quotations are visible at a time. The projector is similar to that used in moving pictures or a stereopticon. These projectors are now widely used in the customers' rooms of brokerage offices, although they do not dispense with the use of the boards which show the high, low, and latest quotations for the day, as well as the previous day's closing prices. A projection machine has also been installed on the floor of the stock exchange so that it is no longer necessary for the floor traders to leave their posts to read the tape.

Ticker services are also maintained by the New York

Curb Exchange, the New York Cotton Exchange, the Chicago Board of Trade, and other leading exchanges. In addition to quotation tickers, a highly important ticker service is the Dow Jones News ticker, which constantly operates before, during and after the close of the Exchange, publishing news and quotations affecting the market as such news matter becomes available. (See Quotation Ticker, Ticker Abbreviations.)

TICKER ABBREVIATIONS

New York Stock Exchange ticker abbreviations may be explained as follows:

One price following the abbreviation of a stock signifies a sale of 100 shares. Thus, NP. 20 means the sale of 100 shares of Northern Pacific at 20.

When more than 100 shares are sold, the number of shares sold precedes the price. Thus, NP. 2.20 1/2 means the sale of 200 shares of Northern Pacific at 20 1/2. NP. 3. 20 3/4.1/4.1/2. means the sale of 300 shares of Northern Pacific at 20 3/4 followed by the sale of 100 shares at 20 1/4, and another 100 shares at 20 1/2.

An offer alone without a bid is preceded by an 0. Thus, NP.0.19 means an offer of 19 for Northern Pacific.

A bid alone without an offer is followed by a B. Thus NP .19 1/2B. means a bid of 19 1/2 for Northern Pacific.

When a sale is not reported in its right place, the price is preceded by the abbreviation SLD. Thus, NP. SLD. 20 1/2 means that a sale of Northern Pacific has not been reported in the right place.

When an error has been made by a reporter, or in printing, the last letter or figure is repeated several times, indicating that the quotation is to be eliminated. Thus, NP. 20 1/2 1/2 i/2 1/2 means that a sale of Northern Pacific is to be disregarded.

For abbreviations of the stocks on the New York Stock Exchange, see New York Stock Exchange Abbreviations.

TICKET DAY

See Settlement Days.

TICKLER

A Maturity index.

A book in which the maturity dates of notes, discounts, acceptances, bonds, and sometimes dividends, interest payments, and the like are journalized, to serve as a future reminder to the bank or brokerage house that these instruments will need attention at some future date.

The most important tickler in a bank is that for showing the maturity of notes and acceptances. It is essential that a note be presented on the maturity date in order to hold the indorser liable. The note maturity tickler, therefore, is indispensable in the management of a bank, whether large or small, in order to guarantee presentation of notes at maturity and thereby protect the bank from possible losses through the release of indorsers, should presentation be neglected.

The purpose of a note maturity tickler is to record all notes in such a way as to indicate the dates on which they mature. This is accomplished by journalizing (recording chronologically) notes by maturity dates at the time they are discounted or purchased. Consecutive pages in the tickler are devoted to consecutive maturity dates. By reference to the tickler, consecutive pages of which are headed with consecutive dates, it is possible to tell at a glance what notes are maturing on any given date and the amount of the total maturities for any given day.

Maturity ticklers are also maintained to indicate compulsory and optional maturity dates of bonds which a bank holds as its own investments.

TIGHT MONEY

When credit is difficult to obtain, although high grade collateral is offered, and high interest rates prevail, money is said to be tight. (See Stringency.)

TILL MONEY

Money for use at the counter, as distinguished from that kept as reserve in the vault, or deposited with other banks. The paying-teller is usually exclusive custodian of the till money necessary for current "over the window" use. (See Paying Teller.)

TIMBER BONDS

The term applied to bonds issued to finance logging and lumber-making operations, and secured by timber lands. These bonds were formerly current in the lumber industry as a means of raising needed capital, particularly after the turn of the century, when Chicago was the principal market for these issues, and there were a number of independents operating in the Middle Western timber areas. Leading lumber companies publicly owned at present are the Long Bell Lumber Company and the Weyerhaeuser Timber Company, both operating in the Northwest, where the center of the lumber industry has shifted.

TIME BILLS

See Bill of Exchange, Draft, Foreign Bills of Exchange.

TIME CERTIFICATE OF DEPOSIT

See Certificate of Deposit.

TIME DEPOSITS

Deposits which are not subject to check, and on which the bank may require 30 days notice of intention of withdrawal. The Federal Reserve Act (section 19) before amendment by the Banking Act of 1935, which left the definitions of deposits to the Board of Governors of the Federal Reserve System, defined time deposits as comprising "all deposits payable after 30 days, all savings accounts and certificates of deposit which are subject to no less than thirty days' notice before payment, and all postal savings deposits."

As defined by the Board of Governors of the Federal Reserve System, the term "time deposits, open accounts," is held "to include all accounts not evidenced by certificates of deposit or savings pass books, in respect to which a written contract is entered into with the depositor, at the time the deposit is made that neither the whole nor any part of such deposit may be withdrawn by check or otherwise, except on a given date or on written notice which must be given by the depositor a certain specified number of days in advance, in no case less than 30 days."

Member banks wherever located are required to keep a reserve of 7 1/2 per cent. against time deposits, in

accordance with latest revision of reserve requirements effective September 16-24, 1948.

According to the New York state banking law, time deposits are those the payment of which cannot legally be required within thirty days. (See Deposits.)

TIME DRAFT

See Draft.

TIME GROUP

A term used among collection and transit clerks to indicate a group into which out-of-town checks are assembled to be forwarded for collection through the Federal Reserve Check Collection System (q.v.). The proceeds of out-of-town checks become available as reserve to the sending bank in a certain number of days indicated by the Federal Reserve Schedule Showing When Proceeds of Items Will Become Available (q. v.). This schedule divides out-of-town checks into a certain number of time groups, each Federal Reserve bank making its own schedule. For the New York Federal Reserve bank four time groups known as (1) immediate credit points; (2) one-day points; (3) two-day points; and (4) three-day points are shown in the schedule. (See Transit Department.)

TIME LOAN

A loan which becomes payable on a future specified date and which is not terminable at the option of either borrower or lender before that time. In practice, a bank will usually accept payment of a time loan before compulsory maturity with a pro rata abatement of interest or discount. (See Loans.)

TIME LOCK

A mechanical contrivance for preventing the opening of the door of a vault even though the combination is worked, before the hour set for opening by adjusting the attached clock.

TIME MONEY

Money loaned for a definite period and payable on a specified future date, as distinguished from call or demand money. (See Money Rates.)

TIME PAPER

A general term including all forms of notes, acceptances, bills and drafts maturing on specified future date, as contrasted with paper payable on demand. (See Loans.)

TIME TO RUN

When a note evidencing a time loan is presented to a bank for discount, it must be timed, in order to ascertain the precise maturity date and the amount of the discount. A 90 day note dated April 1, may be presented for discount on April 15. While its term is 90 days, its time to run is the number of days elapsing between the date of discount and its maturity. In calculating the time to run, an exact count of the number of days is taken, e. g., in the above illustration the time to run is 75 days (discount is computed for 75 days) and the maturity date falls on June 29 (not June 30). If the maturity date should fall on Sunday, or a holiday, the note becomes payable, in most states, on the following business day. Accordingly another day, or days, may be added in computing the discount. In some states notes falling due on Sunday are collectible on the Saturday preceding. Reference must be made to the laws governing the collection of notes in the various states, including the Negotiable Instruments Law as adapted by the particular state.

TIN

One of the important commercial base metals, this metal, like copper, has been known and used since ancient times. Tin mines at Cornwall (England) are the oldest known, having been operated for centuries. Up to about 1885, the world tin production was obtained almost exclusively from Cornwall and the Far East.

Metallurgy.—Due to its higher price, the use of tin is much less than in the case of copper, lead or zinc. The qualities which give tin its industrial advantage are: not readily acted upon by weak acids, including vegetable, fruit and animal juices; and resistance to oxidation under ordinary conditions. Therefore, tinplate is used largely in the canning industry for preservation of food products, as well as in kitchen utensils and roofing. Tinplate is sheet iron coated with tin, and this semi-finished material is much cheaper than solid tin. The tin plate industry in the United States normally takes about 50% of tin consumption. Tin is also used in the manufacture of solder and tin foil, as an alloy with other "composition" metals.

Production.—The chief source of supply is the Far East, which contributes over 60 per cent. of world production. About 60 per cent. of the tin produced in the Far East is from the Malay Peninsula, and about 30 per cent. from the Dutch East Indies, the balance coming from Siam, China and Burma. In the Far East, mining is carried on through dredging or washing gravel, with consequent low production costs. In Bolivia, representing about 12 per cent. of world production, tin is obtained by shaft-mining operations at higher costs. While in England the mines extend to great depths, Cornwall now represents a minor portion of world tin production. Africa, including Nigeria and Congo, produces less than 10 per cent. of the world's output, the balance being obtained in Cornwall, Australia, Spain, Mexico and other countries. Tin is not produced in commercial quantities in the United States, which alone consumes over 60 per cent. of the world consumption.

Other than production controlled by the Netherlands Government, British companies control the main source of tin supply. World production of tin in 1947 recovered to about 114,000 tons, compared with low of 86,000 tons in 1945, high of 246,000 tons in 1941, and 173,000 tons in 1939 (long tons). There is also a secondary source of supply from scrap and other sources, which in the United States contributes about 24,000 tons to supply.

While "Straits Settlement" tin (tin refined at smelters in Singapore and Penang) constitutes the greater part of the tin imported into the United States, smelting of tin is performed in this country in the Texas City, Texas Government-owned smelter which uses Bolivian concentrates.

Uses.—The most important single use of tin is tinplate, which is employed mainly in the manufacture of tin containers for the preservation of fruits, vegetables, meats and other food products, as well as containers for motor oil, tobacco and numerous articles. Tin is

the chief ingredient in collapsible tubing used as a container for toothpaste and other pharmaceutical products, as well as in tin foil.

Tinplate is also used in the manufacture of kitchen utensils, and for roofing. Through the latter use, as well as the extensive use in the manufacture of solder and as an alloy with other metals, it is an important product in the building industry. Tin is an indispensable alloy in producing various commercial metals, such as babbitt and other bearing metals, tern plate, bronze, gun metal, pewter, and type metal. Directly and indirectly, tin is used in numerous industries. The United States consumes about 62 per cent. of world tin production, with the United Kingdom second in importance among consuming countries.

Production Control.—Tin is one of the few raw materials over which production control has been established with apparent success. The International Tin Committee was formed to control tin production, as of March 1, 1931, in the Federated Malay States, Dutch East Indies, Bolivia and Nigeria, representing about 90 per cent. of the world's productive capacity. Subsequently, Siam, French Indo-China and certain African territories became participants, increasing the production controlled to over 95 per cent. of productive capacity. While the original agreement terminated December 31, 1933, it was subsequently extended. The International Tin Pool, formed in September, 1931, to hold excess stocks, was able to gradually liquidate most of its holdings in the latter half of 1933. Under the International Tin Committee agreement, production quotas and export quotas were established as percentages of agreed tonnages allotted to the principal producing countries.

During World War II, supplies of tin and tin ores were centralized in the Combined Raw Materials Board, which was succeeded in 1945 by the Combined Tin Committee, which body now controls international allocations of exports to consuming countries. Members of the Committee are: United States, United Kingdom, France, Belgium, Netherlands, Canada, China and India.

In the United States, under legislation effective June 1, 1948, and extending through June 30, 1949, allocation, price and distribution controls and the stockpiling program have been continued. The Tin Sales Corporation, agent for the Reconstruction Finance Corporation, in 1948 raised the price for United States consumers to $1.03 per pound, in coordination with the British Ministry of Supply, which performs similar functions for Great Britain. Most of the tin consumed in the United States is purchased from Bolivia.

Market.—For many years, the London Metal Exchange has been the active and dominant market for tin. However, dealers and brokers maintain a "spot" market in New York, and a futures market was conducted on the Commodity Exchange, Inc. until advent of Wartime controls over prices and allocations, such futures market continuing suspended with the Reconstruction Finance Corporation setting prices for United States consumption. In both London and New York, the trading unit is five long tons (2,240 pounds each) or 11,200 pounds. In London, tin is quoted in Sterling per ton, and in New York in cents per pound. In the New York market, "Straits Tin" (tin refined at Singapore and Penang, 99.9 per cent. pure) is the usual grade quoted.

In the past, tin has been subject to wider price fluctuation than most other metals. The lowest price in the past 50 years was 12.62 cents per pound in 1896, and the highest price $1.10 per pound in 1918. The highest average monthly price of "Straits Tin" in New York in 1929 was 49.37 cents per pound, and the lowest price during the depression was 18.35 cents in 1932.

In 1948, price established by the Reconstruction Finance Corporation for United States consumption was advanced to $1.03 per pound, as compared with price of 70¢ per pound established by the RFC upon termination of price controls by the OPA in November, 1946, and subsequent prices of 80¢ (April 2, 1947) and 94¢ (December, 1947).

TIP

An unsupported statement or advice given a person concerning the movement of a particular security, in supposed confidence and secrecy, but without revelation of the source of information, or facts to demonstrate its logic. Tips are given by legitimate bankers and brokers, and by "insiders" who have a knowledge of facts upon which to base their judgment, but who are not always in a position to disclose these facts. Such tips are honest. Tips are also given by unscrupulous brokers, professional tipsters and charlatans with the intention to misrepresent and deceive. Most tips are based upon guess-work, rumor, or pure fabrication. No tips should be acted upon without investigation, or at least without knowing the reputation of the informant. Tips are one of the manipulative or deceptive devices prohibited by Sec. 9 of the Securities Exchange Act of 1934. (See Copper a Tip.)

TIPSTER

One who gives advice to buy or sell a certain security but without furnishing information and reasons. One who gives advice to buy or sell a certain security, especially the professional charlatan who usually specializes in questionable or highly speculative securities. Such advice is usually offered with an ulterior motive and should not be acted upon. Because of the operations of the professional tipster, a stigma has come to be attached to this term. Tipsters of the professional type are banned by Sec. 9 of the Securities Exchange Act of 1934, and through the registration provisions of the Investment Advisers Act of 1940. The States also proceed against professional tipsters under local Blue Sky Laws. (See Tip.)

TITLE

The evidence of a person's right to or ownership in a piece of property. In the case of real estate, the documentary evidence of ownership is the title deed. (See Abstract of Title, Title Deed, Title Insurance.)

TITLE COMPANY

See Title Insurance Company.

TITLE DEED

The documentary evidence of a person's ownership of a piece of land. Such a deed specifies in whom the legal estate is vested and the history of the ownership and transfers from one person to another from the original grant to the present owner. Title to land may be acquired in one of five ways: (1) purchase; (2) inheritance; (3) devise; (4) gift; or (5) through foreclosure of a mortgage. (See Abstract of Title, Title Insurance.)

TITLE GUARANTY

See Title Insurance.

TITLE GUARANTY COMPANY

See Title Insurance Company.

TITLE INSURANCE

A contract by which the insurer, usually a title insurance company, for a valuable consideration, agrees to indemnify the insured for a specific amount against any loss which may arise through the appearance of defects of title to real estate, wherein the latter has an interest as purchaser, mortgagee, or otherwise. Such a contract is recognized as a true indemnity for loss actually sustained by reason of the defects or encumbrances against which the insurer covenants to indemnify. Title insurance involves a careful examination of the evidences of title by the insurer who employs, or is himself, a skilled conveyancer. (See Title Insurance Company.)

TITLE INSURANCE COMPANY

A company, usually operated in conjunction with a mortgage company, which examines titles to real estate, determines their status at law, and insures their validity to interested persons, whether owners, purchasers, or lenders, and whether the insuring company makes a loan on such property, or not. A purchaser of, or lender on, real estate (mortgagee), is entitled to an abstract of title and the seller (or borrower) must be able to transfer a clear title to the purchaser (or mortgagee). Ordinarily, abstracts of title are prepared, and the title verified, by a lawyer who states only an opinion and neither guarantees the validity of the title, or defends any claim that may be set up against it. A title insurance company, however, a large part of the personnel of which is composed of lawyers, agrees to indemnify the owner of a title against any loss which may be sustained through the subsequent development of a defect. A title insurance policy is the evidence of the title insurance. Its cost depends upon the value of the property and the degree of risk involved, as shown by the condition of the title.

TO ARRIVE GRAIN

Grain to be shipped (not to arrive) from 3 to 90 days after purchase according to contract, as distinguished from cash grain, and grain for future delivery.

TO BEARER

See Pay to Bearer.

TO ORDER

See Pay to Order.

TOBACCO

One of the three largest money crops in the United States, owing largely to the greatly increased consumption of cigarettes, more than half of the leaf tobacco produced being consumed by the cigarette industry. Production of tobacco in 1947 rose to 2,168 million pounds, compared with 2,319 million pounds in 1946; 1,262 million pounds in 1941; and low in recent years of 1,018 million pounds in 1932. Most important of the tobaccos is flue cured tobacco, which accounts for over half of total tobacco crop and is used in the production of cigarettes, pipe and chewing tobaccos. Second in importance is burley tobacco, accounting for about 20% of the tobacco crop and also used in the manufacture of cigarettes, pipe and chewing tobaccos. Consumption of cigarettes, principally in the "Big Three" blends (Camels, Chesterfields and Lucky Strike) reached a new high record in 1947, exceeding the previous high of 352 billions in 1946 by 4%, as contrasted with cigar production of 5.7 billions in 1947, a decline of 5% below 1946 production.

Most important type of market for tobacco in the United States is the auction or loose leaf markets in the various producing States, the principal producing States being North Carolina, Kentucky, Tennessee, Virginia, South Carolina, Georgia, Pennsylvania, Ohio, Wisconsin, Maryland and Connecticut. Tobacco is one of the crops supported by the parity price program, the base period for flue-cured and burley tobaccos being August, 1934-July, 1939. Formerly, a tobacco futures market was maintained in New York by the New York Tobacco Exchange, Inc., but this exchange closed on December 29, 1934 because of lack of business.

Because of the importance of blends in cigarette and cigar production, tobacco is an international commodity. Among world producers, the United States and India are the largest, accounting for about half of world output, but many countries produce tobaccos of particular qualities essential for various blends, including China, Russia, Brazil, Japan, Turkey, Greece, Bulgaria, Philippine Islands, Cuba, Italy, and the Dutch East Indies. Among exporting nations, the United States is the largest, because of its importance as a cigarette producer.

TOKEN COINS

See Token Money.

TOKEN MONEY

Fractional silver coins (50 cents, 25 cent and 10 cent pieces) and minor coins (5 cent and 1 cent pieces), which constitute the subsidiary coinage, as distinguished from standard money and paper money. The characteristics of token money are:

1. Issued in small denominations. Token money is primarily a tool for "making change."

2. Made of different metal than the standard coin—of silver, nickel and copper. This is necessary because a coin of small denomination if made of the standard metal—gold (under the Gold Reserve Act of 1934 gold coinage and gold coin circulation are forbidden)—would be too small for convenience in handling.

3. Shortness in weight. Token coins do not have the intrinsic value called for by their nominal value. They are worth more as coins or purchasing power than as metal or bullion. The purpose of this provision is to prevent token coins from being melted,thus insuring their permanence in circulation. It also prevents them from being hoarded or exported because they are worth more as coin than as metal. Fractional silver coins suffer a reduction in weight by about 6 per cent. of the bullion value of the silver dollar. To illustrate, a silver dollar contains 371.25 grains of pure silver. Fractional silver coins contain only 345.6 grains of pure silver for two halves, four quarters, or ten dimes.

4. Coinage on Government account only. It is evident that if coins are issued at a nominal value, which is

about the cost of the metal contained in them, the issuer—the Government—makes a profit or seigniorage. This profit inures to the benefit of the Government and not to a private person.

5. Limit in amount coined. Token coins are minted to the amount which experience shows is necessary for the purpose of trade. The purpose of this restriction is to insure token coins from falling below par. If token coins were minted without limit, they would soon assume the same coin value as metal.

Under the Joint Resolution of June 5, 1933, which amended the Thomas Amendment (Sec. 43) of the AAA Farm Relief and Inflation Act of May 12, 1933, all coins and currencies of the United States heretofore or hereafter coined or issued, are legal tender for all debts, public and private, public charges, taxes, duties, and dues. Since this law prescribed no limitations, Token Money is full legal tender.

The Thomas Amendment provided that the gold dollar shall be the standard unit of value, and all forms of money issued or coined by the United States shall be maintained at a parity with this parity. It is the duty of the Secretary of the Treasury to maintain such parity.

TOLERANCE

Allowance made for the deviation of coins from the specifications as to weight and fineness prescribed by statute. Tolerance is of two kinds: (1) for variation, or percentage of error, allowed to the mint, also known as "remedy," or "remedy of the mint;" (2) for abrasion, or reduction in weight through circulation, allowed without impairing full legal tender value. The tolerance allowed the mint is for error in fineness and error in gross weight. The tolerance for error in fineness is 1/1000, i. e., a coin may be .901 or .899 fine and still be legal. The "General Instructions and Regulations" of the United States Mint, however, state that no bullion should be coined that varies beyond the limits of .8997 and .9003. For silver dollars, the tolerance is one and one-half grains.

Under Sec. 5 of the Gold Reserve Act of 1934, no gold shall hereafter be coined, and all gold coin was withdrawn from circulation.

For the tolerance allowed for abrasion through circulation see Light Coin, Light Gold.

TOMAN

A gold coin of Iran (Persia), formerly current, and money of account. The international currency unit of Iran is the rial, equivalent to 100 dinars. (See Foreign Moneys—tables 1 and 2.)

TON-MILE

The unit of railway freight service, and of costs and revenue. This unit is represented by the carriage of one ton of freight one mile. Annual freight revenues divided by ton-miles results in the average revenue per ton-mile, a basic indicator of profitableness of railroad operation. (See Railroad Earnings.)

TOP

A term having reference to the conclusion of a period of rising prices on a stock or commodity market, i. e., when the highest prices for the upward movement have been attained. It is usually the point or plateau at which general optimism, as demonstrated by public participation in the market is shown, and when professional operators distribute, i. e., unload their holdings. The top of a market is reached in a period of great prosperity, but before the turning point in commodity prices. (See Business Cycle.)

TOP PRICE

The highest price quoted for a stock or commodity, or the highest average price for the market as a whole, for a single day's trading, for a movement, or entire speculative cycle.

TOPHEAVY

A term to describe the condition of a single security, or the market, when prices have reached a level too high to be warranted by conditions, and which therefore may be expected to react; the condition of a market when prices have advanced rapidly and a decline is in prospect.

TORONTO STOCK EXCHANGE

Founded in 1852, and since its merger in 1934 with the old Standard Stock and Mining Exchange (also located in Toronto, the most important securities market in Canada. The Standard Stock and Mining Exchange was formed in the latter part of the 19th century, and had grown to be the world's largest purely mining stock exchange. As a composite listing of industrial, commercial, banking and mining shares, the stock list comprises the largest proportion among Canadian security exchanges of the corporate securities of Canada.

Growth and importance of the exchange were officially recognized in 1878 when a Special Act of Parliament was invoked granting to the Toronto Stock Exchange "the right of constitution of a body politic and corporate." In 1887 a permanent place of business was obtained. A membership fee of $5 was charged and a fee of $10 was imposed on corporate listings. These early charges offer a comparison with 1929's high of $2,20,000 for a membership and a sharply graded listing fee on securities. As the largest Canadian securities exchange, the Toronto Stock Exchange fulfills a major function in the maintenance of a listed market for Canadian securities, thus aiding in this respect in Canadian financing. Following a steady decline in each of the 10 years ended 1946, the volume of security issues in Canada turned sharply upward in 1947, such financing having been accomplished almost entirely in the domestic market.

TORRENS SYSTEM OF LAND TITLE REGISTRATION

The popular designation, Torrens System, is taken from the name of its founder, Sir Robert Torrens, who as land commissioner and registrar-general, established the system in Australia in 1858. Under this system an owner of land may apply for a certificate of title to be issued by the registrar of the county. This certificate is similar to a ledger page as commonly used in bookkeeping accounts. The original certificate constitutes one page in the title book in the registrar's office, upon which all the facts with regard to the title of the particular piece of ground affected are entered, i. e., description of the property, name of the owner in fee, and the mortgages and other liens or encumbrances standing against it. A duplicate of the original of this

certificate or ledger page is given to the owner as his evidence of title.

The certificate of title gives to the owner a declaration or statement of his title which is indefeasible and incontestable. In order to ascertain the condition of a title it is necessary only to scrutinize this ledger page certificate and whatever may be noted there may be finally and absolutely accepted as the condition of the title. No mortgage, judgment, lien, dower claim, ancient right of heirs, or any other claim can be set up or claimed unless it is noted upon this certificate. By its policy of title insurance, a title company simply promises to defend a person's title in case of a lawsuit. The Torrens system, however, is calculated to prevent lawsuits, i. e., the law provides that no claim can be set up against the title or enforced in a court, unless the claim is stated upon the certificate. This advantage is accomplished because of the fact that the first certificate issued is founded upon a final judgment of the court and back of every certificate is the sovereignty of the state declaring the title to be absolutely indefeasible and incontestable. After the first registration no searching is required and the title cannot be questioned.

The chief defect of the present system is that no purchaser of real estate can be certain of his title until he has employed an attorney to examine the title from the current date back to the original grant. This examination is expensive and must be repeated with each sale, because no prospective purchaser will be content to buy without being assured of the title.

The success of the plan in Australia caused it to spread rapidly to various English colonies. England adopted a law in 1862, and in 1897 it was made compulsory in London. In 1865, the system was established in Ireland. In Canada it is today practically universal.

In the United States registration laws have been established in 19 states as follows: California, 1897 (amended 1914); Colorado, 1903; Georgia, 1917; Illinois, 1897; Massachusetts, 1898; Minnesota, 1901; Mississippi, 1914; Nebraska, 1915; North Carolina, 1913; North Dakota, 1917; New York, 1908; Ohio, 1896; (constitution amended 1912); Oregon, 1901; South Carolina, 1916; South Dakota, 1917; Tennessee, 1917; Utah, 1917; Virginia, 1916; Washington, 1907. The system was adopted by the United States Government for the Philippine Islands in 1902, and for Hawaii in 1903.

The certificate system of land registration has not met with success in every state. The Massachusetts law is one of the most successful and has served as a model for that of the Philippine Islands, Hawaii, New York, Minnesota, and a few other states.

TRACTION SECURITIES

Stocks and bonds of electric railway companies, whether surface, elevated, subway, or interurban railways, as distinguished from the securities of steam railroad companies. (See Street Railway Bonds.)

TRADE ACCEPTANCE

A bill of exchange drawn by the seller (drawer) on the purchaser of goods sold and accepted by such purchaser (drawee). As defined by the Board of Governors of the Federal Reserve System, "a bill of exchange drawn to order, having a definite maturity and payable in dollars in the United States, the obligation to pay which has been accepted by an acknowledgment, written or stamped, and signed across the face of the instrument by the company, firm, corporation, or person upon whom it is drawn; such agreement to be to the effect that the acceptor will pay at maturity, according to its tenor, such draft or bill without qualifying conditions."

In order to certify that a trade acceptance is eligible for rediscount, it "must bear on its face or be accompanied by evidence in form satisfactory to the Federal Reserve bank that it was drawn by the seller of the goods on the purchaser of such goods. Such evidence may consist of a certificate on or accompanying the acceptance, to the following effect: THE OBLIGATION OF THE ACCEPTOR OF THIS BILL ARISES OUT OF THE PURCHASE OF GOODS FROM THE DRAWER. Such certificate may be accepted by the Federal Reserve bank as sufficient evidence; provided however, that the Federal Reserve bank, in its discretion, may inquire into the exact nature of the transaction underlying the acceptance."

Although widespread use of the trade acceptance has been made in Europe for many years, it has only partially supplanted the use of the check in this country. One of the aims of the Federal Reserve Act was to encourage the use of the acceptance in the United States. The purpose of the American Acceptance Council was to maintain an intensive campaign to foster the trade acceptance in American business. The movement was also approved by the National Association of Credit Men which stated: "Trade acceptances present conveniences and economies which should appeal to the encouragement and support of commercial credit grantors The trade acceptance system would eliminate certain serious evils which have developed with the increase of commercial credits on an open account system, and of which unearned discounts, the abuse of sales terms, and the assignment of accounts receivable are the more prominent."

The procedure in trade acceptance practice is as follows. The seller of merchandise upon making shipment, forwards with the shipping documents an acceptance form (in reality a time draft). This form is often sent in duplicate to enable the buyer to retain a copy for his files. If the goods are subject to cash discount, the buyer may avail himself of this opportunity by remitting immediately; otherwise the buyer is expected to sign the acceptance form which consists of writing his name across the face of the instrument, indicating the date, and designating the bank where it is payable. In the great majority of cases, an acceptance is payable at the drawee's (acceptor's) bank. It may be made payable at any bank or trust company in the United States. It is then returned to the drawer (seller).

The Negotiable Instruments Law now adopted in all the states provides that an instrument payable at a bank is equivalent to an order to the bank to pay for the account of the principal debtor thereof. For this reason when a trade acceptance is made payable at the acceptor's bank, it may be presented for payment and collected through the Federal Reserve check collection system in the same manner as a check.

There are many advantages accruing to both buyers and sellers in the use of the trade acceptance. The seller's advantages are as follows:

1. It completes the transaction by joining the evidence of the debt and means of payment with the shipment or invoice.
2. It compels definite payment at maturity. The seller has the buyer's negotiable guarantee that at a

specified time and place the buyer will pay for the goods purchased from the seller.

3. It makes definite calculations possible, since sellers know in advance at what times their sales will become available as cash.

4. It prevents tying up capital in open book accounts.

5. It provides additional credit facilities. Trade acceptances can be discounted at 100 per cent. of their face value, while accounts receivable cannot be discounted even under the most favorable conditions for more than 50 per cent. Furthermore, there is no limit to the amount of acceptance paper which a bank may take from one customer, since the 10 per cent. limitation (applying to National banks and to state banks in many states) does not apply.

6. It reduces collection expenses and petty annoyances.

7. It avoids making the seller perform banking functions.

8. It tends to prevent the cancellation of orders and the return of goods.

9. It increases the liquidity of the seller's assets.

10. It permits a lower discount rate. Trade acceptances command a preferential rate of interest, since they afford double security to the lending bank. Recognition of the superior security in the trade acceptance is demonstrated by the fact that the Federal Reserve rate of rediscount for this class of paper is usually lower than for other commercial paper.

11. It promotes economy through the lower rate of discount, and through the reduction of the cost of extending credit, losses on bad accounts, etc.

Many of the advantages to the seller also accrue to the buyer. In addition, the buyer benefits in the following ways:

1. It strengthens his credit. In giving a trade acceptance the buyer proves his good faith by binding himself to pay an honest debt in full when it becomes due. He assumes no obligation until after the seller has surrendered title to the merchandise. In other words, it brings the transaction out into the open and places the buyer on a merit basis.

2. It tends to develop careful buying. The purchaser will not overbuy when he realizes that the debt must be met at a definite maturity.

3. Reduces expenses of handling open accounts.

4. Acceptance buyers are preferred by sellers.

The banker also benefits by the use of the trade acceptance in the following ways:

1. It tends to better the character of the bank's assets, since trade acceptances are two-name paper and are readily rediscountable.

2. It promotes a keener sense of responsibility in business.

3. It increases the amount of discounting business to be done.

4. It increases the amount that can be loaned to one borrower.

5. It makes possible a fuller utilization of commercial credit.

6. It prevents the secret assignment of open book accounts.

A trade acceptance must always represent a completed merchandise transaction and cannot be used as a means to enforce payment of debts past due, or as an evidence of a loan, i. e., it is to be based solely on connection with a current merchandise transaction. Federal Reserve banks may rediscount trade acceptances, or purchase them in the open market provided they conform to the eligibility requirements. The Board of Governors of the Federal Reserve System by regulation has provided: "The Federal Reserve bank shall take such steps as it deems necessary to satisfy itself as to the eligibility of the . . . trade acceptance offered for rediscount and may require a recent financial statement of one or more parties to the instrument. The trade acceptance should be drawn so as to evidence the character of the underlying transaction, but if it is not so drawn, evidence of eligibility may consist of a stamp or certificate affixed by the acceptor or drawer in a form certificate to the Federal Reserve bank."

Despite united efforts to promote the use of the trade acceptance, it has not caught on as a popular business practice, except perhaps as a means of making liquid accounts inclined to be slow on collections.

(See Acceptance, Bank Acceptance.)

TRADE ASSOCIATION

An association of the units in a single line of business for mutual aid and protection of common interests. As defined by the American Trade Association Executives, a trade association is "an organization of producers or distributors of a commodity or service upon a mutual basis for the purpose of promoting the business of their branch of industry and improving their service to the public through the compilation and distribution of information, the establishment of trade standards and the co-operative handling of problems common to the production or distribution of the commodity or service with which they are concerned." Practically all types of business in the United States are represented in a trade association, many of which meet annually in convention to discuss trade practices, establish rules of conduct, and other methods of co-operation.

Trade associations are not new in the United States or in other countries. In this country, organizations of competitors in given industries or branches of industries, encompassing a wide variety of trade interests, may be traced well back into the nineteenth century. In Europe, cartels, with functions and powers similar to those now invested in trade associations here, have ruled many industries for a number of years. As long ago as the Middle Ages, the guilds of England and other European countries functioned in many respects as does the modern trade association. In their present form, American trade associations are generally recognized to have had their beginnings in the period of the Civil War, although several associations trace their establishment back a few years further. Many associations had their inception during the period of increasing business activity marking the recovery from the panic of 1873.

Four major types of trade association activities of the past have been declared illegal by the courts. Broadly speaking, these four types of activities relate to unification in selling, exclusion from the market, curtailment of production and price agreements.

Under the National Industrial Recovery Act (q. v.) the powers, purposes and activities of trade associations were broadened. That Act authorized the National Recovery Administration to employ existing trade or industrial associations, or to establish new agencies if necessary, to compel reforms in industry with respect to employment, hours of labor, wages, control of production, and prevention of unfair methods of competi-

tion. To achieve these ends, the Act provided five principal methods: (1) voluntary trade association codes; (2) voluntary agreements within an industry; (3) codes limited to the subjects of hours of labor, wages and conditions of employment; (4) compulsory codes imposed by the Administration; (5) a system of licensing in extreme instances where uncorrected abuses were shown to exist. Of these, the voluntary trade association codes were the most important.

Among the many trade associations in the United States are:

Aeronautical Chamber of Commerce
Affiliated Dress Manufacturers
Air Transport Association
Aircraft Industries Association of America
American Bankers Association
American Bottlers of Carbonated Beverages
American Bureau of Shipping
American Cloak and Suit Manufacturers Association
American Farm Bureau Federation
American Gas Association
American Institute of Laundering
American Iron and Steel Institute
American Meat Institute
American Paper & Pulp Association
American Petroleum Institute
American Potash Institute
American Trucking Association
American Water Works Association
Anthracite Institute
Asphalt Institute
Association of American Railroads
Association of Casualty and Surety Executives
Automobile Manufacturers Association
Central Motor Freight Association
Copper Institute
Cooperative League of the U. S. A.
Edison Electric Institute
Electrical and Gas Association of N. Y.
Folding Paper Box Association of America
Gas Appliance Manufacturers Association
Glass Container Association of America
Gypsum Association
Insurance Executives Association
Investment Bankers Association of America
Jewelers Board of Trade
Lake Carriers Association
Life Insurance Association of America
Merchants Association of N. Y. (Commerce and Industry Association of N. Y.)
Millers National Federation
Motor and Equipment Manufacturers Association
National Aeronautic Association
National-American Wholesale Lumber Association
National Association of Dyers and Cleaners
National Association of Food Chains
National Association of Hosiery Manufacturers
National Association of Ice Industries
National Association of Life Underwriters
National Association of Manufacturers
National Association of Motor Bus Operators
National Association of Mutual Savings Banks
National Association of Retail Druggists
National Association of Retail Grocers
National Association of Wool Manufacturers
National Automobile Dealers Association
National Beer Wholesalers Association of America
National Bus Traffic Association
National Canners Association
National Coal Association
National Cotton Council of America
National Cottonseed Products Association
National Council of Farmer Cooperatives
National Dairy Council
National Dress Manufacturers Association
National Electrical Manufacturers Association
National Federation of American Shipping
National Federation of Textiles
National Fertilizer Association
National Foreign Trade Council
National Frozen Food Locker Association
National Hardwood Lumber Association
National Industrial Sand Association
National Knitted Outerwear Association
National Leather and Shoe Finders Association
National Lime Association
National Live Stock Marketing Association
National Live Stock and Meat Board
National Lumber Manufacturers Association
National Metal Trades Association
National Paint, Varnish and Lacquer Association
National Paperboard Association
National Petroleum Association
National Piano Manufacturers of America
National Restaurant Association
National Retail Dry Goods Association
National Retail Furniture Association
National Retail Hardware Association
Paper Bag Manufacturers Institute
Portland Cement Association
Retail Credit Institute of America
Southern Freight Association
Southern Passenger Association
Southern Pine Association
Tile Manufacturers Association
Tobacco Merchants Association of the U. S.
Traffic Executives Association
Transportation Association of America
Trunk Line Association
United Brewers Industrial Foundation
U. S. Beet Sugar Association
U. S. Brewers Association
U. S. Cane Sugar Refiners Association
U. S. Savings and Loan League
Western Passenger Association
Western Pine Association
Wholesale Dry Goods Institute
Wine Institute

According to the U. S. Department of Commerce, there were as of 1942 a total of about 11,000 trade organizations in the United States, of which about 8,000 were trade associations, of which in turn about 1/4th were national or interstate in scope, and about 3,000 were chambers of commerce and other types of local community development groups.

TRADE BALANCE

See Balance of Trade.

TRADE BAROMETERS

See Business Barometers.

TRADE CREDITOR

A person, firm, or corporation to which a business is

indebted for purchases on open account, or as evidensed by its notes payable.

TRADE CYCLE

Same as Business Cycle (q. v.).

TRADE DISCOUNT

A deduction from the published list price allowed to the trade, as distinguished from cash discount. The purpose of trade discount is to permit manufacturers and merchants dealing in commodities with frequent and wide price fluctuations to adjust the fixed price as published to current market quotations; thus, trade discounts offered depend upon current market conditions.

TRADE DOLLAR

The trade dollar of 420 grains troy was authorized by the act of February 12, 1873. It was intended for circulation in oriental countries as a substitute for the Mexican dollar, which it slightly exceeded in weight; but by the terms of the authorizing act it was made legal tender in the United States in sums not exceeding $5.

This legal-tender quality was withdrawn by the joint resolution approved July 22, 1876, and the coinage was limited to such amount as the Secretary of the Treasury should consider sufficient to meet the export demand. The act of February 19, 1887, provided for the retirement of trade dollars and their recoinage into standard silver dollars or subsidiary silver. For six months after the passage of the act they could be exchanged at the Treasury or any subtreasury, dollar for dollar, for standard silver dollars or subsidiary coin.

The total number of trade dollars coined was 35,965,924. The number redeemed under the act of 1887 was 7,689,036, and from the bullion resulting from the melting of these dollars there were coined in subsidiary silver $2,668,674.30, and into standard silver dollars $5,078,472. Following expiration of the period of redemption, trade dollars were purchased as bullion when presented at the mints. (Source—Treasury Department Bulletin).

TRADE-MARK

A distinctive identification, in the form of mark, motto, device, or emblem, to distinguish the product of a manufacturer. In the absence of statutory provision for registration, the courts recognize property rights in the exclusive use of a trade-mark. In the United States, Federal statutes provide for registration of trade-marks with the U. S. Patent Office used in interstate commerce, foreign commerce, or "commerce with the Indian tribes." Under the Act of May 4, 1906, as amended, only trade-marks used in connection with merchandise were registerable, but under amendment of July 5, 1947, marks of service enterprises may also now be registered.

Unlike Patents, whose statutory period is 17 years, and Copyrights, which run for 28 years with privilege of renewal for another 28 years, Trade-Marks have no specific statutory period of effectiveness, and registration as such confers no ownership rights, priority of use being a determining factor in court adjudication of ownership.

TRADE PAPER

Notes, or trade acceptances given in exchange for merchandise, rather than money. Same as Business Paper (q. v.).

TRADE READJUSTMENT

See Business Cycle, Readjustment.

TRADE REFERENCE

The name of a business house, usually a creditor, but sometimes a debtor, given by another business house to a bank, business house, or mercantile agency, in order that its credit reputation may be investigated. No organizations are in a better position to know the character, ability and general standing of a given enterprise than its creditors. It is customary when a business house desires to open credit relations with another, that the latter request names of references for investigation purposes pending the allowance or rejection of the application.

TRADER

A person who engages in speculation, buying and selling securities or commodities for price appreciation. Also the term given to a person who executes orders of others on the floor of an exchange, or who among dealers in unlisted securities, maintains a "position" or inventory in assigned stocks and engages in buying and selling operations in such stocks.

TRADERS' MARKET

In unlisted securities trading, the "inside" market, or that market with the closest spreads between bid and asked prices, maintained for trading between firms, and not for the public. Traders' markets are published daily in the National Quotation Bureau's "sheets" (see National Quotation Bureau). Quotations released through regional offices of the National Association of Securities Dealers, Inc. (q.v.) to the press reflect markets in approximate quotations for the public. Necessarily, spreads in quotations for the public must allow for the expense of maintaining facilities for the public. Traders' markets may be likened to "wholesale" prices, while public quotations are "retail" prices.

TRADING CORPORATION

A name sometimes given to that type of management investment organization which seeks to secure profits from short-term trading swings, and makes frequent shifts in positions. (See Investment Company.)

TRADING MARKET

A narrow, dull, inactive market in which prices "cover the same ground over and over;" a market in which public participation is negligible, transactions being largely confined to those of professional traders, and therefore sometimes called a professional market. A trading market is a preparatory, hesitating condition preceding an impending movement upward or downward. In a trading market the range of stocks is kept within a few points and the trading area is a small range between the limits of which the movement of prices is confined.

A trading market is a period of vacillation occurring at the conclusion of a decisive upward or downward swing. Preparatory to the next swing, prices vibrate within a narrow range—the amplitude of fluctuations de-

marking the limits of the trading area. It is a time of suspended judgment—a speculative question mark—and may be conceived as a prolongation of a pause to permit digestion of the preceding move, while speculators wait for additional facts to provide an impetus for a fresh start in one direction or the other.

Referring solely to the movements of the averages, a trading area on a high plateau in a bull market almost invariably is an interlude in what later proves to be a resumption of the rise, else the energy required to hold prices within the area would not have been expended. The technical rule is that the line of least resistance is motion, and stocks having risen to a temporary apex, would be more apt to round off and with little hesitation to start downward. Similarly, a trading area at the bottom of a sharp decline is a breathing space to take account of fundamentals. If the decline has gone too far, recovery, if there is to be one, will lose no time in asserting itself. Consequently, a trading area following a declining movement is usually the precursor of a resumption of the fall. Technically, then, a trading area is a compromise since the rule of motion is violated.

What applies to the averages in regard to trading areas is not applicable to individual stocks. Frequently, what appears to be a trading area at the bottom of a decline in an individual stock is a zone of accumulation with the next important movement upward. Similarly, the semblance of a trading area in an individual stock on a high plateau frequently turns out to be a level of distribution with the next move downward.

A trading area offers one type of market situation in which the trader may have his decision made for him with a minimum of risk. Since a trading area is an interruption of the trend, the market will show, by its own action, what the direction will be when the trading market has terminated. Just as soon as the averages break out of their trading range in one direction or the other, the action can be followed almost blindly. Almost invariably, it is a signal for a continuation of that directional change.

TRADING UNIT

Unit of trading on the New York Stock Exchange is 100 shares for active stocks, 10 shares for inactive stocks. Less than 100 shares for active stocks, and less than 10 shares for the inactive stocks, are Odd Lots (q.v.).

TRADING VALUE

Among traders or speculators this term is used to refer to the price at which a purchase, whether a bond, stock, real estate, or commodity, must be sold in order to "get out even," or, in the language of speculation, the price at which a purchase "stands" the owner, e. g., if a stock has been purchased at 90, it must be sold at that price to avoid taking a loss. The trading value at the time of actual purchase is equal to the cost, market and book values.

Where trading operations are constantly engaged in, a record of trading values is extremely important, because these values are the indicators of the profitableness of individual transactions. To illustrate the use of trading value, suppose ten bonds having a par value of $1,000 each, are bought for $9,000. The trading value is 90 (100 equals par), that is, ten bonds would have to be sold at 90 in order to avoid taking a loss. If, however, five of these bonds should be sold for $5,000, the trading value for the remaining five is 80 because they may be sold at that price without having to close out this particular block of bonds at a loss. Bond and stock traders apply the profit made in one group of securities to losses made in others to determine net results and for tax purposes.

TRANSFER AGENT

See Stock Transfers.

TRANSFER BOOK

The stock transfer ledger in which changes of ownership in stock are recorded, i. e., the transferor debited and the transferee credited. The stock book is required to be maintained by every stock corporation under Sec. 10 of the New York Stock Corporation Law, containing the names, alphabetically arranged, of all persons who are stockholders of the corporation, showing their places of residence, number of shares held, the time when they became owners thereof, and the amount paid thereon. (See Corporate Records.)

TRANSFER IN BLANK

The transfer or assignment of a stock certificate by the owner, whose name is registered on its face, to another person without writing the name of the person to whom it has been sold on the back of the certificate where the form of assignment is printed, and delivery to the person who has bought it. When a stock certificate has been transferred in blank it can pass from one owner by purchase to another any number of times, and while the holder is the legal owner, the stock is still in the name of the person who originally transferred it in blank, on the books of the corporation. He would therefore get any dividends that might be declared, and would be entitled to vote, and receive any other rights, but in practice these dividends and rights would be conveyed to the current owner. Stock which has been transferred in blank usually represents the Floating Supply (q.v.) and such certificates are known as Street Certificates (q.v.). (See Stock Transfers.)

TRANSFER OF MORTGAGE

Either the mortgagor (borrower) or the mortgagee (lender) may assign his interest in a mortgage.

In the assignment of a bond and mortgage, the bond is the obligation to pay the debt for which the mortgage is security. An assignment of the bond alone has been held by New York courts to carry with it the mortgage security, but the assignment of the mortgage alone without the bond does not effect transfer of title to the mortgage.

The New York Real Property Law (Sec. 258, Schedule O), contains a short form of assignment of a bond and mortgage, as follows:

Know that ....., assignor, in consideration of ..... dollars, paid by ....assignee, hereby assigns unto the assignee, a certain mortgage made by ....., given to secure payment of the sum of .....dollars and interest, dated the ..... day of ....., recorded on the ..... day of ...., in the office of the .... of the county of ..... in liber ..... of mortgages, at page ..... covering premises ....., together with the bond or obligation described in said mortgage,

and the moneys due and to grow due thereon with the interest,

To have and to hold the same unto the assignee, and to the successors, legal representatives and assigns of the assignee forever.

In witness whereof, the assignor has hereunto set his hand and seal this ..... day of ..... nineteen hundred and .....

In presence of:

The New York courts, however, have held that the bond and mortgage are assignable by delivery, without a writing or the payment of consideration by the assignee.

The grantee may be held as to any equities existing at the time of the assignment as between the mortgagor and mortgagee, as the bond and mortgage are non-negotiable instruments. The grantee may also be held as to any equities by third parties existing at the time of assignment against the assignor.

When land which is mortgaged is conveyed, the grantee may take the property subject to the mortgage, and thus be free from liability on the bond for any deficiency arising upon foreclosure, such liability remaining in the original mortgagor; or may take the property assuming the mortgage, whereby the grantee undertakes the personal liability to pay the mortgage debt and thus can be held on any deficiency. Assumption of the mortgage by the grantee is part of the consideration involved in the transaction.

(See Mortgage, Mortgage Loans.)

TRANSFER OF STOCK

See Stock Transfers.

TRANSFER OFFICE

The office of the Stock Transfer Agent designated by a corporation to handle transfers of its stock; or where no agent is designated, an office of the corporation itself may handle the work. Listing requirements of the New York Stock Exchange (q.v.) require a corporation to maintain a stock transfer office and a stock registrar in the City of New York.

TRANSIT CLERK

A bank clerk who has charge of the collection of out-of-town Cash Items (q. v.). (See Collection Clerk.)

TRANSIT DEPARTMENT

The department of a bank which collects checks and other items drawn on out-of-town banks. The principal media of collection are through the Federal Reserve Check Collection System (q. v.) and through other banks acting as collecting agents.

TRANSIT FANFOLD MACHINE

A special type of adding-typewriter used in the preparation of transit letters. (See Transit Letters.)

TRANSIT ITEM

See Out-of-town Checks.

TRANSIT LETTER

A letter or deposit slip addressed to a Federal Reserve bank, or other bank acting as collecting agent, containing a list of the enclosed out-of-town checks to be collected for, and the proceeds remitted to, the sending bank. A transit letter describes each listed check with the following details: (1) transit number of the drawee (paying) bank (if the transit number is not used, the name and location of the bank are written out); (2) name or transit number of the sending (owning) bank; (3) amount; (4) any special instructions, e. g., no protest, wire non-payment, deliver documents upon payment only, etc.

TRANSIT NUMBER

See Numerical Transit System.

TRANS-LUX

Sometimes called the "movie ticker," is a movie projector equipment used principally for market quotations by stock and grain exchanges and brokerage firms. The equipment is so designed that projections are made from behind the screens. The screen is a newly developed translucent or "day-light" type which permits exceptional clarity of visibility with a minimum of distortion in full daylight or artificial light. The paper tape of the usual Western Union stock ticker, or a special cellophane tape with the printed quotations printed on by the ticker, is mechanically drawn past the lens and magnified and projected across a screen, from left to right, at a moderate rate of speed. The equipment is also used for projecting news articles from the "broad tape" ticker service of newspapers and reporting agencies, such as the Dow-Jones Ticker Service. Other adaptations of special types are used for home movies, educational, advertising and motion picture theatre purposes. (See Ticker.)

TRANSPORTATION

For bibliography, see under Railroad Industry.

TRANSPORTATION ACT OF 1920

The railroad legislation which marked the beginning of modern regulatory policies towards the Railroad Industry in its period of maturity. This Act recognized for the first time the necessity for placing the Railroad Industry on a stable basis by affording adequate rates which would enable railroads to earn a fair return upon railway property. The Act also permitted railroads to enter into pooling agreements and combinations, subject to approval of the Interstate Commerce Commission. It also broadened the powers of the Commission to include supervision over security issues, new construction, abandonments, etc., and set up new procedure for handling labor disputes. In connection with allowing fair rates of return, the Act set up the provisions for recapture of earnings in excess of fair rate of return (the "Recapture Clause"), now repealed.

(See Interstate Commerce Act, Railroad Legislation, Recapture Clause, Valuation Act of 1913.)

TRANSPORTATION (EMERGENCY) ACT OF 1933

See Railroad Transportation (Emergency) Act of 1933.

TRANSPORTATION RATIO

A term used in railroad finance to denote the percent-

age of a railroad company's transportation expenses to total (gross) operating revenues. Transportation expenses are those incurred in the conduct of train operations, chiefly cost of fuel and wages of trainmen and stationmen. The transportation ratio is the best rough guide of a railroad's operating efficiency. The normal transportation ratio (on the average) is about 35 per cent. (See Railroad Earnings.)

TRAVELERS' CHEQUES

International cheques, or more technically, a modified form of a traveler's letter of credit, not drawn on any specified bank or banks, but payable at practically all banks throughout the world, and guaranteed by some well known institution. They furnish a convenient and safe currency for travelers and may be purchased at all principal banks for cash. They are issued in convenient denominations, in dollars—$10, $20, $50. and $100 but may be also available in foreign currencies, chiefly sterling and francs. The signature of the payee (usually also the buyer) is written on the face of the check at the time of purchase. Space is reserved for the beneficiary's counter-signature in the presence of the person agreeing to cash the cheque, for purposes of identification. The signature written in the presence of the paying bank or other institution, must correspond with the signature written at the time of the purchase, agreement of the two signatures being regarded as sufficient identification for the payment of the money. For this reason, a traveler's cheque should never be counter-signed by the payee, except in the presence of the person who agrees to accept it. These cheques are almost universally acceptable abroad, and the principal hotels, railroads, steamship lines and merchants accept them as freely as cash.

Where stability of exchange rates permits, travelers' cheques issued in dollars may be issued payable at fixed rates of exchange. Generally, dollar travelers' cheques are convertible into various foreign currencies at the prevailing buying rate of exchange for bankers' cheques on New York on the date presented. When drawn in a foreign currency, these cheques are payable at face value. When drawn in dollars, they are accepted at the current buying rate for bank checks on New York.

Travelers' cheques are also used domestically. They are usually acceptable as currency, i. e., without being first cashed, by railroads, hotels, gas stations, and principal merchants. Thus, they are equivalent to insured money.

Two types of travelers' cheques can be purchased: American Express Company cheques, and cheques issued by several of the larger banks. American Bankers' Association cheques were discontinued in March, 1933, following the bank holiday. The commission for issuance is usually three-quarters of one per cent.

Travelers' cheques are both safe and convenient, and if lost or stolen, no loss is likely to be incurred, due to the fact that no person other than the payee can cash them, since the counter-signature must be written in the presence of the person agreeing to accept them. In case of loss, however, owners of American Express Company cheques are reimbursed, provided the second signature has not been affixed. Unused portions of travelers' cheques are redeemable at face value by the issuing bank. When presented for redemption they must be countersigned exactly as when cashed at any other place.

Banks sometimes issue guaranteed travelers' cheques, in which case the payee does not pay for them at the time of issue but permits the bank to charge his account after they have returned from abroad and are presented to the payee's bank for collection.

TRAVELER'S LETTER OF CREDIT

A letter issued by a domestic bank introducing the bearer to its correspondents in a foreign country and instructing such correspondents to honor drafts, up to a specified limit, drawn by the bearer, usually in the currency of that country. Travelers' letters of credit are issued for the convenience of foreign travelers and answer the same purpose as travelers' cheques.

Travelers' letters of credit are of two types, circular and specially advised, usually the former. A circular letter of credit enables the borrower to negotiate drafts at any one of a number of foreign correspondents which will pay against drafts so drawn to the borrower, thus enabling the borrower to obtain funds wherever he may be traveling. Appended is a form of circular letter of credit.

A specially advised letter of credit is designed for the benefit of a person who expects to remain in one city in which the bearer is entitled to draw drafts only against a single designated foreign correspondent.

Travelers' letters of credit are usually paid for in advance and any unused portions may be redeemed at the expiration of the credit. A commission is charged at the time of issue. Sometimes travelers' letters of credit are issued without payment by the bearer in advance; instead, arrangements are made with the issuing bank for charging the bearer's account when drafts negotiated by the bearer with foreign correspondents are presented to the bank issuing the credit.

Letters of credit may be issued in dollars, or a foreign currency, according to the wishes of the buyer. If issued in dollars, drafts drawn are converted into foreign currency by the paying bank at the current rate of exchange.

The purchaser of a circular letter of credit is entitled to the following papers from the issuing bank: (1) the letter of credit itself; (2) a booklet containing a complete list of correspondents which will pay against the letter of credit; (3) a travelers' telegraphic code by which the holder may communicate in code with the issuing bank, or its affiliations, concerning its credit, or otherwise; (4) a book of identification containing a specimen signature of the bearer which, in effect, is a letter to correspondent and other banks mentioned in the booklet (above referred to), and reads thus:

"Dear Sirs:

We beg to introduce to you the bearer of our traveler's circular letter of credit No. ....., a specimen of whose signature will be found below."

Letters of credit are issued for a specified amount indicated on the face and are subject to a certain expiration date, after which cheques drawn under the letter of credit will not be honored for payment by foreign correspondents.

When the beneficiary of a letter of credit wishes to procure funds, he presents the letter of credit to a correspondent and draws a draft for the amount desired, being careful to reserve the affixing of his signature until it can be made in the presence of the paying offi-

cer. The signature on the draft must correspond with the signature of the beneficiary as it appears in the letter of identification. This agreement of signatures completes the process of identification and certifies to the foreign bank paying the draft that the bearer of the letter of credit is entitled to the funds. On the second page of the letter of credit, payments are indorsed by each correspondent bank which honors the bearer's draft. The indorsement shows the date of payment, name of paying bank, and amount written in figures and words. The bank that pays the last amount due takes up the letter of credit and forwards it to the issuing bank along with the draft which it has paid.

CIRCULAR LETTER OF CREDIT

No. ..... For $.....

issued by
BLANK BANK

New York, ...19....

Messrs. the Banks and Bankers
(mentioned on the accompanying list of correspondents.)

Gentlemen:

We beg to introduce to you and to recommend to your courtesies .....
to whom kindly furnish funds in sums as desired up to an aggregate amount .....
Dollars against demand drafts on Blank Bank, New York City.

We engage that such drafts will meet with due honor at this bank if negotiated not later than .....
19..... and marked "drawn under Blank Bank's Letter of Credit No....." upon the condition that the amount of each draft negotiated by you shall have been inscribed on the second page of this letter, the draft signed in your presence and the signature carefully compared by you with holder's signature appearing on the inside of the cover of the accompanying list of correspondents duly certified to by this bank.

Kindly purchase drafts at the best rate at which you buy demand drafts on New York, deducting all your charges, if any, and please see to it that the present letter be cancelled and attached together with the list of correspondents to the draft which exhausts the Credit.

TREASURE TROVE

Coin, plate, or bullion, found hidden in the earth, buildings, or other places, the owner of which is unknown. Where statutes so provide, title to treasure trove passes to the State; otherwise, the finder is entitled to treasure trove, against all including the owner of the realty or soil where found, except against the true owner.

TREASURER OF THE UNITED STATES

See Treasury Department.

TREASURY BILLS

Non-interest bearing obligations of the U. S. Treasury, payable to bearer, which are sold on a discount basis for maturities of 90 to 92 days. Income, representing the increment between purchase price and full maturity value, is fully taxable. The regularity of issue every week enables the Treasury to adjust volume of such short-term borrowing in accordance with money market conditions, its own cash requirements, and the effect of offerings on the money market. The Treasury issues notice of prospective offerings in which it invites bids on both a competitive and non-competitive basis, the non-competitive bids usually being accepted at the average price of the competitive bids accepted. Treasury bills are particularly popular with commercial banks as highly liquid short term investment for available reserves.

During 1948, volume of weekly offerings has run at about $1 billion a week, the amount outstanding at the close of June, 1948 totaling $13,757 million, compared with $15,136 million at the close of 1947, $6,627 million at the close of 1942, and $2,002 million at the close of 1941.

Treasury Bills in the past have been issued with maturities of up to one year, similar to maturities on Treasury Certificates of Indebtedness, but the Certificates are issued with a coupon for interest payable with the principal at maturity, whereas Treasury Bills are issued on a discount basis. Treasury Bills began to be issued by the Treasury in the latter part of 1929, and by 1931 began to be issued in volume as a means of reaching commercial bank demand for short term Government securities. Their volume expanded greatly during World War II years, as contrasted with no recourse to Treasury Bills as a method of financing during World War I years. During World War I, the Treasury utilized Certificates of Indebtedness as the medium for borrowing in maturities up to one year. (See U. S. Government Securities.)

TREASURY CERTIFICATES

See Certificates of Indebtedness, U. S. Government Securities.

TREASURY DEPARTMENT

This department was established by an act of Congress on September 2, 1789. It is that branch of the Government which has charge of the national finances, collects its revenues, takes custody of its funds, and makes disbursements on warrants and drafts. The department is under the general supervision of the Secretary of the Treasury (q.v.), with an Under Secretary. Three assistant secretaries are assigned senior administrative supervision over various bureaus and activities.

The Treasury Department is divided into a number of bureaus each of which is administered by a separate Government official. The Treasurer of the United States receives and disburses public moneys deposited with the Treasury at Washington, with the various Federal Reserve banks, and bank depositories. The Fiscal Service of the Treasury includes both the Treasurer of the United States and the Bureau of Accounts.

The Comptroller of the Currency (q.v.) has general supervision over the organization and examination of the National banks in the United States, Alaska, and Hawaii, and over National bank operations.

The Bureau of Engraving and Printing (q. v.) designs and prints paper money, bonds, postage stamps, revenue stamps, etc.

The Director of the Mint has charge of the various coinages of the United States, and the direction of the activities of the various mints. (See Mint.) The Secret

Service Bureau is charged with the detection and arrest of counterfeiters.

The Customs Bureau supervises the collection of customs duties on imports for the various customs districts at the different ports of entry.

The Commissioner of Internal Revenue supervises the collection of the income taxes and all other internal revenues.

The department also includes Narcotics, Federal Supply, Treasury Enforcement Agencies, Coast Guard, and Tax Research bureaus. There are also a Budget Officer and Director of Personnel.

TREASURY NOTES OF 1890

Notes authorized by the act of July 14, 1890, commonly called the Sherman Silver Purchase Act. The Secretary of the Treasury was directed to purchase each month 4,500,000 ounces of fine silver at the market price and to pay for the same with Treasury Notes redeemable on demand in coin and legal tender for all debts, public and private, except where otherwise expressly stipulated in the contract. It was provided in the act that when the notes should be redeemed or received for dues they might be reissued, but that no greater or less amount of such notes should be "outstanding at any time than the cost of the silver bullion and the standard silver dollars coined therefrom, then held in the Treasury, purchased by such notes."

The authority for the purchase of silver bullion under this act was repealed by the act of November 1, 1893, up to which date the Government had purchased 168,674,682.53 fine ounces, at a cost of $155,931,002, for which Treasury Notes were issued. Treasury notes redeemed in standard silver dollars are cancelled and retired in accordance with the requirements of the act of 1890. Sections 5 and 8 of the act of March 14, 1900, also provide for the cancellation and retirement of Treasury notes to an amount equal to the coinage of standard silver dollars and subsidiary silver from the bullion purchased with such notes. By 1915, all but $2 1/4 million had been retired. Since these notes are retired as fast as received by the Treasury Department and supplanted by silver certificates supported by silver coin previously purchased with the Treasury Notes, for all practical purposes they may be disregarded as a form of currency. Since October, 1922, circulation statements have been carrying the amount of Treasury Notes of 1890 at about $1 million, apparently an irreducible amount traceable to export, loss or other causes.

Before the Thomas Amendment of May 12, 1933, which made all forms of currency legal tender, and the Joint Resolution of Congress of June 5, 1933, these notes were legal tender for all debts, public and private, except where otherwise expressly stipulated in the contract. They were redeemable in United States gold coin or in standard silver dollars at the option of the holder by the U. S. Treasurer. (See Monetary Stock Circulation.)

TREASURY TAX AND SAVINGS NOTES

Series "A" and "B" of Treasury Tax and Savings Notes were first offered in 1941 to serve as media for the payment of taxes, and are of interest to large taxpayers.

Since 1942, Series "C" Notes only have been issued. These are 3-year, non-callable, non-transferable Notes, sold at par, which may be presented in payment of taxes beginning the second month after issue for Federal income, profits, estate and gift taxes, at par plus interest which is graduated upward in 6-month intervals from $5 to $11 per $10,000 principal amount. These interest provisions provide yields ranging from 0.60% for the first interval of 6 months, to 1.07% if held for the full 36 months. Approximately $5 billion of these Notes were reported outstanding at the close of 1947. (See U. S. Government Securities.)

TREASURY STATEMENT

A daily statement issued by the United States Treasury Department showing receipts and expenditures for the month and fiscal year to date, with comparisons for the corresponding periods in the previous year. The appended table presents a summary of Treasury receipts, expenditures, and related items, on the basis of daily statement of the U. S. Treasury. (See Public Debt.)

Summary of
U.S.Treasury Receipts, Expenditures and Related Items

(Based on Daily Statements of the U. S. Treasury)

(in millions of dollars)

	Fiscal Years		
Receipts	June, 1946	June, 1946	June, 1948
Income Taxes:			
Withheld by employees	$9,392	$10,013	$11,436
Other	21,493	19,292	19,735
Miscellaneous Internal Revenue	7,725	8,049	8,301
Social Security Taxes	1,714	2,039	2,396
Other Receipts	3,953	5,325	4,494
Total Receipts	44,276	44,718	46,362
Net Receipts (less Social Security Employment taxes)	43,038	43,259	44,746
Expenditures:			
Interest on Debt	4,722	4,958	5,211
War and Defense Activities	48,870	17,279	11,524
Transfers to Trust Accounts, etc.	1,918	1,355	4,177(a)
Other Expenditures	8,204	18,913	18,414
Total Budget Expenditures	63,714	42,505	39,326(a)
Budget Surplus (+) or Deficit (–)	–20,676	+754	+5,419
Trust Accounts, etc. (Excess of Receipts (+) or Expenditures (–))	–524	–1,103	+2,706
Clearing Account (Excess of Receipts (+) or Expenditures (–))	. . .	+555	–507
Increase (+) or Decrease (–) During Period:			
General Fund Balance	–10,460	–10,930	+1,624
Gross Debt	+10,740	–11,136	–5,994

(a) Including $3 billion transfer to Foreign Economic Cooperation Trust Fund.

Source--Board of Governors of the Federal Reserve System (Federal Reserve Bulletin).

TREASURY STOCK

A corporation's own stock which has been issued and reacquired by purchase, donation, or otherwise. Such stock is an asset, but has no voting power or right to draw dividends. In financial statements, it may appear on the asset side, but is preferably shown as a deduction from stock issued and outstanding.

The term is sometimes, but improperly used synonymously, with Unissued Stock (q.v.). It differs from the latter because it has previously been issued, is fully paid, and may be sold at less than par.

TRIAL OF THE PYX

An annual ceremony required by the British coinage laws for the purpose of testing the weight and fineness of gold and silver coins to see that the coinage laws are being complied with. The pyx is a box in which specimen coins made at the mint are preserved. The test is conducted by a jury consisting of the Goldsmiths' Company, summoned by the Lord Chancellor. When coinage was done by contract, the trial, held at irregular intervals, had some importance, since the contractors were not entitled to full payment until after such trial. Since coinage has been conducted by the Government mint, the trial of the pyx is largely a perfunctory ceremony. Also, in modern times, the trend has been to increase circulation of paper currency and withdraw coinage, particularly gold coins.

In the United States, this term by analogy would refer to the test of the fineness and weight of coins manufactured at each new minting to determine whether or not the variation is in excess of the limits of error permitted by law. (See Remedy, Tolerance.)

TRIANGULAR EXCHANGE

See Arbitrage.

TROY WEIGHT

A system of weights used by the mint, jewelers and apothecaries. The apothecaries' table of weights is as follows:

20 grains = 1 scruple
3 scruples = 1 dram
8 drams = 1 ounce
12 ounces = 1 pound.

The mint and jewelers' table of weights is as follows:

24 grains = 1 pennyweight
20 pennyweights = 1 ounce
12 ounces = 1 pound.

The grain is the same weight in both tables, there being 5,760 grains to the troy pound.

TRUST

This term has two meanings:

(1) A popular name for a business combination controlling a large number of plants or stores; a combination of business enterprises for the purpose of eliminating competition and securing greater economies of production and distribution. Technically, a trust obtained control of an industry by combining the leading companies therein through the medium of a trust agreement whereby all of the stock of member companies was centralized in a board of trustees and stockholders received in exchange trustee certificates evidencing a proportionate interest. The board of trustees chose the directors of the member companies, could remove them at will, determined the allocation of earnings and dividends, and could order member companies to become inactive so as to centralize operations in a few members and thus lessen the supply of output for the industry at pegged prices. (See Sherman Anti-Trust Act.)

(2) As defined by Bogert, "A trust is a fiduciary relationship in which one person is the holder of the legal title to property, subject to an equitable obligation to keep or use the property for the benefit of another." As defined by Blackstone, a trust is "an estate devised or granted in confidence that the devisee or grantee shall convey it, or dispose of the profits, at the will of or for the benefit of another; an estate held for the use of another." (Trust Company, Trusts.)

TRUST COMPANY

As defined by the New York banking law a "corporation organized for the purpose of taking, accepting and executing such trusts as may be lawfully committed to it, acting as trustee in the cases prescribed by law, receiving deposits of money and other personal property, and issuing its obligations therefor, and lending money on real and personal securities."

"Technically speaking, a trust company is a corporation organized for the purpose of accepting and executing trusts, acting as trustee under wills, bond issues, registrar of bonds and stocks, executor or administrator of estates, etc., although by law and practice trust companies may do a general banking business, but do not issue currency" (Kniffin, W. H.: The Practical Work of a Bank).

"Banking in a more or less limited form, execution of corporate trusts, execution of individual trusts, care of securities and valuables. In addition, other functions are sometimes exercised, such as life, title and fidelity insurance, and the business of becoming surety. The earlier companies in the United States were chartered to manage individual estates only and to act in certain fiduciary capacities; the recent development of the trust company has been in the direction of banking functions and corporate trust business" (Kirkbride, Sterrett and Willis: The Modern Trust Company).

In speaking of the diversity of trust companies functions, Clay Herrick (Trust Companies) writes that the term "is applied to corporations whose functions vary greatly. Some are simply banks of deposit and discount; many are savings banks; some are safe-deposit companies; some are title-insurance or fidelity insurance companies; some serve chiefly as fiscal agents for corporations, and as registrars, transfer agents, intermediaries in reorganizations, promoters, etc.: some devote themselves to the care of estates and to services as executors, administrators, guardians, trustees, etc. Most companies combine two or more of these classes of functions, while a few undertake nearly all of them. In early years the life insurance and trust businesses were intimately associated."

Originally, trust companies were created to act as

incorporated trustees. In acting in various trust capacities, administration of estates, custodianship of funds, trusteeship under mortgage indentures, etc., they naturally came into possession of large sums of money and securities, and accordingly it became necessary to extend their functions beyond those of a merely fiduciary character. Insofar as cash was handled, banking operations became necessary and the handling of securities made necessary the development of investment and safe deposit departments. For these reasons, a modern trust company's operations are not much different from those of a large bank. Recent legislation has tended to eliminate the difference between trust companies and banks and in most states trust companies are now permitted by law to perform all the functions of a bank, in addition to trust functions. The organization of a large trust company comprehends a trust department, safe deposit department, investment department, and title insurance department.

The trust functions of a trust company are divided into two broad classes, individual trusts and corporate trusts. Individual trusts consist of acting in the following capacities: executor, administrator, trustee, guardian, conservator, custodian, committee in lunacy, etc. Corporate trusts consist of acting in the following capacities: fiscal agent, (e. g., paying agent for interest coupons and dividends), registrar of stock, transfer agent, trustee under a deed of trust, depositary for protective committees, reorganization committees, etc., escrow agent, and similar capacities.

Trust companies carry on and work in departments, the most common division being a three-fold one:

1. Banking
2. Trust
3. Safe Deposit

Larger trust companies are veritable financial department stores and have in addition the following departments:

1. Bond and Investment Department
2. Mortgage Department
3. Transfer (or Registration) Department
4. Real Estate Department
5. Organization Department
6. Title Insurance Department
7. Women's Department

Much of the business of a trust company can be divided into kinds of trustee work, and divided on this basis:

1. Business as trustee or agent for individuals under private agreement
2. Probate Business
3. Real Estate Business
4. Investment Business
5. Insolvency Business
6. Business as Trustee or Agent for Corporations
7. Business as Transfer Agent and Registrar for Corporations
8. Corporate reorganization and financing
9. Title Insurance
10. Safety Deposit Business
11. Savings and Banking Business
12. Miscellaneous

Individual Trusts

1. For individuals with lack of business experience
2. For individuals in poor health
3. Absentee property owners
4. For the aged
5. For persons traveling in foreign countries

In such cases the trust company will take complete charge of entire property and assets of the individual, collecting any sum of income such as interest, coupons, dividends, annuities, pensions, notes, accounts, bonds, mortgages and land contracts. In case of real property it keeps up repairs, taxes, insurance, reinvests, income and principal.

Corporate Trusts

1. Trustee under a mortgage securing an issue of bonds.
   a. Agent and representative of bondholders.
   b. Agent and representative for bondholders in case of acts of default or foreclosure.
   c. Custody and management of sinking fund.
2. Fiscal or financial agent of Municipal or private corporations.
   a. Pays bonds, coupons and interest.
   b. Attending to publication and amending of notices
   c. Agent for syndicate, managing voting trusts, etc., by issuing and collecting calls, for installment payments, and computes and distributes to proper parties the amounts of participation in profits or proceeds.
   d. Depository of cash and securities for underwriting syndicates, etc.
   e. To receive subscriptions to stocks and bonds and to handle the same when issued.
3. Transfer agent and registrar.
   a. Transfer agent. Knowledge of laws essential; great care and accuracy needed.
   b. Registrar. Registrar is different organization from issuer of bonds. Purpose to prevent over-issue.
4. Depositary for protective committees and reorganization committees.
5. Escrow agent.

Trust companies lay claim to the following advantages over an individual trustee:

(1) Perpetual existence. The trust company is permanent while the individual trustee may resign, die, or become incapacitated.

(2) Superior responsibility. The trust company is required to keep its trust funds separate from its banking assets. The trust department is subject to examination by the State Banking Department and in case of failure, trust funds are held intact for the beneficiaries and cannot be levied upon by the company's general creditors. In many states, moreover, a trust company must make a deposit of securities with the State Banking Department as a guarantee of faithful discharge of its duties.

(3) Permanent location. The trust company has an established place of doing business; it does not move away and is accessible every business day.

(4) Superior facilities. A trust company can employ experts on investments and by maintaining a highly specialized accounting system, safe deposit and banking departments, it can furnish better facilities.

(5) Greater economy. A trust company is not required to give bond, which is a saving to the estate.

Being an authority upon investments, the presumption is that better protection against unnecessary losses and a more certain income can be secured in the investment of trust funds. By making a specialty of the business the trust company can better protect the interests of the estate.

TRUST COMPANY STOCKS

See Bank Stocks.

TRUST DEED

See Deed of Trust.

TRUST DEPARTMENT

The department of a National or state bank which engages in trust work. Section 11 (k) of the Federal Reserve Act gives National banks authority to conduct a trust department with permission of the Board of Governors of the Federal Reserve System which has power "to grant by special permit to National banks applying therefore, when not in contravention of state or local law, the right to act as trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics, or in any other fiduciary capacity in which state banks, trust companies, or other corporations which come into competition with National banks are permitted to act under the laws of the state in which the National bank is located."

In most states, state banks are also permitted to organize trust departments. In all cases, a trust department of a bank must keep its trust records and assets segregated from its banking records and assets. The bookkeeping must be regarded as distinct. If trust funds are deposited in the banking department they must be secured by a deposit of United States bonds or other approved securities. Securities and assets belonging to each separate trust must, moreover, be kept separate from one another. Trust employees are required to furnish bond for the faithful performance of their duties. (See Trust Company.)

TRUST DEPOSITS

Deposits which are made by one person as trustee for another person. Such deposits are made under trustee account agreements executed in advance, and are subject to the terms and conditions of such agreements. Despite the usual provisions for acquittance and discharge of the bank in such agreements for withdrawals by the trustee, where a trustee has both a personal account and a trustee account in the same bank, the bank might become subject to constructive notice and duty of inquiry in cases of loss to beneficiaries through steady and large withdrawals from the trustee account to the personal account. (See Deposits.)

TRUST ESTATE

An estate the equitable title to which belongs to one person, but the legal title, possession and management of which are intrusted to another person or corporation as trustee. The income of such an estate belongs to the equitable owner, i. e., the beneficiary, or Cestui Que Trust (q. v.). (See Trusts.)

TRUST FUND INVESTMENTS

See Legal Investments for Trust Funds.

TRUST FUNDS

Funds which have been placed in the possession of an individual or corporate trustee in accordance with a trust agreement, trust deed, or will, or in the absence of specific instructions, according to the law of the state. Investment of trust funds is usually restricted to securities approved by the states. (See Legal Investments for Trust Funds, Trusts.)

TRUST INVESTMENTS

See Legal Investments for Trust Funds.

TRUST OFFICER

The manager of a trust department in a bank or trust company, that is, the official in charge of the trust business. He is empowered to sign instruments, including checks, and to commit the institution, but only in connection with the trust business.

TRUST RECEIPT

A contract or trust agreement between a bank and its debtor-borrower which is temporarily substituted for other collateral securing an advance. The object of the trust receipt is two-fold: (1) to evidence the delivery of certain property to the debtor-borrower by the lending bank, and (2) to obtain acknowledgment of the legal title to such property by the lending bank.

The trust receipt may be used in the following types of credit transactions: (1) in substitution of collateral, e. g., securities, notes and acceptances, receivables, or merchandise, on which the bank has made advances, (2) in exchange for documents representing title to goods in storage or transit, e. g., warehouse receipts, bills of lading (ocean or rail), or cotton tickets, and (3) in exchange for documents covering import shipments, whether the merchandise is to be sold, warehoused, processed or manufactured.

The trust receipt is used principally in connection with import transactions in which the importer's bank holds the bill of lading and draft drawn against the shipment. The importer needs the bill of lading in order to obtain possession of the merchandise at the steamship terminal, but if the bill of lading is released by the bank, the latter surrenders its security for the advance. The terms of credit have probably been arranged, however, so that the draft will not be due until after the importer has had an opportunity to liquidate the merchandise. The purpose of the trust receipt is to bridge the gap between the release of the bill of lading by the bank and the maturity of the draft; at the same time placing

the legal title of the goods (until such time as the draft is paid) in the name of the lending bank.

The legal status of the trust receipt has been variously adjudicated. It has been variously held to be a conditional sale, chattel mortgage, and a secret lien. Courts have generally upheld the trust receipt except where banks have endeavored to press their claims against third parties. In order to maintain rights against these parties it is necessary for banks to record the trust receipt in all states except where the instrument is regarded as a chattel mortgage.

Trust receipts are not viewed as good collateral and it is the disposition of banks not to take trust receipts from their customers unless their credit standing is sufficiently meritorious as to warrant an unsecured advance of like amount. Trust receipts are not considered as collateral by the Board of Governors of the Federal Reserve System unless the goods covered therein are earmarked and can be identified at all times; are to be replaced by warehouse receipts; or an actual sale of the goods has been completed (in which case the receipt becomes collateral only for a reasonable time.)

A typical form of trust receipt follows:

To the ..... Bank.

We acknowledge the receipt from you of the following merchandise, your property, specified in the bill of lading per ....., dated ....., which bill of lading has been delivered by you to us without waiver of your ownership of the goods therein described. Said goods are marked and numbered as follows: (Here follows description of merchandise).

It is understood that said goods are (1) consigned to us by you for sale on your account, and in consideration thereof, we hereby agree to hold said goods in trust for you, and as your property, with liberty to sell same for your account, or to manufacture and re-manufacture the same without cost or expense to you; and we (2) further agree to keep said goods and the manufactured product and also the proceeds thereof, whether in the form of money, or bills receivable, or account, separate and capable of identification as your property, and (3) in case of sale to deliver, as soon as received, the full net proceeds thereof direct to you to apply against ..... on our account under the terms of letter of credit No ..... issued for our account, and for the payment of any other indebtedness of ours to you, whether due or to become due.

You may at any time cancel this trust and take possession of said goods or of the proceeds of such as may then have been sold, wherever the said goods or proceeds may then be found, and in the event of any suspension, insolvency or bankruptcy on our part, or of the non-fulfillment of any obligation made or assumed by us under said credit, or under any other credit issued by you on our account, or of the non-payment of any indebtedness on our part to you, all obligations, acceptances, indebtedness, and liabilities, whether due or to become due shall thereupon at your option mature and be due and payable. We further agree to keep said property insured against fire, payable in case of loss to you, without cost or charge to you, hereby waiving any lien, which we might otherwise have on said property for insurance duties or charges paid by us. Any insurance money received for any loss shall be subject to the trust herein contained in the same manner as the goods themselves.

.....
Importer.

TRUSTEE

A person or corporation to whom a trust is committed. Federal and state laws permit a trust company or trust department of a bank to accept and execute any trust which is lawful for an individual. Generally, any person capable of taking legal title and is qualified may become a trustee. (See Trusts.)

TRUSTEE SHARES

Certificates of beneficial interest in an investment company, representing an interest in the securities held under the trust. If there are no bonds or debentures, and only one class of stock issued against the securities held in the investment company, a single trustee share represents that proportion of the undivided equity in the total amount of securities in the trust as one trustee share bears to the total number issued. In America investment company shares are sometimes known as Bankers Shares (q.v.). (See Investment Companies.)

TRUSTOR

The settlor, or person who creates a trust. (See Trusts.)

TRUSTS

From early times trusts have had for their purpose the preservation of property in order that favored individuals or institutions might benefit as recipients of the income from the principal of the trusts, or come into the possession of the principal itself. In the establishment of a trust, there are customarily three principal parties involved: (1) trustor, who is also known as the settlor, grantor or donor, the party creating the trust, (2) beneficiary, or one for whose benefit the fund is established, and (3) trustee, who is charged with the management and preservation of the property which constitutes the trust estate.

Classified by origin, trusts may be created by a declaration or deed of trust, or by will. The former, popularly known as living trusts, personal trusts, or voluntary trusts, may take effect immediately upon the execution of the instrument. Unless the trustor expressly reserves the right to modify or revoke such a trust becomes irrevocable even by the trustor himself, except that in most jurisdictions, a trust whose objects have been accomplished or a passive trust mey be revoked with the consent of all parties beneficially interested. A living trust may be created for the benefit of the trustor himself or for other persons, and the trustor may make himself a sole trustee or jointly with others for the benefit of a third party. The terms of a testamentary trust, i. e., one created by will cannot be altered after the death of the testator.

Various circumstances have operated to increase public interest in trusts, and in the creation of trust estates. Ambitious persons desire to create a competence for themselves in old age and to insure the education and support of their children during the period of their infancy. But if this is left in their own hands it is subject to the constant temptation of being dissipated. On the other hand, if it is given outright to relatives,

the property may be squandered, or the beneficiary may be the victim of unscrupulous persons or other well intentioned but inexperienced advisers. Consequently, trusts have been placed in the hands of trusted, experienced, and conscientious persons or corporations (banks and trust companies) with the end of administering the property and its income in accordance with the desire of the testator or trustor, as expressed in the will or deed of trust.

Among the various provisions incorporated in the trust instrument as affecting the beneficiaries are the following: (1) trusts in which the income is to be periodically paid over to the trustor himself, or to the wife, child, parent, or friend of the trustor, or to a charitable or other institution; (2) trusts in which the income is to be accumulated for a minor until he or she arrives at the age of majority; (3) trusts in which the principal is to be paid over to one beneficiary at a certain age (the remainderman), the income in the meanwhile being paid to another or the same beneficiary (the life-tenant); (4) trusts in which the principal is to be paid to the beneficiary upon marriage as a marriage settlement.

Because of the nature and responsibility of the relationship brought into existence by the establishment of a trust the law has surrounded the administration of trust funds with numerous safeguards for the protection of all concerned. Among these safeguards are the following: (1) the trustee must keep accurate accounts of the funds held, invested, and distributed, and trust funds must be kept entirely segregated from individual or corporate assets; (2) the trustee must comply with the wishes of the trustor in carrying out the terms of the trust; (3) the trustee is not permitted to take advantage of his position to profit at the disadvantage of the beneficiaries; (4) unless the character of the investments has been prescribed by the trustor, then the trustee is bound to confine himself to the class of investments permitted by the law of the state as being legal for trust funds.

Although the law places safeguards around trust funds, it has also prevented the locking up of such funds beyond a reasonable length of time. To circumvent this tendency which arises from the natural desire to retain in the family the property which it has acquired, two rules have been written into the trust laws of most states, e. g., New York. One of these is the Rule Against Perpetuities (q.v.), which makes a gift void if the vesting of title is postponed beyond two lives in being and the minority of a third life. The other law is that no funds may be placed in trust for the accumulation of income except during the period of legal infancy of one or more minor beneficiaries then in being. This law has for its object the avoidance of concentration of wealth in one family and to insure the re-entry of the trust funds into the normal channels of business .

The compensation of the trustee is usually agreed upon between the trustor and trustee; if not, the fee is determined by statutory provisions or court direction. (See Deed of Trust, Legal Investments for Trust Funds, Living Trust, Will.)

For bibliography, see under Trust Company.

TURN

A completed speculative transaction involving a purchase and sale. (See Round Turn.)

TURN IN THE MARKET

A change in or reversal of the price tendency; the beginning of a major swing upward after prices have declined or remained on a low plateau over a long period, or the beginning of a major swing downward after a period of rising prices, or a high plateau.

TURN THE CORNER

A term used in business forecasting and securities literature to denote the reversal in the trend of affairs of an individual company, of a group of securities, or of business in general. The turn may be upward after a prolonged period of depression, or downward after a period of prosperity.

TURNOVER

A general term used somewhat loosely to indicate the amount of, or rapidity of sales, as compared with another factor. Properly, however, the term should not be confined to sales turnover, and may be used to indicate the number of times and rapidity with which invested capital, merchandise, or accounts are "turned over" or "moved" in a given period. It is therefore a ratio determined by dividing the amount of annual sales by the average invested capital, merchandise, or receivables, etc. For example, if the annual sales are $5,000,000 and the invested capital $4,000,000, the capital turnover is 1.25 times. (See Account Turnover, Credit Barometrics, Merchandise Turnover.)

TWENTY PER CENT. RULE

A term applied to the practice of many banks requiring borrowing customers to maintain average deposit balances equal to about 20 per cent. of such borrowings. Although the practice of requiring a certain proportion between balances and borrowings is common among banks, the proportion is not uniformly 20 per cent., but ranges from 10 to 25 per cent. The greatest force of the application of this rule is felt in New York City.

The chief reasons for requiring a 20 per cent. or other proportion of balances to borrowings are: (1) borrowers should maintain adequate cash working balances sufficient to insure a safe liquid position, thereby protecting both the borrower and lending bank; (2) the right to credit must be earned and since a bank could not lend freely unless certain proportions were kept on deposit, it prefers to select customers as borrowers who earn the right to a credit force by keeping adequate balances; (3) commercial banks, morally, though not legally, become bound to insure the borrowing customers' credit line, provided no change in financial status occurs. The insistence on keeping balances in proportion to loans may be regarded as a premium to insure a credit force equal to the line granted; (4) bank operating costs are considerably increased as the result of the exercise of the loan and credit functions. This increased cost is passed on to borrowing customers.

TWO-CENT PIECE

In the United States, coinage of the Two-Cent Piece was discontinued in 1864. See Bronze Coins.

TWO-DOLLAR BROKERS

A Floor Broker on the New York Stock Exchange who executes orders for other Exchange members and member firms. The term is derived from the former charge of $2 for purchasing or selling 100 shares of stock. Although the charge of the "Two-Dollar"

Broker is now higher, the term has remained as a designation of this type of floor members.

Many commission houses, those who deal directly with the public, which maintain large systems of branch offices have so many accounts and consequently may receive such a large volume of orders, that their own representatives on the floor cannot execute them all expeditiously and thus provide adequate service for their customers. This is especially true when the market is active, or at the opening each day when numerous orders may have accumulated overnight. In these circumstances, the Two-Dollar Brokers are utilized in handling the load of orders.

Members who act as Two-Dollar Brokers may also be traders for their own account, thus combining the functions of broker and dealer. Because of the conflict of interest involved, however, the law and Exchange rules closely regulate such a conflict arising on the same security. Executing an order for own account in the same security and at the same price specified in the order accepted as broker is prohibited. The New York Stock Exchange Rules state that a member may take the securities named in the order, or supply same as the case may be, provided: (1) he shall have offered the same in the open market at a price which is higher than his bid by the minimum variation permitted in the security, or shall have bid for the same in the open market at a price which is lower than his offer by the minimum variation, as the case may be; (2) the price is justified by the condition of the market; and (3) the member who gave the order shall directly or through a broker authorized to act for him, after prompt notification, accept the trade. A member acting as a broker is permitted to report to his principal a transaction as made with himself when he has orders from two principals to buy and sell the same security, but such securities shall be first publicly offered at a price which is higher than his bid by the minimum variation permitted for the security before making a transaction with himself, and in such case he must add to his name on the report the words "on order."

(See Floor Trader.)

TWO-NAME PAPER

Notes, bills of exchange, trade and bankers' acceptances, with two signatures, each representing separate interests, responsible for payment. Trade and bankers' acceptances are, automatically at least two-name paper, since both the drawer and acceptor are liable to the discounting bank. Two-name paper is also known as double-name paper. (See Single-Name Paper.)

TYPE-RATIO ANALYSIS

See Credit Barometrics.

UNASSENTED SECURITIES

Stocks or bonds, the status, i. e., the rights in or conditions of which, a corporation desires to change, but to which changes the owners have not agreed.

Under Chapter X of the National Bankruptcy Act, which provides for corporate reorganizations, written acceptances of 2/3rds of claims allowed and of a majority of the stock of a solvent debtor for which proofs of claim have been filed, are required. Should the court thereafter confirm the reorganization plan, it will be binding on the non-assenting creditors and stockholders.

Voluntary changes in capitalization, however, are subject under corporation laws to the right of appraisal by non-assenting stockholders. Under the New York Stock Corporation Law (Sec. 38), if the certificate of changes in capitalization required under Sec. 36 of the Stock Corporation Law (1) alters or abolishes any preferential right of any outstanding shares having preferences, affecting the holders of such shares adversely; or (2) creates, alters or abolishes any provision or right in respect of the redemption of any outstanding shares or of any sinking fund for the redemption or purchase of any such shares, affecting the holders of such shares adversely; or (3) limits or denies any pre-emptive right of the holders of any outstanding shares to subscribe for shares or other securities of the corporation, or alters or abolishes any provision affecting any such right, so as to affect adversely the pre-emptive right of such holders; or (4) abolishes any voting right of the holders of shares of any class or limits their voting rights, except as the same may be limited by the voting rights given to new shares of any class authorized by the certificate then upon timely objection to such action and demand of payment for his stock, a non-asserting stockholder shall have the right to have his stock appraised and paid for as provided in the Stock Corporation Law. (See Readjustment, Reorganization.)

UNCALLED CAPITAL

See Call.

UNCLAIMED BALANCES

Bank balances which have remained dormant without deposits or withdrawals over a long period of time.

There is nothing in the National Bank Act or Federal Reserve Act that specifically designates what disposition shall be made of unclaimed deposits of a National bank. It is generally understood, however, that these balances remain a liability of the bank until they are paid, in the meantime being carried to an inactive ledger or suspense account. National banks are thus required to carry all deposits on their books as deposits until such time as they have been withdrawn, regardless of the length of time that may have elapsed since the last withdrawal. The Supreme Court of the United States on June 4, 1923, in the case of The First National Bank of San Jose vs. State of California, held that a state could not dissolve contracts of deposit even after twenty years and that it could not require National banks to pay to it the amounts then due.

Insured deposits must be claimed, as required by Sec. 12B of the Federal Reserve Act relating to deposit insurance. If after the Federal Deposit Insurance Corporation shall have given at least 3 months notice to the depositor by mailing notice to his last known address appearing on the records of the closed bank, any depositor in the closed bank fails to claim his insured deposit from the Corporation within 18 months after appointment of receiver, or fails within such period to claim or arrange to continue his deposit if it has been transferred to a new bank or to another insured bank, all rights of the depositor with respect to the insured deposit and against the new bank or other insured bank with respect to the transferred deposit, shall be barred. All rights of the depositor against the closed bank and its shareholders, or the receivership estate to which the Corporation may have become subrogated, shall thereupon revert to the depositor. The amount of any transferred deposits not claimed within such 18 months period shall be refunded to the Corporation.

If a National bank voluntarily dissolves, unclaimed deposits are transferred into the custody of the Comptroller of the Currency. Where insured National banks or insured District of Columbia banks are closed for inability to meet demands of depositors, the Federal Deposit Insurance Corporation shall be appointed receiver, and one of its duties is to wind up the affairs of such closed banks in conformity with the provisions of law relating to liquidation of closed National banks, as modified by Sec. 12B of the Federal Reserve Act. One of these provisions has been that all moneys received by the receiver are paid into the Treasury of the United States, and dividends to depositors are drawn on the balance in the Treasury to the credit of the insolvent bank. Any amounts unclaimed, therefore, remain in the Treasury.

The laws of most states have clearly established the procedure in handling unclaimed balances, whether held by a state bank, private bank, savings bank, or trust company. In New York State, Secs. 300-305 (Article III) of the Abandoned Property Law, relating to unclaimed property held or owing by banking organizations, define abandoned property and specify the procedure. The following shall be deemed abandoned property: (1) any amounts due on deposits or any amounts to which a shareholder of a savings and loan association or a credit union is entitled to, held or owing by a banking organization, which shall have remained unclaimed for 15 years by the person or persons appearing to be entitled thereto, including any interest or dividends credited thereon. (2) Any amounts held or owning by a banking organization for the payment of a negotiable instrument or a certified check whether negotiable or not on which such organization is directly liable, which instrument shall have been outstanding for more than 15 years from the date it was payable or from the date of its issuance if payable on demand.

On or before the first day of August in each year, every banking organization shall make a verified written report to the State Comptroller which shall contain a true and accurate statement as of the first day of July next preceding, of all abandoned property held or owing by it.

Within 30 days after making the report of the abandoned property, such banking organization shall cause to be published a notice entitled "Notice of Names of Persons Appearing as Owners of Certain Unclaimed Property Held by (Name of banking organization)" Such notice shall be published once in two newspapers

published in the city or village where such abandoned property is payable (if payable in the city of New York, such publication shall be in two newspapers published in the county where such abandoned property is payable). All newspapers in which such notice shall be published shall be newspapers printed in the English language. Such notice shall in accordance with the classification prescribed by the State Comptroller for the purpose set forth the names and last known addresses of all persons appearing to be entitled to any such abandoned property amounting to $10 or more. Such names shall be listed in alphabetical order, and the notice shall contain a statement that a report of unclaimed amounts of money or other property held or owing by the banking organization has been made to the State Comptroller; and that a list of names of the persons appearing from the records of such banking organization to be entitled thereto is on file and open to public inspection at its principal office or place of business in any city, village or county where such abandoned property is located. Further, that such unclaimed moneys or other property will be paid or delivered by it on or before the succeeding 31st day of October to persons establishing to its satisfaction their right to receive same; and that in the succeeding month of November, and on or before the 10th day thereof, such unclaimed moneys or other property still remaining will be paid or delivered to the State Comptroller; and that it shall thereupon cease to be liable therefor. Affidavit of such publication shall be filed by the banking organization on or before the 10th day of September in each year.

All amounts held by the Superintendent of Banks as trustee for the holders thereof after the completion of the voluntary or involuntary liquidation of the business and affairs of any banking organization which shall not have been claimed and paid within 4 years after receipt by the Superintendent shall be deemed abandoned property. Not later than the 1st day of October in each year, the Superintendent of Banks shall pay to the State Comptroller all such abandoned property held by him which shall have become abandoned property at any time prior to the 1st day of July next preceding.

UNCLAIMED DEPOSITS

See Unclaimed Balances.

UNCOLLECTED ITEMS

An account which appears among the assets in the weekly statement of the Federal Reserve System, to represent the amount of items in process of collection, but not yet collected, for member banks. It is offset by the account entitled, Deferred Availability Items (q.v.).

UNCONFIRMED CREDIT

See Letters of Credit.

UNCOVERED PAPER MONEY

Irredeemable paper money; paper money not supported, or only partially supported by a specie reserve. (See Fiat Money.)

UNDER THE RULE

Whenever a member of the New York Stock Exchange becomes insolvent, or is unable to make good deliveries, his outstanding contracts are settled "under the rule". Actually, there are two sets of rules involved, those pertaining to insolvency and those involving failure to fulfill contracts. When an announcement is made of the suspension of a member or member firm pursuant to the provisions of Art. XIII of the New York Stock Exchange Constitution, members or member firms having Exchange contracts with the suspended member or firm for the purchase, sale or loan of securities shall without unnecessary delay proceed to close such contracts on the Exchange or in the best available market pursuant to the By-Laws or rules of the Stock Clearing Corporation which are applicable and provide the method of closing.

A contract in securities admitted to dealings on the Exchange which has not been fulfilled according to the terms thereof may be officially closed by an officer or employee of the Exchange authorized by the Exchange to close such contracts. Order to close such contract shall be delivered to the Exchange, and the member or member firm giving such order shall also deliver at the office of the member or member firm in default notice of intention to make such closing.

Delays in deliveries occurring through no fault of the contracting firm expose it to "buy-ins", but before the drastic action of a buy-in is resorted to, the courtesy among cashiers of Wall Street is to give the defaulting firm a period of grace in which to make the delivery. (See Good Delivery.)

UNDERLYING BONDS

Prior lien bonds; senior bonds; bonds secured by a mortgage lying closer to the ground than other issues secured by inferior liens on the same property; bonds secured by a first mortgage, or at least by a mortgage having priority over other mortgages on the same property. The term is an antonym of overlying or junior bonds. (See Underlying Mortgage.)

UNDERLYING LIEN

A lien, i. e., a right to retain property given as security until the claim against it has been paid, e. g., a mortgage which underlies or is prior to others. A first mortgage is an underlying lien, but a second mortgage is also an underlying lien when there is a third. Any lien is an underlying lien except the last. The use of this term presumes that overlying or junior liens exist.

UNDERLYING MORTGAGE

A mortgage constituting a prior lien over other mortgages on the same property. Although usually understood to be a first mortgage, an underlying mortgage is any mortgage that takes precedence over another mortgage on the same property; thus, a first mortgage is an underlying mortgage when there are two; first and second mortgages are underlying mortgages when there are three; and first, second and third mortgages are underlying mortgages when there are four, etc.

UNDERLYING SYNDICATE

See Syndicate.

UNDERTONE

An expression used to indicate the fundamental underlying tendency of market prices neglecting hour to hour fluctuations; thus, the undertone of a day's market may be weak, steady, or strong.

UNDERWRITER

This term has two meanings:

(1) An insurer; a person or company which, for a compensation, undertakes any kind of insurance contract. (See Insurance.)

(2) A person or company which underwrites an issue of securities. (See Syndicate, Underwriting.)

As defined by the Securities Act of 1933, in Sec. 2 (11), the term "underwriter" means "any person who has purchased from an issuer with a view to, or sells for an issuer in connection with, the distribution of any security, or participates or has a direct or indirect participation in any such undertaking, or participates or has a participation in the direct or indirect underwriting of any such undertaking; but such term shall not include a person whose interest is limited to a commission from an underwriter or dealer not in excess of the usual and customary distributors' or sellers' commission."

UNDERWRITING

The act or process of guaranteeing the sale of an issue of securities by purchase at a stated price from the issuing corporation or governmentality by an underwriting syndicate. It devolves upon the underwriters constituting the purchase group to dispose of the securities to the investing public at a price sufficiently attractive to insure their sale, and yet yield the underwriter a profit.

Before passage of the Securities Act of 1933, which imposed civil liability upon underwriters, and when larger underwriting spreads were customary, it was the practice to organize a second purchase group, larger than the original purchase group and usually composed of large distributing houses with large placement power among institutional investors. From the standpoint of the original purchase group, this second intermediate group between the original purchase group and the selling group, usually called the "banking group", assured spreading of the risk and additional aid in carrying any unsold bonds or other security involved in the underwriting. Since passage of the Act, however, this intermediate group has practically disappeared, discouraged also by the narrower spreads available for allocation among the original purchase group members and any additional banking group members.

In addition to the "straight" underwriting of a public offering, involving a firm commitment, there is the "stand-by" type of underwriting, wherein the purchase group makes a firm commitment to take any balance of bonds or shares unsubscribed in a company offering of subscription rights to stockholders; and the "best efforts" type of underwriting, wherein the underwriters make no firm commitment, but merely engage to use their best efforts to sell as much of the offering as possible. (See Syndicate.)

UNDERWRITING AGREEMENT

See Syndicate Underwriting.

UNDERWRITING SYNDICATE

See Syndicate.

UNDESIGNATED CITIES

Cities not designated by the Board of Governors of the Federal Reserve System as "central reserve" or "reserve" cities (see Central Reserve Cities, Reserve Cities). Member banks in such undesignated cities are termed "country" banks. Under latest change in member bank reserve requirements, effective September 16, 1948, country banks are required to maintain reserves of 16 per cent. against net demand deposits, and like all member banks, are required to maintain reserves of 7 1/2 per cent. against time deposits. (See Reserve.)

UNDIGESTED SECURITIES

Securities issued in excess of the capacity of the investment market to absorb them fully; securities not owned outright by ultimate investors, but held by syndicates, individual speculators and bankers with the intention of disposing of them when a favorable market opportunity presents itself. Sometimes securities purchased by an underwriting syndicate cannot for one reason or another be entirely sold to the investment public. Such part as remains unsold in the hands of the syndicate members is said to be undigested. The severe decline of security prices in 1903 is sometimes referred to as the panic of "Undigested Securities."

UNDIVIDED PROFITS

The name of an account, also known as unappropriated profits, to which current net earnings or profits are credited. This title is of most frequent occurrence in bank accounting and corresponds to what is more usually known among manufacturing and mercantile corporations as earned surplus. It represents profits not yet distributed in dividends.

Banking institutions maintain two accounts, undivided profits and surplus. Current net earnings are credited to the former account, which consists of undistributed earnings, available for dividends and to write off bad debts and special losses, while the latter is a capital surplus account not available for cash dividends from undivided profits, or a combination of both. (See Capital and Surplus, Surplus.)

UNEARNED INTEREST AND DISCOUNT

The title of a deferred income account set up to reflect interest or discount paid in advance but not yet earned. In accounting terminology, this account is a liability or real account which becomes a nominal account, and is closed out to the profit and loss account, when the interest or discount is fully earned. Not setting up unearned interest and discount would overstate true earnings for a particular period. Proper accounting on the accrual basis therefore calls for accrual of interest and discount as earned. (See Discount.)

UNEARNED INCREMENT

Enhancement in the value of property arising from the growth of population and not from improvements effected therein by the owner. Such "unearned" or natural increases in value, however, are reflected promptly in increased assessments and taxes upon the property. Capital gains upon sale or other disposition of the property are also taxed. Also, in the event of population shifts, there are just as liable to be unearned decrements in the value of property.

The Single Tax, as advocated by Henry George in his Progress and Poverty, would be levied upon the rental

value of the land alone, as distinct from the rental value of the improvements made thereon.

UNEMPLOYMENT INSURANCE

In the United States, before passage of the Social Security Act (q.v.), Wisconsin was the only State which had adopted unemployment insurance. Under the Wisconsin law, every employer of 10 or more persons receiving under $1,500 in wages or salaries annually was required to pay 2% of payrolls into a State fund until a credit of $55 was reach for each such employee, thereafter 1% of payrolls until a credit of $75 was reached, when further payments ceased unless the fund became depleted below that limit. Benefits were payable to employees after a two weeks' waiting period at the rate of $10 per week or 50% of average weekly wage, whichever was lower, for not more than 10 weeks in any calendar year.

As the result of the Social Security Act's unemployment insurance provisions, all States now have unemployment insurance. Under the Act, the States may set up unemployment insurance plans of their own, subject to meeting minimum Federal requirements, and receive Federal aid in meeting the administrative cost of such plans.

UNEVEN

An expression used to describe the stock market when prices fluctuate rapidly and over a wide range.

UNFUNDED DEBT

Floating debt; short-term debt; indebtedness not represented by bonds. (See Funded Debt.)

UNIFIED BONDS

See Unifying Mortgage Bonds.

UNIFIED MORTGAGE BONDS

See Unifying Mortgage Bonds.

UNIFORM BILLS OF LADING ACT

See Bill of Lading Act.

UNIFORM NEGOTIABLE INSTRUMENTS LAW

See Negotiable Instruments Law.

UNIFORM WAREHOUSE RECEIPTS ACT

See Warehouse Receipts Act.

UNIFYING MORTGAGE BONDS

Bonds issued (usually by railroad companies) for the purpose of combining several issues of bonds into one issue supported by a single blanket mortgage. The purpose of such an issue is to simplify a company's finances. When unifying mortgage bonds are issued, the amount authorized is usually sufficiently large to provide for future expenditures for some time to come. This title is practically synonymous with General Mortgage Bonds (q. v.) and Consolidated Mortgage Bonds (q. v.).

UNENCUMBERED

Free from all claims and debts; thus, real estate is unencumbered when there are no mortgages, or other liens, e. g., taxes, against it.

UNISSUED STOCK

Stock which has been authorized to the corporation by its certificate of incorporation or certificate of capital changes, but as yet unissued. Although unissued stock is not an asset or a liability, it should be shown on the balance sheet, indicating which portion if any is reserved for options, warrants, or conversion privileges. Unissued stock not earmarked for such purposes is available to directors for issuance for corporate purposes. Under the practice prescribed for railroads by the Interstate Commerce Commission, unissued stock is shown on the balance sheet as a subtraction from the authorized amount, and most accountants follow this practice, stating each class of stock separately, with the amount authorized, issued (which includes treasury stock as well as outstanding stock), and outstanding, together with par value per share for each class of . stock.

See Authorized Capital Stock, Capital Stock, Issued Capital Stock, Treasury Stock.

UNIT OF VALUE

Same as Monetary Unit. (See Monetary Unit, Money of Account, Standard of Value.)

U. S. GOVERNMENT SECURITIES

Securities which are obligations of the United States Government and represent a debt which legally constituted Federal authorities covenant and promise to pay on stated maturity dates. These constitute the largest class of civil bonds. Federal Government securities represent the highest form of credit in the United States, since the debt of the Federal Government supersedes that of all other governmentalities.

There are three characteristics of Federal government securities which set them apart from all others. Since the Federal Government cannot be sued against its will, the security of these obligations depends upon the good faith and integrity of the Government and the stability of the political organization. While this fact may seem to detract from the investment position of government securities, it must be remembered that while a government may repudiate its debts, to do so would be to commit credit suicide. A nation which repudiates its debts undermines its credit standing with its own and other peoples and this is difficult to restore. Repudiation by the United States Government is scarcely conceivable. Not only does the United States Government enjoy a stable political organization, and power to control the resources and productivity of the nation, but also unlimited powers of taxation. These facts make valid the Federal Government's right to the highest credit standing. Another characteristic, not found in State, municipal and corporation bonds, is that the Federal Government can borrow for any purpose, whether productive or unproductive, without establishing special forms of taxation to pay off the bonds issued. Thus, a Government may borrow to build canals, improve harbors, i. e., productive purposes, or to build museums or purchase land for a national park, i. e., unproductive purposes.

From an investment point of view, the value of a Government obligation depends upon the public credit which a nation enjoys, stability of its political organization,

resources, extent of development of resources, ability to tax its people, and ratio of national debt to national wealth. A government enjoys a higher credit standing among its own people than among others, and consequently an internal loan sells on a lower basis than an external loan.

Statutory authority for the issuance of U. S. Government securities is the Second Liberty Bond Act of September 24, 1917, as amended at various times since. Latest amendment of the Act increased the Federal debt limit (obligations issued under the Act, and obligations guaranteed as to principal and interest by the United States, exclusive of holdings by the Treasury of such guaranteed issues) to $275 billion. Outstanding securities as of December 31, 1947 subject to the limitation totaled $256 billion.

Growth of the public debt is tabulated in Public Debt (q. v.). The following are the principal types of U. S. Government securities currently outstanding.

Marketable issues include the following:

Treasury bills.—Outstanding June 30, 1948 in the amount of $13,757 million, consisting of 13 issues in weekly maturities of 90 to 92 days of $905 million to $1,205 million each. Sold on a discount basis. Purchased largely by commercial banks. Fully taxable.

Treasury certificates of indebtedness.—Outstanding June 30, 1948, $22,588 million. Maturities then consisted of 10 issues, ranging in size from $1,055 million to $4,300 million. Issued in maturities up to one year. Largely held by commercial banks. Current interest rates range from 7/8% to 1 1/8%. Fully taxable.

Treasury notes.—Issued in maturities of one to 5 years. Outstanding June 30, 1948 in the amount of $11,375 million, consisting of only three issues. One of these, the September 15, 1948 maturity of $3,748 million, is a 1 1/2% wartime issue, and carries interest coupons. The other two issues, however, the 1% notes of October 1, 1948, $4,092 million, and the 1 1/8% notes of January 1, 1949, $3,535 million, were refunding issues which were issued in the latter part of 1947 carrying only one coupon for the payment of interest along with principal at maturity. Owned largely by commercial banks. Fully taxable.

Treasury bonds.—Issued with maturities of 5 years and over. As of June 30, 1948, there were $112,462 million outstanding, consisting of 10 bank-restricted issues and 29 bank-eligible issues, with interest rates of 1 1/2% to 3 1/8% at varying maturities, longest of which is 1967-72. Bank-restricted issues, which are not eligible for purchase by commercial banks until a specified future time in their maturity, first appeared in May, 1942 as a measure to minimize the inflationary effect of issuance of long term bonds to commercial banks. Savings banks and insurance companies have been the principal buyers of bank-restricted bonds. Bank-eligible bonds, those which may be bought by commercial banks with restriction, are partially tax-exempt and fully taxable. Fourteen of the bank-eligible bond issues are partially tax-exempt (exempt except as to surtaxes, estate or inheritance taxes, and any excess profits or war profits taxes). The supply of partially tax-exempt bonds is decreasing, as maturing issues are replaced by fully taxable bonds.

The restrictions on bank holding of bank-restricted bonds in 1944 were eased to permit limited subscriptions to such bonds in proportion to time deposits. In 1946, commercial banks were also permitted to subscribe to limited amounts of bank-restricted issues to facilitate transactions for their customers.

Panama Canal Loan 3s of 1961.—Issued in 1911, and currently outstanding in the amount of only $50 million. Fully tax-exempt.

Postal Savings bonds.—As of June 30, 1948, outstanding in the amount of $114 million, issued from 1928 to 1935. No Postal Savings bonds have been issued since that year, which was the first year of issuance of U. S. Savings Bonds. Fully tax-exempt.

Non-marketable Government securities include the following types:

U. S. Savings Bonds.—As of June 30, 1948, outstanding in the amount of $53,274 million. Are non-transferable and registered. Such bonds issued prior to March 1, 1941 were partially tax-exempt (from normal income taxes, but not from surtaxes), but bonds issued since that date are fully taxable. Only three series are currently offered: Series "E", appreciation type issue for issuance to individuals; Series "F", appreciation type issue for issuance to individuals, associations, partnerships, trustees, or corporations (except commercial banks accepting demand deposits); and Series "G", current income type, for issuance to same type of holders as those eligible to hold Series "F" bonds. Series "E" bonds mature 10 years from date of issue; cost $75 per $100; afford a yield to maturity of 2.90% per annum compounded semi-annually; may be redeemed at any time after 60 days from date of issue; and have a limitation on purchase of $10,000 maturity value in any one calendar year. Series "F" bonds mature 12 years from date of issue; cost $74 per $100; afford a yield to maturity of 2.53% per annum compounded semi-annually; may be redeemed by the owner on one month's written notice after 6 months from date of issue; and have a limitation on purchase of $100,000 issue price for Series "F" and Series "G" combined in any one calendar year. Series "G" bonds mature 12 years from date of issue; cost $100 (face value); afford a yield of 2.50% per annum, payable semi-annually by Treasury check; may be redeemed under the same conditions as the Series "F" bonds; and have the same limitation on purchase as the Series "F" bonds.

Treasury tax and savings notes.—Outstanding June 30, 1948 in the amount of $4,394 million. Only Series "C" notes are currently issued, maturing 3 years after date of issue and non-callable. Non-transferable, and inscribed. Interest, which is payable upon presentation for redemption, accrues on each $10,000 principal amount as follows: $5 per month for the first 6 months; $8 per month for second 6 months; $9 per month for the third 6 months; $10 per month for the fourth 6 months; and $11 per month for the fifth and sixth 6 months. If held to full maturity, the yield would be 1.07%. These notes may be presented in payment for Federal income, profits, estate and gift taxes, after the second calendar month after purchase, with interest being credited up to and including the month of presentation.

Treasury bonds, investment series.—A special type of non-marketable issue, issued on October 1, 1947 and maturing October 1, 1965, although redeemable on and after April 1, 1948, on one month's notice, by the owner. This issue is of the current income type, interest at the rate of 2 1/2% being paid April 1st and October 1st each year by Treasury check. Outstanding in the amount of $970 million.

There are also other special types of non-marketable

issues, such as depositary bonds, Armed Forces Leave bonds, issues of the Treasury to Government agencies and trust funds.

In addition to direct obligations, there was a total of $69 million in fully guaranteed interest-bearing securities outstanding June 30, 1948, including $27 million of Federal Housing Administration debentures. Fully guaranteed debt is now at relatively unimportant levels as compared with pre-War levels, as many Government agencies have since steadily retired publicly held obligations.

Position of Government Securities.—Since 1933, when the Federal debt began to expand substantially, and particularly since 1941, when war financing further expanded volume of Government obligations, the commercial banking system has been a major buyer and holder of Government securities. At the close of June, 1948, out of the total outstanding interest-bearing debt of $250,132 million, commercial banks held $65,000 million, as compared woth $23,200 million by insurance companies, $12,000 million by mutual savings banks, $21,000 million by other corporations and associations, and $66,800 million by individuals. Federal Reserve Banks held $21,366 million.

Because of the high ratio of Government security holdings alone to capital funds, commercial banks are naturally interested in stability of market for Government securities during any further rise in money rates. Such stability is essential in view of the ratio of 6 1/2:1 of Government securities to capital accounts of commercial banks as of June 30, 1948. Through open market operations, the Federal Reserve System has stabilized recent market levels for Government securities after rapid fading away of former premiums when short-term money rates, taking their cue from higher short-term Treasury borrowing rates, rose in 1947 and 1948. In addition to open market purchases, the Federal Reserve System has the power to lend member banks on their promissory notes secured by Government securities for 15-day periods, renewable indefinitely, at par for the Government securities serving as collateral, but member banks are not inclined to borrow at the Federal unless obliged to do so in order to raise additional reserves.

(See Certificate of Indebtedness, National Budget, Public Debt, Treasury Bills, Treasury Tax and Savings Notes, U. S. Savings Bonds.)

UNITED STATES DEPOSITORY

See Depository.

UNITED STATES MONEY

As the result of monetary legislation enacted during 1933, culminating in the Gold Reserve Act of 1934 (q. v.), and the Silver Purchase Act of 1934 (q. v.), United States money has been irredeemable in gold, although legislation requires the maintenance of the various forms of money at parity with the gold dollar. For international monetary purposes, however, the United States is on a gold bullion standard subject to license and restrictions by the Treasury.

In the years 1934 and 1935, the Treasury took steps toward the simplification of the currency supply of this country. This will result in the eventual elimination of National bank notes and Federal Reserve bank notes from circulation, and, with the retirement of other types of currency which had been in progress, will reduce the number of the kinds of United States currency, other than subsidiary silver and minor coins, from nine types to four—Federal Reserve notes, silver certificates, silver dollars, and United States notes. Gold certificates, issued only to Federal Reserve Banks to monetize gold credits arising from the nationalization of gold under the Gold Reserve Act of 1934, are a special type issued. There also are still outstanding some of the old type of gold certificates, never turned in pursuant to the Emergency Banking Act of March 9, 1933 and Executive Order of March 10, 1933. The following table shows the amounts of various kinds of currency outstanding outside the Treasury and Federal Reserve Banks at the end of June, 1948, compared with preceding year:

(in millions of dollars)

	June 30, 1948	June 30, 1947
Gold certificates (old type, formerly in general circulation, subject to retirement as received)	45	48
Federal Reserve notes	23,600	23,999
Treasury currency:		
Standard silver dollars	156	148
Silver certificates	2,061	2,061
United States notes	321	320
Subsidiary silver coin	919	876
Minor coin	346	331
In process of retirement:		
Federal Reserve Bank notes	353	406
National Bank notes	99	106
Treasury notes of 1890	1	1
Total	27,903	28,297

Gold coin, which up to the spring of 1933 was a part of the circulating money of the United States, was called in and its holding made illegal on March 10, 1933, and the remaining amount that was nominally outstanding but actually no longer in circulation on January 31, 1934, has been deducted from the data on the money supply of this country. The holding of gold certificates has been illegal, except by Federal Reserve Banks (and then only for reserve purposes), since March of 1933.

When the retirement of Federal Reserve Bank notes, National Bank notes, and Treasury notes of 1890, as well as old type gold certificates still in circulation, is completed, there will remain in circulation in this country in addition to subsidiary or fractional currency just four kinds of money—silver dollars and three types of paper money: Federal Reserve notes, which in recent years have constituted by far the largest part of the currency outstanding, especially in denominations of $10 and up; United States notes (Greenbacks), which are issued largely in the smaller denominations and the amount of which in circulation is about one-tenth the amount of Federal Reserve notes in circulation; and silver certificates, which rank second only to the Federal Reserve notes.

Subject to the foregoing qualifications and explanations, there are three kinds of metallic, and four kinds of paper money issued currently in the United States, all of which are explained in greater detail as separate terms, as follows:

METALLIC MONEY

1. Minor Coins:
   (1)—1¢ pieces (cents).
   (2)—5¢ pieces (nickels).
2. Subsidiary Silver Coins:
   (1)—10¢ pieces (Dimes).
   (2)—25¢ pieces (Quarters).
   (3)—50¢ pieces (Half Dollars).
3. Standard Silver Dollars.

PAPER MONEY

(1)—United States Notes (Greenbacks).
(2)—Gold Certificates (held only by Federal Reserve Banks).
(3)—Silver Certificates.
(4)—Federal Reserve Notes.

In accordance with the AAA Farm Relief and Inflation Act of May 12, 1933, as amended by the Joint Resolution of Congress June 5, 1933, all coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve banks and national banks while they continue outstanding) theretofore or thereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues.

For description of each of these kinds of money, see Federal Reserve Notes, Federal Reserve Bank Notes, Gold Certificates, Gold Coins, Minor Coins, National Bank Notes, Silver Certificates, Silver Dollar, Subsidiary Silver Coins, Treasury Notes of 1890, United States Notes.

See also: Coinage, Fiat Money, Irredeemable Money, Mint, Mint Price of Gold, Monetary Stock (Circulation), Money, Paper Money, Quantity Theory of Money.

U. S. GOVERNMENT SECURITIES CROWD

In bond trading on the New York Stock Exchange, the section of the "Active Crowd" which handles trading in marketable U. S. Government securities. Because of the largely institutional character of the market for U. S. Government securities, most trading volume in Government securities is transacted off the board by dealers in Government securities, including trading departments of banks, usually in large blocks at low net spreads. Bids and offers in Government securities on the Exchange are in minimum variations of 1/32 of 1%. (See Active Crowd.)

UNITED STATES NOTES

Notes created by several Acts passed during the Civil War, also known as legal tender notes, and as "legal tenders," and "greenbacks," because they were the first bills to be engraved with green backs. They are issued in denominations as follows: $1, $2, $5, $10, $20, $50, $100, $500, $1,000 and $10,000, but mostly in small denominations. This issue bears a red seal on the obverse side.

The Act of February 25, 1862, authorized the issue of $150,000,000 of which $50,000,000 were in lieu of an equal amount of demand notes, and could be issued only as the demand notes were cancelled. A second issue of $150,000,000 was authorized by the Act of July 11, 1862, of which, however, $50,000,000 were to be a temporary issue for the redemption of a debt known as the temporary loan. A third issue of $510,000,000 was authorized by the Act of March 3, 1863. The total amount authorized, including the temporary issue, was $450,000,000, and the highest amount outstanding at any time was $449,338,902 on January 30, 1864. There are still outstanding $346,681,016, and are required by law to be reissued whenever they return to the Treasury on any account.

The reduction from the original permanent issue of $400,000,000 to $346,681,016 was caused as follows: The act of April 12, 1866, provided that United States notes might be retired to the extent of $10,000,000 during the ensuing six months, and that thereafter they might be retired at the rate of not more than $4,000,000 per month. This authority remained in force until it was suspended by the Act of February 4, 1868. The authorized amount of reduction during this period was about $70,000,000, but the actual reduction was only about $44,000,000. No change was made in the volume of United States notes outstanding until after the panic of 1873, when, in response to popular demand, the Government reissued $26,000,000 of the cancelled notes.

This brought the amount outstanding to $382,000,000, and it so remained until the resumption Act of January 14, 1875 provided for its reduction to $300,000,000. The process was, however, again stopped by the Act of May 31, 1878, which required the notes to be reissued when redeemed. At that time the amount outstanding was $346,681,016, which is the present amount. The amount of United States notes redeemed from the fund raised for resumption purposes since January 1, 1879 has amounted to several times this original amount, but the volume outstanding has remained undiminished because of the provisions of the Act of May 31, 1878, which require the notes so redeemed to be paid out again and kept in circulation.

The Act of March 14, 1900, also directed the reissue of United States notes when redeemed, but under that act, they would first be exchanged for gold. The act also provided that when silver certificates of large denominations were cancelled, and small denominations issued in their place, a like volume of small United States notes shall from time to time be cancelled and notes of $10 and upward issued in substitution therefor.

The Act of March 4, 1907, provided for the issue, under certain conditions, of United States notes in denominations of $1, $2, and $5, and upon such issue an equal amount of United States notes of higher denominations would be retired and cancelled.

The Act of March 14, 1900, increased the reserve fund to $150,000,000 of gold coin and bullion for the redemption of United States notes and after setting forth the methods to be employed in maintaining the fund provided that if at any time notwithstanding the reserve should fall below $100,000,000 then "it shall be his (the Secretary's) duty to restore the same to the maximum sum of $150,000,000 by borrowing money on the credit of the United States, and for the debt thus incurred to issue and sell coupon or registered bonds of the United States."

At the present time, however, since the Gold Reserve Act of 1934 provides that no currency of the United States shall hereafter be redeemable in gold, except such redemptions in gold bullion as may be permitted by the Secretary of the Treasury with the approval of the President, and gold certificates issued to Federal Reserve Banks if necessary in order to maintain parity with gold, United States Notes are not redeemable in gold.

Also, under the AAA Farm Relief and Inflation Act of

May 12, 1933, which provided that all forms of lawful money shall be full legal tender, as amended by the Joint Resolution of Congress of June 5, 1933, United States Notes are now full legal tender. Previously, United States Notes were legal tender except for duties on imports and interest on the public debt, although in practice, despite the statute, from resumption of specie payments on January 1, 1879 United States Notes had been fully accepted and received in payment of customs duties.

(See Greenbacks.)

UNITED STATES POSTAL SAVINGS BANKS

See Postal Savings System.

UNITED STATES SAVINGS BONDS

These bonds, issued uner the authority of the Second Liberty Bond Act, approved September 24, 1917, as amended, are obligations of the United States Government and are payable in ten years from the date of issue. The only series still being issued are the Series "E", "F" and "G" bonds, although there are still Series "C" and "D" bonds outstanding. When held for 10 years, the Series "E" bonds yield a return which amounts to interest at the rate of 2.9 per cent. compounded semiannually. But to provide for emergency needs of investors, the Government will redeem the bonds at any time after 60 days from the issue date. A table of redemption values showing how the bonds increase in value is shown on page 699. It will be seen from this table that the greatest return is obtained by holding the bonds for the full ten years. The bonds are issued in denominations (maturity values) of $25, $50, $100, $500, and $1,000. The purchase price is three-fourths of the amount which the owner will receive in 10 years; that is, he pays $18.75 for a $25 bond, $75 for a $100 bond, and so on.

To cash a bond before maturity (if it has been held for 60 days or more) the owner simply takes it to any post office where the bonds are on sale or to a bank. In the presence of an officer authorized to perform this service, the owner signs the request for payment printed on the bond and has the officer certify to his signature. Many banks provide redemption service for their depositors. If not, the owner then sends the bond to any Federal Reserve Bank or to the United States Treasury in Washington. The Government will mail a check for the rdemption value of the bond. This will be in an amount equal to the purchase price if the bond nas been held less than a year, but in a greater amount if it has been held more than a year.

Owners are protected against loss of Savings Bonds. Each bond is registered in the name of the owner on the books of the Treasury. Registration may be made in the name of one individual, two individuals as co-owners, or one individual and another as beneficiary. Individuals must be residents of the United States, its territories and possessions, or citizens temporarily residing abroad. If the owner desires, the Treasury will hold it in safe keeping for him at his request at the time of purchase. Under regulations of the Treasury, a duplicate will be supplied if the bond is destroyed or lost. Bonds issued prior to March 1, 1941 were partially tax-exempt as to Federal normal income taxes, but bonds issued since that date are fully taxable.

Bonds may be bought at any time to suit a budget or savings plan. Purchase may be made weekly or monthly as desired, but since the bonds are designed for the investment of savings, no one person is permitted to buy more than $10,000 of face value of the bonds in any one calendar year. In addition to the Series "E" bonds, another appreciation type U. S. Savings Bonds series are the Series "F" bonds. Series "F" bonds mature 12 years from date of issue; cost $74 per $100 maturity value; afford a yield to maturity of 2.53% per annum compounded semi-annually; and may be registered in the same names as for Series "E" bonds, but in addition, in the name of any association, partnership, trustee, or corporation (except commercial banks accepting demand deposits). They may be redeemed by the owner on one month's written notice after six months from date of issue. Limitation on purchase is $100,000 (issue price) for Series "F" and Series "G" combined in any one calendar year.

Series "G" bonds are current income type of U. S. Savings Bonds, affording a yield to maturity of 2.50% per year payable semi-annually by Treasury check. Maturity is 12 years from date of issue. Cost is par. Until maturity, they are redeemable at varying values, except at par upon death of the owner or co-owner or if in the name of a trustee, upon the death of any person whose death terminates the trust. Series "G" bonds may be registered in the same names as Series "F" bonds, and necessitate the same notice for redemption. There is also the same limitation on purchase as for Series "F" bonds.

See Treasury Department.

UNIVERSAL NUMERICAL SYSTEM

See Numerical Transit System.

UNLAWFUL LOANS

Loans made by banks in violation of the banking laws. Unlawful loans may be divided into four classes: (1) those in excess of the maximum allowed to one borrower (see Limitations on Bank Loans); (2) loans in excess of the legal rate of interest (see Legal Rate of Interest, Usury); (3) loans to certain persons such as bank officers, directors and employees which are prohibited among National banks and usually among state banks unless approved by a majority of the board of directors; (4) loans for certain purposes, e. g., a National bank may not loan upon real estate with a second mortgage as security.

UNLIMITED MORTGAGE

An open end mortgage. A mortgage which is not limited to a certain amount, but nevertheless may be restricted by the bankers who are to sell the bonds secured thereby. The restrictions relate to earnings, purpose for which money is to be spent, probable earning power of the improvements, cost of improvements, etc. The unlimited mortgage, which occurs in public utility mortgages in particular, has the advantage of relieving the company of the trouble and expense of preparing frequent new mortgages as additional funds are needed to meet expansion. An unlimited mortgage also simplifies the financial plan of the company because all of its financing may be accomplished under a

single mortgage rather than having outstanding several issues brought out under different mortgages. (See Open End Mortgage.)

UNLISTED SECURITIES

Securities not admitted to registration, listing or trading on organized securities exchanges, but traded in the Over-the-Counter Market (q. v.). Trading in such securities is conducted by brokers and dealers for their customers and for own account with other brokers, dealers, and customers wherever a market can be found, various dealers making a market for particular issues. Various firms make a specialty of dealing in unlisted securities, and some exchange members maintain unlisted securities departments.

Transactions in the Over-the-Counter Market are not made public, but quotations on issues having the greatest public interest are furnished for publication by the National Association of Securities Dealers, Inc. (q.v.). Althouth it is impossible to make any dependable estimates of the number of securities traded Over-the-Counter or to calculate the amount of money involved in such transactions, it is an accepted fact that the aggregate of transactions in unlisted securities traded in the Over-the-Counter Market exceeds that of transactions on the stock exchanges. Approximately 3,000 securities are listed on stock exchanges, whereas quotations on some 25,000 Over-the-Counter securities are published during the course of a year. U. S. Government securities, issues of States and Municipalities, the bulk of trading in corporate bonds, and particular types of stocks, such as bank, insurance, and investment com-

pany stocks, guaranteed stocks, as well as the bulk of stocks which are either not qualified for listing or which the managements do not prefer to list, are traded in the Over-the-Counter or unlisted securities market.

Banks, in making security loans, usually favor securities with a listed market. However, some listed securities which are inactive may have less desirability for collateral purposes than unlisted securities which enjoy active markets. Also, because of the credit restrictions imposed by the Securities Exchange Act, listed securities are the only securities, except Government and Municipal securities, which exchange members and most brokers and dealers may accept as collateral in security loans. Because of the high margin requirements of recent years on listed securities (75% effective February 1, 1947 and 100% from January 21, 1946 to January 31, 1947), the New York Stock Exchange points out that speculative funds have been attracted to unlisted securities, commodities markets and real estate, where speculative funds may have the leverage of lower collateral, margin or lending requirements.

UNLISTED TRADING PRIVILEGES

A security admitted to trading on an exchange upon the request of a member as distinguished from the issuer is said to be admitted to "unlisted trading privileges." Such privileges may be granted by an exchange without regard to agreement by the issuer. A security admitted to unlisted trading privileges should be distinguished from a listed security which is admitted to trading upon application of the issuer. (For a discussion of the distinctions between a listed security and one admitted to unlisted trading privileges see report of the Securities Exchange Commission on "Trading in Unlisted Securities Upon Exchanges," Part I.)

Stocks admitted to unlisted trading privileges on the New York Curb Exchange, also called "traded stocks," are those traded, quoted, and cleared by the New York Curb Exchange, although actually unlisted. Since passage of the Securities Exchange Act of 1934, the restrictions on the admission of securities to unlisted trading privileges are so stringent that the number of issues so admitted has been negligible. Practically all of the present issues admitted to unlisted trading privileges on the New York Curb Exchange, or their predecessors, were so admitted prior to enactment of the Act.

Nevertheless, securities admitted to unlisted trading privileges still represent a substantial proportion of the total trading list of the Curb Exchange. As of December 31, 1947, the trading list compared as follows: Stocks: fully listed, 449; unlisted trading privileges, 387; total, 836; proportion in unlisted trading privileges, 46 per cent. Bonds: fully listed, 19; unlisted trading privileges, 95; total, 114; proportion in unlisted trading privileges, 83 per cent. Total issues: fully listed, 468; unlisted trading privileges, 482; total, 950; proportion in unlisted trading privileges, 51 per cent.

Unlisted trading privileges may also be authorized by the Securities and Exchange Commission on one exchange to securities which are fully listed on other national securities exchanges. The Commission in granting such applications considers such factors as distribution of the issue in the area of the exchange and volume of trading originating in the area. The Boston Stock Exchange and the San Francisco Stock Exchange, in particular, have high proportions of their trading list in issues admitted to unlisted trading privileges.

The New York Stock Exchange discontinued the practice of admitting issues to unlisted trading privileges in 1910.

UNLOAD

An expression used to indicate the sale of securities or commodities to avoid a loss due to a falling market, or any expected unfavorable development; "to get out from under" before prices collapse. Very often the "insiders," i. e., officers of a corporation, unload their holding of the securities of their corporation in anticipation of poor earnings or threatened insolvency, upon the market. The expression is usually applied to transactions on a large scale.

UNREGISTERED EXCHANGE

A stock exchange which is exempted from registration with the Securities and Exchange Commisssion under Sec. 5 of the Securities Exchange Act of 1934 (q.v.), upon application of the exchange because, in the opinion of the Commission, by reason of the limited volume of transactions effected on such exchange, it is not practicable and not necessary or appropriate in the public interest or for the protection of investors to require such registration.

As of June 30, 1947, the following stock exchanges are exempt from registration: Colorado Springs Stock Exchange, Honolulu Stock Exchange, Minneapolis-St. Paul Stock Exchange, Richmond Stock Exchange, and Wheeling Stock Exchange.

(See Stock Exchanges.)

UNSECURED CREDITOR

A general creditor; a person or company which has no security or other legal claim upon specific property to satisfy a debt. An unsecured creditor shares in the distribution of the assets of a bankrupt equally with all others after preferred and secured claims have been met. (See Liabilities.)

UNSTEADY

An expression used to describe the stock market when prices fluctuate widely, but close without showing a definite tendency.

UNVALUED SHARES

See No Par Value Stock, Without Par Value.

URBAN MORTGAGE DEBT

Mortgage debt on non-farm property, including homes, apartment houses, office buildings, lofts, hotels, etc. As estimated by the U. S. Department of Commerce, mortgage debt, farm and urban (non-farm), is reported on an individual and non-corporate basis separately from corporate debt, long term and short term.

At the close of 1946, urban mortgage debt amounted to $33.5 billion, a record high surpassing the previous peak of $33.1 billion in 1930, and representing an expansion of about 20% over the 1945 total of $27.9 billion. This rate of expansion was the fastest among types of private debt, reported as corporate, long term and short term; individual and non-corporate, consisting of

mortgage debt (farm and urban) and non-mortgage, farm and non-farm. Urban mortgage debt since 1927 has been the largest single type of individual and non-corporate debt. It is held by institutions and individuals, institutional lenders in particular having expanded such type of debt in recent years stimulated by the facilitating arrangements offered by the Federal Housing Administration (q.v.), and the Servicemen's Readjustment Act of 1944.

(See Internal Debts.)

USANCE

The non-statutory period of time fixed by mercantile usage or custom for the payment of a bill of exchange drawn in one country and payable in another. (See Foreign Bills of Exchange.)

USURY

From the Latin, "usura," meaning enjoyment, interest, i.e., money paid for the use of money. Although the term originally meant interest, in modern times it has come to mean excessive interest, particularly interest in excess of the maximum rate fixed by law.

In the United States, interest rates are fixed by the various States, which prescribe a maximum legal rate, and also fix the maximum contract rate. Every State in the United States has by statute fixed the legal or conventional rate, usually 6%, applicable to matured obligations, judgments and in the absence of contract. With the exception of Colorado, Maine, Massachusetts and New Hampshire, the States also impose limits on the contract rates of interest. In addition, some 40 States have adopted "small loan" statutes, regulating loans of $300 or less and patterned after the Uniform Small Loan Law.

The penalties for violation of the usury laws vary in the different States. In some States, creditors may recover principal and interest, losing only the excess interest, but in others, a usurious contract is void, and the lender is subject to fine and imprisonment. (See Legal Rate of Interest, Small-Loan Business.)

VALEURS

The French equivalent for the term securities in the United States. In France, stocks are called actions, and bonds are called obligations. Obligations may also be known as fonds d'etat (Government funds, i. e., bonds, fonds garantis, i. e., guaranteed bonds, and as emprunts, meaning borrowings.

VALORIZATION

The process of attempting to establish a higher market price for a commodity by governmental interference than would obtain by free and open competition. The arbitrary market value is established in several ways, e. g., governmental maintenance of a purchasing fund, and by governmental loans to producers to enable them to hold their products awaiting a favorable market opportunity, etc. Thus, the Government of Brazil in the past attempted to valorize coffee, which had declined to a price far below its normal cost of production.

VALUATION

Appraisal or act of appraisement; appraised value; market value; estimated value; amortized value; depreciated value.

The basis of valuation of property of railroads and other public utilities has been a point of contention ever since the courts first entertained appeals to review the determinations of valuation of properties for rate making and other purposes by administrative agencies of the Federal Government and the States. The three principal bases of valuation are: (1) market value of the properties; (2) cost or investment in the properties; and (3) cost of reproduction of the properties as of current date. Perhaps the most famous court cases in which the U. S. Supreme Court passed upon valuation disputes are: Smyth v. Ames, 169 U. S. 466 (1898), which laid down the rule that all elements should be considered in the determination of "fair value"; and St. Louis & O'Fallon Railway Co. v. U. S., 279 U. S. 461 (1929), in which the Supreme Court followed the rule of Smyth v. Ames and refused to adopt the viewpoint of the dissenting justices and the Interstate Commerce Commission that the prudent investment basis was a satisfactory sole basis for valuation to be followed for all time.

For bases of valuation of bank investments, see Comptroller's Regulation, Investment Securities Regulations.

VALUATION ACT OF 1913

This was an amendment of the Interstate Commerce Act (q.v.) of 1887, passed March 1, 1913, and amended February 28, 1920. It is section 19-a of the Interstate Commerce Act, and is known as the Physical Valuation of Property Act, which provides for the valuation of all railroad properties in the United States. In the rate-making section of the Transportation Act of 1920 (q.v.), it was provided that as soon as the valuation of a railroad had been determined under section 19-a of the interstate Commerce Act that valuation shall be used in revising the tentative value of each rate territory for rate-making purposes.

The original purpose of the Valuation Act (which was sponsored by Senator Robert M. LaFollette) was to ascertain the physical valuation of the railroads in the belief that actual values were far exceeded by capital issues, i. e., that railroad capitalizations were excessive in terms of real value behind them. By June 30, 1934, practically all of the work of valuing the railroads by the Bureau of Valuation of the Interstate Commerce Commission had been completed. These valuations of individual railroad properties are as of various dates from 1914 on, and are not brought down to date. It is the consensus of opinion, however, that railroad valuations, if allowance be made for present values, are considerably above the par value of securities outstanding.

The Valuation Act did not specify the use of any particular basis of valuation, and generally stated "that the (Interstate Commerce) Commission shall investigate, ascertain, and report the value of all the property owned and used by every common carrier subject to the provisions of the Act. To enable the Commission to make such investigation and report, it is authorized to employ such experts and other assistants as may be necessary. . . . The Commission shall make an inventory which shall list the property of every common carrier subject to the provisions of the Act in detail, and show the value thereof as hereinafter provided, and shall classify the physical property, as nearly as practicable, in conformity with the classification of expenditures for road and equipment, as prescribed by the Interstate Commerce Commission. In such investigation said Commission shall ascertain and report in detail as to each piece of property owned or used by said common carrier for its purposes as a common carrier, the original cost to date, the cost of reproduction new, the cost of reproduction less depreciation, and an analysis of the methods by which these several costs are obtained, and the reason for their differences, if any. The Commission shall in like manner ascertain and report separately other values, and elements of value, if any, of the property of such common carrier, and an analysis of the methods employed, and of the reasons for any differences between any such value, and each of the foregoing cost values."

Valuation data in practice proved unsatisfactory as basis for either the now repealed "recapture clause" of the Transportation Act of 1920, or for rate making. Accordingly, the Emergency Railroad Transportation Act of 1933 provided for a new rule of rate making, under which the Interstate Commerce Commission is required to give due consideration to the effect of rates on the movement of traffic, to the need in the public interest of adequate and efficient railroad transportation service at the lowest cost consistent with the furnishing of such service; and to the need of revenues sufficient to enable carriers under honest, economical and efficient management to provide such service.

(See Railroad Industry, Railroad Legislation.)

VALUE

The ratio at which commodities or services exchange; the power of one commodity or service to command other commodities or services in exchange. In all civilized countries, for the sake of convenience, money is used as a common denominator, medium of exchange, or yardstick of value, so that the values of other com-

modities and services are expressed as ratios to the standard money.

The explanation of value, that is, why goods and services command the money prices they do, is one of the most difficult problems in economics.

Price differs from value in that the former is value in money terms; moreover, a thing may have value without having a price, e. g., something which is not priced for sale.

While the above serves as a general definition of the term, there are many special connotations as expressed in such terms as book value, market value, par value, cost value, sales price value, reproduction cost value, replacement value, scrap value, present value, tangible value, intangible value, capitalization of earning power, liquidation value, etc. These terms are treated separately. (See Assessed Value, Book Value, Intrinsic Value, Inventory Value, Investment Value, Market Value, Par Value, Trading Value.)

VALUE DATE

The date upon which the proceeds of a check or other instrument deposited for credit become available for withdrawal, i. e., have a value. The term is used particularly in foreign exchange bookkeeping to indicate the date upon which the proceeds of a draft become available for the use of a customer or correspondent, or upon which a remittance becomes available in the account of the purchaser abroad.

VAULT

A secure space for the protection and storage of valuable property. Among banks three types of vaults are used—money vaults, record vaults, and storage vaults. The latter type of vault is for the protection of current and old records, etc., and is proof against fire and water. Money vaults are designed to be proof against fire, water, burglary, and mob violence.

Money vaults vary greatly in size and construction, those of safe deposit companies oftentimes occupying an entire basement or ground floor. Many ingenious devices have been invented to secure protection against burglars, and among the larger banks a large number of these devices are in use. The larger vaults are equipped with 2-ft. thick armor plate steel walls, and 3-ft. steel doors. Since most burglars gain access to a vault through the door by boring or drilling the combination, it is necessary to give it added protection. Such added protection may consist of an electric signal alarm system communicating with the local burglar alarm company and setting off an alarm bell in the bank; a time lock, and by running an electric current through the door. The time lock does not open the door automatically, but prevents its opening before a prearranged hour. By means of an electric current, any person tampering with the combination, or bolts of the door is gripped by an electric current. The vault wall itself is very often embedded in a concrete case. In some banks, a network of wires is run through the vault wall so that the slightest puncture will produce a contact that will notify the local burglar alarm company and set off an alarm in the bank. If burglars gain access to the interior of the vault, steam jets may be so arranged to fill the place with live steam in a few moments.

The interior of a vault is usually divided into many compartments, each of which is protected by one or more combination locks which, like the outside combination, are subject to joint control. The combinations to these locks are known by separate officers having custodianship over certain portions of the bank's assets; thus, one compartment may contain the bank's money reserve, another United States bonds; another other securities, another securities pledged as collateral; another securities for which the bank is custodian; another trust department assets, etc. (See Safe Deposit Company.)

VELVET

An easily made profit; bonus; net profit clear of expenses. An expression to denote a profit made on a speculative transaction.

VENDEE

One to whom something is sold.

VENDOR

One who sells, or who has sold, something.

VISE (VISA)

An official indorsement on a passport, or other document as an approval or attestation of its validity. A visé is a certification that a document has been examined by the proper authorities and found to be correct and regular in all respects. The term "visa" is used by the U. S. State Department.

VISIBLE SUPPLY

Stocks of goods subject to statistical measurement.

A term used particularly to denote the stocks of grain in public and private terminal elevators, at all terminal markets, and the amount in transit, as distinguished from the amount held on the farms. It is also used to indicate the stocks of other commodities on hand at the principal souces of production, e. g., copper stocks at refineries, raw sugar supplies held by importers and refineries, hides held by packers, tanners, and importers, etc.

VISITORIAL POWERS

Under the Federal Reserve Act (Sec. 21), no bank shall be subject to any visitatorial (visitorial) powers other than such as are authorized by law, or vested in courts of justice, or such as shall be or shall have been exercised or directed by Congress, or by either the House of Representatives or Senate, or by any committee of Congress or of either House duly authorized.

Member banks of the Federal Reserve System are subject to examination at least twice each year or oftener if considered necessary, by examiners appointed by the Comptroller of the Currency with the approval of the Secretary of the Treasury. The Board of Governors of the Federal Reserve System, however, may authorize examination by the State authorities to be accepted in the case of State member banks, and may at any time direct the holding of a special examination of State member banks. In addition to the examinations made and conducted by the Comptroller of the Currency, every Federal Reserve Bank may, with the approval of the Federal Reserve Agent or the Board of Goverors, provide for special examination of member banks within its district. The Federal Reserve Banks themselves, at least once a year, are subject to examination ordered

by the Board of Governors. Upon joint application of ten member banks, the Board of Governors shall order also a special examination and report of the condition of any Federal Reserve Bank.

State corporation laws usually specify details of judicial supervision of a corporation and of the officers and members thereof. In New York State, this is found in Article 6 of the General Corporation Law, Sec. 62 of which states that such specification of judicial supervision shall not impair any visitorial power over a corporation vested in a corporate body or public officer.

(See Bank Examinations.)

VITAL STATISTICS

See Population.

VOLUNTARY ASSOCIATION

A rare form of business organization similar to that of a Trust (q.v.) in the popular sense. In Massachusetts, such "Massachusetts trusts" or voluntary associations exist, by which the management of the business is given over to a number of trustees by a deed of trust from the stockholders. The stockholders receive transferable certificates which represent their interest in the association. (See Massachusetts Trust.)

VOLUNTARY BANKRUPTCY

See Bankruptcy.

VOLUNTARY TRUST

See Living Trust.

VOSTRO ACCOUNTS

A term used in foreign exchange bookkeeping to denote the accounts of foreign banks, or other foreign correspondents having dollar balances on deposit with a domestic bank, or other institution. The term literally means "your accounts," and is the antonym of Nostro Accounts (q. v.).

VOTING POWER

Ultimate power in a corporation is the voting power exercised by stockholders.

Sec. 47 of the New York Stock Corporation Law states that unless otherwise provided in the certificate of incorporation or other certificate filed pursuant to law, every stockholder of record of a stock corporation shall be entitled at every meeting of the corporation to one vote for every share of stock standing in his name on the books of the corporation.

Stockholders thus vote by shares of stock held, except in the following cases: (1) Voting per capita by stockholders present at a corporate meeting for inspectors of election, as authorized by Sec. 46 of the Stock Corporation Law; and (2) Cumulative voting as authorized by the certificate of incorporation or other certificate filed pursuant to law, for elections of directors. In cumulative voting, each stockholder is entitled to as many votes as shall equal the number of votes which excepting for such cumulative voting provisions he would be entitled to cast for the election of directors with respect to his shares of stock multiplied by the number of directors to be elected. The stockholder may cast all such cumulative votes for a single director or may distribute them among the number of directors to be voted on, or any two or more of them, as he may see fit.

There are three ways of depriving the stockholder of voting power: (1) By the stockholder's use of the proxy, as authorized by Sec. 19 of the General Corporation Law. Every member of a corporation, except a religious corporation, entitled to vote at any meeting may vote by proxy. (2) By creation of the voting trust, as authorized by Sec. 50 of the Stock Corporation Law. A stockholder, by agreement in writing, may transfer his stock to a voting trustee or trustees for the purpose of conferring the right to vote thereon for a period not exceeding ten years upon the terms and conditions stated in the agreement. (3) By reclassifying a class of stock, so as to deprive the entire class of stock of voting power, as authorized by Sec. 51 of the Stock Corporation Law. The certificate of incorporation or other certificate filed pursuant to law may provide, either absolutely or conditionally, that the holders of any designated class or classes of stock shall not be entitled to vote, or it may otherwise limit or define the respective power of voting of the several classes of stock. However, in any proposal for classifying or reclassifying any already authorized or outstanding shares so as to deprive a class of stock of voting power, the holders of all shares of any class or classes that will be adversely affected by such action shall be entitled to vote, regardless of any provision to the contrary in the certificate of incorporation or other certificate of incorporation or other certificate filed pursuant to law. (See Proxy, Voting Trust.)

VOTING TRUST

A trust created in which the stockholders of a single corporation deposit their stock in the custody of designated trustees, called voting trustees, who issue stock trust certificates, or voting trust certificates, in exchange. The stockholders retain all rights in their stock except voting power, which is delegated to the trustees under the terms, and during the life of, the voting trust agreement. Voting trusts are usually created in reorganizations when it is desirable to concentrate the control in the hands of capable persons in order that the corporation may be better tided over the difficult period. Otherwise, the purpose is to secure continuity in policies, management, and operation, e.g., a voting trust is often provided for in the case of companies closely owned so as to assure stability of management.

Under the New York Stock Corporation Law (Sec. 50), a voting trust agreement is limited to ten years. Other states have enacted laws imposing similar limitations. Trust companies are often appointed by voting trustees to act as custodian of stock certificates, to issue and transfer voting trust certificates in exchange, and to disburse dividends received upon the stock to the proper owners.

The National bank laws do not authorize the creation of voting trusts for National banks. The provisions of Sec. 50 of the Stock Corporation Law in New York also do not apply to stock of a banking corporation, and most States similarly exclude banks.

VOTING TRUST CERTIFICATE

A certificate issued by voting trustees to a stockholder as a negotiable receipt for stock certificates deposited with such trustees. (See Voting Trust.)

VOTING TRUSTEES

See Voting Trust.

VOUCHER

A receipt; a recepted bill or statement; any paper evidencing a money expenditure or payment of a debt. Cancelled checks are often called vouchers because they offer proof of payment. Originally, a voucher meant a person or paper that afforded proof, or bore witness concerning some matter under examination.

VOUCHER CHECK

A special form of check combining the features of a formal receipt and a check. On a voucher check space is reserved in the left hand margin, or on the reverse side, to indicate the goods, services or debt owing, i.e., statement of account or invoice, for which the check is in payment. A variant form of the voucher check is a double sized check folded in the middle, one sheet operating as a check and the other as a voucher.

The advantage of a voucher check is that each bill is identified with its payment, and when the check is returned from the bank indorsed by the payee (creditor), it constitutes unquestionable evidence of payment. The voucher check is in general use among large corporations where the voucher system is in operation. In personal checking transactions, an ordinary cancelled check serves the purpose of a receipt quite as well as a voucher check.

VOUCHER DEPARTMENT

The department of a bank, the function of which is to cancel, verify, file, store, and forward cancelled checks or vouchers to the depositors who drew them, after they have been posted to the debit of depositors' accounts on the ledgers and statements. Checks are cancelled as of the date they are paid and posted to the drawer's account. Cancellation is effected by means of a perforating machine which cuts the following words into the check: "Paid .....(date) ..... Blank Bank." The cancelled checks are then sorted by customers' accounts, and filed until the statements are prepared. They are arranged in the order of payment, which is the same as the order in which they appear on the statement. When the latter is ready, the cancelled checks are verified by "checking" them against the entries on the statement. Individual customers' cancelled checks are usually combined with the statement, placed in an envelope, and retained at the bookkeeper's window until called for by the customer. Cancelled checks are sent to out-of-town customers by registered mail, or express.

WAIVER

Voluntary renunciation or relinquishment of a legal right. (See Waiver of Demand,-Waiver of Notice, Waiver of Protest.)

WAIVER OF DEMAND

It is required by law (Sec. 89, Uniform Negotiable Instruments Law; Sec. 160, N. Y. Negotiable Instruments Law) that notice of demand and protest be given to indorsers of a check, bill, or note, in case of dishonor. Although the parties secondarily liable are entitled to receive notice of dishonor and refusal to pay, it is a right which they may waive (Sec. 109, Uniform Negotiable Instruments Law; Sec. 180, N. Y. Negotiable Instruments Law). (See Protest Waived.)

WAIVER OF NOTICE

This term has two applications:

(1) See Protest Waived.

(2) Corporation meetings under State statutes are of six basic types: (1) Directors' meetings are regular meetings of the board of directors, and special meetings. Under Sec. 27 of the New York General Corporation Law, the by-laws may provide for a quorum for directors' meetings, to be not less than 1/3rd of the board, and fix the dates of regular meetings of the directors. If the dates for regular meetings appear in the by-laws, the directors are not entitled to any additional notice. For special directors' meetings, notice is required, but such notice may be waived. (2) Stockholders' meetings are the annual meetings, special meetings, meetings to oust holdover directors, and extraordinary meetings (those held by application to the Supreme Court, where there is difficulty in getting required ratio of consent because of stockholder apathy in sending in proxies or attending, etc.). Notice is required for all these types of meetings, but under Sec. 31 of the General Corporation Law, may be waived, in writing. (See Meetings.)

WAIVER OF PROTEST

See Protest Waived.

WALL STREET

A popular designation for the financial district of New York and by extension, the financial interests of the United States. The Wall Street district includes not only the New York Stock Exchange, and the New York Curb Exchange with the brokerage houses of their members, but also the largest banks and trust companies, the New York Clearing House, many of the general offices of the large industrial, railroad and insurance companies, a large number of the import, export, and steamship companies, Chamber of Commerce, Customs House, and the Produce, Cotton, Coffee and Sugar, Cocoa, and Commodity Exchanges.

Since finance is the key to the economic structure, any objective appraisal of the role of Wall Street must include as one of its conclusions the fact that it provides liquidity for the large volume of listed securities, as well as providing a market place facilitating the flow of equity capital from private sources essential to business development.

WAR ASSETS ADMINISTRATION

An executive agency, created by Executive Order on March 25, 1946, to centralize the functions of a number of Government property disposal agencies. Its specific functions are to formulate policies and execute those policies for the disposal of surplus property remaining from World War II of the U. S. Government, such disposal to be executed in a "fair and equitable" manner. The WAA by September 30, 1947 had taken over some $27 billion of Government surplus property, with another $7 billion additional expected to be acquired for disposal, of which some $21 billion had already been disposed of by its domestic disposal agencies.

WAR DEBTS

Credits extended by the United States to European nations for the purpose of prosecuting World War I. According to a study of the Brookings Institution, total credits extended by the United States during the period April 6, 1917 to November 1, 1920 totaled $9,466 million, of which $4,197 million was extended to Great Britain, $2,966 million to France, $1,631 million to Italy, and $349 million to Belgium. Giving effect to various settlements, total payments made to the United States on war debts account from 1918 to 1931 aggregated $2,606 million, of which $1,891 million was interest.

Although the United States never received reparations from Germany, it nevertheless financed German borrowing under the Dawes and Young Plans. During the period 1924-1930, it is estimated that net foreign debt of Germany was increased by 18 billion Rm. to 25 billion Rm., and that about 55% of the long term debt and 37% of the short term debt of Germany were financed in the United States. During the period 1924-1931, under the Dawes and Young Plans, German payments to the United States on her debt aggregated 449 million Rm. Whether directly contemplated or not, financing by the United States of German debt aided Germany in meeting reparations payments to the other Allies, who in turn were aided by such payments at least indirectly in meeting war debt payments to the United States.

This circuitous flow of funds broke down in 1930 and 1931, and in June, 1931, the Hoover Administration declared a moratorium of one year on war debt payments to the United States. The Lausanne Conference in June and July, 1932, eliminated an estimated 90% of Ger-

many's reparations liability and substituted therefor the plan calling for delivery by Germany to the Bank for International Settlements of an issue of 3 billion Rm. in 5% bonds (approximately $715 billion), to be held by the Bank three years and then publicly offered. Not long afterward, debtors of the United States began to default on war debt payments on the grounds of hardship, and in June, 1934, Germany proclaimed a transfer moratorium and suspended cash payments on foreign debts. As of July 1, 1947, the Treasury reports a total outstanding indebtedness on war debts account, in principal and accrued interest, of $14.8 billion, exclusive of unfunded war debts (Armenia and Russia) totaling another $495.9 million.

On April 13, 1934, the Johnson War Debt Default Act was approved, prohibiting financial transactions with any foreign government in default in the payment of its war debts. On March 10, 1941, the Lend-Lease Act was approved, and "war debts" for the prosecution of World War II were financed in large part under this Act in subsequent years. (See Lend-Lease, War Debts Default Act.)

WAR DEBTS DEFAULT ACT

An act, approved April 13, 1934, sponsored by Senator Johnson of California, which had as its main object the prohibition of financial transactions with any foreign government in default in the payment of its obligations, or any part thereof, to the government of the United States. It also imposed a fine of not more than $10,000, or imprisonment for not more than five years, or both, for violation of this act.

Extensions of military and civilian aid during World War II for the purpose of prosecuting the war were administered under Lend-Lease (q.v.), authorized by the Lend-Lease Act approved March 10, 1941.

WAR FINANCE CORPORATION

A corporation created by the Act of April 5, 1918, for the purpose of aiding financing of essential war industries and the marketing of their products. The Corporation during the years 1918-1923 provided financing for exports and agricultural intermediate credit. It may be regarded as an antecedent of the Reconstruction Finance Corporation (q.v.), created by Act of Congress on January 22, 1932.

WAR LOANS

Organized financing drives by the Government during and for the purpose of financing a war.

During World War II, the United States organized seven War Loans and a Victory Loan, as follows:

First War Loan: Offered November 30, 1942, and consisting of $2,831 million in Treasury 2 1/2% bonds, due 1963-1968; $3,062 million in Treasury 1 3/4% bonds, due June 15, 1948; and $3,800 million in Treasury 7/8% Certificates of Indebtedness.

Second War Loan: Offered March 12, 1943. Consisted of $3,762 million in Treasury 2 1/2% bonds, due 1964-1969; $4,939 million in Treasury 2% bonds, due 1950-1952; and $5,251 million in Treasury 7/8% Certificates.

Third War Loan: Offered August 16, 1943, consisting of $3,779 million in Treasury 2 1/2% bonds, due 1964-1969; $5,257 million in Treasury 2% bonds, due 1951-1953; and $4,122 million in Treasury 7/8% Certificates.

Fourth War Loan: Offered November 22, 1943. Consisted of $2,212 million in Treasury 2 1/2% bonds, due 1965-1970; $3,728 million in Treasury 2 1/4% bonds, due 1956-1959; and $5,048 million in Treasury 7/8% Certificates.

Fifth War Loan: Offered April 14, 1944. Consisted of $2,909 million in Treasury 2 1/2% bonds, due 1965-1970; $5,825 million in Treasury 2% bonds, due 1952-1954; $1,948 million in Treasury 1 1/4% Notes; and $4,770 million in Treasury 7/8% Certificates.

Sixth War Loan: Offered October 23, 1944. Consisted of $3,448 million in Treasury 2 1/2 bonds, due 1966-1971; $7,922 million in Treasury 2% bonds, due 1952-1954; $1,550 million in Treasury 1 1/4% Notes; and $4,395 million in Treasury 7/8% Certificates.

Seventh War Loan: Offered April 11, 1945, consisting of $7,967 million in Treasury 2 1/2% bonds, due 1967-1972; $5,284 million in Treasury 2 1/4% bonds, due 1959-1962; $2,635 million in Treasury 1 1/2% bonds, due December 15, 1950; and $4,799 million in Treasury 7/8% Certificates.

Victory Loan: Offered September 12, 1945. Consisted of $11,689 million in Treasury 2 1/2% bonds, due 1967-1972; $3,470 million in Treasury 2 1/4% bonds, due 1959-1962; and $3,768 million in Treasury 7/8% Certificates.

In addition to these offerings of marketable securities, the Treasury organized large financing drives for the placement of U. S. Savings Bonds (q.v.), first issued in 1935 and emphasized during the War Loan drives for purchases by individuals either directly or through payroll savings plans. (See U. S. Government Securities.

WAR PAPER

Same as War Loans (q.v.).

WARD

A minor child whose person or property, or both, are under the control of a Guardian (q.v.).

WAREHOUSE ACT

See Warehouse Receipts Act.

WAREHOUSE CERTIFICATE

Same as Warehouse Receipt (q.v.).

WAREHOUSE COMPANY

A company engaged in the business of storing goods and merchandise for hire. Such a company has a lien on property stored for the amount of the charges, and an insurable interest in such property to the extent of charges, and any advances that may have been made thereon.

The term "public" warehouse applies to all storage buildings whose facilities are open to the public, as compared with the private warehouses of individual manufacturers used only for the products of the owner. It was estimated by the National Bureau of Economic Research that in 1941 there were at least 5,000 field warehouses in the United States, of which about 3,000 were operated by large regional or national companies,

and about 2,000 operated by small local concerns.

A distinct feature of the modern warehousing companies is the diversification of their service. In addition to furnishing storage space, many of the larger companies provide steamship piers, loft buildings for manufacture, cold storage plants, railroad connections with the trunk lines, and truck distributing services—all of these facilities operating as a closely co-ordinated unit. Thus there are several sources of revenue from a single customer. A manufacturer hiring space in one of the loft buildings is likely to store his excess stock in the nearby warehouses of the company. Similarly, it is likely that he will use the company's piers for his foreign trade and the company's trucks and railroad connecting facilities for his inland distribution. While the warehouse company profits from this diversification of services, the customer himself also benefits from the economy and convenience of storage and distribution facilities concentrated at a single point and under a single direction.

Field warehousing organizations in recent times have also developed field warehousing services, including the segregation, storage inspection, and protection of pledged goods stored on the premises of a borrower, rather than in warehouse space, thus facilitating field warehouse loans by banks. (See Warehouse Receipts.

WAREHOUSE LOANS

Loans made against warehouse receipts, i. e., against the evidence of goods stored in a warehouse. (See Warehouse Receipts.)

WAREHOUSEMAN

See Warehouse Company, Warehouse Receipt.

WAREHOUSE RECEIPT

A receipt for goods stored in a warehouse; an undertaking in which the warehouseman or warehouse compaby acknowledges receipt and agrees to the safe custody and redelivery of the therein described goods upon surrender of the receipt properly indorsed and payment of the charges. To the owner or holder to whom the goods are deliverable it also constitutes a document of title.

Warehouse receipts are issued in negotiable and non-negotiable form, but usually the former in order that they may serve as collateral for bank loans. Since they do not call for payment in money they cannot technically be called Negotiable Instruments (q.v.). A non-negotiable receipt states that the goods will be delivered to the depositor or to some other person designated on its face. A negotiable receipt states that the goods will be delivered to the bearer or to the order of some person named therein. Negotiable receipts are printed on a yellow form and non-negotiable receipts on a white form.

Under the Federal Warehouse Receipts Act a warehouse receipt may be issued only by a licensed warehouseman, and must contain the following essential details: (1) name and location of the warehouseman, (2) date of issue of receipt, (3) consecutive number of the receipt, (4) whether the goods are deliverable to order or to bearer, or to a specified person, (5) description of the goods, stating grade or class, (6) if owned in part by the warehouseman, a statement of that fact, (7) signature of the warehouseman, and (8) rate of storage charges.

Warehouse receipts offer an important basis of commercial credit, and are frequently employed by importers, manufacturers, and merchants as collateral for bank loans. They are regarded as good collateral provided the merchandise stored is not subject to rapid physical deterioration, nor to excessive market depreciation. In case of deterioration or decline in value, the warehouseman is compelled to notify the depositor of the merchandise, and the bank which has made advances against the receipt. Since the warehouseman is not responsible in case of loss or damage by fire, the receipt should be accompanied by a fire insurance certificate if offered as bank collateral.

The typical form of negotiable warehouse receipt is given below.

(See Warehouse Receipts Act.)

.....Warehouse Company
1000 Main Street
No. ..... New York .....19....

RECEIVED on storage in warehouse, 1000 Main Street, New York City from .....

Form of Warehouse Receipt

WAREHOUSE RECEIPTS ACT

Prior to 1916 warehouse and elevator companies were under the regulations of the separate states. In New York State, the Uniform Warehouse Receipts Act was first enacted in 1907, and in 1909 was amended and incorporated into the General Business Law as Article IX (Secs. 90 to 143, inclusive). At the instigation of the Department of Agriculture, Congress passed the Federal Warehouse Receipts Act on August 11, 1916. The purpose of this act was two-fold: (1) to standardize the type of warehouses storing agricultural products acceptable as collateral for bank loans, and (2) to standardize warehouse receipts in order to furnish more satisfactory evidence of storage and to obtain more complete records.

Under the Federal Act, as amended in 1919, 1923 and 1931, warehouses are licensed and brought under the inspection service of the Department of Agriculture. Periodic reports are required of all warehousemen so that their financial condition, and the physical condition

of their properties may be known at all times. The principal classes of merchandise stored in warehouses under warehouse receipts that are acceptable as bank collateral are grains, cotton, wool, silk, tobacco, sugar, coffee, and seeds.

WARRANT

A short term obligation of a municipality, or other political subdivision, constituting a part of its floating debt. A warrant is a revenue obligation issued in anticipation of tax collections.

Federal Reserve banks are permitted to invest in such warrants as are defined by the Federal Reserve Act, thus: "with a maturity from date of purchase of not exceeding six months, issued in anticipation of the collection of taxes or in anticipation of the receipt of assured revenues by any state, county, district, political subdivision, or municipality in the continental Unite d States, including irrigation, drainage and reclamation districts, such purchase to be made in accordance with rules and regulations prescribed by the Board of Governors of the Federal Reserve System." Regulation F of the Board of Governors regulates the purchase of such warrants. (See Dividend Warrant, Interest Warrant, Stock Purchase Warrant, Municipal Warrant.)

WARRANTS ATTACHED

See Stock Purchase Warrant.

WARRANTY DEED

See Deed.

WASH SALE

A form of manipulation whereby a pretended or fictitious sale of securities occurred between two conspiring exchange members, or speculators acting through brokers. The sale was executed at a price higher than the prevailing market and the inflated quotation appeared upon the ticker, thus creating an impression of activity and strength in the hope of inducing the public to buy at the inflated price. The excess price paid by the buyer was remitted by the seller. Wash sales are prohibited by the rules of stock exchanges, commodity exchanges, the Commodity Exchange Act, the Securities Exchange Act, as well as the Internal Revenue Code in taxation matters.

WASTING ASSETS

Exhaustive assets; assets of companies engaged in the extractive industries which become depleted as they are worked. Thus, mines, quarries, and oil wells, are wasting properties, and their value declines in proportion as the mineral product which they contain is extracted. The decline in value of wasting assets is sometimes offset by making depletion charges against earnings and setting up a depletion reserve with the object of reserving sufficient income to redeem the capital stock at par when the assets have become exhausted.

WATER BONDS

A sub-classification of municipal bonds, the purpose of which is to furnish the municipality with a supply of water. These bonds are of the highest grade investments, since not only are they issued for an essential purpose, but in many cases the water plant of a municipality earns the interest on the water bonds, thereby making it unnecessary for the city to provide such interest out of taxes.

WATER COMPANY BONDS

The water supply industry is one of the oldest among public utilities, but because of increasing public ownership of water supply systems, there are only a relatively few privately owned water supply companies. These private companies in turn have a comparatively small aggregate of bonded debt outstanding, primarily because of the largely local nature of operations, and absence of extra-territorial connections and expansion as in the case of electric power and natural gas companies.

Water company bonds are characterized by limited floating supply caused both by the relatively small amounts outstanding, and the holding of such bonds by institutional investors for investment, particularly the life insurance companies. Although varying in quality, water company bonds deserve a generally favorable investment regard because of the investment characteristics of the industry itself. These include: (1) Essential nature of the service provided; (2) Stability of revenues, there being little industrial load in sales to industrial users, and sales being largely residential; (3) Assurance of growth arising from growth in population of the territory served; (4) Low operating ratio of expenses to revenues, despite a tendency in recent years towards higher costs; (5) Although the ratio of plant and property, and therefore funded debt, to gross revenues is comparatively high, necessitated by the requirement of large capital investment for the business, fixed charges have been reduced in recent years of low money rates by refundings into lower coupon bonds; (6) The water supply industry has been relatively free from pressure for rate reductions or burdensome State regulation; and (7) Satisfactory franchises. (See Public Utility Industry.)

WATER POWER ACT

The Federal Water Power Act, enacted June 10, 1920, created the Federal Power Commission, to coordinate the Federal Government's water power interests, to encourage water power development, and to cooperate with the States in formulating policies regarding the use of water power within their borders.

As originally constituted in the 1920 Act, the Commission consisted of the Secretaries of War, Agriculture, and the Interior, who appointed an executive secretary and also could request the designation of an Army engineer for duty with the Commission. In June, 1930, the Commission was reorganized under Act of Congress, which created a Commission of five members, appointed by the President with the consent of the Senate to replace the Cabinet officers.

The Federal Power Act (Title II of the Public Utility Act of 1935) reenacted, with various amendments, the Federal Water Power Act of 1920 and vested the Commission with definite regulatory powers over the transmission and wholesaling of electric energy in interstate commerce as well as over the public utility companies so engaged. In addition, the Commission was vested ing under this power, the Commission prescribed its Uniform System of Accounts, effective January 1, 1937. System of Accounts, effective January 1, 1937.

Other legislation which has added to the powers and

duties of the Commission are: Natural Gas Act of 1938, as amended, regulating natural gas companies engaged in the transportation and sale of natural gas in interstate commerce, and following the general lines of the Federal Power Act in regard to rates and accounting practices; the Flood Control Acts of 1938, 1939, 1941, 1944, and 1946; the Rivers and Harbors Acts of 1945 and 1946; the Tennessee Valley Authority Act of 1933; the Bonneville Act of 1937; Fort Peck Act of 1938. (See Federal Power Commission.)

WATER POWER COMPANY BONDS

Bonds of hydro-electric power companies, being a sub-classification of public utility bonds. Hydro-electric power plants require large initial investment, and in addition, the building of "stand-by" steam plants for use in periods of low water flow. When the hydro-electric plants are in operation, operating earnings are relatively high as compared with those from operation of steam generating plants, because of the basic advantage in elimination of fuel costs. When rainfall and water flow are low, however, and resort must be had to operation of the steam plants, the operating ratio of such a water power company rises, and operating earnings are lowered. This fluctuating nature of earnings of a water power company results in variable margins of earnings over fixed charges of water power company bonds. (See Public Utility Bonds, Public Utility Industry.)

WATERED CAPITAL

See Watered Stock.

WATERED STOCK

A popular metaphorical expression given to stock, the par value of which is in excess of the value of the net tangible assets which it represents. Watered stock is created in several ways: (1) by issuing stock for money or other property less than its par value; (2) by giving stock away to the promoters or organizers for their services, or to stockholders as a bonus; (3) by an impairment of assets through an operating deficit, and (4) by issuing stock against a fictitious or intangible asset.

The amount of watered stock in a corporation may be determined by the excess of the par value of its stock over its tangible assets. Inasmuch as the assets must be at least equivalent to the stock, the "water" masquerades under the name of some fictitious or intangible asset, e. g., good will, patents, trade marks, and the like, or else by an overvaluation of the tangible assets.

Many companies which were originally organized with watered stock have since squeezed the water out by retention of a part of the earnings and re-investing them in the business. In the case of some enterprises which have been extraordinary profitable, i. e., earning a large per cent. of return upon the capital invested, stock has been watered for the purpose of concealing large profits. This has been accomplished by increasing stock against some intangible asset, usually patents, or good will. In such a case, although the stock is watered, the company cannot be said to be over-capitalized, since over-capitalization presupposes that the corporation cannot pay even a moderate return upon the capital outstanding. (See Overcapitalization.)

WEAK

An expression used to denote that stock or commodity prices have a declining tendency. A weak security or commodity, or a weak market, is one in which prices are lower than for the previous day.

WEALTH

The money value of a person's possessions or rights in personal and real property. The concept of national wealth is essentially different from that of private wealth. National wealth is the aggregate of the wealth of individuals plus social wealth, i. e., the property of the Federal Government and its political subdivisions which include Federal, state, and city public works, buildings, parks, museums, and the like. In computing national wealth care is taken to avoid double accounting, e. g., a railroad property is wealth, but it is represented also by stocks and bonds owned by individuals, which they in turn consider as a part of their wealth. Estimates avoid including both the value of the railroad property and the value of its stocks and bonds in computing national wealth. (See National Wealth.)

WEBB-POMERENE ACT

An act, also known as the Export Trade Act or Webb Act, passed on April 10, 1918. This Act exempted from the prohibitions imposed by the Sherman Anti-Trust Act and the Clayton Act on monopolies and combinations in restraint of trade, such export trade associations as might be formed by exporters for purposes of foreign trade, wherein they came into competition with foreign cartels and monopolies operating free from any restrictions upon quotas, prices, and selling policies.

Sec. 4 of the Act, however, specifically provided that such export trade associations would not be exempt from the prohibition against unfair methods of competition used against competing American exporters, even though such unfair methods were used outside the territorial jurisdiction of the United States, imposed by the Federal Trade Commission Act (approved September 26, 1914). The Federal Trade Commission was vested with the powers of supervision over such foreign trade associations, including registration, filing of reports, and power to make findings and recommendations to the Attorney General of the United States where it finds upon investigation that any acts of foreign trade associations are in restraint of trade within the United States or in restraint of the export trade of any domestic competitors of such foreign trade associations.

(See Federal Trade Commission.)

WELCHER

One who fails to live up to an agreement, which, though not enforceable at law, is a moral obligation, e. g., refusal to accept or deliver an order of goods, or cancellation of an order when the market goes against him.

WHEAT

Although the most important cash grain crop produced in the United States, wheat ranks after corn and oats in quantity of annual output. Whereas, nearly 90 per cent. of all wheat grain in this country is sold for milling purposes, the bulk of corn and oats is consumed as animal feed on the farms. Thus, the latter grains are indirectly marketed as live stock. Until 1930,

wheat was an important agricultural export item, ranking second only to cotton, but in later years, owing to various factors, and chiefly to domestic price support and competition from other wheat-growing countries, exports of wheat became relatively insignificant. Following the end of World War II, United States exports of wheat jumped sharply to about 400 million bushels annually.

The importance of wheat in annual money value to the American farmer is usually overemphasized. Other farm products contribute larger annual gross receipts; for example, live stock, cotton, milk, truck garden produce, and eggs. In fact, wheat in pre-World War II years accounted for not more than 10 per cent., and merely 8 per cent., of total farm income. The prominence of wheat is rather due to its former position in American agriculture and export trade; the breadth of its production, contributing to the farm income in every state; because of its world-wide importance in international commerce; because it is primarily produced for cash sale; because it symbolizes man's most elemental and universal food; and because of its steady flow into consumption through the organized grain exchanges.

Wheat is known as the "luxury" grain and is the most prized cereal for human consumption throughout the world. Except under extraordinary circumstances, it commands a higher price than any other grain. Its closest botanical kinship is with rye and barley, also widely used for human consumption and as a base for spirituous liquors. However, rice ranks after wheat in human use. Smaller quantities of corn, oats, millet and buckwheat also enter into human consumption.

Plant and Growth.—The life of the wheat plant may be divided into three stages: (1) the seedling stage when the young plant lives upon the reserve food supplies provided in the seed; (2) the growing stage when the plant draws from soil and air those materials which are necessary to the production of roots, stems, leaves and head; and (3) the fruiting period when the plant transfers to the fruit or grain certain materials that it has previously accumulated, plus starch which it elaborates during this period.

About thirty days before harvest, the wheat plant flowers and begins the formation of the grain. The first major process includes the production of a sack or envelope which is ultimately to become the bran coat of the grain. Into this sack are loaded the other two major structures of the grain (a) the germ or embryo, and (b) the endosperm or starchy and glutenous food reserves.

Into the pericarp, or fibrous branny sack, the plant proceeds to load protein materials and minerals that have been accumulated and stored in other parts of the plant previous to blossoming. At the same time the green parts of the plant are actually engaged in manufacturing sugars which are transferred to the grain and there are built over largely into starch. Accordingly both protein- and starch-forming materials are flowing into this sack at the same time. Completely formed protein is not built up immediately however; this process is incomplete until the approach of ripeness. About the time that the first tinges of yellow appear on the plant, a curious and interesting change in the process of grain formation occurs. This change in color, accompanied by a fall in moisture content, warns the plant that it must promptly complete its task of developing its fruit. Accordingly, the transport of materials to the grain stops at about the stage when its moisture content falls below forty per cent., and the protein-forming materials present are rapidly built up into gliadin and glutenin which jointly are referred to as "gluten." It is here, in the laboratory of the ripening wheat plant, that the components of flour are laid down.

The completeness with which this gluten formation occurs, together with the ratio or proportion of gluten to starch that then exists, has no small bearing upon the usefulness of this grain for human consumption. These gluten proteins, gliadins and glutenin, are curious substances, and their like is not encountered elsewhere in natural foods. When moistened with water, they exhibit a definite attraction for each other—an attraction that can be explained on a basis of certain electrical properties. The complex which results possesses an ability to stretch and expand without rupturing that is not equalled by other natural plant materials. Its usefulness in the production of leavened wheat bread is too well known to require further elaboration.

Production and consumption.—In the past decade, the world has produced about 5 to 6 billion bushels of wheat annually. Allowing a billion bushels for other purposes, including seed, the main use of the remaining 4 to 5 billion bushels is for conversion into human food. In this process varying proportions up to 30 per cent. may be separated as not desirable human food, and this large residue, in the form of bran and shorts, becomes one of the most valuable feeds for livestock, and particularly for milch cattle. Of the wheat which is not milled nor used for seed, animals, among which poultry probably easily stand first, are the main consumers.

The population of the world is about two billion, and the wheat available for milling would give every man, woman and child about one-half of a barrel of flour per year. In North America human consumption is a little less than one barrel per head per year. In Europe it is a little higher than this, but in the greater part of the rest of the world consumption does not reach a half barrel per head. There is, however, no continent in which wheat is not a prominent item in human diet. Even Asia, which grows most of the rice of the world, produces something like a billion and a quarter bushels of wheat per year and is besides a net importer of wheat and flour, and thus uses approximately a quarter of a barrel per year per head of its vast population.

The production of wheat is widely distributed throughout the temperate zones in both the northern and southern hemipheres. As a result of varying climatic conditions in countries having different latitudes, and due to plant variations (time required to mature) as between species and between Fall-sown and Spring-sown seed, there is a wheat harvest in some country of the world for every month of the year. However, roughly 85 per cent. of the world's wheat is harvested between May and September, since about this proportion of the world's output is grown in the northern hemisphere. In the United States, wheat is harvested in the months of June to August.

Prior to the organization of international trade in wheat, i. e., before 1850, wheat prices, within a given country, fluctuated sharply depending upon the size of domestic crops. Wheat trading was largely confined among the countries of Europe. But with the establishment of international trade and markets, the extremes of price fluctuation have greatly narrowed. The great

advance in agricultural production in the United States, Canada, Argentina and Australia in the closing years of the nineteenth century and in the first years of the present century, definitely marked the inauguration of a new era in the production of high quality wheat at generally lower prices than obtained fifty and one hundred years ago.

While previous to 1914, Russia was a leading exporter of wheat, this country has since been practically eliminated from the world grain trade. In the period 1929-1934, world wheat trade became dislocated from the trends of the preceding several decades, owing to several factors: (1) rise of world surplus stocks caused by increased acreages brought into production by the stimulus of war prices; (2) increased production in European countries after the war in an attempt to regain "self-sufficiency," and (3) curtailed world consumption as a result of the world-wide depression.

In pre-World War II years, the chief surplus, or wheat-exporting nations, were Canada, Argentina, Australia, and the Danubian Basin countries. While Europe still constitutes the chief importing group of nations, quantities taken were considerably less than during the eighty years ended with 1930. Japan and China are also important importers of wheat.

Annual production of wheat in the United States during the twentieth century, until 1933, was never less than 500,000,000 bushels, reaching as high as 1,000,000,000 bushels in one year—1915. The average for this period was about 750,000,000 bushels. In view of burdensome world surpluses built up from 1929 to 1932, resulting in extremely low prices, the United States inaugurated a crop restriction program, under the Agricultural Adjustment Act (q.v.) in 1933, the effect of which was to curtail output, increase the domestic price, but practically to eliminate the United States as an exporter. Under the stimulus of post-World War II demand, however, wheat production in the United States reached 1,072 million bushels for the 1944-1945 crop year, and increased this billion bushel crop to 1,108 million bushels for 1945-1946; 1,153 million bushels for 1946-1947; and 1,365 million bushels for the 1947-1948 crop year. Wheat exports expanded to 403.7 million bushels for 1946-1947 crop year, and 396.3 million bushels for 1947-1948.

The Wheat Calendar.—Herewith follows a monthly synopsis of statistical and other factors that are determinants of price movements:

July

July 1 is usually regarded in this country as the beginning of the crop season. About the eighth the government issues a forecast of the winter wheat crop and the spring wheat crop and the stocks of last year's crop remaining on farms and in interior mills and elevators. These stocks together with the "visible" statement are usually considered the "carryover." By July the production of winter wheat is estimated with fair accuracy and its size discounted in the market. When the carryover is very small the earliness or lateness of harvest is an important factor on current prices. In the cash market June-July is the transition period from one crop season to another—sometimes from one season of small supplies to a new season of expected large supplies, causing sharp declines in prices. Crop news dominates the market (probable yields of winter wheat and condition of spring wheat). Condition of European crop becomes more definite.

August

By this time the winter wheat crop in the United States is fairly well known. The prospects of spring wheat in the United States and Canada become the dominating influence. The movement of new wheat to primary markets swells the visible, supply increases and export movement takes on importance. As these are relatively large or small, they have an effect upon prices.

September

The size of the United States crop and much of the European crop is now fairly determined, but the Canadian crop is sometimes uncertain and its progress is watched closely. August-September is the period of heavy export movement from this country and is usually an index of foreign demand. The question of acreage in the southern hemisphere begins to be of some interest.

October

Crop news is now largely a matter of history and the rate of marketing becomes an important factor, although uncertainty sometimes still exists as to the outturn of the Canadian crop. Exports from Canada begin in large volume. Estimates of probable surplus of exporting countries are made by international wheat statisticians and their estimates have an influence on the price.

November

Crop prospects in the southern hemisphere and the rate of movement in the northern hemisphere are the dominating influences. At this time world export movements is usually at its maximum, being large from both the United States and Canada. Competition is sometimes keen between domestic millers and exporters.

December

The out-turn of the crop in the southern hemisphere takes definite shape (usually about 10 to 15 per cent. of the world's production, but about 30 per cent. of the world's exports). The visible in the United States usually reaches its maximum in the month, and its change is closely watched. Crop movement rather than crop estimates, except from Argentina and Australia, is the dominating influence. In this month the report is made on winter wheat plantings, and the condition on December 1 indicates the state in which wheat enters the winter period.

January

Beginning of the heavy movement of Argentina's new crop which competes with exports from this country. Visible stocks have reached their maximum, and the weekly decrease is an important factor. Almost two-thirds of our season's exports are usually moved out of the country before January 1; if they continue relatively heavy, suggesting a drain on the surplus, they have an upward influence on prices; if surplus is regarded as large and exports lag, they have a sagging influence. Crop reports are usually a very small factor, unless winter wheat is bare of snow and intense freeze occurs.

February

In this month rate of reduction of the visible is an important influence, also the primary receipt and shipments which affect the trend of the visible. Severe weather sometimes checks the movement of wheat to

market. The rate at which commercial supplies are absorbed into consumptive channels is an important factor. Little attention is given to crop conditions unless hard alternate freezing and thawing in the winter wheat belt, when no snow covers it, threatens the plant.

March

This is the month when consideration is given to the question of balance between supplies and distribution. About the eighth of the month the government estimates the supplies of wheat remaining on farms March 1, also the supplies in country mills and elevators. These added to the visible statistics (which are published weekly), indicate approximately the amount of wheat stock, and indicate how supplies are holding out. Large supplies tend to depress prices and small supplies to advance prices. Crop scares of winter killing become important in this month and continue into April.

April

Condition of winter wheat begins to be an important factor. The first government report of winter wheat conditions is issued about April 8. If there is a close balance between estimated supply and requirements, world export movement, as well as domestic movement is watched closely, also the rate of decrease of visible supplies.

May

In the speculative wheat market this is probably the most important month of the year. There is more trading in May futures than any other delivery, because it represents the practical close of the old crop season. If there has been any error in the estimate of supplies and consumption has been excessive in relation to supplies, sharp advances occur. Practically all historical "corners" occurred in May delivery. On the other hand, if too much has been held over, prices are likely to sag, especially if prospects of growing winter wheat be favorable. The government report issued about May 8 is important in that it gives the amount of winter wheat acreage to be harvested (in contrast to the December estimate of plantings, the difference being the abandonment caused by winter killing); and also the first quantitative forecast of winter wheat production. Private estimates begin as to the probable acreage of spring wheat.

June

In this month estimates of spring wheat, as well as winter wheat, become an important influence. Weather influences on the growing crop have a dominant effect. Early forecasts of European crops begin to influence the market.

Markets.—Wheat enjoys a world market. The principal market in the United States is in Chicago (Chicago Board of Trade), with lesser markets, i. e., organized grain exchanges at Kansas City, Minneapolis, and other cities. Winnipeg is the principal market in Canada.

Liverpool is the principal market in England and of the world, and acts as a distributing center for Europe, best reflecting the world competitive price. The contract unit is 8000 bushels, or 1000 quarters, and the basic grades are American Hard Winter, Soft Winter, and Spring Wheat; Manitoba Spring Wheat; Argentine Wheat, and Australian Wheat.

At Buenos Aires, the contract unit is 200 metric tons (7354 bushels). Quotations are in paper pesos, and hundredths thereof per 100 kilos. At Rotterdam, the contract unit is 100 metric tons, (3677 bushels).

Government reports give intentions to plant, abandoned acreage, crop conditions, indicated yields, and actual output. The following factors influence prices; acreage, weather, pests, farm labor supply, surplus (carry-over), foreign crops, and sentiment.

Statistics.—Following table shows the production and farm price of wheat by years from 1897:

PRODUCTION OF WHEAT IN THE UNITED STATES

Year.	Bushel.	Average Farm Price per bushel
1897	530,149,000	.....
1898	675,148,000	.....
1899	547,303,000	.....
1900	522,229,000	.....
1901	748,460,000	62.4¢
1902	670,063,000	63.0¢
1903	637,821,000	69.5¢
1904	552,399,000	92.4¢
1905	692,979,000	74.8¢
1906	735,260,000	66.7¢
1907	634,087,000	87.4¢
1908	664,872,000	92.8¢
1909	737,189,000	98.6¢
1910	695,433,000	88.3¢
1911	621,338,000	87.4¢
1912	730,267,000	76.0¢
1913	763,380,000	79.9¢
1914	897,017,000	98.6¢
1915	1,025,801,000	91.9¢
1916	636,318,000	160.3¢
1917	636,655,000	200.8¢
1918	921,438,000	204.2¢
1919	952,097,000	216.3¢
1920	843,277,000	182.6¢
1921	818,964,000	103.0¢
1922	846,649,000	96.6¢
1923	758,482,000	92.6¢
1924	840,091,000	124.7¢
1925	669,142,000	143.7¢
1926	833,544,000	121.7¢
1927	874,733,000	119.0¢
1928	912,961,000	99.8¢
1929	822,180,000	103.4¢
1930	889,702,000	67.0¢
1931	932,221,000	39.0¢
1932	744,076,000	37.9¢
1933	529,000,000	73.1¢
1934	496,900,000	84.7¢
1935	628,227,000	83.2¢
1936	629,880,000	102.5¢
1937	873,914,000	96.2¢
1938	919,913,000	56.2¢
1939	741,180,000	69.1¢
1940	813,305,000	68.2¢
1941	943,127,000	94.5¢
1942	974,176,000	109.8¢
1943	841,023,000	136.0¢
1944	1,072,177,000	141.0¢
1945	1,108,224,000	141.0¢
1946	1,153,046,000	150.0¢
1947	1,364,919,000	191.0¢

WHEAT PIT
See Pit.

WHEN, AS, AND IF ISSUED
See When Issued.

WHEN ISSUED
The method of trading in listed or unlisted securities whose issue has not been finally approved, or for which certificates or forms have not been issued or are not ready for delivery, and therefore in which execution of contracts is contingent upon such issue. Bids and offers in securities admitted to dealings on the New York Stock Exchange on a "when issued" or "when distributed" basis shall be made only on that basis, for delivery when issued or when distributed as determined by the Exchange. However, written contracts in forms approved by the Exchange must be exchanged not later than the business day following the transaction, and signatures to such contracts shall be affixed by a partner of the contracting firm.

Rule X-12D3 of the Securities and Exchange Commission, issued under the Securities Exchange Act of 1934, defines the requirements under which unissued warrants and unissued securities other than warrants may be registered for "when issued" trading on a national securities exchange. The requirement of the Securities Act of 1933 that a registration statement be in effect, if required, is incorporated in this regulation. Formal and official announcement by the issuer of plan or reorganization, exchange, subscription rights, etc. is also a requirement for registration for "when issued" trading on a national securities exchange. Included among types of "when issued" trading are exchanges or distributions resulting from the "break-up" of public utility holding companies under Sec. 11 of the Public Utility Act of 1935; securities issued under reorganizations pursuant to Chapter X of the National Bankruptcy Act; and railroad securities issued pursuant to Chapter VIII of the Bankruptcy Act (the former Sec. 77).

WHIPSAWED
An expression used among speculators to denote a double loss realized as the result of buying at the top of a movement and then when prices have reached the bottom, not only selling long stocks, but also selling a line of short stocks, which because of a subsequent upward turn in the market, are covered at a loss. As stated by one writer, being whipsawed consists of "buying in the hope of a rise, but selling instead on a fall, then selling more, expecting a further fall, but being compelled to buy because the market goes up instead of down," i. e., getting "caught, coming and going."

WHITE ELEPHANT
An expression figuratively applied to any property which cannot be operated at a profit because the cost of operation would exceed the gross revenue, out of analogy to the white elephant, which eats more than its services are worth. Any business into which considerable capital has been invested, and which because of changes in fashion, or in the popular taste, or because of obsolescence, or other reason, cannot be profitably operated, and which could be sold only at a terrific loss, e. g., a large hotel located at a once fashonable summer resort no longer popular.

WIDE OPENING
An expression used to denote that opening prices for the same stock in an active market are wide apart.

WIDE PRICES
An expression used to apply to the condition when bid and asked prices are not fractionally or at least normally close. Ordinarily the bid and asked prices for an active security are from 1/8 to 3/4 of a point apart, and when they are several points apart, e. g., bid 10, asked 13 1/2, they are said to be wide.

WIDOW'S EXEMPTION
A continuance for the benefit of a widow of a deceased debtor, of the immunity or privilege allowed by law to a debtor during his lifetime, to hold a certain amount of property free from levy or seizure in payment of his debts. The following is a legal definition: A widow's exemption is a continuation for the benefit of the wife of a deceased debtor of the immunity, privilege and freedom from any charge or burden allowed by law to a debtor during his lifetime to hold property up to a certain amount, or certain classes of property free from all liability to levy and sale, on execution, attachment, or other legal process issued for the satisfaction of a money-judgment.

WILD CAT BANKS
A derisive name given to banks organized under the laws of the various states in the chaotic, uncontrolled and unsound banking period between the years 1811 and 1863. These banks were permitted to issue bank notes against personal notes, or bonds and mortgages of resident land owners, and in many cases were organized solely for the purpose of issuing paper money rather than carrying on a deposit and loan business. In Michigan, "many of these institutions were located in the depths of forests where there were few human habitations, but plenty of wild cats." They were purposely inaccessible to prevent redemption of their practically worthless notes. Bank failures were numerous and since the security behind these notes was inadequate and illiquid, the banks were unable to redeem them, thus resulting in large losses to the holders. There were approximately 1,600 different kinds of bank notes in circulation when the National Bank Act, in 1863, put an end to the note issues of state banks.

WILD CAT COMPANY
An expression applied to an unsound or highly speculative business venture in which the chance of success is slight, particularly a company organized to develop oil wells on leased lands before it is known positively that oil exists.

WILD CAT CURRENCY
Notes issued by the wild cat banks before the period of sound banking in the United States. (See Wild Cat Banks.) By extension this term refers to any depreciated or worthless money.

WILD CAT SECURITIES
Highly speculative, fraudulent, or worthless securi-

ties; securities of companies organized to exploit an unsound, fanciful or hazardous venture, but upon which the promoters promise large profits; securities of companies which represent nothing but "capitalized hopes." (See Wild Cat Company.)

WILL

A formal written testament or final disposition of property, to take effect after death, made by a person of sound and disposing mind, known as a testator. All persons are competent to make a will, except idiots, infants and persons of unsound mind. In some States, "testaments" of personal property may be made at an earlier age than "wills" of real property, but most States today make no distinction between wills and testaments as to the age at which each can be made.

Generally, laws of most states require that a will be in writing (although various States allow nuncupative or oral wills under specified conditions), signed by the testator, or by some person in his presence and by his direction, and attested by witnesses, who must subscribe their names thereto in the presence of the testator. Most states require two witnesses, except a few which require three. Three witnesses are desirable even though only two are required.

Although the form or wording of a will is immaterial, as long as its intent is clear, and only the subscription by the testator and signatures of the witnesses are absolute requisites, it is advisable to obtain competent legal advice when drawing and executing a will. Many things may render a will invalid such as failure to sign it in the proper place or an insufficient number of witnesses. Erasures, interlineations, or other changes made at a later date than the will itself may not be valid. Unclear language or contradictory provisions may also defeat the testator's intent, particularly in the intricacies of specific legacies, demonstrative legacies, general legacies, and the residuary clause. Codicils may be written to supplement the matter contained in the will, but the same formalities must be observed. The laws governing the execution of wills differ in various states. It is unsafe for a layman to draw a will without consulting a lawyer. Even in cases where the property is small or where the disposition thereof appears not to be a complicated matter, competent legal counsel is essential both to avoid possible litigation (expense of which might be charged to the estate) and to insure carrying out the precise intentions of the testator.

In addition to allowing nuncupative or oral wills, most States also allow holographic wills, those written entirely in the handwriting of the testator. In New York State, nuncupative wills are permitted only in the case of soldiers on active military duty, sailors at sea, and merchant seamen on the high seas, and must be made in the hearing of two persons and proved by at least two witnesses. New York allows a holographic will when written entirely in the handwriting of the testator even though the same be unattested.

There are a number of advantages in making a will over leaving an intestate estate:

1. The testator (one who makes a will) can designate to whom the property shall be left, and in the proportion he desires. He can designate relatives, friends, employees, or charitable institutions as legatees—more to some and less to others. (In New York, neither spouse may devise or bequeath more than one-half of the net estate to a charity or for a charitable purpose where a husband, wife, child, descendant, or parent survives.) Without a will, the property will be distributed according to the laws of descent in the state in which the testator was a resident. These laws operate rigidly. In New York, where dower and curtesy were abolished August 31, 1930, a personal right of election was given to a surviving spouse to take the same share as in intestacy despite a will made by the deceased spouse.

2. The testator can name his own executor and stipulate that he be not required to give bond. Otherwise, the court will appoint an administrator. An administrator is required to give bond and the premium will be charged to the estate. The heirs will be involved in the intricacies of court procedure, and their inheritance may become the prey of inexperience or unscrupulous persons. Thus, by a will, the property is likely to be more economically and expeditiously distributed.

3. The testator can set up a testamentary trust. In this way, all or a part of the property may be conserved, and the income distributed to the persons designated in accordance with their needs, and the principal distributed at some future date. Without a will, the principal of the estate is divided by law, and every beneficiary, if or when of age, will come into absolute control of his or her estate, without regard to personal ability to take care of it. Only by a will, can a life income be provided.

4. Real estate can be sold more readily. A testator can empower the executor to sell his real estate. Without a will, in some States the property can be sold only if all the heirs agree, or by means of a lengthy and expensive suit in partition. (In New York, the administrator of a decedent dying after August 31, 1930 may sell, mortgage or lease real property under the same conditions requiring petition, hearings, and order by the Surrogate as for executors.) (See Codicil, Descent, Laws of, Executor, Trusts, Voluntary Trust.)

For illustrative purposes, the carefully drawn wills of two wealthy men, George F. Baker and Robert W. de Forest, both of which contain supplementary codicils, are reproduced herewith:

Will of George F. Baker.—I, GEORGE F. BAKER, of the City of New York, do hereby make, publish and declare this my Last Will and Testament:

ARTICLE FIRST—Section 1. I give and bequest unto my daughter, Evelyn B. St. George, the sum of $5,000,000.

Section 2. I give and bequeath unto my daughter, Florence B. Loew, the sum of $5,000,000.

Section 3. The above legacies to my daughters are in addition to provisions which I have made in my lifetime for them and their children.

ARTICLE SECOND—I give and bequeath unto my son, George F. Baker, Junior, and unto my daughter, Evelyn B. St. George, and unto my daughter, Florence B. Loew, respectively, such of the furniture, furnishings, pictures, carpets, rugs, silverware, china, glass and other chattels usually contained in the dwelling house upon my country place in Tuxedo, New York, as my said son, George F. Baker, Junior, shall by a writing signed by him and filed with my executor, within six months after my death, determine to be desired by him or his sisters respectively.

ARTICLE THIRD—I give, devise and bequeath unto my granddaughter, Florence J. Loew, and her heirs forever, my country place at Tuxedo, New York, together with

all buildings and improvements thereon and all appurtenances and all the furniture, both useful and ornamental, pictures, bric-a-brac, farming and garden tools and equipment, horses, wagons, automobiles, harness and articles of stable and garage equipment, and other chattels which at the time of my death shall be in or upon my said country place or ordinarily used in connection therewith, excepting only such of the articles above enumerated as are in and by the last preceding article of this will otherwise disposed of.

ARTICLE FOURTH—I give and bequeath the following legacies:

(a) To the New York Public Library, Astor, Lenox and Tilden Foundations, a corporation, the sum of $250,000.

(b) To the New York Exchange for Women's Work, a corporation, the sum of $25,000.

(c) To the Tuxedo Memorial Hospital, a corporation, the sum of $25,000.

In the event that I shall hereafter in my lifetime make any gift or gifts to any of the institutions or corporations to which I have bequeathed legacies in and by this fourth article of my will, such gift or gifts to any such institution or corporation shall be deemed to be in payment of, or on account of, the legacy so bequeathed to it in and by this article, and such gift or gifts shall operate to the extent thereof as in ademption or satisfaction of any such legacy.

If, in any case, I have committed myself during my lifetime to make certain gifts to one or more of such institutions or corporations, it is my will that the legacy herein given to any such institution or corporation shall be taken in full satisfaction and discharge of all such commitments.

ARTICLE FIFTH—In memory of my father, George E. Baker, and my mother, Eveline S. Baker, I give and bequeath unto the Protestant Episcopal Cathedral Foundation of the District of Columbia, the sum of $250,000. It is my wish that this legacy shall be devoted to the erection of an addition to the Washington Cathedral which will serve as a memorial to my father and mother.

ARTICLE SIXTH—I give and bequeath unto Frank Rysavy the sum of $25,000.

ARTICLE SEVENTH—In recognition of faithful service, I give and bequeath the following legacies:

(a) To Helen E. Reddy the sum of $10,000.

(b) To Claire Chaplin the sum of $10,000.

(c) To Michael Birish the sum of $15,000, but if he shall die before me leaving a widow me surviving, such widow shall take the legacy her husband would have taken had he survived me.

(d) To Mary Monahan the sum of $5,000.

(e) To William Ellings and his wife jointly the sum of $10,000, but if either of them shall die before me the survivor shall take the whole of this legacy.

(f) To Adla Backman the sum of $6,000.

(g) To Louise Holdtman the sum of $4,000.

(h) To Cecilia Fitzgerald the sum of $1,000.

(i) To Sophie McEnnis the sum of $2,000.

(j) To Catherine McDonnell the sum of $3,000.

(k) To Frank Healy the sum of $2,000.

(l) To John Rivoire the sum of $2,500.

ARTICLE EIGHTH—All the rest, residue and remainder of my property and estate, real and personal, of whatsoever nature and wheresoever situated and whether acquired before or after the execution of this will, I give, devise and bequeath unto my son, George F. Baker, Jr., and his heirs forever.

ARTICLE NINTH—I direct that all transfer, legacy or inheritance taxes, or estate duties, or other taxes in the general nature thereof, which may become payable by reason of my death, shall be paid out of the capital of my residuary estate.

ARTICLE TENTH—I hereby appoint my said son, George F. Baker, Jr., to be the executor of this my will. I authorize my said executor in his discretion to sell and convey at public or private sale, for cash or upon credit, or partly for cash and partly upon credit, and upon such terms and conditions as he shall deem proper, any property, real or personal, belonging to my estate and not hereby specifically devised or bequeathed, and to borrow any moneys for any purposes which he may deem necessary or convenient in the administration of my estate and to secure such loans by the pledge or hypothecation of any securities belonging to my estate and no person making any such loan or loans to my executor shall be bound to inquire into the expediency or propriety thereof or to see to the application of the proceeds thereof, and the judgment of my executor as to the necessity or propriety of any such loan shall be final and conclusive upon all persons interested in my estate.

In the event that my said son shall die, or fail to qualify or resign as executor of this my will, I hereby appoint The First National Bank of the City of New York to be the executor thereof, with all the same powers, discretionary or otherwise, as are herein conferred upon my said son as executor.

I direct that no bond or other security shall ever be required of any executor hereby appointed by reason of non-residence in any jurisdiction in which this will may be proved, or for any other cause whatsoever.

Last—I revoke all former wills by me at any time made.

In witness whereof I have hereunto set my hand and seal this 21st day of May in the year 1930.

GEORGE F. BAKER.

Signed, sealed, published and declared by George F. Baker, the testator above named, as and for his last will and testament, in our presence, and we, at his request, in his presence of each other, have hereunto subscribed our names as witnesses this 21st day of May, 1930.

LEWIS CASS LEDYARD, 27 East Seventy-second Street, New York City.

JACKSON E. REYNOLDS, 33 Beekman Place, New York City.

SAMUEL A. WELLDON, 28 East Thirty-sixth Street, New York City.

The Codicil

I, George F. Baker, of the city of New York, having heretofore and on the 21st day of May, in the year 1930, duly made, published and declared my last will and testament bearing date that day, do now make, publish and declare this codicil thereto:

FIRST—Whereas and by sub-division (k) of the seventh article of my said will I gave and bequeathed to Frank Healy the sum of $2,000, and whereas since the making of my said will the said Frank Healy has left my service; now I do hereby wholly revoke the said legacy to him given in said sub-division (k) of the seventh article of my said will.

LASTLY—Except as modified by this codicil, I do

hereby in all things ratify, confirm and republish my said last will and testament.

In witness whereof I have hereunto set my hand and seal this 14th day of April, in the year 1931.

GEORGE F. BAKER.

Signed, sealed, published and declared by George F. Baker, the testator above named, as and for a codicil to his last will and testament, in our presence, and we, at his request, in his presence and in the presence of each other, have hereunto subscribed our names as witnesses on the day and year last above written.

LEWIS CASS LEDYARD, 27 East Seventy-second St., New York City.

JACKSON E. REYNOKDS, 33 Beekman Place, New York City.

WALTER S. GIFFORD, 111 East Seventieth Street, New York City.

Will of Robert W. deForest.—I deem in inappropriate in a will, which only concerns the disposition of property and is necessarily made public, to give any expression of my beliefs or affections. These are inherently private. I therefore confine the provisions of my will to its legal purposes.

FIRST. I give to The Metropolitan Museum of Art and to The Charity Organization Society of the City of New York, that is to each, the sum of Fifty Thousand dollars ($50,000). In so far as I may have given Ten thousand dollars ($10,000) at any one time subsequent to the date of this will to either of these institutions, such gifts shall be deemed advancements on account of the above legacies.

SECOND. I give to my children me surviving the sum of Five thousand dollars ($5,000) for each one of my grandchildren me surviving, making a total sum of Five thousand dollars multiplied by the number of my grandchildren so surviving. I rely on my children to apply this gift so that each of my grandchildren shall remember me, but this reliance shall not affect the absolute quality of my gift to my children.

THIRD. If my wife survive me, I give:—

(1) to each of my children me surviving the sum of Two hundred and fifty thousand dollars ($250,000).

To whatever extent I may have given to any of my children since January 1, 1923, the sum of not less than Twenty thousand dollars ($20,000), either in money or in securities of that market value, such gift shall be an advancement on account of the legacy given to such child.

I devise to my son Johnston, as part of his legacy above mentioned, any or all of the real estate owned by me in Suffolk and Nassau counties, Long Island, at the time of my death, other than Wawapek Farm as hereinafter described, provided he elect within six months after probate of my will to take the same, or any part thereof designated by him, at the assessed valuations thereof as the same appear on the tax bills last paid before my death. He has been associated with me in the purchase of this property, he has been interested in its use and development, and I wish to give him this opportunity if he cares to avail of it.

(2) I give to my wife, Emily Johnston de Forest, all my personal effects other than money or securities.

I also give to her the sum of two hundred and fifty thousand dollars ($250,000).

There are friends whom I wish to remember. There are those who have been in my employ for many years whom I also wish to remember. There are public purposes to which I have given in my lifetime to which I may wish to give more. I expect to indicate to my wife in some form my desires in these and possible other particulars, and I rely on her to carry out any expressed intentions of mine, but this gift to her is not qualified in any respect by this reliance upon her, and is absolute.

(3) All the rest, residue and remainder of my estate, real and personal, wheresoever and whatsoever, I give to my executors named in my will, in trust, to hold the same and any reinvestments thereof during the life of my said wife, to apply the income thereof during the life of my said wife to her use semi-annually, or oftener if practicable, and upon her death to divide the same equally among her and my children then surviving and the lawful issue of any children who have died before her, such issue to take its parent's share. Except, however, that as respect any part of my estate given to any grandchild who may not be of lawful age, it shall be held in trust for such grandchild as provided by (a) of the Fourth Article of my will.

FOURTH. If my wife die before me I give:

1. To my children me surviving all my personal effects other than money and securities (except those hereinafter specifically bequeathed), to be divided equally between them.

2. All the rest, residue and remainder of my estate, real and personal, wheresoever and whatsoever (except that hereinafter specifically given otherwise), I give, in equal shares, to my children me surviving, and the issue of any who may have predeceased me, such issue to take their parents' share and to divide it equally between them.

(a) Except that as respects any part of my said gift given to any grandchild who may not be of lawful age, part of my said gift to any grandchild who may not be of lawful age I direct that it be held in trust for such grandchild until he or she attains lawful age; that so much of the income thereof as may in the opinion of my executors and trustees be necessary for the education and maintenance of such grandchild be applied for it semi-annually, or oftener if practicable, and that when such grandchild attains majority the principal thereof he paid over to it. Should any grandchild die before attaining majority such principal shall be paid over in equal parts to its brothers or sisters, as the case may be, or if there be no brothers and sisters, then to my next of kin in the proportions provided by law; and

(b) Except also that I give to my eldest son me surviving my country-place known as Wawapek Farm, at Cold Spring Harbor, Long Island, intending by this description to include all the land owned by me within the election district of Cold Spring Harbor, together with all the furniture, equipment and other personal property there situated at the time of my death, and used or intended to be used in connection therewith, it being my expectation and desire that such son will maintain this family country home, with which all my children have many associations in common, so far as practicable as a permanent family home, in which my other children can share so far as my said eldest son deems expedient, but the expression of this expectation and desire is not intended to limit in any sense the absolute quality of

this gift, or to impose any moral obligation on my said son; and

(c) Except also that I devise to my son, Johnston, as part of his share in my estate, any or all of the real estate owned by me in Suffolk and Nassau counties, Long Island, at the time of my death, other than Wawapek Farm as above described, provided he elect within six months after probate of my will to take the same, or any part thereof to be designated by him, at the assessed valuation thereof as the same appear on the tax bills last paid before my death. He has been associated with me in the purchase of this property, he has been interested in its use and development, and I wish to give him this opportunity if he cares to avail of it.

(d) As I have said in that part of my will which will be effective if my wife survives me, I wish to remember some friends, some who have been in my employment and possibly some public purposes in which I am interested, and I expect to indicate in some form my desires in these and possibly other particulars. I rely on my children to carry out any of my expressed intentions, but my gift to my children is not qualified in any respect by this reliance upon them and is absolute.

FIFTH. I appoint my wife, Emily J.de Forest, my brother, Henry W. de Forest, and my two sons, Johnston and Henry L. de Forest, executrix and executors of and trustees under this my will.

I authorize and empower my said executors and trustees to compromise and settle any claims against my estate in their discretion; to sell, convey and transfer any real or personal property of which I may die possessed, or to which I may die entitled, at such time and in such manner, and upon such terms, as in their discretion shall seem most advantageous to my estate; to hold as part of the trust funds to be held by them under this will any property or securities of which I die possessed; to reinvest, in their discretion, the proceeds of any property held in trust by them as part of said trust funds and sold by them, in any other property or securities selected by them for this purpose, and to execute and deliver any instruments of conveyance and transfer, and do all other acts, and take all other proceedings in relation to such sale, conveyance, transfer and reinvestment, as may, in their judgment, be requisite and proper.

I further authorize and empower my said executors and trustees to lease any real estate of which I may die possessed, or in which any of my estate given in trust may be invested pursuant to the powers of this will, for terms not exceeding twenty-one years, with renewals, and with such covenants for improvements as they may deem expedient, and also to improve any such real estate out of the proceeds of my personal estate.

I further authorize and empower my said executors and trustees to value, for the purpose of constituting the said trust funds, and also for the purpose of division, any of the property of which I may die possessed, their valuations to be final and conclusive, and to distribute any property to such trust funds, and to all persons entitled to share in my estate at such valuations, with like effect in all respects as if it were sold at such valuations and the proceeds thereof distributed in money.

I further authorize and empower such of my executors and trustees as may quality, to appoint, under their hand and seal, with the consent of the beneficiary of any trust, if of age and without such consent if the beneficiary be not of age, a successor trustee or trustees in the place of any who may not quality, or who, having qualified, may die or resign, or otherwise be incapacitated from performing the duties of trustee. This power to be exercised by successor trustees with like effect as if they had been originally appointed.

I direct that my executors and trustees, and my successors so appointed, be not required to give bonds.

LASTLY. I revoke all other wills and codicils to wills, by me at any time heretofore made.

IN WITNESS WHEREOF I ROBERT W. DE FOREST, have hereunto set my hand and seal at New York, this 5th day of February, in the year one thousand nine hundred and twenty-six.

ROBERT W. DE FOREST (Seal).

Signed, Sealed, Published and Declared by ROBERT W. DE FOREST, the Testator, as and for his Last Will and Testament, in the sight and presence of us, who in his and each other's sight and presence, and at his request, have hereunto subscribed our names as witnesses thereto, this 5th day of February, A. D., 1926.

ROBERT D. ELDER, Short Hills, N. J.
WILLIAM McBRIEN, 10419-116th St., Richmond Hill, N. Y.
OLIVE M. CLEARWATER, 36 Raymond Ave., Rutherford, N. J.

A CODICIL to the Will of ROBERT W. de FOREST, Dated February 5, 1926.

FIRST. By the third article of my Will, effective if my wife survive me, and by clause (3) of said article, I give a life estate in the rest, residue and remainder of my estate to my wife and provide that upon her death this property is to be divided equally among her and my children then surviving, and the lawful issue of any children who have died before her, such issue to take its parent's share. I except from my property so to be divided equally among her and my children upon her death, my country place known as Wawapek Farm, at Cold Spring Harbor, Long Island, intending by this description to include all the land owned by me within the election district of Cold Spring Harbor, together with all the furniture, equipment and other personal property there situated at the time of her death, and used or intended to be used in connection therewith, and I give and devise the same to my eldest son then surviving. It is only all the rest, residue and remainder of my property with the above exception which is to be divided equally among my children then surviving and the lawful issue of any children who may have died before her, such issue to take its parent's share.

SECOND. I give the following legacies:

(1) To the American Federation of Arts the sum of ten thousand dollars ($10,000).

(2) To my wife my share of the Jekyl Island Club and the Jekyl Island Annex Association, together with all my property on Jekyl Island, real and personal. Also eighteen shares of the stock of the Adirondack Mountain Reserve and all my rights as lessee or otherwise in the camp and camp sites on the easterly side of the Upper Ausable Lake appurtenant to such stock.

(3) To my son, Henry L. de Forest, nine shares of the said stock and the camp site appurtenant thereto known as the Trumbull Camp.

(4) To my son, Johnston de Forest, my share in the Cascapedia Club, and all my fishing equipment.

(5) To my faithful and trusted secretary, William McBrien, the sum of thirty thousand dollars ($30,000).

(6) To Elizabeth E. Castello, an annuity of six thousand dollars ($6,000) a year, payable quarterly from the date of my death. This may be paid out of the income from securities to be set aside by my executors for this purpose, or by the purchase of an annuity for her in the Metropolitan Life Insurance Company, or any other company preferred by her.

(7) I revoke the appointment of my brother, Henry W. de Forest, as one of my executors and trustees under the fifth clause of my will. I do not wish to impose on him this burden, and I know that my wife and my two sons can always count on his advice and aid without having this burden put upon him in addition to the many others he is carrying.

LASTLY. I revoke all other wills and codicils to wills by me at any time heretofore made, except my will dated February 5, 1926, and this codicil thereto.

IN WITNESS WHEREOF I have hereunto set my hand and seal this 16 day of July, 1928.

ROBERT W. DE FOREST (Seal).

Signed, Sealed, Published and Declared by the Testator above named and for a Codicil to his Will dated February 5, 1926, in our presence, who at his request and in his and each other's presence have signed as witnesses thereto, this 16 day of July, 1928.

Robert Thorne, 863 Park Avenue, New York.
Mary Mitchison, 44 Butler Place, Brooklyn, New York.

A second codicil to the will of Robert W. de Forest.

This will is dated February 5, 1926, and the first codicil is dated July 16, 1928.

I give to my executors, in trust, the sum of fifty thousand dollars ($50,000), to apply the same, principal and interest and any accumulations of interest, to the maintenance and improvement of the Adirondack Mountain Reserve, of which I am now president. My purpose is to preserve the forests, lakes and mountains of the Upper Ausable Valley in their wild and natural condition, under the policy set forth in the present by-laws of the reserve or as these by-laws may be hereafter amended.

To effectuate this purpose I give my said trustees absolute power and discretion in the application of this gift. I do not wish it used for current expenses. I expect these will be met by our members, but I wish to safeguard the reserve against unusual outlay.

If in the opinion of my trustees my purposes cannot be wisely accomplished by this gift, I authorize them to terminate the trust as to any amount then in their hands, either in whole or in part, and distribute the same as part of my residuary estate.

Should any trustee die or become incapacitated, the surviving trustees or trustee may appoint, under hand and seal, a successor, who shall be vested with the same powers as if originally appointed by me.

This trust shall continue, unless sooner terminated, during the lives of my two sons.

My trustees are authorized to use my gift in any way which will, in their opinion, best accomplish my purpose. I suggest that my gift be constituted by fifty thousand dollars of certificates of the Provident Loan Society of New York, of that par value, if at the time of my death I own that amount.

IN WITNESS WHEREOF, I ROBERT W. de FOREST, have hereunto set my hand and seal at New York City, New York, this 9th day of October, in the year one thousand nine hundred and twenty-eight.

ROBERT W. DE FOREST.

Signed, Sealed, Published and Declared by ROBERT W. de FOREST, the Testator, as and for a Second Codicil to his Last Will and Testament dated February 5, 1926, in the sight and presence of us, who in his and each other's sight and presence, and at his request, have hereunto subscribed our names as witnesses thereto, this 9th day of October, A. D., 1928.

Robert Thorne, 863 Park Avenue, New York.
Mary Mitchison, 44 Butler Place, Brooklyn, New York.

A THIRD CODICIL TO THE WILL OF ROBERT W. de FOREST dated February 5, 1926 AND TO THE TWO CODICILS THERETO Dated respectively July 16 and October 9, 1928.

FIRST. I give the following legacies:

(1) To the Metropolitan Museum of Art, One hundred thousand dollars ($100,000), in lieu of the Fifty thousand dollars ($50,000) given to that institution by my will. It is my wish that this be held as a principal sum the income of which shall be applied every year to provide free concerts in the Museum. But the expression of this wish shall create no legal obligation.

(2) To the Charity Organization Society of the City of New York, the sum of One hundred thousand dollars ($100,000), in lieu of the Fifty thousand dollars ($50,000) given to that Society by my will. The fifty thousand dollars I have recently given to the said Society shall be deemed an advancement on account of this legacy of one hundred thousand dollars.

(3) In so far as I may hereafter give to either of the said institutions at any one time twenty-five thousand dollars ($25,000) or more, such gifts shall be deemed advancements on account of these legacies.

(4) To Elizabeth E. Castello, twenty thousand dollars ($20,000), in addition to the annuity given by the codicil to my will dated July 16, 1928.

(5) To Helen Moore, ten thousand dollars ($10,000).

(6) To Mrs. Henry Parkman, twenty thousand dollars ($20,000).

(7) To Margaret N. Hogan, if she shall be in my employ at the time of my death, five thousand dollars ($5,000).

(8) To William McBrien, twenty thousand dollars ($20,000), in addition to the thirty thousand dollars given to him by the codicil to my will dated July 16, 1928.

SECOND. I direct that all estate or inheritance taxes upon the legacies given by this codicil, and my will, and any codicil thereto shall be paid out of my residuary estate, so that my legatees may receive the net amount of their legacies.

THIRD. Any legacies may be paid by my securities, at valuations fixed by my executors, not below market values.

LASTLY. I revoke all other wills and codicils to wills by me at any time made except my will dated February 5, 1926, and the two codicils thereto above mentioned, all of which I confirm.

IN WITNESS WHEREOF I have hereunto set my hand and seal this 26 day of July, 1929.

ROBERT W. de FOREST (Seal).

Signed, Sealed, Published and Declared by the testator above named as and for a Codicil to his Will dated February 5, 1926, in our presence, who at his request and in his and each other's presence have signed as witnesses thereto, this 26 day of July, 1929.

Ernest C. Mansfield, 330 West 85 Street, New York City.
Mrs. Elizabeth Gilway, 7 Washington Square, New York City.

I, ROBERT W. de FOREST, residing at 7 Washington Square, New York City, New York, do hereby make, publish and declare the following as and for a Fourth Codicil to my Last Will and Testament dated February 5, 1926, and the three codicils thereto dated respectively July 16, 1928, October 9, 1928, and July 26, 1929.

FIRST. By the third article of my will, effective if my wife survives me, I give my residuary estate in trust to my executors, to hold and apply the income thereof to my wife and upon her death to divide it equally between her and my children her surviving.

I wish to except from this equal division my country place, known as "Wawapek Farm," at Cold Spring Harbor, Long Island, as described by section (b) of the fourth article of my will, and to give this property as so described to my eldest child her surviving. This as distinguished from dividing it. And I hereby modify my will in this particular.

SECOND. In addition to the powers given my executors by my said last will and testament and the said codicils thereto, and for the purpose of paying any debts of my estate, any taxes thereon or on the transfer thereof and any expenses of administering my estate, I hereby authorize and empower my said executors to borrow such sums of money as they may deem necessary and to pledge or mortgage as collateral security for the repayment thereof any property, real or personal, of which I may die seized or possessed.

THIRD. I increase to the sum of One Hundred Thousand dollars—($100,000), instead of Fifty Thousand dollars, the legacy given to my executors by the second codicil to my will for the maintenance and improvement of the Adirondack Mountain Reserve, with like effect in all respects as if I had named the sum of One Hundred Thousand dollars in that codicil.

FOURTH. I increase the annuity of Six thousand dollars ($6,000), given by the codicil to my will dated July 16, 1928, to Elizabeth E. Castello, to the amount of Ten thousand dollars ($10,000), with like effect in all respects as if I had named said sum of Ten thousand dollars instead of Six thousand dollars in that codicil.

FIFTH. I revoke any codicil to my will heretofore executed except those above named, and confirm my said will and the said three codicils thereto.

IN WITNESS WHEREOF, I have hereunto set my hand and seal this 22d day of May, 1930.

ROBERT W. de FOREST (Seal).

Signed, Sealed, Published and Declared by Robert W. de Forest, the testator, as and for a Fourth Codicil to his Last Will and Testament dated February 5, 1926, in the sight and presence of us, who in his and each other's sight and presence and at his request, have hereunto subscribed our names as witnesses thereto this 22 day of May, 1930.

MARGARET N. HOGAN,
115 Henry Street, Brooklyn, N. Y.
MRS. ELIZABETH GILWAY,
7 Washington Square, N. Y. City.

I, ROBERT W. de FOREST, residing at 7 Washington Square, New York City, New York, do hereby make, publish and declare the following as and for a Fifth Codicil to my Last Will and testament dated February 5, 1926, and the four codicils thereto dated respectively July 16, 1928; October 9, 1928; July 26, 1929, and May, 1930.

I give the following legacies:

(1) To Elizabeth E. Castello thirty thousand dollars ($30,000) in addition to the annuity given by the codicil to my will dated July 16, 1928, making my gift to her in all fifty thousand dollars.

(2) To Margaret N. Hogan, if she be in my employ at the time of my death, five thousand dollars ($5,000) in addition to the five thousand dollars given to her by the third codicil to my will, making my gift to her in all ten thousand dollars.

(3) I revoke any codicils to my will heretofore executed except those named, and confirm my said will and the said four codicils thereto.

In witness whereof, I have hereunto set my hand and seal this 3rd day of November, 1930.

ROBERT W. de FOREST (Seal)

Signed, sealed, published and declared by Robert W. de Forest, the testator, as and for a fifth codicil to his last will and testament, dated February 5, 1926, in the sight and presence of us, who in his and each other's sight and presence and at his request, have hereunto subscribed our names as witnesses thereto this 3rd day of November, 1930.

William McBrien, 10419-116th Street, Richmond Hill, N. Y.

Elizabeth Gallagher, 7 Washington Square, New York City.

WINDING UP

Liquidation, terminating a business by a voluntary dissolution or bankruptcy, and by sale of the assets, paying the debts, and distributing the balance, if any, to the owners. In modern bankruptcy statutes, the old-time theory of liquidation for the benefit of creditors has been replaced by the modern concepts of reorganizations and arrangements for the relief of debtors. (See Bankruptcy, Liquidation.)

WINDOW DRESSING

An expression applied to the practice of certain com-

panies, of temporarily arranging their affairs in order to make a more favorable showing on the date of their published financial statements than actual conditions warrant. In its application to financial institutions the term has reference to temporarily increasing reserves just prior to a statement date by calling loans or selling securities, ostensibly to make it appear through the published statement that the reported reserve is habitually carried. (See Bank Statement, Comptroller's Call.)

WINNIPEG GRAIN EXCHANGE

The market place for Canada's wheat and other grains and one of the three great futures markets for grain in the world. Originally established in 1887 as the Winnipeg Grain & Produce Exchange, it was incorporated in 1891. Following opening of a grain futures market and a clearing house in 1901, the exchange was reorganized in 1908 as a voluntary, non-incorporated association without articles of incorporation or charter, under its present name, Winnipeg Grain Exchange.

Organization.—As a self-governing institution, founded on the consent of its members, the exchange is governed by a Council consisting of the president of the exchange, two vice-presidents and twelve members, all of whom are elected annually. In addition, there are two elected committees, on Arbitration and on Appeals, and the exchange has a secretary-treasurer and an assistant-secretary. The Council appoints members to ten other committees, who serve for one year.

Any bona fide trader or dealer in grain may become a member. Membership is not exclusive and may be obtained by anyone in any country whose credentials are satisfactory to the members. There are about 460 members, including elevator operators, commission merchants, brokers, shippers, exporters, vessel brokers, millers, representatives of farmer-owned companies, railway officials and bankers. About 360 members are residents of Winnipeg, and the remainder include residents of other countries than Canada. Only members may execute orders on the exchange either for themselves or on a commission basis for others. The offices and trading facilities of the exchange are in the Grain Exchange Building, Lombard Street, Winnipeg, Canada.

Clearings.—All futures trades on the exchange are cleared daily through the Winnipeg Grain & Produce Exchange Clearing Association, commonly called the Clearing House, an organization separate from the Winnipeg Grain Exchange but used by members of the exchange. At the close of each business day, each member gives the Clearing House a statement of all his transactions, from which his net position is determined and settlement is made by a check to or from the Clearing House. In addition to clearing all futures contracts daily, the Clearing House guarantees safe holding and proper delivery of spot grains on sales of futures contracts. However, most sales of cash grain are made through cash grain brokers, who issue duplicate receipts to buyer and seller against which the grain is invoiced and delivered, without clearing through the Clearing House.

Trade Information.—By direct wire and cable, the exchange receives continuously during each trading day grain prices on other leading exchanges, including Chicago, Minneapolis, Duluth, New York, London and Buenos Aires. It also flashes Winnipeg prices to other exchanges. In addition, the exchange collects and makes available statistics on the movement of grains, visible supplies, imports and exports, inspections, and crop conditions, as well as weather reports, both in Canada and in other countries. Therefore, the exchange serves to register both local and world-wide supply and demand factors as they affect grain prices.

Grain Trading.—While sales are made in cash grains in various positions, such as "on track", nearly all cash grain sold in the Winnipeg market is "spot" grain (unloaded in a terminal elevator and available for immediate delivery). All futures contracts on the exchange call for delivery "in store Fort William or Port Arthur", on any trading day of the contract month at the seller's option. Importers, millers and others buying cash grain usually "hedge" their position against price fluctuation, by sale of an equal quantity of futures.

Due to shipping conditions from Fort William and Port Arthur, futures trades are usually made for the months of October, November, December, May and July. The ordinary unit of trading in futures is 5,000 bushels of grain, except flax seed for which the unit is 1,000 bushels.

Various contract grades, and price discounts on lower grades, are fixed each year by the Council of the exchange for wheat, oats, barley, flax seed and rye—the grains traded in on the exchange. During World War II, the wheat futures market became restricted in character, with the United Kingdom becoming the largest buyer of Canadian wheat through the Canadian Wheat Board.

Trading on the exchange is conducted on every week day, the market opening at 9.30 a. m., Central Standard Time and closing at 1.15 p. m., except on Saturday when it closes at noon. From May to September inclusive, the market opens and closes one hour earlier. While trading in futures is not permitted outside of trading hours, buying and selling of cash grain is not restricted by any time limit.

WIPED OUT

An expression used to denote the loss by a speculator of money put up as margin, occasioned by a drop in the value of the securities purchased, and their consequent sale by the broker to protect his loan (customer's debit balance). By extension, this expression also applies to the total loss of one's wealth.

WIRE FATE ITEM

A term given to a check, draft, or note sent for collection from an out-of-town depositor or bank correspondent with instructions to report by telegraph whether or not the item was collected, i. e., paid when presented.

WIRE TRANSFER

See Telegraphic Transfers.

WITH EXCHANGE

When the words "with exchange" or "payable with exchange" are written on a draft or check, exchange charges or collection costs, in addition to the face of the instrument, are payable by the drawee or payer, respectively.

WITH INTEREST

Accrued interest included. A bond or note sold "with interest" must be paid for at the price named, plus interest at a specified rate. (See Accrued Interest.)

WITH PARTICULAR AVERAGE

See Average.

WITHDRAWAL

A taking or drawing out. Commercial deposits are withdrawn by check and savings deposits by presentation of the passbook in which the amount is entered. Although withdrawals of savings deposits are subject to notice of 30 days, such notice is customarily not invoked. (See Checking Account, Savings Accounts.)

Securities or notes may be withdrawn from collateral supporting a loan by substitution of others. (See Collateral.)

WITHOUT INTEREST

Flat; interest not included. (See Flat.)

WITHOUT PAR VALUE

In some states, shares of stock may be issued without a specified par value, but usually may not be sold below a certain minimum price. Such shares are known as "shares without par value," "shares of no par value," or as "unvalued shares." The number of unvalued shares which a certain certificate represents, and the total number of shares authorized must appear on the face of each stock certificate. In this way it is possible to determine the proportionate interest in the net assets of a corporation a given stock certificate represents, e. g., in a corporation organized with 10,000 unvalued shares, a ten share stock certificate would represent 1/1000 interest in the corporation. It is well known by experienced investors that no necessary relationship exists between the par value, book value, and market value of a given stock, which, for example, may have a par value of $100, book value of $60, and a market value of $30. Since, however, a specified par value implies that fully paid equivalent value has been paid in exchange, e. g., a $100 stock certificate implies the existence of $100 in assets (which may or may not be true), doubtless the phrase, "of the par value of $100" deceives many uninitiated persons. By the issuance of unvalued shares, a corporation incidentally avoids such possiblity of misrepresentation of value, but more direct advantages of no par shares are: (1) the power of directors to fix the amount of the consideration paid for no par shares to be set up in capital account and the balance to be set up in surplus account, thus "window dressing" surplus; (2) the flexibility of no par shares in permitting directors to issue such shares for such issuance prices as shall be deemed fair by the directors, instead of being required to issue par value shares at least at par value in order to be fully paid.

The capital stock shown on the books and balance sheet of a corporation with unvalued shares indicates the number of shares authorized, the number issued, the number outstanding, and the stated value set by directors for capital account purposes; and the capital surplus arising from setting the stated value below the amount of consideration paid in for no par value shares. Dividends are paid on the basis of dollars per share.

WITHOUT RECOURSE

In the law of negotiable instruments, an indorsement "Without recourse, signed, A. B. See", is a qualified indorsement, which constitutes the indorser a mere assignor of the title to the instrument (Sec. 38, Uniform Negotiable Instruments Law, Sec. 68, New York Negotiable Instruments Law). Nevertheless, such an indorser makes the limited warranties prescribed by Sec. 65, Uniform Negotiable Instruments Law (Sec. 115, New York Negotiable Instruments Law). An instrument so indorsed may be negotiated by delivery only, in which event the warranties extend in favor of no holder other than the immediate transferee.

WOMEN'S INVESTMENTS

A term sometimes applied to high grade investments in which safety of principal, regularity of income and freedom from care, are present in a high degree, i. e., "defensive" investments which afford steady income with least exposure to capital depreciation. The term arises from the fact that some women investors are primarily interested in safety and income because of their dependence upon their securities for stability and income. It does not follow, however, that all women are such investors, as those who are in the higher tax brackets as the result of personal income, provided either from family sources or independent personal means, are just as interested as other investors in the lower taxability of capital gains under current tax laws, and are not interested in additional income which would raise them higher in the tax brackets. (See Fluctuating Principle.)

WOMEN'S SIGNATURES

In business correspondence unmarried women should give their full signature with the first name written out, instead of initials, to prevent any mistake in identifying the sex, e. g., Mary A. Roe. To indicate that she is unmarried, it is advisable to prefix the word "Miss" in parenthesis.

Since the law does not fix other than the surname of a married woman, she may sign her name in several ways, provided the surname given is that of her husband. When Mary A. Roe becomes Mrs. Doe, she may sign her name as (1) Mary A. Doe, (2) Mary Roe Doe, (3) Mary A. Roe Doe, or (4) Mary Doe.

Whenever a married woman signs papers transferring the title of property, acquired before marriage to another, it is customary and advisable for her to set forth the change in her marital status in the body of the instrument, or on a separate document. (See Good Delivery.)

WOOL

Production of this important textile fiber is worldwide, but the principal commercial producing and exporting countries are Australia, Argentina, New Zealand, Union of South Africa, and Uruguay. Five Southern Hemisphere countries alone produce about 60 per cent. of the world's output, exclusive of Russia. World production in 1947 totaled 3,720 million pounds, compared with high of 4,200 million pounds in 1941, and of this world total, the British Commonwealth nations of Australia, New Zealand, and South Africa have ac-

counted for 40% to 50%. Though the United States normally has produced over 400,000,000 pounds annually, or about 12 per cent. of world output, an additional quantity of from 150,000,000 to 300,000,000 pounds has been normally imported annually to fill consumption requirement, and in recent years, with the decline in United States production to about 300 million pounds annually, and stepped up demand for woolen apparel, its net imports of wool have increased to 600 million to 900 million pounds annually.

Sheep-Raising.—The pastoral, or sheep-raising industry, is one of the oldest in the world, but wool remained domestic in its uses for ages before it became an article of commerce. Biblical records are full of allusions to sheep and shepherds. The Romans are credited with having brought the manufacture of wool to England. For a long time England manufactured only enough woolen goods for her own domestic needs. The remainder was shipped to other countries, made into cloth and then sent back to her. Finally, a "manufacture at home" movement was started and this combined with a system of apprenticeship to teach the trade gave England her start.

No domesticated sheep were found in North America by the early explorers. The wild Rocky Mountain sheep has neither been successfully domesticated nor crossed with the domestic sheep, so it is safe to assume that practically every phase of the textile industry originated outside of our own country.

The Spanish merinos were introduced into the United States during the first quarter of the nineteenth century and from these the American and Delaine merinos have been developed. This breed of sheep is the result of years of careful cross-breeding and they are known the world over for the amount and quality of wool they produce. The majority of sheep in the United States is raised on the farms and ranges of the West. Wyoming, Montana, Washington, Utah, Idaho, Oregon and California are among the leading states in the production of raw wool.

Wool calls for a careful preparation before it can be made into cloth. First, it must be sorted. Foreign wool is very popular with American textile manufacturers, not so much because of its superior quality, but because foreign wool growers are careful to send clean wool to market. How to tell at a glance the length and quality of the wool fiber and just what sort of wool is best for a particular purpose requires long training and experience. Australia and a few other countries have a system of classifying the wool before it is shipped which greatly simplifies the work of the sorter.

After the sorting and grading process the wool is thoroughly washed in a warm alkaline bath. This removes the impurities and natural grease. After the wool has been dried and the fibers straightened and again oiled by passage through a grilling machine it enters the combing machines. Here it is divided into two parts, "top" and "noil." The former is the long wool used by the worsted spinner. The noil or short wool is used for making felting, blankets, tweeds, etc. In the manufacture of the last named materials which are known as woolens, the noil or short wool is sent through a carding machine and the fibers are separated very minutely.

Spinning comes next and the long wool fibers are twisted into strands of yarn suitable for weaving purposes. The wool leaves the combs in long fleecy ropes and it is necessary to reduce this to strong thread of uniform size. This is done by gradually drawing out the uneven coil until it becomes a series of thin, smooth threads.

Wool Grades.—Wools are described under various grades, e. g., "quarter blood," and "half blood," indicating the proportion of course and fine breeds. Finer shadings of grade or quality are designated by the terms "64s," "56s," etc. Merino wool (from a fine Spanish breed) has already been mentioned.

When wool is clipped from the sheep it is called the wool clip. It is then spoken of as in the grease or unwashed. The coarser qualities of wool are used in carpet and rug manufacture.

Wool Markets.—Organized markets for wool recognize contracts only in wool tops, the long-fibered wool suitable for clothing manufacture. Trading in wool tops futures is conducted by the Wool Associates of the New York Cotton Exchange, an Exchange regulated by the Commodity Exchange Administration. Dealings in wool are also carried on in the United States under trade customs, the principal market being in Boston. Markets in England and Australia are conducted as auction sales under trade customs. Future markets in contracts for wool tops on the continent are also conducted in Belgium.

In trading in wool top futures by the Wool Associates of the New York Cotton Exchange, the wool top contract is for 5,000 pounds. The basis grade is wool top, Exchange standard, which is an average quality made of merino wools, oil combed with normal content of 3 per cent. oil produced from average 64's wools grown in the United States and shorn from live animals, cleaned, scoured, carded and combed in accordance with prevailing methods in the trade, and of average length and color. Various other wool tops, from wools grown in the United States and certain wool tops from wool grown in the Argentine, Uruguay, Australia and South Africa, are tenderable under certain conditions. Minimum fluctuation is 1/10th of one cent, or $5 per contract. Daily trading limits are 10¢ above or below previous close. Commission rate to a non-member for buying or selling one contract is $15.

The Wool Associates of the New York Cotton Exchange also provide futures trading for wool (clean content), the contract unit being 6,000 pounds, with similar minimum fluctuation of 1/10 of one cent, or $6 per contract.

WORKED OFF

A stock market expression used to denote that prices have gradually declined, but on the average, only fractionally.

WORKING CAPITAL

This term is not standardized in accounting terminology, but is usually taken to mean the net current assets, or current assets (cash, notes receivable, securities and other assets of a quick and liquid nature, accounts receivable, and inventories), less the current liabilities (notes payable, other debts payable within one year, accounts payable, and current liability reserves). This excess is also referred to as free working capital or excess quick, measuring the margin of liquid assets over quick liabilities and thus the ability of a business to meet liabilities as they mature over the ensuing year. The ratio of current assets to current liabilities,

however, is more indicative of such ability than the figure of net current assets in the absolute. Thus, the net current assets are the same whether current assets are $1,000,000 and current liabilities are $500,000, or whether current assets are $1,500,000 and current liabilities $1,000,000, but the current ratio is 2:1 in the first case and only 1 1/2:1 in the second case.

From an operating standpoint, the working capital available to a business is sometimes referred to as gross current assets, the gross in cash, cash items such as liquid securities, receivables, and working assets in inventories (raw materials, in process, and finished goods), which a business is turning over in its operations. From the standpoint of credit analysis, however, the net current assets are more indicative of the net funds available to a business for operations. (See Credit Barometrics, Current Ratio.)

WORLD BANK

See International Bank for Reconstruction and Development, International Monetary Fund.

WORN CURRENCY

When a person has a worn-out bill—whether it be a Federal Reserve note or a silver certificate, the two most common types of paper currency in circulation, or any other types of paper currency which might come into his possession--he may take it to his bank and receive in return for it a bill for circulation; or, if he wishes, obtain credit for it in his deposit account. Banks which are members of the Federal Reserve System ordinarily do not keep more currency on hand than they are likely to need for the day-to-day use of their customers. Accordingly, shipments of currency are constantly passing between member banks and their Federal Reserve banks, and notes unfit for further circulation are usually sent along with shipments of currency, which for the time being may be in excess of requirements. Such a shipment the Federal Reserve bank places to the credit of the transmitting member bank in its deposit account for use as the member bank desires. A non-member bank may also ship notes directly to the Federal Reserve bank, receiving payment by draft, or by deposit to its account in its correspondent bank, or in currency as is described below.

Currency received by the Federal Reserve banks in these ways is first counted and is then sorted according to denomination and kind, and mutilated and badly worn currency is eliminated. All Federal Reserve notes fit for circulation issued by Federal Reserve banks other than the one handling them are shipped immediately to the respective issuing banks, inasmuch as no Federal Reserve bank is permitted under the law to pay out notes of another Federal Reserve bank. Notes of other types which are fit for use are held in the vaults until needed, and all notes which are unfit for further circuation are canceled and shipped to Washington for redemption.

Currency is supplied to banks, both member and non-member, in amounts and denominations as they desire. Since much currency fit for further circulation is returned to the Federal Reserve banks, all shipments of currency cannot be made in new money, the supply of which is apportioned to the banks according to the volume of their business. A member bank draws currency from the Federal Reserve bank in just the same way that an individual draws currency from his own bank, and such withdrawals are charged to its deposit account. The bank which is not a member of the system usually pays for a shipment of currency either by check or by sending in unfit currency. At the New York Federal Reserve bank a regional supply of paper currency is kept on hand for use when needed, and a national supply of currency is available in Washington.

The volume of paper currency turnover handled each year by the Treasury and the Federal Reserve Banks reaches in the aggregate large figures. For the 1947 fiscal year, a total of $8,185 million in paper currency was redeemed, and $8,048 million new paper currency issued (the only types of paper currency being currently issued are Federal Reserve Notes, silver certificates and United States Notes). The Destruction Committee during the 1947 fiscal year supervised the incineration of 1,678 million pieces of paper currency, with a total dollar value of $6,983 million.

In carrying forward currency operations the Federal Reserve banks now do much work which the Government formerly performed through the sub-treasuries. On May 29, 1920, an Act of Congress was approved providing for the discontinuance of the sub-treasury system, which was established in 1846, and the transfer of its currency functions to the Federal Reserve banks. (See Mutilated Currency, Paper Money).

WRITE DOWN

See Write Off.

WRITE OFF

To reduce the book value of an asset in order to bring it into agreement with its present "going," estimated, appraised or market value. For example, depreciation, i. e., physical wear and tear in buildings, equipment and machinery, is charged as an expense of operation, and current depreciation is charged by reducing the value of the assets to which it applies, or by setting up a reserve. The assets so charged are said to be "written down". An uncollectible debt is "written off" by reducing its value to zero and charging the amount as a loss.

In banking practice, the examination procedure revised in June, 1938 calls for the following valuation procedure on securities held: Group I securities (those marketable obligations in which the investment characteristics are not distinctly or predominantly speculative), neither appreciation nor depreciation will be taken into account in figuring net sound capital of the bank; Group II securities (valued at average market price for 18 months next preceding examination), 50% of net depreciation will be deducted in computing net sound capital; Group III and IV securities (securities in default, and stocks), net depreciation is classified as loss. Premiums on securities purchased at a premium must be amortized. (See Comptroller's Regulation, Examination Procedure.) When the premium on a bond is written off by annual or semi-annual charges in order to bring the book value of the bond to par at maturity, the process is called Amortization (q. v.).

To "write off", "charge off", and "write down" are practically synonymous, except that the first two are customarily used when the entire value of an asset is charged as a loss, e. g., a bad debt.

WRITE UP

The opposite of writing down, i. e., bringing the book value of an asset into agreement with the market value, appraised value or estimated value when the latter are above the former.

The practice of writing up the value of assets is not favored as a conservative practice by accountants, as it might lead to abuse in "window dressing" surplus, and also leads to taxation questions, especially when depreciation is sought to be charged against the written up asset.

Under the revised examination procedure agreed on in June, 1938 by the bank supervisory authorities, neither appreciation nor depreciation in Group I securities (marketable obligations in which the investment characteristics are not distinctly or predominantly speculative--including those rated in the four highest grades by the recognized statistical services) will be taken into account in figuring the net sound capital of a bank. Group II securities are valued at average market price for 18 months next preceding examination, and 50% of their net depreciation will be deducted in computing net sound capital. Any net depreciation in Group III or IV securities will be classified as loss. Recoveries in market value of Group II, III and IV securities are usually credited by the more conservative banks to reserves rather than undivided profits. Premiums on securities purchased at premiums must be amortized. (See Comptroller's Regulation, Examination Procedure.)

YEN

The monetary unit of Japan, equivalent to 100 sen. Coinage included the silver yen, and the gold 20-, 10-, and 5-yen coins. With occupation of Japan by the Allied Powers, headed by Gen. Douglas MacArthur as Supreme Commander, following defeat in World War II, Japanese international trade and finance have been under the supervision of the Occupation authorities.

YIELD

Investment income; investment rate of return, as distinguished from a speculative or temporary rate of return; the net income from property, but particularly applied to bonds bought as investments to be held to maturity. When a bond is bought for trading purposes its income is known as current return; if held to maturity, yield.

The yield of a bond depends upon four variables, viz.: (1) price; (2) interest rate; (3) interest period; and (4) term, i. e., remaining life of the bond to maturity. The third variable may be omitted for practical purposes, since the interest on most bonds is payable semi-annually. Bonds paying interest annually are less valuable than bonds otherwise the same, paying interest semi-annually, but this difference for all practical purposes is negligible. (See Interest.)

A 5 per cent. bond purchased at par, regardless of its term, yields 5 per cent., but if purchased at a premium, its yield is less, and if at a discount, more, depending upon the term. The exact yield of a bond bought at a premium or discount can be determined by applying certain mathematical formulae, including the use of logarithms, but in practice, the yield is customarily determined by consulting bond values tables. (See Bond Value Table.) A 4 per cent. bond (interest payable semi-annually), having 20 years to run, and purchased at a premium of $35, i. e., $1,035, yields 3 3/4 per cent., but if purchased at a discount of $33.50, i. e., $966.50, yields 4 1/4 per cent.

Bid and asked quotations on Treasury Certificates or Notes as well as Bills; and State and municipal issues are quoted on a yield basis. Prices are quoted "at a price to yield ..... per cent." since, when other factors are equal, yield is the only common denominator for market prices and for comparison of investment values. (See Investment Value.)

The terms yield and return are often confused. The first is restricted in its meaning to the net income from a bond if held to maturity, whereas return denotes current income derived from either a bond or stock, without reference to a maturity. In the case of stock, the variables mentioned above are not fully known. There is no term or maturity value, nor is the income certain; therefore yield cannot be computed. The current return of a bond or stock is determined by dividing the purchase price into the annual cash interest or dividend. In the above case, where the purchase price of the bond is $1,035 and the cash interest $4 the current return is 3.865 per cent., whereas the yield is 3.75 per cent. The current return of a bond bought at a premium is higher than its yield, since no deduction need be made for the premium, which is lost when the bond matures. Conversely, the current return on a bond bought at a discount is lower than its yield, since the investment value of the bond increases as it approaches maturity.

The yield on Optional Bonds (q. v.) selling at a premium should be computed on the shortest possible time which they may be outstanding. If the optional bonds are selling at a discount, the yield should be computed upon the longest possible time they may be outstanding. (See Bond Values Table, Interest Tables.)

YIELD TO MATURITY

See Yield.

YUAN

The yuan dollar was the original monetary unit of the Chinese Republic, established in 1914. The international monetary unit of modern China is the national dollar, equivalent to 100 cents. (See Foreign Moneys--table 2.)

ZINC FUTURES

Contracts in zinc futures are traded on the Commodity Exchange, Inc., of New York City. The zinc contract calls for the delivery of 60,000 lbs. (one-half of 1% more or less) of zinc in slabs of usual commercial weights and sizes, with seller's option to deliver any one of the brands officially listed by the Exchange. Delivery is to be at seller's option at any time during the month specified in the contract from one of the warehouses licensed by the Exchange at designated delivery points. All tenderable grades of zinc are deliverable at the contract price. There are fixed premiums over the contract price on deliveries at certain designated delivery points.

The trading unit is 60,000 lbs. of zinc. Each contract unit must be made up exclusively of one of the deliverable grades and exclusively of one of the officially listed brands.

Price changes are registered in multiples of 1/100th of one cent per pound. A fluctuation of 1/100th of a cent, therefore, is equivalent to $6 on a contract, and a fluctuation of one cent is equivalent to $600 on a contract.

Trading is conducted in the current month and the eleven succeeding months.

Price quoted on the Exchange is in respect to Prime Western Zinc. The following grades are also deliverable at the contract price: Special High Grade; High Grade; Intermediate; Brass Special; and Selected.

Zinc delivered upon Exchange contracts shall: (a) be equal in quality to that specified in the American Society for Testing Materials (B6-46) for any grade therein defined for primary slab zinc; (b) be produced by distillation, or electrolysis, or electrothermic or other accepted processes for producing primary slab zinc, remelted zinc being excluded; (c) be deliverable in slabs of usual commercial sizes and of the usual standard weight as produced by each producing plant, and not more than 70 lbs. per slab; and (d) be accompanied by a smelter's certificate of assay of the producing smelter.

Delivery points are from warehouses licensed or designated by the Exchange located at the following points, with the following differentials

Delivery Point	Differential
East St. Louis, Ill.	No differential (at contract price)
St. Louis, Mo.	No differential (at contract price)
Chicago, Ill.	8/100ths of one cent per pound premium above contract price
Pittsburgh, Pa.	30/100ths of one cent per pound premium above contract price
Port of New York	30/100ths of one cent per pound premium above contract price

Commission for buying or selling per contract is $12.50 for members residing in the United States and Canada; and $25 for non-members residing in the United States and Canada. For members and non-members residing outside of the United States and Canada, a commission of $1.25 per contract is charged in addition to the above rates.

The United States both produces and consumes about one-third of the world's production and consumption of zinc. Over 40% of consumption in the United States is for galvanizing purposes.

ZLOTY

The post-World War I monetary unit of Republican Poland, established May 1, 1924 and revalued on October 13, 1927. Following the routing of Germany from Polish territory in 1945 by Russia, a Polish Government was set up under the Russian orbit which nationalized all basic industries in January, 1946.
